	Version 6.2
	Summary of Changes
March 15, 2008 Version 0.1D	Initial Release for PSEG NJ Change Control.
August 20, 2008 Version 0.1.5D	Incorporate changes for PA
October 2, 2008 Version 0.1.6D	Remove PECO from PA Notes section
August 8, 2009 Version 0.1.7D	Incorporate PA Change Control 056 (PPL field use)
January 24, 2010 Version 1.0	This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware.
November 4, 2010 Version 1.0.1D	Incorporated PA Change Control 065 (REF*LF and REF*SV) Incorporated PA Change Control 066 (FE HI Implementation) Incorporated PA Change Control 068 (PECO HI Implementation) Incorporated PA Change Control 073 (Update terminology of AMTKC to PLC and AMTKZ to NSPL)
February 28, 2011 Version 2.0	This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware.
February 16, 2012 Version 2.01	Incorporated PA Change Control 075 (Update UOM codes in QTY03) Incorporated PA Change Control 077 (Add QTY01 Codes) Incorporated PA Change Control 078 (REF*11) Incorporated PA Change Control 080 (Clarify K1 in SU loop) Incorporated PA Change Control 082 (Add/update QTY01 Codes) Incorporated PA Change Control 085 (REF*KY) Incorporated PA Change Control 090 (REF03 in REF*KY) Incorporated PA Change Control 093 (admin updates)
March 8, 2013	<ul> <li>Moving to v6.0 to align versions across all transaction sets</li> <li>Cleaned up references to Allegheny and APS throughout document</li> <li>Incorporate PA Change Control 087 (add DTM segments to be used with QTY*KC and QTY*KZ to denote current and future values)</li> <li>Incorporate PA Change Control 095 (REF03 in REF*KY)</li> <li>Incorporate PA Change Control 101 (remove AMT*LD from request; rescinds CC 58)</li> <li>Incorporate PA Change Control 102 (increase REF*BF length in Data Dictionary)</li> <li>Incorporate PA Change Control 103 (uniform net metering consumption reporting)</li> <li>Incorporate MD Change Control 015 (add 867HI support for Maryland)</li> </ul>
March 17, 2014 Version 6.1	<ul> <li>Incorporate PA Change Control 109 (clarify use in PTD*BQ gray box)</li> <li>Incorporate PA Change Control 110 (clarify notes section for PECO)</li> <li>Incorporate PA Change Control 114 (add REF*PR to PTD*FG &amp; PTD*RT loops)</li> <li>Incorporate PA Change Control 115 (add PTD*RT loop for PECO)</li> <li>Incorporate MD Change Control 026 (PHI new CIS; changes to HU/HI)</li> <li>Incorporate MD Change Control 028 (BGE support of 867IU)</li> <li>Incorporate MD Change Control 029 (uniform net meter data reporting)</li> <li>Incorporate MD Change Control 030 (Net Meter Indicator in REF*KY)</li> <li>Incorporate NJ Change Control Electric 019 (ACE new CIS: changes to 867HU/HI)</li> <li>Incorporate NJ Change Control Electric 031 (RECO removal from IG)</li> <li>Incorporate NJ Change Control Electric 032 (PSE&amp;G admin updates)</li> </ul>
March 14, 2017 Version 6.2	<ul> <li>Incorporate PA Change Control 131 (Add DTM328 to identify data increment change)</li> <li>Incorporate PA Change Control 133v3 (Uniform Daylight Savings Time Reporting)</li> <li>Incorporate NJ Change Control Electric 039 (Uniform Daylight Savings Time Reporting)</li> <li>Incorporate MD Change Control 043 (Future PLC value/date for Potomac Edison)</li> <li>Incorporate MD Change Control 045 (Aggregate Net Metering family identifier REF*AN)</li> <li>Incorporate MD Change Control 046 (Uniform Daylight Savings Time Reporting)</li> <li>Update Delaware Notes to say see Delmarva MD for applicability</li> </ul>

#### **General Notes**

Use

- Historical Usage will be provided to an ESP upon Request. The request will be made using the 814E documents.
- Historical Usage can be requested for an entity that is already a customer of the ESP
- Historical Usage can be requested for any customer that has not restricted the release
  of their historical usage. This is state dependent, some states allow this scenario, and
  others do not.
- The Historical Usage Transaction Set is sent by the LDC only one time per ESP request. No corrections or changes will be transmitted. The Historical Usage data is correct for the point in time that is it requested. Subsequent adjustments to Historical Usage will not be transmitted to the ESP.
  - If providing history totalized for an account, use "SU"/"BQ" (Summary) in PTD01, else if providing history by meter, use "BO"/"PM" (Physical Meter) in PTD01.

LDC Definitions:

The term LDC (Local Distribution Company) in this document refers to the utility. Each state may refer to the utility by a different acronym:

- EDC Electric Distribution Company (Pennsylvania, Delaware)
- LDC Local Distribution Company (New Jersey)
- EC Electric Company (Maryland)

**ESP Definitions:** 

The term ESP (Energy Service Provider) in this document refers to the supplier. Each state may refer to the supplier by a different acronym:

- EGS Electric Generation Supplier (Pennsylvania)
- TPS Third Party Supplier (New Jersey)
- ES Electric Supplier (Delaware)
- ES Electricity Supplier (Maryland)

Renewable Energy Provider Definition: The term Renewable Energy Provider in this document refers to the party that provides Renewable Energy Credits (RECs). This party does not provide generation to the account. Each state may refer to the Renewable Energy Provider by a different acronym:

• GPM – Green Power Marketer (New Jersey)

**Note:** The transaction will either have an ESP or a Renewable Energy Provider, but not both.

Daylight Savings Time (DST) Reporting

The following formats are required to report Daylight Savings Time (DST).

#### **Spring Daylight Savings Time**

60 Minute Interval Increment - Upon the change from Eastern Standard time (ES) to Eastern Daylight time (ED) at 0200, the interval ending 0300 is skipped and the interval ending 0400 is sent with a Time Code (DTM04) of ED. The Time Code 'ED' will be displayed for every reading until the fall DST where it will change to 'ES' denoting Eastern Standard time.

Example of Spring DST Change with 60-minute interval increments...

QTY~QD~95.58~KH

DTM~582~20150308~0100~ES

QTY~QD~96.9~KH

DTM~582~20150308~0200~ES

QTY~QD~86.7~KH

DTM~582~20150308~0400~ED

QTY~QD~96.9~KH

DTM~582~20150308~0500~ED

QTY~QD~97.44~KH

Version 6.2

30 Minute Interval Increment - Upon the change from Eastern Standard time (ES) to Eastern Daylight time (ED) at 0200, the intervals ending 0230 & 0300 are skipped and the interval ending 0330 is sent with a Time Code (DTM04) of ED. The Time Code 'ED' will be displayed for every reading until the fall DST where it will change to 'ES' denoting Eastern Standard time.

Example of Spring DST Change with 30-minute interval increments... QTY~QD~239.76~KH
DTM~582~20150308~0130~ES
QTY~QD~302.4~KH
DTM~582~20150308~0200~ES
QTY~QD~248.76~KH
DTM~582~20150308~0330~ED
QTY~QD~241.56~KH
DTM~582~20150308~0400~ED

15 Minute Interval Increment - Upon the change from Eastern Standard time (ES) to Eastern Daylight time (ED) at 0200, the intervals ending 0215, 0230, 0245 & 0300 are skipped and the interval ending 0315 is sent with a Time Code (DTM04) of ED. The Time Code 'ED' will be displayed for every reading until the fall DST where it will change to 'ES' denoting Eastern Standard time.

Example of Spring DST Change with 15-minute interval increments...
QTY~QD~239.76~KH
DTM~582~20150308~0145~ES
QTY~QD~302.4~KH
DTM~582~20150308~0200~ES
QTY~QD~248.76~KH
DTM~582~20150308~0315~ED
QTY~QD~241.56~KH
DTM~582~20150308~0330~ED

#### **Fall Daylight Savings Time**

60 Minute Interval Increment – Upon the change from Eastern Daylight time (ED) to Eastern Standard time (ES) at 0200, the interval ending 0200 reading is repeated. The first interval ending 0200 represents the last interval for Eastern Daylight time (ED) with a Time Code (DTM04) of ED. The second interval ending 0200 represents the initial interval for Eastern Standard time (ES) with a Time Code (DTM04) of ES. The Time Code 'ES' will be displayed for every reading until the spring DST where it will change to ED denoting Eastern Daylight time.

Example of Fall DST Change with 60-minute interval increments... QTY\*QD\*54.87\*KH
DTM\*582\*20151101\*0100\*ED
QTY\*QD\*55.62\*KH
DTM\*582\*20151101\*0200\*ED
QTY\*QD\*54.71\*KH
DTM\*582\*20151101\*0200\*ES
QTY\*QD\*53.46\*KH
DTM\*582\*20151101\*0300\*ES

 $30\,Minute$  Interval Increment – Upon the change from Eastern Daylight time (ED) to Eastern Standard time (ES) at 0200, the intervals ending 0130 & 0200 are repeated. The interval ending 0200 represents the last interval for Eastern Daylight time (ED) with a Time Code (DTM04) of ED. The second interval ending 0130 represents the initial interval for Eastern Standard time (ES) with a Time Code (DTM04) of ES. The Time Code 'ES' will be displayed for every reading until the spring DST where it will change to ED denoting Eastern Daylight time.

Example of Fall DST Change with 30-minute interval increments...

QTY~QD~18.9~KH

DTM~582~20151101~0100~ED

QTY~QD~18.63~KH

DTM~582~20151101~0130~ED

QTY~QD~19.17~KH

DTM~582~20151101~0200~ED

OTY~OD~19.44~KH

DTM~582~20151101~0130~ES QTY~QD~19.575~KH DTM~582~20151101~0200~ES QTY~QD~19.17~KH DTM~582~20151101~0230~ES

15 Minute Interval Increment – Upon the change from Eastern Daylight time (ED) to Eastern Standard time (ES) at 0200, the intervals ending 0115, 0130, 0145 & 0200 are repeated. The interval ending 0200 represents the last interval for Eastern Daylight time (ED) with a Time Code (DTM04) of ED. The second interval ending 0115 represents the initial interval for Eastern Standard time (ES) with a Time Code (DTM04) of ES. The Time Code 'ES' will be displayed for every reading until the spring DST where it will change to ED denoting Eastern Daylight time.

Example of Fall DST Change with 15-minute interval increments...

QTY~QD~18.63~KH

DTM~582~20151101~0115~ED

QTY~QD~19.17~KH

DTM~582~20151101~0130~ED

QTY~QD~19.44~KH

DTM~582~20151101~0145~ED

QTY~QD~19.575~KH

DTM~582~20151101~0200~ED

QTY~QD~19.17~KH

DTM~582~20151101~0115~ES

QTY~QD~18.9~KH DTM~582~20151101~0130~ES QTY~QD~20.115~KH

DTM~582~20151101~0145~ES QTY~QD~18.36~KH

DTM~582~20151101~0200~ES QTY~QD~18.765~KH

## Pennsylvania Notes

Use

- Transaction is conditional in Pennsylvania. PUC order dated 12/5/2012, Docket # M-2009-2092655, Page 13 requires "all EDCs covered by the smart meter mandates to install the capability to share a minimum of 12 months of historical interval account level or meter level usage via EDI."
- The EDC will provide interval detail at the lowest recorded level. The EGS will not be able to request a specific interval level.
- EDC support of 867HI:
  - Duquesne Supports; utilizes account summary loops (SU & BQ)
  - First Energy (ME,PE,PP, & WPP)— Supports; utilizes account summary loops (SU & BQ)
  - PECO Supports; utilizes account summary loops (SU & BQ) for MV90 metered accounts and single rate AMI metered accounts. For AMI customers with more than one rate (service point), utilizes rate loops (RT & BQ).
  - PPL EU Supports; utilizes account summary loops (SU & BQ)
  - UGI Does not support
- The Pennsylvania default is 12 months of Historical Interval Usage, the following EDCs offer more than 12 months...
  - o PECO default is 24 months

# Implementation Information

- PECO For any HIU in which the data precedes December 2010, PECO is required to force the QTY\*01 segment to "actual" because actual versus estimate data is not available for dates preceding December 2010.
- PECO For will implement a new "Rate" (RT) loop that will mimic the existing SU loop structure with the exception of the loop name (RT instead of SU). PECO will implement the RT loop such that a transaction will contain one RT loop for each rate (aka service point) included in the transaction. If the associated account is associated with two rates, then PECO will include two RT loops. Historical interval usage will therefore be provided at the rate level.

Requirements for uniform support of Net Metered Customers:

Account Level – both the SU and BQ loops are sent. Supported by DLCO, FE, PECO, and PPL. N/A to UGI as they do not have Interval Metered accounts.

- SU (Account Services Summary) Loop –reports consumption summarized/totalized for account by unit of measure for net metered customers. Individual intervals are not reported in the PTD\*SU loop.
  - 1. When the customer's consumption is greater than generation for a given service period, the KH will be reported as net consumption (QTY01 w/actual = QD or estimated = KA) with the total generation subtracted from total consumption.
  - 2. When the customer's generation is greater than consumption for a given service period, the KH will be reported as net generation (actual = 87 or estimated = 9H) with the total consumption subtracted from total generation).
  - 3. In either scenario, the QTY02 will never be signed negative.
- BQ (Account Services Detail) Loop reports consumption provided by meter summed to the account level by unit of measure. This will be looped for each month for which the history is being reported.
  - 1. The QTY02 will report the net KH for ALL metered services being summed to the account level for the given reporting period.
  - 2. When the net KH for a given report period is generation, the QTY01 will be either '87' or '9H' to denote net generation.
  - 3. When the net KH for a given report period is consumption, the QYT01 will be one of the six valid consumption quantity qualifiers.

Meter Level – none of the PA EDCs are reporting Historical Interval usage at the meter level in the EDI 867HI EDEWG may add requirements/examples should any EDC wish to send meter level consumption history in the 867HI.

**Change in Interval Data Increment**  The PTD01=BQ & PM loops will be repeated when the interval data reporting increment changes. See DTM\*328 segment and examples section for additional information.

# **Maryland Notes**

#### Use

- Maryland EDI Change Control 15 added support of the EDI 867 Historical Interval usage transaction for Maryland. As of 1/28/13 the exact utility implementation dates and looping have yet to be completely finalized:
- Delmarva / PEPCO will support in new CIS at the account level. For non-EDI HI requests, the supplier should contact supplier support.
- BGE support of 867HI went live for AMI/Smart meter accounts only on 1/16/2014.
  - Supports only 500 requests per day; excess will be carried over to following day.
- Potomac Edison support of 867HI estimated for 3Q/4Q 2013 and will be at the account level only.

#### Requirements for uniform support of Net Metered Customers:

- Maryland EDI Change Control 029 adopted uniform net meter data reporting for Maryland. Utility support as of January 24, 2014...
  - BGE est. 3O 2014
  - PHI (Delmarva & PEPCO) with new CIS
  - Potomac Edison (FE) 4Q 2014 (MU/HU) & 1Q 2014 (IU/HIU)
- Account Level both the SU and BQ loops are sent. Supported by BGE, Potomac Edison (FE), & PHI companies (Delmarva MD & PEPCO MD).
- SU (Account Services Summary) Loop –reports consumption summarized/totalized for account by unit of measure for net metered customers. Individual intervals are not reported in the PTD\*SU loop.
  - 1. When the customer's consumption is greater than generation for a given service period, the KH will be reported as net consumption (QTY01 w/actual = QD or estimated = KA) with the total generation subtracted from total consumption.
  - 2. When the customer's generation is greater than consumption for a given service period, the KH will be reported as net generation (actual = 87 or estimated = 9H) with the total consumption subtracted from total generation).
  - 3. In either scenario, the QTY02 will never be signed negative.
- BQ (Account Services Detail) Loop reports consumption provided by meter summed to the account level by unit of measure. This will be looped for each month for which the history is being reported.
  - 1. The QTY02 will report the net KH for ALL metered services being summed to the account level for the given reporting period.
  - 2. When the net KH for a given report period is generation, the QTY01 will be either '87' or '9H' to denote net generation.
  - 3. When the net KH for a given report period is consumption, the QYT01 will be one of the six valid consumption quantity qualifiers.

Meter Level – none of the MD Electric Companies are reporting Historical Interval usage at the meter level in the EDI 867HI.

# **New Jersey Notes**

Use

- Transaction is optional in New Jersey.
- Atlantic City Electric effective with new CIS, ACE will support the EDI 867 Historical Interval Usage transaction summarized to the ACCOUNT level using the SU, BQ and FG loops. ACE will process Historical Usage requests as follows:

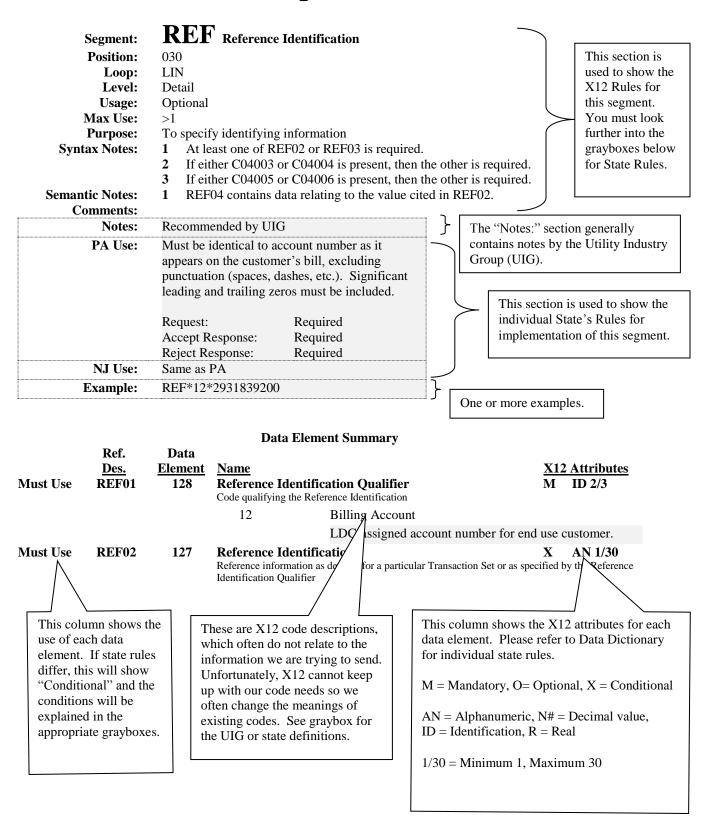

LIN05	Scenario	REF1P Code	867 Action
LIN05 = HU	HU available on non-interval account	No REF1P sent	867HU sent
LIN05 = HU	HU not available	REF1P = HUU	No 867 sent
LIN05 = HI	HI available	No REF1P sent	867HI sent
LIN05 = HI	Neither historical interval detail or summary data available	REF1P = HIU	No 867 sent
LIN05 = HI	HI data unavailable BUT summary HU data is available	No REF1P sent	867HU sent
LIN05 = HI	HI request on non-interval account	No REF1P sent	867HU sent

	Unit of Measurement	quantity of consumption delivered			
		during billing period.			

#### PTD Loop for Historical Usage that is Summarized/Totalized by Rate (PTD01 = RT)

A PTD Loop will be provided for each type of consumption measured for the overall account (PTD01=SU) or by meter (PTD01 = PM) or by rate (PTD01=RT) in addition to the PTD loop that provides Scheduling Determinants when appropriate

17.1	Loop Identification	Indicates if usage is provided totalized or by meter.	$PTD01 = \mathbf{RT}$		X(2)
17.2	Profile Group	A code for the Load Profile used for this rate. Differs by LDC. Codes posted on LDC's Web site.	REF02	PTD: REF01= <b>LO</b>	X(30)
17.3	LDC Rate Code	Code indicating the rate a customer is being charged by LDC per tariff. Codes posted on LDC's Web site	REF02	PTD: REF01= <b>NH</b>	X(30)
17.4	LDC Rate Sub-class	Code to provide further classification of LDC Rate Code	REF02	PTD: REF01= <b>PR</b>	X(30)
17.4	Quantity Qualifier	Represents whether the quantity is actual or estimated:  KA = Estimated Quantity Delivered  QD = Actual Quantity Delivered  87 = Actual Quantity Received (Net Meter)  9H = Estimated Quantity Received (Net Meter)	QTY01		X(2)
17.5	Quantity Delivered	Represents quantity of consumption delivered for billing period.	QTY02	QTY01	9(15)
17.6	Quantity Delivered Unit of Measurement	Indicates unit of measurement for quantity of consumption delivered during billing period.	QTY03		X(2)
17.7	Consumption	Represents quantity of consumption delivered for service period. Contains the difference in the meter readings (or as measured by the meter) multiplied by various factors, excluding Power Factor.	MEA03	MEA02 = <b>PRQ</b>	9(9).9(4)
17.8	Unit of Measure	Unit of measure for readings.	MEA04		X(2)
17.9	Measurement Significance Code	Code used to benchmark, qualify, or further define a measurement value.	MEA07		X(2)
17.10	Service Period Start	Start date of the period for which these readings are provided	DTM02	QTY: DTM01 = <b>150</b>	X(8)
17.11	Service Period End	End date of the period for which these readings are provided	DTM02	QTY: DTM01 = <b>151</b>	X(8)

### PTD Loop for Historical Interval Usage that is provided at Account Level (PTD01 = BQ)

A PTD Loop will be provided for each type of consumption measured (PTD01 = BQ) in addition to the PTD loop that provides Scheduling Determinants when appropriate

21	-	Indicates if usage is provided totalized or by meter.	$PTD01 = \mathbf{BQ}$		X(2)
22.1	Service Period Begin	Start date of the service period or start date of the changed in meter.	DTM02	DTM01 = <b>150</b>	9(8)
22.3		End date of the service period or end date of the changed out meter.	DTM02	DTM01 = <b>151</b>	9(8)
23	_	Date when the change in the interval data increment occurs	DTM02	DTM01 = <b>328</b>	9(8)

24					
	Meter Type	Code indicating type of consumption measured & interval at which measurements are taken.	REF02	PTD: REF01 = <b>MT</b>	X(5)
25	Quantity Qualifier	Represents whether the quantity is actual or estimated:  17 = Incomplete Quantity Delivered 19 = Incomplete Quantity Received (Net Meter) 20 = Unavailable 87 = Actual Quantity Received (Net Meter) 96 = Non-Billable Quantity 9H = Estimated Quantity Received (Net Meter) KA = Estimated Quantity Delivered QD = Actual Quantity Delivered			X(2)
27	Quantity Delivered	Represents quantity of consumption delivered for billing period.	QTY02	QTY01	9(15)
28	Quantity Delivered Unit of Measurement	Indicates unit of measurement for quantity of consumption delivered during billing period.	QTY03		X(2)
29	Report Period Date/Time	The date/time of the end of the interval.	DTM02 (CCYYMMDD) and DTM03 (HHMM)	QTY: DTM01 = <b>582</b>	DTM02= 9(8) and DTM03= 9(4)
29.1	Time Code	The time code must accurately provide the time zone when the daylight savings time starts and ends if the meter is adjusted for daylight savings time. <b>ED</b> = Eastern Daylight Time	DTM04		X(2)
		ES = Eastern Standard Time			
This PTD J	PTE provides Scheduling Determ Loop Identification	Loop for Scheduling Determina	PTD01 = <b>FG</b>	= <b>FG</b> )	X(2)
	provides Scheduling Determ	Loop for Scheduling Determination in the control of		FTD:REF01=LF	X(2) X(30)
30	provides Scheduling Determ	D Loop for Scheduling Determination in the company of the company	PTD01 = <b>FG</b> REF02		
30	Loop Identification  Loss Factor	Indicates if usage is provided totalized or by meter.  Loss Factor  A code for the Load Profile used for this customer. Differs by LDC. Codes posted on LDC's Web site.  Code indicating the rate a customer is being charged by LDC per tariff. Codes	PTD01 = <b>FG</b> REF02	PTD:REF01= <b>LF</b>	X(30)
30 31 32	Loop Identification  Loss Factor  Profile Group	Indicates if usage is provided totalized or by meter.  Loss Factor  A code for the Load Profile used for this customer. Differs by LDC. Codes posted on LDC's Web site.  Code indicating the rate a customer is	PTD01 = <b>FG</b> REF02  REF02	PTD:REF01= <b>LF</b> PTD: REF01= <b>LO</b>	X(30) X(30)
30 31 32 33	Loop Identification  Loss Factor  Profile Group  LDC Rate Code	Indicates if usage is provided totalized or by meter. Loss Factor  A code for the Load Profile used for this customer. Differs by LDC. Codes posted on LDC's Web site. Code indicating the rate a customer is being charged by LDC per tariff. Codes posted on LDC's Web site Code to provide further classification of	PTD01 = <b>FG</b> REF02  REF02	PTD:REF01= <b>LF</b> PTD: REF01= <b>LO</b> PTD: REF01= <b>NH</b>	X(30) X(30) X(30)

# March 14, 2017 Version 6.2

				Versi	JII 0.Z
37	Special Meter Configuration Code	Used to convey there's a special meter present on the account. For example, Net Metering	REF02	PTD: REF01 = <b>KY</b>	X(3)
37.1	Special Meter Configuration Information	PPLEU-used to report the max K1 (demand) the special meter supports	REF03	PTD: RF01 = <b>KY</b>	X(80)
38	Aggregate Net Energy Meter Role	The role of the customer account in the Aggregate Net Energy Meter family	REF02	PTD: REF01= AN	X(30)
39	Peak Load Contribution (PLC)	Peak load contributions provided to PJM for Installed Capacity calculation (coincident with PJM Peak).	QTY02	PTD: QTY01 = <b>K</b> C	9(15)
40	Unit of Measure	Indicates unit of measurement for quantity of consumption delivered during billing period.	QTY03 = <b>K1</b>	PTD: $QTY01 = \mathbf{QD}$	X(2)
41	Network Service Peak Load	Customer's peak load contribution provided to PJM for the Transmission Service calculation (coincident with LDC peak).	QTY02	PTD: QTY01 = <b>KZ</b>	9(15)
42	Quantity Delivered Unit of Measurement	Indicates unit of measurement for quantity of consumption delivered during billing period.	QTY03 = <b>K1</b>	PTD: $QTY01 = \mathbf{QD}$	X(2)

Segment: ST Transaction Set Header

**Position:** 010

Loop:

Level: Heading Usage: Mandatory

Max Use:

**Purpose:** 

To indicate the start of a transaction set and to assign a control number

**Syntax Notes:** 

**Semantic Notes:** 

The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).

#### **Comments:**

PA Use:	Required
NJ Use:	Optional
DE Use:	Not Used
MD Use:	Same as PA; see Notes section for utility support
Example:	ST*867*00000001

Must Use	Ref. <u>Des.</u> ST01	Data Element 143	Name Transaction Set Identifier Code Code uniquely identifying a Transaction Set	Attı M	ributes ID 3/3

Segment:  ${\bf BPT}$  Beginning Segment for Product Transfer and Resale

**Position:** 020

Loop:

Level: Heading Usage: Mandatory

Max Use:

Purpose: To indicate the beginning of the Product Transfer and Resale Report Transaction Set and

transmit identifying data

**Syntax Notes:** 1 If either BPT05 or BPT06 is present, then the other is required.

**Semantic Notes:** 1 BPT02 identifies the transfer/resale number.

BPT03 identifies the transfer/resale date.
BPT08 identifies the transfer/resale time.

4 BPT09 is used when it is necessary to reference a Previous Report Number.

#### **Comments:**

PA Use:	Required
NJ Use:	Same as PA; see Notes section for utility support

			45 Old Account Number		
			LDC's previous account number	for the end	luse
			customer.		
<b>Must Use</b>	REF02	127	Reference Identification	X	AN 1/30
			Reference information as defined for a particular Transaction Set or Identification Qualifier	as specified b	by the Reference

Segment: PTD Product Transfer and Resale Detail (SU= Interval Summary-Account)

Position: 010 Loop: PTD Level: Detail Usage: Mandatory

Max Use:

Purpose: To indicate the start of detail information relating to the transfer/resale of a product and

provide identifying data

**Syntax Notes:** 1 If either PTD02 or PTD03 is present, then the other is required.

2 If either PTD04 or PTD05 is present, then the other is required.

**Semantic Notes:** 

**Comments:** 

Notes:	This PTD Loop will be used when providing Historical Interval Usage by account. The PTD*SU Loop sums the intervals for the month by unit of measure for each bill period. Demand is optional in the PTD*SU loop. Individual intervals are not reported in the PTD*SU Loop.  One PTD*SU loop is required for each unit of measure for each bill period.		
PA Use:	Required if sending HI summed to the account level		
NJ Use: Same as PA; see Notes section for utility support			
DE Use: N/A			
MD Use: Same as PA; see Notes section for utility support			
Examples:	PTD*SU		

	Des.	Element	<u>Name</u>		Att	<u>ributes</u>
Must Use	PTD01	521	Product Transfer Type Code Code identifying the type of product transfer		M	ID 2/2
			SU	Designated Items		
				Account Services Summary		

Segment: QTY Quantity

Position: 110
Loop: QTY
Level: Detail
Usage: Optional

Max Use: 1

**Purpose:** To specify quantity information

**Syntax Notes:** 1 At least one of QTY02 or QTY04 is required.

2 Only one of QTY02 or QTY04 may be present.

**Semantic Notes:** 1 QTY04 is used when the quantity is non-numeric.

**Comments:** 

Notes:	Each QTY/MEA/DTM loop conveys consumption information about one interval.			
PA Use:	Required if providing Historical Usage by Account; otherwise, not used. Each QTY/MEA/DTM loop conveys consumption information about one bill period.  Note: For an interval account, this provides the net total usage for the bill period.			
NJ Use:	Same as PA; see Notes section for utility support			
DE Use:	N/A

Reference information as defined for a particular Transaction Set or as specified by the Reference

Identification Qualifier

Segment: QTY Quantity

Position: 110
Loop: QTY
Level: Detail
Usage: Optional
Max Use: 1

**Purpose:** To specify quantity information

**Syntax Notes:** 1 At least one of QTY02 or QTY04 is required.

2 Only one of QTY02 or QTY04 may be present.

**Semantic Notes:** 1 QTY04 is used when the quantity is non-numeric.

**Comments:** 

Notes:	Each QTY/MEA/DTM loop conveys consumption information about one metering period.
PA Use:	Required
NJ Use:	Not Used
DE Use:	Not Used
MD Use:	Not Used
Example:	QTY*QD*5210*KH

Must Use	Ref. <u>Des.</u> QTY01	Data <u>Element</u> 673	Name Quantity Qualifier	Attributes M ID 2/2			
1.2450 050	Q-1-0-	0.0	Code specifying the type				
			KA	Estimated Quantity Delivered			
				Used when the quantity delivered is an estimated quantity.			
			QD	Actual Quantity Delivered			
				Used when the quantity delivered is an actual quantity.			
			87	Actual Quantity Received (Net Metering)			
				Used when the net generation quantity received is actual.			
			9H	Estimated Quantity Received (Net Metering)			
				Used when the net generation quantity received is estimated.			
Must Use	QTY02	380	<b>Quantity</b> Numeric value of quantity	X R 1/15			
Must Use	QTY03	355	Unit or Basis for Measurement Code M ID 2/2 Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken				
			K1	Kilowatt Demand (KW) Represents potential power load measured at predetermined intervals			
			K2	Kilovolt Amperes Reactive Demand (KVAR)			
				Reactive power that must be supplied for specific types of customer's equipment; billable when kilowatt demand usage meets or exceeds a defined parameter			
			K3	Kilovolt Amperes Reactive Hour (KVARH)			
				Represents actual electricity equivalent to kilowatt hours; billable when usage meets or exceeds defined parameters			
			K4	Kilovolt Amperes (KVA)			
			KH	Kilowatt Hour (KWH)			

Segment: MEA Measurements

Position: 160
Loop: QTY
Level: Detail
Usage: Optional
Max Use: 40

**Comments:** 

**Purpose:** To specify physical measurements or counts, including dimensions, tolerances, variances,

and weights (See Figures Appendix for example of use of C001)

**Syntax Notes:** 1 At least one of MEA03 MEA05 MEA06 or MEA08 is required.

2 If MEA05 is present, then MEA04 is required.3 If MEA06 is present, then MEA04 is required.

4 If MEA07 is present, then at least one of MEA03 MEA05 or MEA06 is required.

5 Only one of MEA08 or MEA03 may be present.

**Semantic Notes:** 1 MEA04 defines the unit of measure for MEA03, MEA05, and MEA06.

1 When citing dimensional tolerances, any measurement requiring a sign (+ or -), or any measurement where a positive (+) value cannot be assumed, use MEA05 as the

negative (-) value and MEA06 as the positive (+) value.

Notes:	The MEA segment is sent for each QTY loop. The MEA will indicate the "time of use" that applies to the QTY. If meter readings are included in the MEA, they will indicate the "time of use" that the meter readings apply to.
PA Use:	Optional field for time of use other than totalizer (MEA07=51).  Optional for time of use equal to totalizer (MEA07=51) if that is the only time of use on the account.
NJ Use:	Not Used
DE Use:	Not Used
MD Use:	Not Used
Examples:	MEA**PRQ*14*K1***51 (If meter measures multiple things, you need to send multiple QTY loops, one for each unit of measurement).

			HHMM format	t		
Must Use	<b>DTM04</b>	623	<b>Time Code</b>		0	ID 2/2

Code identifying the time. In accordance with International Standards Organization standard 8601, time can be specified by a + or - and an indication in hours in relation to Universal Time Coordinate (UTC) time; since + is a restricted character, + and - are substituted by P and M in the codes that follow

The time code must accurately provide the time zone when the daylight savings time starts and ends if the meter is adjusted for daylight savings time. If meter is not adjusted for daylight savings time, the time code will always reflect Eastern Daylight Time which will be interpreted as prevailing time.

ED Eastern Daylight Time
ES Eastern Standard Time

			<b>NETMETER</b>	Net Meter (Used for EDCs who will a		
				specific type of net meter)		
Optional	REF03	352	Description		X	AN 1/80

A free-form description to clarify the related data elements and their content

# **March 14, 2017** Version 6.2

PPLEU: Used for the output rating of the generation equipment reporting in KW and reflects the maximum generation the equipment can produce at any one time

Position: 030
Loop: PTD
Level: Detail
Usage: Optional
Max Use: 20

**Purpose:** To specify identifying information

**Syntax Notes:** 1 At least one of REF02 or REF03 is required.

If either C04003 or C04004 is present, then the other is required.
If either C04005 or C04006 is present, then the other is required.

**Semantic Notes:** 1 REF04 contains data relating to the value cited in REF02.

**Comments:** 

PA Use:	Not Used
NJ Use:	Not Used
DE Use:	Not Used
MD Use:	Conditional - Required when the customer account is part of an Aggregate Net Energy Meter family.
Example:	REF*AN* PARENTHOST

			Data Elem	chi bummar y		
	Ref.	Data	**		3710	
	Des.	<u>Element</u>	<u>Name</u>		<u>X12</u>	<u> Attributes</u>
Must Use	REF01	128	Reference Identific	cation Qualifier	M	ID 2/3
			Code qualifying the AN	Reference Identification Aggregate Net Energy Meter Role		
				The role of the customer account in the Energy Meter family	e Agg	regate Net
Must Use	REF02	127	Reference Identifie		X	AN 1/30
				ion as defined for a particular Transaction ference Identification Qualifier BGE & FE: Host Account with Gener PHI: Customer designated primary ho Generation	ation	
			PARENT	BGE & FE: Not Used PHI: Host account with generation, no	ot the	primary
			CHILD	Child account, may or may not have its NOTE - The REF*KY segment is used account has its own generation.		

 $\ QTY\ \ {\it Quantity}\ ({\it KC=Peak}\ {\it Load}\ {\it Contribution})$ **Segment:** 

110 **Position:** Loop: QTY Level: Detail Usage: Optional

Max Use:

**Purpose:** To specify quantity information

**Syntax Notes:** At least one of QTY02 or QTY04 is required.

2 Only one of QTY02 or QTY04 may be present.

1 QTY04 is used when the quantity is non-numeric. **Semantic Notes:** 

<b>Comments:</b>	
Notes:	Each QTY/MEA/DTM loop conveys consumption information about one metering period.
PA Use:	Required - The QTY/DTM loop may be sent twice depending on the time of year the Historical Usage is being provided. (PLC is effective June 1 - May 31) One iteration will show the current PLC and a second iteration will show the PLC that will be effective in the period defined in the DTM segment. Currently the PA EDCs change the PLC effective June 1st. Once the EDCs are aware of what the next effective PLC will be (typically in December) they should begin providing it on transactions.  For example, in February 2010 the PLC values would be reported as:
	QTY*KC*476*K1
	DTM*007****RD8*20090601-20100531
	QTY*KC*450*K1
	DTM*007****RD8*20100601-20110531
	Whereas in September 2010 the PLC value would include only one loop because the following year's PLC is undetermined: QTY*KC*450*K1
	DTM*007****RD8*20100601-20110531
NJ Use:	Required for PJM participants; see Notes section for utility support. This will be the Peak Load Contribution in effect when the transaction is requested.  NJ Note: PSE&G sends Capacity Obligation to PJM.
DE Use:	N/A
MD Use:	Required for PJM participants; see Notes section for utility support. This will be the Peak Load Contribution in effect when the transaction is requested. Potomac Edison – follows PA use of effective dates where Future Peak Load Contribution is sent when calculated and available.
Example:	QTY*KC*752*K1

Must Use	Ref. <u>Des.</u> QTY01	Data <u>Element</u> 673	Name Quantity Qualifier Code specifying the type		
			KC	Net Quantity Decrease	
				Peak Load Contribution: Peak load contributions provided PJM for Installed Capacity calculation (coincident with P. Peak).	
Must Use	QTY02	380	<b>Quantity</b> Numeric value of quantit	X R 1/15	
Must Use	QTY03	355	Unit or Basis for M Code specifying the units has been taken	<b>Teasurement Code</b> Sin which a value is being expressed, or manner in which a measurement	
			K1	Kilowatt Demand	

# March 14, 2017 Version 6.2

Represents potential power load measured at predetermined intervals

Segment: DTM Date/Time Reference (007=PLC Effective Date)

Position: 210
Loop: QTY
Level: Detail
Usage: Optional
Max Use: 10

**Purpose:** To specify pertinent dates and times

**Syntax Notes:** 1 At least one of DTM02 DTM03 or DTM05 is required.

2 If DTM04 is present, then DTM03 is required.

3 If either DTM05 or DTM06 is present, then the other is required.

## **Semantic Notes:**

Comments:	
PA Use:	Required for PJM Participants
	The QTY/DTM loop may be sent twice depending on the time of year the Historical Usage is being provided. (PLC is effective June 1 - May 31) One iteration will show the current PLC and a second iteration will show the PLC that will be effective in the period defined in the DTM segment. Currently the PA EDCs change the PLC effective June 1st. Once the EDCs are aware of what the next effective PLC will be (typically in December) they should begin providing it on transactions.
	For example, in February 2010 the PLC values would be reported as: QTY*KC*476*K1 DTM*007****RD8*20090601-20100531 QTY*KC*450*K1 DTM*007****RD8*20100601-20110531
	Whereas in September 2010 the PLC value would include only one loop because the following year's PLC is undetermined: QTY*KC*450*K1 DTM*007****RD8*20100601-20110531
NJ Use:	Not Used
DE Use:	Not Used
MD Use:	Required for Potomac Edison. Optional for other MD LDCs. See PA Notes for implementation.
Example:	DTM*007****RD8*20070601-20080531

	Ref. <u>Des.</u>	Data <u>Element</u>	<u>Name</u>	·	:	Attı	<u>ributes</u>
Must Use	DTM01	374	Date/Time Qualifie	er e of date, or time, or both date		M	ID 3/3

Segment: QTY Quantity (KZ=Network Service Peak Load)

Position: 110
Loop: QTY
Level: Detail
Usage: Optional
Max Use: 1

**Purpose:** To specify quantity information

**Syntax Notes:** 1 At least one of QTY02 or QTY04 is required.

2 Only one of QTY02 or QTY04 may be present.

**Semantic Notes:** 1 QTY04 is used when the quantity is non-numeric.

Comments:

Comments:	
Notes:	Each QTY/MEA/DTM loop conveys consumption information about one metering interval.
PA Use:	Required - The QTY/DTM loop may be sent twice when the Utility is providing both the current NSPL and the NSPL that will be effective for a subsequent period. This will occur for short period of time between when the future value is sent via the 814C and the actual date the future value takes effect.
	For example, you may receive either two loops:
	QTY*KZ*476*K1
	DTM*007****RD8*20100101-20101231
	QTY*KZ*450*K1
	DTM*007****RD8*20110101-20111231
	Or just one:
	QTY*KZ*450*K1
	DTM*007****RD8*20110101-20111231
NJ Use:	Required for PJM participants; see Notes section for utility support. This will be the Network
	Service Peak Load in effect when the transaction is requested.
	NJ Note: PSE&G sends Capacity Obligation to PJM.
DE Use:	N/A
MD Use:	Required for PJM participants, see Notes section for utility support. This will be the Network Service Peak Load in effect when the transaction is requested. Potomac Edison – follows PA use where Future Network Service Peak Load is sent when calculated and available.
Example:	QTY*KZ*752*K1

Must Use	Ref. <u>Des.</u> QTY01	Data Element 673	Name Quantity Qualifier Code specifying the type	Ī	Attributes M ID 2/2
			KZ	Corrective Action Requests - Written	
				Network Service Peak Load: Customer' contribution provided to PJM for the Tracalculation (coincident with LDC peak).	ansmission Service
Must Use	QTY02	380	<b>Quantity</b> Numeric value of quantity		X R 1/15
Must Use	QTY03	355	Unit or Basis for M Code specifying the units has been taken	leasurement Code in which a value is being expressed, or manner in v	M ID 2/2 which a measurement
			K1	Kilowatt Demand	
				Represents potential power load measure predetermined intervals	ed at
