Four out of five families in the US now own a grill. Most people barbecue at least once a week throughout the summer months. The number one choice for consumers is the propane grill with a cylinder. The New Jersey Division of Fire Safety and your local fire service suggest the following ways to keep fire safe.

GRILLING HINTS

- Before connecting propane, check for leaks with a 50/50 solution of liquid soap and water.
- Keep lid open when starting.

BARBECUE SAFETY

- **DO NOT** use matches or a lighter to check for leaks.
- **NEVER** use a fluid designed for a charcoal grill.

- **DO NOT** allow children to tamper with the cylinder or the grill.
- When finished turn off burner controls and close cylinder valve.
- Cover grill to prevent connector corrosion.

CYLINDER CARE

- Always store cylinders outside, in the upright position and **NEVER** inside.
- After fill up or exchange go directly home, valve closed and capped in a ventilated vehicle.
- **NEVER** store, use or transport near high temperature.
- On refills-exchanges have supplier check cylinder for damage, rust, dents or leaks.
- Keep the grill at least five feet from a combustible wall or fence.

In 2009 there were nearly 18,000 injuries nationwide involved in the use of gas fired and charcoal grills. National Fire Protection Association Report
