Categories: NJDEP

Theresa,

Based upon the low PAH levels detected in the soil piles (removed from the site) and the LSRP certification of the soil laboratory data of those soil piles, we are not concerned with the remaining soil on site. We will not be requiring any additional sampling of the remaining soil at the site for this REC to be clear.

Please contact Bill or myself if you have any additional concerns.

Sincerely,
Kim McEvoy

Bill,

We understand from your email below that you have cleared the original soil piles and we will address this in the EA. However do you have any issues on the remaining soil (surface/subsurface)?

Please provide your assessment of the findings regarding the remaining soils. Thanks, Theresa

Theresa,

The attached report submitted by Lewis Consulting Group is acceptable to NJDEP (please attach the new cover letter provided above to the original report). **The soil pile REC is considered cleared by NJDEP.** This report, along with the report from NJDEP inspector Shawn Bulger (also attached) should provide enough information for Gannett- Fleming to complete the Environmental review for this applicant. Please contact me and Kim McEvoy if you have any questions or require any additional information.
