Hi Nelson,

Thank you for the message and attached materials and map. It is not clear to me why you would have gotten a "yes" for T/E presence so you may want to investigate that further. I can tell you that it is not because of piping plover.

After reviewing the information that you sent and trusting that all work will be completed within the existing footprint of the developed part of the property, we find that there will be no affect on piping plovers. This finding means that consultation with USFWS will not be triggered and the applicant can move forward without any additional review for piping plovers.

Dear Christina:

We are performing a site specific (Tier II) review of a project site in Monmouth County, following the completion of the Tier I Environmental Assessment as part of New Jersey's Rehabilitation, Reconstruction, Elevation, and Mitigation (RREM) Program. I am writing to request that you provide us with a determination of project effects for this site.

The project location is 5 Island View Way, Unit 11 in Sea Bright (PAMS Pin: 1342\_1.05\_11).

The project involves reconstruction and elevation of a residential structure that was damaged by Superstorm Sandy. The NJDEP HUD Environmental Review Tool 2.1 shows Piping Plover layer to nearby but outside of the project site (see the attached endangered species map), however, centroid data returns a "yes" for the presence of state and federally listed

endangered animals.

A shapefile of the project site is attached. We appreciate your efforts in helping us resolve this matter. Please let me know if there are additional materials that you need from us.

Thank You,  
Adam
