Great. In that case, I have no concerns for state listed species Piping Plover and Least Tern and therefore there are no special conditions needed.

Christina – sorry, it looks like this email fell through the cracks!

After going through it does indeed look like all work will be interior. I think the only exterior “work” would possibly be if they need to temporarily store construction materials in the building’s parking lot.

Hi Gary,

I received your message regarding the Superstorm Sandy CDBG-DR environmental assessment – SRP0041091 and have reviewed it for possible conflicts with Piping Plover and Least Tern. After reviewing the documents you provided, I agree that there is no impact to these species based on the repairs that you describe in your email and those that are outlined in the estimate from Gilbane.

My only question is in regard to your sentence, "Notwithstanding this information, since the proposed work is limited primarily to interior repairs...". It looks to me that *all* the repairs are confined to the interior of the residence - when you used the word "primarily", did you mean that there are some repairs that will take place beyond the interior work outlined in the estimate? If so, what are those?

Thank you,  
chris

Chris,

This site intersects plover as well as least tern. Can you please review and reply to Gary and Cc me?

Thanks,

Pat

Patrick,

We have another Superstorm Sandy CDBG-DR environmental assessment – SRP0041091 – that we are reviewing and would like your input. The site is located at 1492 Ocean Avenue Unit A-6, Sea Bright, NJ (Block 2.03, Lot 1.06 – I have included a GIS shapefile of the parcel). This application is for a single residential unit located within an apartment building. We do not have any specific site plans for this application, but the documentation provided in the application (see attached) indicates that the property was not substantially damaged, and that work will be limited primarily to interior repairs.

The property shows up on NJDEP’s ArcGIS mapping as being within the Piping Plover buffer area (the USFWS’s IPaC results also indicate Piping Plover may be within proximity to the project site). Notwithstanding this information, since the proposed work is limited primarily to interior repairs on a previously developed lot, we feel there will be no impact to this species.

Please let us know your thoughts. If you require any additional information, don’t hesitate to contact me.

Thanks,  
Gary
