[1] County of incident is based on the zip code of the incident location. Due to conversion issues, there were instances for which this field was not available. In those instances, county of incident was obtained from pre-conversion incident municipality data.

[2] A report for an investigation can involve several children or a child with several allegations or both. This chart counts by children by separate incident, not allegations. If a child is the subject of several allegations related to the same incident, that is counted once. But if that child is the subject of reports on separate occasions - e.g. once in March and once in September - both of those incidents are included.

[1] County and municipality of incident are based on the zip code of the incident location. Due to conversion issues, there were instances for which this field was not available. In those instances, county and municipality of incident were obtained from pre-conversion incident municipality data.
[2] A report for an investigation can involve several children, or a child with several allegations, or both. This chart counts children by separate incident, not allegations. If a child is the subject of several allegations related to the same incident, that is counted once. But if that child is the subject of incidents on separate occasions - e.g. once in March and once in September - both of those incidents are included.
[3] Refers to instances for which the data were not reported at the municipal level, and there were no valid substitutions.
