

NEW JERSEY SMALL BUSINESS ENVIRONMENTAL ASSISTANCE PROGRAM

New Jersey Fuel Dispensing Facilities Compliance Calendar 2018

Welcome

The New Jersey Small Business Environmental Assistance Program developed this guidance document to help Fuel Dispensing Facilities comply with regulatory requirements for the transfer of fuel. We hope that you find this compliance calendar to be a helpful tool for your daily, weekly, monthly and annual record keeping obligations. Please feel free to contact us with any questions or comments regarding this compliance calendar.

Important Notes: The compliance calendar has some new regulations added to the calendar and more Air and UST regulations will continue to be added.

<u>UST Rules</u>: Complete <u>Underground Storage Tanks</u> (USTs) rules are available in the U.S. Code, Title 42, Chapter 82, Subchapter IX. Go to: <u>http://www.epa.gov/oust/fedlaws/index.htm</u> and for additional information use the link <u>http://www.nj.gov/dep/rules/notices/20170515a.html</u>

<u>Air Rules</u>: The Department proposes to repeal t-butyl acetate (TBAC) emissions reporting and recordkeeping requirements. Amendments to major and minor source permitting requirements expressly state that the terms of the preconstruction permit are incorporated into and become part of the operating permit, and provide that the Department will publish public notice of a draft operating permit by posting the notice on its website http://www.nj.gov/dep/rules/proposals/20170703a.pdf

> New Jersey Small Business Environmental Assistance Program New Jersey Department of Environmental Protection PO Box 420 Trenton, NJ 08625-0420 Phone (877) 753-1151 or (609) 633-0631 Fax (609) 777-1330

Instructions for Use

This compliance calendar has been developed to help gas stations comply with record keeping required by the Air General Permit for the NJ Vapor Recovery Program for Gasoline Dispensing Facilities (GP-004) and Fuel Dispensing Facilities (GP-004A). Please review your facility's air permit compliance plan for all conditions, requirements and submissions.

This document does not replace or supercede N.J.A.C. 7:27-16 et seq. GP-004 or GP-004A. If there are any discrepancies between this compliance calendar and your existing permit requirements or other New Jersey regulations, the permits and regulations take precedence. For more information on general permits and air regulations please visit <u>www.nj.gov/dep/aqpp/</u>.

Additionally, gas stations with underground storage tanks (UST) must comply with UST regulations. This compliance calendar provides limited guidance on the transfer of fuel into an UST, but it is not intended as a compliance assistance tool for other UST regulations. Release detection, corrosion protection, installation, closure, site remediation and other UST regulations are not components of this compliance calendar. For more information on UST regulations please visit <u>http://www.nj.gov/dep/srp/regs/</u>

Please report any errors or inconsistencies in this compliance calendar to the Small Business Assistance Program at (609) 292-8601 or (877) 753-1151

Best Management Practices (BMP) & Complying with NJDEP Regulations

Do Not Top-Off: Topping-off may result in a liquid blockage decreasing vapor control effectiveness and subsequent fines.

Liquid Extractors Must Be Used: if the hose hangs more than 10 inches from bottom of the nozzle when hanging in the holster.

Remove Pump Covers: When checking for leaks on a daily basis, remove the pump covers.

Equipment Replacements Must Be Compatible: When replacing individual components of a vapor recovery system, refer to the CARB EO for compatibility with the current system.

U Must have a current and valid UST registration and Financial Responsibility (Tank Insurance).

Must have Important Documents On Site: NJ DEP Air Certificate, Vapor Recovery Inspection Logs, CARB EOs, Vapor Recovery Equipment Testing Results, Equipment Change Logs, Release Response Plan, UST Registrations, and current Financial Responsibility (aka: Tank Insurance).

Keep Spill Buckets Clean: Spill catchment basins must be clear of fuel, water and debris otherwise fuel deliveries must be refused. Monitor the fuel delivery. The transfer operation is monitored constantly to avoid spilling and overfilling.

Test Release Detection System: Is your release detection equipment working properly? Run a quick "self-test" of the ATG to verify it's working properly. Check your manual dipstick to make sure it's not warped or worn. Have a passing release detection test every 30 days. Maintain the release detection system according to manufacturer's specifications.

Retractors: Must work properly otherwise they are not in compliance with CARB Executive Order (EO).

Overfill Protection options: Do you have an alarm? (if you have one): Is your overfill alarm outside, easily seen or heard and working? Or do you have flow restrictors or flapper values? Be sure they are functioning properly.

Cathodic Protection System (if you have one): Is your cathodic protection system turned on? For impressed current check your rectifier at least every 60 days and keep a record. Test your cathodic protection every 3 years. If your cathodic protection fails, you need to repair and apply for a Substantial Modification Permit. The sub mod permit can be found at http://www.nj.gov/dep/srp/forms/ust/

Fill and Monitoring Ports: Are covers and caps tightly sealed and locked? Are you checking the fillports before and after a delivery ensuring that no product, water, or debris exist in the ports? Do you keep records? All fill ports must be permanently marked to identify the product inside the tank system.

Spill and Overfill Response Supplies: Do you have the appropriate supplies for cleaning up a spill or overfill?

Dispenser Hoses, Nozzles, and Breakaways: Are they in good condition and working properly? Do you check them daily for any damage such as tears or leaks? Keep daily records. Keep records for repairs.

Dispenser Sumps & Piping/Turbine Sumps: Any signs of leaking? Are the sumps clean and empty? Keep monthly records for the piping/turbine sumps.

If you find any problems during a self-inspection, You or your equipment contractor must take action quickly to resolve the problems and avoid serious releases.

Air Permitting Requirements for Fueling Stations

All Fueling Stations Require a Valid Air Permit

(Note: A New General Air Permit "GP-004B" has been adopted when a facility decommissions Stage II replacing GP-004A)

Marinas with individual gasoline storage tanks equal to or greater than 2,000 gallons maximum capacity equipped with Stage I Vapor Control.

Facilities with individual gasoline storage tanks equal to or greater than 2,000 gallons maximum capacity equipped with Stage I Vapor Control and were constructed prior to June 29, 2003. The facility must not have, and has never had, for any 12-month period subsequent to February 6, 1989, an average monthly throughput of greater than 10,000 gallons (37,850 liters).

NOTE: Storage, transfer and dispensing of diesel fuel and kerosene may be included in this General Permit but does not require Stage I Controls. <u>www.nj.gov/dep/aqpp/gp.html</u> (When GP-014 expires, GP-014 will not be able to be renewed, apply for GP-004A, unless you decommission them apply for GP-004B).

□ <u>GP-004A</u>: GP-004A is available, GP-004 and GP-014 cannot be renewed. GP-004A is only a Paper Form for Fuel Dispensing Facilities Equipped with Phase I and Phase II Vapor Recovery Control Systems (Options FD-4A-4 and FD-4A-5 Only) (When GP-004 expires, GP-004 will not be able to be renewed, apply for GP-004A or GP-004B if Decommissioning STAGE II).

GP-004A has the following permitting options:

9 million gallons or less of annual throughput for gasoline storage tank(s) & dispensing equipment with Stage I & II Vapor Control Systems; or

15 million gallons or less of annual throughput for gasoline storage tank(s) & dispensing equipment with Stage I & II Vapor Control Systems with an additional vapor recovery system control

COST: \$820 www.nj.gov/dep/aqpp/gp.html.

<u>GP-004B</u>: GP-004B is available, GP-004B has the following permitting options for decommission of Stage II:

Marina gasoline storage tank(s) equipped with a Phase I vapor recovery control system used exclusively for refueling marine vehicles;

Airport gasoline storage tank(s) equipped with a Phase I vapor recovery control system used exclusively for refueling of aircraft;

Fuel service station gasoline storage tank(s) equipped with a Phase I vapor recovery control system having an annual facility throughput less than or equal to 20,000,000 gallons;

COST: \$820 <u>www.nj.gov/dep/aqpp/gp.html</u>.

Pre-Construction Permit (PCP): Fueling stations can obtain a PCP if they want a fuel throughput limit which exceeds the limit of a general permit or if the facility is ineligible for a general permit.

COST: \$2527 for gasoline tank + \$590 for each additional piece + \$2527 Risk Assessment fee.

Note: Stage I vapor recovery equipment must comply with NJAC 7:27-16.3 on all regulated gasoline tanks at the facility.

Stage II vapor recovery equipment must comply with NJAC 7:27-16.3 on all regulated gasoline dispensing equipment at the facility.

Transferring Ownership of a Gasoline Station Facility

Within 120 days after the sale of a gasoline station facility a Non-Technical Amendment must be submitted to the NJDEP to transfer the ownership of any air permits.

cost: \$173 (the form can be downloaded at: <u>www.nj.gov/dep/aqpp/applying.html</u>)

Decommission of Stage II

 \Box At least 14 days prior to commencing work to decommission, the owner or operator of the gasoline dispensing facility shall notify the Department by e-mail to 14dayUSTnotice@dep.nj.gov and include the name, address, and registration number of the facility, name and contact information for the owner and operator, the name and contact information of the certified individual and business conducting the decommissioning, and the date on which the decommissioning is scheduled to begin; and

Within 14 days after decommissioning is complete, the owner or operator of the gasoline dispensing facility shall notify the Department by email to 14dayUSTnotice@dep.nj.gov and include the name, address, and registration number of the facility, name and contact information for the owner and operator, the name and contact information of the certified individual and business conducting the decommissioning, the date on which the decommissioning was conducted and a decommissioning checklist in accordance with PEI/RP300-09, or a checklist that may be amended by the Department as applicable.

□ Apply for GP-004B and follow compliance plan

Vapor Recovery Equipment/Control Device Specifications

Stage I:

Transfer of gasoline and/or E85 from any delivery vessel into any stationary storage tank having a maximum capacity of 2,000 gallons or greater shall occur only if such storage tank is equipped with and operating the following emission controls:

A permanently affixed submerged fill pipe or bottom fill pipe.

A vapor control system that reduces the total applicable VOC emissions into the outdoor atmosphere by no less than 98 % of the applicable VOC by volume in the air vapor mixture displaced during the transfer of gasoline; and

A pressure/vacuum relief valve on each atmospheric vent which remains closed during the gasoline transfer; or

□ A floating roof tank.

Requirements for Gasoline Storage Tanks: GDF which commenced on or before June 29, 2003 shall keep a facility monthly throughput of less than 10,000 gallons in any month requires only stage I.

GDF, the Permittee must minimize spills, clean up spills expeditiously; cover gasoline containers and storage tanks fill pipes with gaskets seal and

minimize gasoline sent to open collection systems.

Above ground fuel storage tank(s) exposed to the sun's rays must be painted white. Visually inspect every 6 months.

All hoses, piping, connections, fittings and manholes shall be tight and leak free, except when gauging or sampling is performed.

The dispensing devices, associated hoses, and nozzles shall be maintained according to manufacturer's specifications. Inspect the dispensing devices daily for liquid or vapor leaks.

New & replaced tanks constructed on or after May 13, 2013 must be equipped with a dual point (no coaxial) vapor recovery system.

Vapor Recovery Equipment/Control Device Specifications

Stage I: Continued

The pressure/vacuum relief valves on each atmospheric vent shall remains closed during transfer operations except when the positive cracking pressure is exceeded. The specifications of the system shall be: Positive pressure setting of 3.0 ± 0.5 inches water column Negative pressure setting of 8.0 ± 0.5 inches water Column.

GDF constructed on or before November 9, 2006, the transfer of gasoline to the storage tank shall be made through a submerge fill pipe permanently affixed to the tank and with a discharge that is no more than 12 inches for pipes.

GDF constructed after November 9, 2006, the transfer of gasoline to the storage tank shall be made through a submerge fill pipe permanently affixed to the tank and with a discharge that is no more than 6 inches for pipes.

 \Box GDF with monthly throughput >100,000 gallons of gasoline and or E-85, the vapor recovery and product adoptors and the method of connection with the delivery elbow, shall be designed so as to prevent the over tightening or loosening of fittings during normal delivery operation.

 \Box GDF with monthly throughput >100,000 gallons of gasoline and or E-85, the vapors line from the gasoline storage tank to the gasoline cargo shall be vapor tight.

 \Box GDF with a monthly throughput >100,000 gallons of gasoline and or E-85, all vapor connections and lines on the storage tank shall be equipped with closures that seal upon disconnect.

 \Box GDF with a monthly throughput >100,000 gallons of gasoline and or E-85, Liquid fill connections for all systems shall be equipped with vapor-tight caps.

 \Box For GDF with a monthly throughput >100,000 gallons of gasoline and or E-85, Pressure/vacuum (PV) vent valves shall be installed on the storage tank vent pipes. The pressure specifications for PV vent valves shall be: a positive pressure setting of 2.5 to 6.0 inches of water and a negative pressure setting of 6.0 to 10.0 inches of water. The total leak rate of all PV vent valves at an affected facility, including connections, shall not exceed 0.17 cubic foot per hour at a pressure of 2.0 inches of water and 0.63 cubic foot per hour at a vacuum of 4 inches of water.

 \Box GDF with a monthly throughput >100,000 gallons of gasoline and or E-85, must be equipped with a dual point (no coaxial) vapor balance system for GDF or tanks constructed after November 9, 2006, and reconstructed GDF.

Vapor Recovery Equipment/Control Device Specifications

Stage II:

Transfer of gasoline and/or E85 into any gasoline vapor laden vehicular fuel tank must be made only if such operation is equipped with a vapor control system that meets the following conditions:

 \Box A vapor control system that reduces the total applicable VOC emissions into the outdoor atmosphere by no less than 95 % of the applicable VOC by volume in the air vapor mixture displaced during the transfer of gasoline; and

□ The system prevents overfilling and spillage.

The system has been California Air Resource Board (CARB) Certified and is operated in accordance with manufacturer's specifications.

Each dispensing device and its nozzle(s) at all GDFs shall be equipped with a check value in the dispenser nozzle. The nozzle together with its vapor boot fits into the housing in which it is hung on the dispensing device; and the nozzle's vapor check value remains in the closed position when the nozzle is properly hung on the dispensing device.

Each nozzle at all GDFs with a vacuum assist vapor control system shall be equipped with a splash guard that prevents spillage during refueling on each nozzle at the facility. The nozzle together with its vapor boot fits into the housing in which it is hung on the dispensing device; and the nozzle's vapor check valve remains in the closed position when the nozzle is properly hung on the dispensing device.

Each dispensing device at a new GDF that dispenses more than one grade of gasoline shall utilize a unihose system if the GDF was constructed or reconstructed on or after June 29, 2003.

□ Each dispenser shall be equipped with breakaways.

Fuel Throughput Limits:

Pre-Construction Permits (PCPs): PCPs are individual permits and have site specific requirements. Please check your PCP compliance plan for your facility's throughput limit.

GP-004A: The General Permit - 004A allows GDFs with Stage I & II vapor controls with throughput options of 9 million gallons of gasoline per consecutive 12-month period year or 15 million gallons of gasoline per consecutive 12-month period year.

GDFs choosing the 15 million gallons of annual throughput under pending GP-004A must have an additional vapor recovery system (i.e., hydrocarbon vapor membrane), which operates in conjunction with the Stage I & II vapor recovery systems and on-board refueling vapor recovery, capable of reducing emissions and recovering gasoline vapors at greater than or equal to 95% recovery efficiency.

Vapor Recovery Equipment Record Keeping

All vapor recovery equipment located at the facility must be California Air Resource Board (CARB) Certified and operate in accordance with manufacturer's specifications [N.J.A.C 7:27-16.3(e)2]. In order to comply with this requirement you must keep the following records:

1. You must have on site the manufacturer's specifications demonstrating vapor control compliance with gasoline transfer requirements for both Stage I and Stage II equipment. (See the previous page for required equipment specifications)

2. A Copy of the CARB Executive Order for each Stage II Vapor Recovery system shall be maintained on site for the life of the equipment and made available to the Department upon request. (Executive Orders can be found online at: www.arb.ca.gov/vapor/eo.htm)

3. Any of the following changes listed below must be recorded in either a log book or in readily accessible computer memories listing a description of the change and the date on which it occurred. These records shall be made available to the Department upon request:

- Replacement of any existing gasoline tank(s),
- \Box Addition of any new gasoline tank(s),
- Change of material stored
- Records of these changes must be maintained on site for a minimum of 5 years.

4. Vapor Recovery Equipment Testing must be conducted within 90 days when any of the above listed changes are conducted (see the following page for testing requirements).

Equipment Change Log for 2018

Description of Equipment Change	Date of Change
Records of these changes must be maintained on site for a minimum of 5 years.	

Vapor Recovery Equipment Testing											
All Gasoline Dispensing Facilities (GDF) Shall Conduct And Pass The Following Tests: **											
Name of Test	Testing Protocol	Testing frequency									
Static Pressure Performance Test	CARB TP-201.3	at least once in every 12 month period *									
Pressure Vacuum Valve Test	CARB TP-201.E or GP-004A allows pressure vacuum valve replacement every two years***	at least once in every 12 month period *									
Dynamic Backpressure Performance Test	CARB TP-201.4	at least once in every 36 month period *									
GDFs Using Vacuum Assist Systems Shall Conduct And Pass An Additional Test: **											
Air to Liquid Volume Ratio Test	CARB TP-201.5	at least once in every 12 month period *									

Vapor Recovery Equipment Testing Log

All vapor recovery equipment located at the facility must be tested for compliance with California Air Resource Board (CARB) performance standards and specifications. The facility must maintain test results, which include date of the test, the time the test was conducted and the results. All records, including test results, must be maintained on site for at least three to five years (Read your Permit) and made available to the department upon request.

Name of Test	Date of Test	Time of Test	Result of Test (Pass / Fail)
	Important Notes:		
 * All vapor recovery equipment must be tested within 90 d. installation of Gasoline Stage II Vapor Recovery replacement of any existing gasoline tank(s); addition of any new gasoline tank(s); replacement of any underground vapor return line 	retest any vapor control sys Upon failure of the retest th	t the Permitee shall repair and stem within 14 days of failure. he Permitee shall notify the hin 72 hours of the failure to	
• change of material stored from diesel or kerosene	*** Refer to your air perm	it for requirements.	

Fueling Stations Record Keeping

Vapor and Liquid Leaks and Equipment Repair Record Keeping

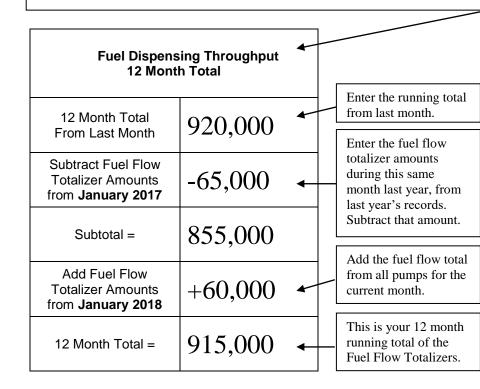

Inspections: The NJDEP requires inspection of your dispensing equipment during the days of operation, such as: pumps, nozzles, bellows, hoses, breakaways, and swivels. Record the results if a leak was detected or no leak was detected. If a vapor or liquid leak is detected the leaking equipment must be taken out of service until the necessary repairs are completed. Be sure to record the results of the inspection on the calendar and describe and any remedial action taken to repair the leaks. Indicate the date repaired and equipment repaired. All records must be maintained on site for a minimum of 5 years and made available to the department upon request.

Fuel Dispensing, Spill Basins, and Spill Containment Equipment Record Keeping

Fuel Dispensing Logs: The NJDEP requires gas stations to keep a log of the fuel dispensed on a monthly basis and to calculate how much fuel was dispensed in the last 12 months. Below is a sample of how to complete the loa:

Spill Catchment Basin Inspection Log: The NJDEP requires that spill catchment basins be inspected before & after fuel delivery. Additionally, Stage I vapor recovery equipment must be operating properly. Use the log below to show compliance with this regulation.

delivery. Fuel delivery cannot be accepted if Stage I vapor recovery equipment is not working properly or if the spill basin contains fuel, water or debris. Spill Basin Stage I Date of Deliverv Inspected Inspected

Spill Basin & Stage I Inspection Log

Inspections must be conducted before & after every

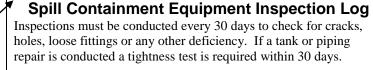

After inspection of catchment basin, check-off the box if it is clean and clear of fuel, water or debris.

After inspection of Stage I vapor recovery equipment, check-off the box if the equipment is working properly.

Write the date of delivery. Do not accept fuel deliveries if the equipment fails your inspection.

Spill Containment Equipment Inspection Log:

The NJDEP requires spill containment equipment to be inspected every 30 days. Use the log on the right to record if any repairs are needed.

Spill Contain Equipme		Date Inspe		Are Repairs Required?	-

Community Right to Know Surveys Go Electronic

The New Jersey Department of Environmental Protection (NJDEP), Community Right to Know (CRTK) program has instituted Mandatory Electronic Submittal of CRTK Surveys. (CRTK Surveys are due March 1 of every year). Therefore, you will no longer be receiving a paper copy of the Survey to complete.

STEP 1: Requesting Access (New Users - are users who do not already have a NJDEP Online account or ID)

1. Go to <u>http://www.njdeponline.com</u> and select the button labeled "NEW USERS Request Access to NJDEP Online for Registered Services." This will open a new screen entitled "Request Access to NJDEP Online."

- 2. Fill in all fields.
- 3. Click on the "Request" button.

STEP 2: Link Your NJDEP Online Services to Your myNewJersey Account

Fill out Section B with your desired 'Log On ID,' 'Password,' 'Security Question,' and 'Security Answer' and click "Create this new myNewJersey Account and Link NJDEP Online To It." (**Remember to write down this information!**)

STEP 3: Use NJDEP Online

1. Enter your contact information. Click on Add Contact Number and add at least one contact number and click "Continue."

2. The next screen is the "Request your Certification PIN." You do not need a Certification PIN to complete the Right to Know Survey. Click on "Complete Setup."

3. Select "Community Right to Survey" from the My Services screen and click "Ok."

4. To add your facility, click on "Add Facility" and in the box next to "Facility ID" enter your 11 digit Facility ID and click "Search." Once your facility appears click inside the small box then click on "Add Selected Facility."

STEP 4: Accessing the Community Right to Know Survey

- 1. Make sure you are on the "My Workspace page."
- 2. Under "Service Selection" click on "Community Right to Know Survey"
- 3. The Facility Selection will appear. Click on the "Yellow paper icon" located on the right-hand side under "Access Facility."
- 4. Click "Continue"
- 5. Then go through the Five steps to submit your survey.

You are now ready to complete and submit your Community Right to Know Survey for the 2014 reporting year. The Community Right to Know submittal function for Reporting Year will be available the first week of January.

Note: After completing these steps, you will be able to access NJDEP Online by visiting <u>http://www.njdeponline.com</u> and clicking "Log in to NJDEP Online" within the blue box at the top right of the screen. If you need further assistance, please contact us at the link labeled 'Address your comments and suggestions to us' located at the bottom of <u>http://www.njdeponline.com</u>.

Information or assistance is available by calling (609) 292-6714 from 8:00a.m.-5:00p.m. You can also visit our website at http://www.nj.gov/dep/opppc/.

The following pages are online examples of the "Company Information" screen and the "Submittal List" screen:
