

## Wayne Township

### **Wayne Campus Cogeneration & Renewable Energy Project**

Wayne Township has embarked on a unique approach to energy conservation and education. Their municipal building, main library, high school, elementary school, Board of Education and Department of Parks and Recreation Facility are all located within a 400,000 square foot contiguous area with no public roads intersecting. This area has been designated as a campus where the township will first investigate opportunities for energy conservation within each building and second will treat the campus as one site where they will employ multiple renewable energy technologies (solar, geothermal and wind) with cogeneration and a strong environmental educational program. For additional details click on the link above.
