

Channel Catfish

Ictalurus punctatus

Description:

- ◆ deeply forked caudal fin
- ◆ upper jaw projects beyond lower
- ◆ white to dusky chin barbels
- ◆ olive to pale blue on back and sides with silvery white belly
- ◆ numerous small dark spots on back and sides: absent on young and less obvious on large adults

Size:

- ◆ up to 50 inches

Range:

- ◆ Native to North America, east of Rockies from south Canada, south into northeast
- ◆ Mexico and east of the Appalachians; absent through much of the coastal plains
- ◆ north of Florida; introduced over much of the U.S.

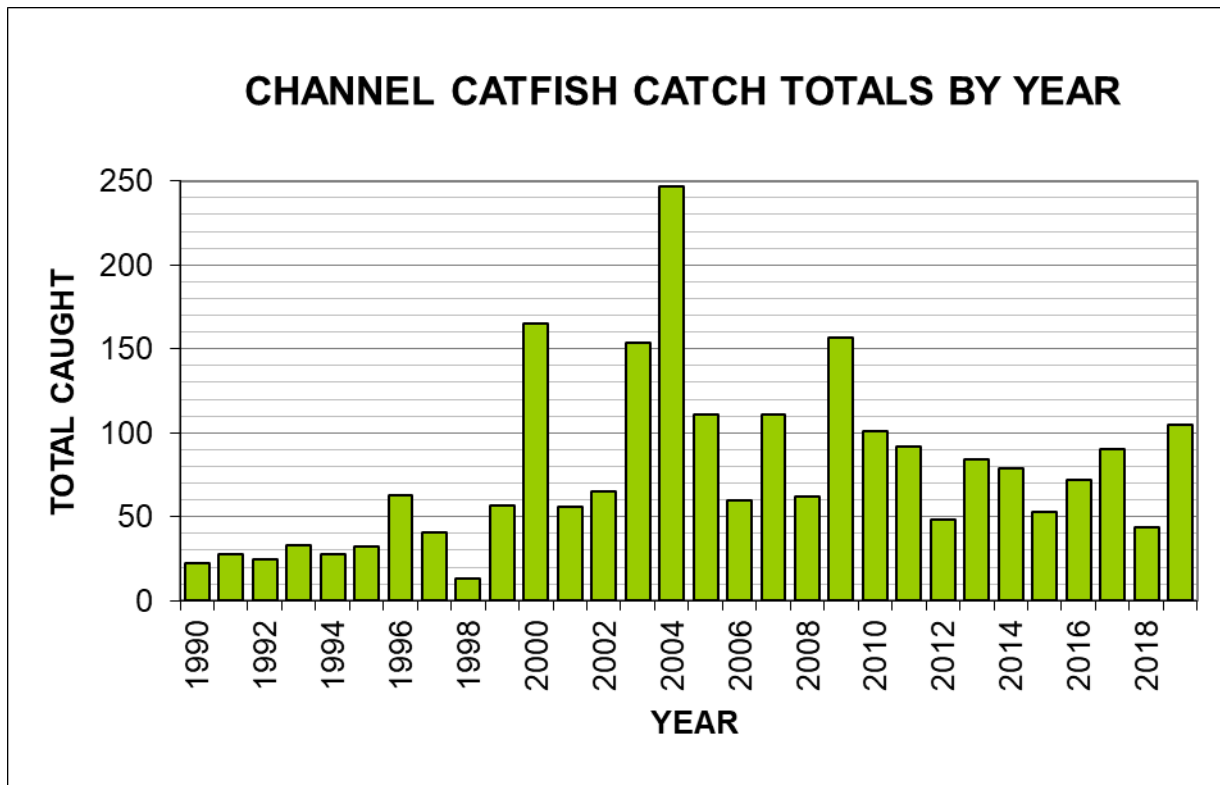

Facts:

- ◆ spawn in late spring or early summer
- ◆ males select dark, secluded nest sites
- ◆ golden yellow gelatinous egg mass deposited by female in bottom of nest and guarded by male
- ◆ eggs hatch in a week, if not eaten by male
- ◆ fry remain in nest with male for another week
