TRENTON, NEW JERSEY 08625

SHEET 34
TOPOGRAPHIC SERIES

NOTE—The curved lines are level lines drawn on the earth's surface. All points through which any given line passes are at the same level and their height above mean sea level is shown by the figures on the line. The rise or fall from any line to the next is, as the figures will show, 10 feet. Figures not on any line show the actual elevation of the surface at a point indicated by a small cross. Figures on the blue ground indicate the depth of water at mean low tide, as revised for 1910. U. S Coast Charts should be used for water depths.

The numbers shown at the borders are for N. J. Plane Coordinate Grid System. (The last three digits are omitted viz: 1,740, equals 1,740,000 feet.)

NEW JERSEY - DELAWARE BOUNDARY (Decfsion of U. S. Supreme Court Feb. 5, 1934)

Within the twelve mile circle about the town of New Castle, Delaware the river and the subaqueous soil thereof up to the low water mark on the easterly or New Jersey side will be adjudged to belong to the State of Delaware, subject to the compact of 1905. Below the twelve mile circle, the true boundary will be adjudged to be the middle of the main ship channel in Delaware River and Bay.
