PRELIMINARY ASSESSMENT REPORT
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

Executive Summary

Langan Engineering and Environmental Services, Inc. (Langan) has prepared this Preliminary Assessment (PA) Report for the project known as "New Meadowlands Stadium Project" ("Project") located on a portion of the Meadowlands Sports Complex, which is located at 50 State Highway Route 120 in East Rutherford, Bergen County, New Jersey. The Project consists of the New Meadowlands Stadium, Giants Practice Facility, and associated ancillary components. The project is located on a portion of land situated on Block 107.01, Lot 1 in the Borough of East Rutherford, Bergen County, New Jersey. The approximate 200 acre Project is presently comprised of Giants Stadium, practice fields, parking lots Y, 1 through 18, as well as the interior landscaped portions of the western peripheral road ("Site") (See Figures 1 through 3). This PA addresses the existing stadium, two practice facilities, and parking lots and access roads.

This PA Report summarizes the site history and current operations in order to evaluate potentially contaminated areas of concern (AOCs) currently and/or formerly located within the project site. This PA was performed in accordance with the NJDEP Technical Requirements for Site Remediation, N.J.A.C. 7:26E (Technical Requirements). A site inspection was performed on 6 June 2005 and updated on 20 December 2005.

The land comprising the Site was acquired by the New Jersey Sports and Exposition Authority (NJSEA) in the early 1970s. The construction of the existing Giants Stadium commenced on 19 November 1972. From the mid 1950s until just prior to the completion of the stadium in 1976, portions of the eastern border of the Site were occupied intermittently by what appear to be several small warehouse or trucking facilities, the largest of which occupied the existing Giants Stadium parking lots 4, 7, and 8. Most of the area that these facilities occupied was utilized for the parking of tractor trailers. Prior to the mid 1950s, the entire Site consisted of undeveloped wetlands and marshlands.

A records review indicates that non-indigenous fill material was placed at the Site in the early 1970s for the purpose of raising the topographic grade prior to the development of the existing stadium.

Several permits and other regulatory listings are identified in regulatory agency records relating to the Meadowlands Sports Complex and the NJSEA. These permits apply to the entire Meadowlands Sports Complex (i.e. Giants Stadium, Meadowlands Racetrack,

Continental Airlines Arena, and Meadowlands Xanadu) and, depending on the permitted activity, are not necessarily associated with the stadium or its activities.

Based on the results of this PA, 12 AOCs have been identified (See Figures 5 and 6). These AOCs consist of the following:

AOC – 1. Former Underground Storage Tanks (USTs) – NJDEP issued No Further Action (NFA) letters in 2001 and 2002 for the USTs which comprise this AOC.

AOC – 2. Dumpsters

AOC – 3. Chemical Storage Cabinets

AOC – 4. Floor and Trench Drains

AOC – 5. Stormwater Collection System

AOC – 6. Historic Fill

AOC – 7. Historic Spills

AOC – 8. Maintenance Shop

AOC – 9. Carpenter Shop

AOC – 10. Electrical Transformers

AOC – 11. X-Ray Room

AOC – 12. Photographic Darkroom

A site investigation (SI) has been completed to address the AOC-6 (Historic Fill) for which further investigation was warranted based on the PA findings. The SI of this AOC was performed to evaluate the presence of contaminants above the potentially applicable remediation standards. The resulting Site Investigation Report and Remedial Action Workplan will be submitted to the NJDEP in accordance with N.J.A.C. 7:26E (Technical Requirements). With regards to AOC-7 (Historic Spills), Langan has been in contact with NJDEP regarding the status of the five open cases associated with the Site. At this time, site investigation activities do not appear to be warranted in any of the cases. However, Langan will continue to gather information regarding the status of each of these cases to determine the need to proceed with site investigation activities.

New Jersey Department of Environmental Protection
Site Remediation Program

PRELIMINARY ASSESSMENT REPORT

This form has been created to assist in completing a Preliminary Assessment in accordance with the Technical Requirements for Site Remediation, N.J.A.C. 7:26E. It must be completed in detail and supplemented with narratives where directed. This form takes the Preliminary Assessment requirements of the Technical Rules and puts them into a question and answer format. It is the foundation for completing an environmental investigation of a site as a means towards obtaining a no-further-action approval from the Department ; as well as a means toward meeting the minimum requirements of the due diligence requirements of the innocent purchaser defense as defined by N.J.S.A. 58:10-23.11g

INFORMATION IN THE REPORT SHALL BE USED AS THE INITIAL BASIS FOR ASSESSING POTENTIAL ENVIRONMENTAL CONCERNS. THIS FORM MUST BE CERTIFIED IN ACCORDANCE WITH N.J.A.C. 7:26E-1.5. SUBMIT ONE ORIGINAL CERTIFIED COPY OF THIS FORM UNLESS IT IS ACCOMPANIED BY A SITE INVESTIGATION REPORT AND A PROPOSED REMEDIAL INVESTIGATION WORKPLAN IN WHICH CASE 3 COPIES SHALL BE SUBMITTED.

This form should be used as a foundation for completing a preliminary assessment report in accordance with N.J.A.C.7:26E, the Technical Requirements for Site Remediation, subchapter 3.1 and 3.2. The purpose of a preliminary assessment is to identify the presence of any potentially contaminated areas of concern. And if the information gathered to complete this form identifies and potentially contaminated areas of concern, then there is a need to complete a site investigation pursuant to N.J.A.C. 7:26E-3.3 through 3.13. If this is the case, then continue with the remedial activities and submit the preliminary assessment report with a complete site investigation report and a proposal based on the findings of the site investigation.

The Department will accept mimeograph copies or computer-generated copies of this form provided the copies are legible and all questions listed on this form are included.

The application must be notarized.

Should you encounter any problem in completing this form, we recommend that you discuss the matter with your assigned Case Manager for active cases or a representative from the Department if completing the form in anticipation of a future submittal to the NJDEP. Submitting incorrect or insufficient data may cause processing delays and possible postponement of your transaction.

Please call (609) 633-0708 or your assigned case manager between the hours of 8:30 a.m. and 4:30 p.m. to request assistance.

4/98

NEW JERSEY DEPARTMENT OF ENVIRONMENTAL PROTECTION
DIVISION OF RESPONSIBLE PARTY SITE REMEDIATION
P.O. Box 435, TRENTON, NJ 08625-0435

PRELIMINARY ASSESSMENT REPORT

Answer all questions. Should you encounter any problems in completing this form, we recommend that you discuss the matter with a representative from the Site Remediation Program. Submitting incorrect or insufficient data may cause processing delays and possible postponement of your transaction

PLEASE PRINT OR TYPE

Date: 2/21/2006

Industrial Establishment/Site Name New Meadowlands Stadium Project

Address 50 Route 120

City or Town East Rutherford Zip Code 07073

Municipality East Rutherford County Bergen

Block (s) 107.01 Lots (s) 1

Site Remediation Program Case Number or EPA Identification Number None

1. Present a history of ownership and operations at the industrial establishment, in tabular form, from the time the site was naturally vegetated or utilized as farmland in accordance with N.J.A.C. 7:26E-3.1(c)1.i. (attach additional sheets as necessary)

Name of Property Owner	From	To
State of New Jersey	---	1971
New Jersey Sports and Exposition Authority	1971	Present

Name of Operator	From	To
State of New Jersey	---	10 May 1971
Warehouse	Early 1950s	Early 1970s
Trucking/Warehouse facility	Middle 1960s	Early 1970s
Warehouse	Late 1960s	Early 1970s
New Jersey Sports and Exposition Authority	10 May 1971	Present

2A. In accordance with N.J.A.C. 7:26E-3.1(c)1.ii, provide a clear and concise description of the past industrial/commercial operation(s) conducted on site by each owner and operator. To the extent available the site history shall include an evaluation of the following sources of information:

(1) Sanborn Fire Insurance Maps; (2) MacRae's Industrial Directory; (3) Title and Deed; (4) Site plans and facility as-built drawings; (5) federal, state, county and local government files; (6) The Department Geographic Information System. (7) and any additional sources which may be available for a specific site.

Site history is frequently an item where preliminary assessments are incomplete. The Industrial Site Recovery Act requires that a diligent inquiry be made, researching the site history back to January 1, 1932. Common answers to this question have included: "Unknown", or "We are only a tenant on the site and have no knowledge of prior site history". Neither of these answers satisfies the requirement for a due diligent inquiry.

To avoid having a PA found incomplete by the Department due to insufficient information, the site history must be researched. The following are ways of obtaining information regarding site history: title searches; contacting the local and county health officials and municipal agencies (for example, local fire and police departments, and local planning, zoning, adjustment boards) requesting any information these public agencies may have on the specific location; and, interviewing long time neighbors of the industrial establishment. Tenants should always request information from the landlord. The applicant should always document any attempts to locate this information to support a claim that a diligent inquiry has been conducted. If the prior site history demonstrates that the current building was built on vacant unimproved property, it should be reported as such. If the site has been, or is now the subject of a site remediation , any prior cases should always be referenced.

Provide the page or appendix number where the site history may be found. Appendix A

Provide a listing of the resources utilized to compile the site history and as appropriate copies of any maps or information, which will assist the Department in evaluating your conclusions.

Name of Resource	Date of document reviewed	Appendix # if providing copies
Aerial Photographs	1940, 1951, 1953, 1961, 1966, 1969, 1974, 1976, 1985, 1995	B
USGS Topographic Maps	1900, 1903, 1905, 1947, 1955, 1967, 1981, 1995	B
Sanborn Fire Insurance Map	Coverage does not exist	A
State and Federal Government Database Search	6 December 2005	C
City Directory	26 May 2005	D

2B. Include a detailed description of the most recent operations subject to this preliminary assessment .

Provide the page or appendix # where the description of the most recent operations may be found. Appendix E

3. Hazardous Substance/Waste Inventory: N.J.A.C. 7;26E-3.1(c)1.iii. List all raw materials, finished-products, formulations and hazardous substances, hazardous wastes, hazardous constituents and pollutants, including intermediates and by-products that are or were historically present on the site. Note: If past usage included farming, pesticides may be a concern and should be included in this list. **(attach additional sheets if necessary).**

Material Name	CAS # if known	Typical annual usage (gallons/lbs.)	Storage method (i.e. Drum, tank, jars)
See Appendix F			

4 A. In accordance with N.J.A.C. 7:26E-3.1(c)1iv provide a summary of all current and historic wastewater discharges of **Sanitary and/or Industrial Waste** and/or sanitary sludges. Present and past production processes, including dates, and their respective water use shall be identified and evaluated, including ultimate and potential discharge and disposal points and how and where materials are or were received on-site. All discharge and disposal points shall be clearly depicted on a scaled site map.

Information required under this item is intended to identify potential discharges to any on-site disposal system, such as a septic system or lagoon or drywell. As an example, a facility that currently discharges sanitary and other wastes to the public sewer system, but maintained an on-site septic system prior to 1976, would complete this item as follows:

Site Information

Discharge Period		Discharge Type	Discharge Location
From	To		
1976	Present	Sanitary	Public Treatment Works
1976	Present	Storm water	Various locations (Sports Complex lagoon system)

4B. Provide a narrative of disposal processes for all historic and current process waste streams and disposal points. (attach additional sheets if necessary)

See Appendix G

5. This question requires the applicant to conduct a diligent inquiry into the current and historic operations at the site to identify all of the potential areas of concern, which formerly or currently exists at the industrial establishment as defined in N.J.A.C. 7:26E-1.8.

Diligent inquiry as defined in N.J.A.C.7:26E-1.8 states:

A. Conducting a diligent search of all documents which are reasonably likely to contain information related to the object of the inquiry, which documents are in such person's possession, custody or control, or in the possession, custody or control of any other person from whom the person conducting the search has a legal right to obtain such documents; and

B. Making reasonable inquiries of current and former employees and agents whose duties include or included any responsibility for hazardous substances, hazardous wastes, hazardous constituents, or pollutants, and any other current and former employees or agents who may have knowledge or documents relevant to the inquiry.

In accordance with N.J.A.C. 7:26E3.1(c)1.v., a narrative shall be provided for each area of environmental concern describing the **(A)** Type; **(B)** Age; **(C)** Dimensions of each container/area; **(D)** Chemical Content; **(E)** Volume; **(F)** Construction materials; **(G)** Location; **(H)** Integrity (i.e., tank test reports, description of drum storage pad); and **(I)** Inventory control records, unless a Department-approved leak detection system, pursuant to N.J.A.C. 7:1E or 7:14B, has always been in place and there is no discharge history. If sampling is not proposed for any identified area of environmental concern, please explain why it is believed that the area of environmental concern does not contain contaminants above the applicable remediation standards. Submit all necessary documentation to verify this belief. The required narrative need not describe the sampling to be completed; however, it should state that sampling will be completed in accordance with the appropriate section of N.J.A.C.7:26E. Detailed descriptions of all remediation activities shall be described in the site investigation report in accordance with N.J.A.C.7:26E-3.13. Note: If the industrial establishment has multiple locations for one type of area of concern (example: underground storage tanks are located in 3 separate areas of the facility), each area must be discussed separately.

Please indicate if any of the potential areas of environmental concern listed below in #5A through #5G, as defined in N.J.A.C. 7:26E-1.8, formerly or currently exist at the industrial establishment by indicating Yes or No in the appropriate space as provided.

For the Location Reference Keyed to Site Map, use either a number or letter identification and be consistent throughout each phase of the remediation, referring to the same identification provided herein.

Provide the required narrative as an appendix to this report. Do not try to provide a narrative in the space provided

I hereby certify that a diligent inquiry has been conducted to identify all current and historical potential areas of environmental concern and based on the diligent inquiry the areas of environmental concern identified below in question 5A through 5G are the only areas of environmental concern believed to exist at the above referenced industrial establishment.

A. Bulk Storage Tanks and Appurtenances, including, without limitation:

Area of Concern	Currently or Formerly Exists at the Site Yes/No	Location Referenced to the Site Map	Appendix Number
Aboveground Storage Tanks and Associated Piping	No		Not Applicable
Underground Storage tanks and Associated Piping	Yes	AOC #1	Appendix H
Silos	No		Not Applicable
Rail Cars	No		Not Applicable
Loading and unloading areas	No		Not Applicable
Piping, above ground and below ground pumping stations, sumps and pits	No		Not Applicable

B. Storage and Staging Areas, including

Area of Concern	Currently or Formerly Exists at the Site Yes/No	Location Referenced to the Site Map	Appendix Number
Storage pads including drum and/or waste storage	No		Not Applicable
Surface impoundments and lagoons	No		Not Applicable
Dumpsters	Yes	AOC #2	Appendix H
Chemical storage cabinets or closets	Yes	AOC #3	Appendix H

C. Drainage systems and areas including without limitation

Area of Concern	Currently or Formerly Exists at the Site Yes/No	Location Referenced to the Site Map	Appendix Number
Floor drains, trenches and piping and sumps	Yes	AOC #4	Appendix H
Process area sinks and piping which receive process waste	No		Not Applicable
Roof leaders when process operations vent to the roof	No		Not Applicable
Drainage swales & culverts	No		Not Applicable
Storm sewer collection systems	Yes	AOC #5	Appendix H
Storm water detention ponds and fire ponds	No		Not Applicable
Surface water bodies	No		Not Applicable
Septic systems leachfields or seepage pits	No		Not Applicable
Drywells and sumps	No		Not Applicable

D. Discharge and disposal areas, including, without limitation:

Area of Concern	Currently or Formerly Exists at the Site Yes/No	Location Referenced to the Site Map	Appendix Number
Areas of discharge per N.J.A.C. 7:1E	No		Not Applicable
Waste piles as defined by N.J.A.C 7:26	No		Not Applicable
Waste water collection systems including septic systems, seepage pits, & dry wells.	No		Not Applicable
Landfills or landfarms	No		Not Applicable
Sprayfields	No		Not Applicable
Incinerators	No		Not Applicable
Historic Fill or any other Fill material	Yes	AOC #6	Appendix H
Open Pipe discharges	No		Not Applicable

E. Other areas of concern, including, without limitation:

Area of Concern	Currently or Formerly Exists at the Site Yes/No	Location Referenced to the Site Map	Appendix Number
Electrical Transformers & Capacitors	Yes	AOC #10	Appendix H
Hazardous material storage or handling areas	No		Not Applicable
Waste Treatment areas	No		Not Applicable
Discolored or spill areas	Yes	AOC #7	Appendix H
Open areas away from production areas	No		Not Applicable
Areas of stressed vegetation	No		Not Applicable
Underground piping including industrial process sewers	No		Not Applicable
Compressor vent discharges	No		Not Applicable
Non-contact cooling water discharges	No		Not Applicable
Areas which receive flood or storm water from potentially contaminated areas	No		Not Applicable
Active or Inactive production wells	No		Not Applicable

F. Building interior areas with a potential for discharge to the environment, including, without limitation:

Area of Concern	Currently or Formerly Exists at the Site Yes/No	Location Referenced to the Site Map	Appendix Number
Loading or Transfer areas	No		Not Applicable
Waste Treatment areas	No		Not Applicable
Boiler rooms	No		Not Applicable
Air vents and ducts	No		Not Applicable
Hazardous material storage or handling areas	No		Not Applicable

G. Any other site-specific area of concern.

Area of Concern	Currently or Formerly Exists at the Site Yes/No	Location Referenced to the Site Map	Appendix Number
Maintenance Shop	Yes	AOC #8	Appendix H
Carpenter Shop	Yes	AOC #9	Appendix H
X-Ray Room	Yes	AOC #11	Appendix H
Photographic Darkroom	Yes	AOC #12	Appendix H

6. If the site area exceeds two acres, an interpretation of the aerial photographic history of the site shall be submitted in accordance with N.J.A.C. 7:26E-3.1(c)1.vi. The interpretation shall be based on available current and historical color, black and white and infrared aerial photographs (scale 1:18,000 or less) of the site and surrounding area at a frequency that provides the evaluator with a historical perspective of site activities. The photographic history shall date back to 1932 or the earliest photograph available. Aerial photographs are available for review at the New Jersey Department of Environmental Protection, Tidelands Management Program, Aerial Photo Library, 9 Ewing Street, Trenton, New Jersey, (609) 633-7369. Note, the applicant is not required to provide the Department with copies of the aerial photographs reviewed only an interpretation of what was observed in each photograph, which may represent an environmental concern.

_____ Check here if an aerial photo review was not complete and provide a reason.

_____

_____

Provide the appendix number for the air photo review narratives _B_____

7. Discharge History of Hazardous Substances and Wastes, N.J.A.C. 7:26E-3.1(c)1vii :

A. Have there been any known discharges of hazardous substances and wastes at the site?

_____ No (Go to question #8) __X__ Yes (Complete Items 7B & 7C)

B. Was the Department notified of the discharge?

__X_____Yes; ___ No

If yes, provide the Case # **See Appendix C**

C. Was a no-further-action letter, negative-declaration approval or full-compliance letter issued as a result of the cleanup of this discharge?

_____ Yes (Submit a copy of the no-further-action approval)

__X__ No (Submit a complete Site Investigation or Remedial Action Report documenting the action taken to address the discharge)

8. In accordance with N.J.A.C.7:26E-3.1 (c) 1.vii, provide a description of any remediation activities previously conducted or currently underway at the site, including dates of discharges, remedial actions taken, and all existing sample results concerning contaminants which remain at the site. Copies of Department or other governmental agency no-further-action approvals should also be provided with a description of the areas to which the no-further-action approvals apply. This information is especially important if the approval was granted for the remediation of a portion of a site or a specific discharge event rather than the entire site subject to this preliminary assessment.

_____ Check here if this question does not apply.

Provide the appendix number for the required narrative and data summary **Appendix K**

9. Protectiveness of past remedies, Order of Magnitude Analysis, N.J.A.C. 7:26E-3.1(c) 1.ix & N.J.A.C. 7:26E, 3.2(a)5

A. Have any areas of concern previously received a No-Further-Action approval from the Department or other equivalent government agency for which no additional remediation is proposed? X No (go to question #10). _____ Yes (complete 9B).

B. In accordance with N.J.S.A 58:10B-13(e) the following evaluation of the protectiveness of past remedies shall be completed for all areas of concern for which no further action was previously approved by the Department or other equivalent government agency and for

which no additional remediation is proposed. All final sampling results shall be evaluated to determine if contaminant levels remaining on site are in compliance with current remediation criteria. The applicant shall complete the following:

Include a table comparing the levels of contaminants remaining in each area of concern, the numerical remediation standard approved in the remedial action workplan or at the time of no-further-action approval and the numerical remediation standards applicable at the time of the comparison. The table shall contain all sampling results, including sample location, sample media, field and laboratory identification numbers, and method detection limits, as necessary, and analytical results for all individual contaminants for each area of concern.

I hereby certify that the order of magnitude analysis required pursuant to N.J.A.C. 7:26E has been completed, since the issuance of a No-Further-Action approval, negative declaration approval or equivalent remediation approval; and (Check the appropriate statements (1), (2), (3) or (4))

(1) ____ The areas of concern listed below contain contaminants above the numerical remediation standard applicable at the time of the comparison, however no further action is required because: (check the appropriate sub statement)

_____ (a) The contaminant concentrations remaining in the areas of concern listed below are less than an order of magnitude (factor of 10) greater than the numerical remediation standard applicable at the time of the comparison;

_____ (b) The areas of concern or the site was remediated using engineering and institutional controls approved by the Department and these controls are still protective of public health, safety and the environment; or

_____ (c) The area of concern or the site was remediated to an approved site specific remediation standard and all of the factors and assumptions which are the basis for deriving the site specific remediation standard remain valid for the site.

Please list the areas of concern for which the previous statement applies.

Area of Concern	Location Reference Keyed to the Site Map
None	

(2) ____ The areas of concern listed below contain contaminants above the numerical remediation standard applicable at the time of the comparison and further remediation is required because: (check the appropriate sub statement)

_____ (a) The contaminant concentrations remaining in the areas of concern listed below are more than an order of magnitude (factor of 10) greater than the numerical remediation standard applicable at the time of the comparison;

_____ (b) The areas of concern or the site was remediated using engineering and institutional controls approved by the Department and these controls are no longer protective of public health, safety and the environment; or

_____ (c) The area of concern or the site was remediated to an approved site specific remediation standard and some or all of the factors and assumptions which are the basis for deriving the site specific remediation standard are no longer valid;

Please list the areas of concern for which the previous statement applies.

Area of Concern	Location Reference Keyed to the Site Map
None	

(3) _X_ The areas of concern listed below do not contain contaminants above the numerical remediation standard applicable at the time of the comparison and no further remediation is required.

Please list the areas of concern for which the previous statement applies.

Area of Concern	Location Reference Keyed to the Site Map
Former Underground Storage Tanks (NJ Spill Case Number 00-06-19-1733-40) NFA issued	AOC #1

(4).____The contaminant concentrations remaining in the below listed areas of concern are more than an order of magnitude greater than the numerical remediation standard applicable at the time of the comparison. However, no further remediation is required by the person conducting this preliminary assessment, because, in accordance with N.J.S.A. 58:10B13(e), that person is not liable for the contamination pursuant to N.J.S.A. 58:10-23.11g

Please list the areas of concern for which the previous statement applies.

Area of Concern	Location Reference Keyed to the Site Map
None	

10. Historical Data on environmental quality at the Industrial Establishment

A. Have any previous sampling results documenting environmental quality of the Industrial Establishment not received a no further action approval from the Department or been denied approval by the Department? (N.J.A.C. 7:26E-3.1(c) 1.viii)

_____Yes (See Attachment #_____) _X_ No (Go to 11)

B. Have there been any known changes in site conditions or new information developed since completion of previous sampling or remediation? If sampling results were obtained, but are not part of this application, please explain below (N.J.A.C. 7:26E-3.1©xi):

_____

_____

11 List all federal, state and local environmental permits at this facility, including permits for all previous and current owners or operators, applied for, received, or both (Attach additional sheets if necessary).

Check here if no permits are involved _____

A. New Jersey Air Pollution Control

Permit Number	Expiration Date	Type of Permitted Unit
None		

B. Underground Storage Tank Registration Number 0005401 (Note: All USTs decommissioned and NJDEP NFAs received.

Size of Tank (Gallons)	Tank Contents
Former 550 – Decommissioned in 2000/2001	Diesel Fuel
Former 2,000 – Decommissioned in 2000/2001	Diesel Fuel
Former 2,000 – Decommissioned in 2000/2001	Diesel Fuel

C. New Jersey Pollutant Discharge Elimination System (NJPDES) Permit

Permit Number	Discharge Type	Discharge Location Keyed to Site map	Expiration Date
NJ0023345	Stormwater	Stormwater outfall pipe	1994
NJ0023345	Stormwater	Stormwater outfall pipe	2010

D. Resource Conservation and Recovery Act (RCRA) permit # EPA ID NJD980647895

E. EPA Identification Number Not Applicable

F. In accordance with N.J.A.C. 7:26E-3.1(c) xii, list all other federal, state, local government environmental permits for all previous and current owners or operators applied for and/or received for the site including :

(1) Name and address of the permitting agency
(2) The reason for the permit
(3) The permit identification number
(4) The application date
(5) The date of approval, denial or status of the application
(6) The name and current address of the permittees
(7) The reason for the denial, revocation or suspension if applicable
(8) The permit expiration date

X Check here if no other environmental permits were applied for or received for this site.

Provide the appendix # for the required listing if other environmental permits exist for this site I.

12. In accordance with N.J.A.C. 7:26E-3.1(c)xiii, provide a summary of enforcement actions (including but not limited to, Notice of Violations, Court Orders, official notices or directives) for violations of environmental laws or regulations (attach additional sheets if necessary):

A. Check here if no enforcement actions are involved _____ (Go to 13 otherwise complete 12B)

B. (1) Name and address of agency that initiated the enforcement action

There have been no Enforcement Actions at this site

(2) Date of the enforcement action _____

(3) Section of statute, rule or permit allegedly violated _____

(4) Type of enforcement _____

(5) Description of the violation _____

(6) How was the violation resolved? _____

13. In accordance with N.J.A.C. 7:26E-3.1(c) xiv, please provide a narrative description of all areas where non-indigenous fill materials were used to replace soil or raise the topographic elevation of the site, including the dates of emplacement. **See Appendix J**

14. A. In accordance with N.J.A.C. 7:26E-3.2(a) 3.i, submit a scaled site plan, detailing the subject lot and block, property and or leasehold boundaries, location of current and former buildings, fill areas, paved and unpaved areas, vegetated areas, and all areas of concern identified above and all active or inactive wells. **See Figures**

B. Scaled historical site maps and facility as built drawings (if available).

C. A copy of the United States Geologic Survey (USGS) 7.5 minute topographical quadrangle that includes the site and an area of at least one mile radius around the site. The facility location shall be clearly noted. If a portion of the USGS quadrangle is used, the scale, north arrow, contour interval, longitude and latitude with the name and date of the USGS quadrangle shall be noted on the map.

15. In accordance with N.J.A.C. 7:26E-3.2, please provide the date that the site visit was completed to verify the findings of the preliminary assessment. 6 June and 20 December 2005

16. List any other information you are submitting or which has been formerly requested by the Department:

Description	Appendix #
None	

CERTIFICATION:

The following certification shall be signed by the highest-ranking individual at the site with overall responsibility for that site or activity. Where there is no individual at the site with overall responsibility for that site or activity, this certification shall be signed by the individual having responsibility for the overall operation of the site or activity.

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this application and all attached documents, and based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information, and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.

NEW JERSEY GEOLOGICAL SURVEY

HISTORIC FILL OF THE WEEHAWKEN QUADRANGLE
HISTORIC FILL MAP HFM-42

The uniform action shown here is subject to periodic update and revision.
Base map from U.S. Geological Survey, 1967. Photorevised 1995.
Digital data are available upon request from the New Jersey Geological Survey.

Fill mapping by S.D. Stanford
GIS cartography by M. Girard

EXPLANATION

The "Brownfield and Contaminated Site Remediation Act" (N.J.S.A. 58:10B-1 et seq.) requires the Department of Environmental Protection to map regions of the state where large areas of historic fill exist and make this information available to the public. This map shows areas of historic fill covering more than approximately 5 acres. For the purposes of this map, historic fill is non-indigenous material placed on a site in order to raise the topographic elevation of the site. No representation is made as to the composition of the fill or presence of contamination in the fill. Some areas mapped as fill may contain chemical-production waste or ore-processing waste that exclude them from the legislative definition of historic fill.

Fill was mapped from stereo aerial photography taken in March 1979, supplemented in places by planimetric aerial photography taken in the spring of 1991 and 1992. Additional areas of fill were mapped by comparing areas of swamp, marsh, and floodplain shown on archival topographic and geologic maps on file at the N. J. Geological Survey, dated between 1840 and 1910, to their modern extent. In a few places, fill was mapped from field observations and from drillers' logs of wells and borings.

Most urban and suburban areas are underlain by a discontinuous layer of excavated indigenous soil mixed with varying amounts of non-indigenous material. This material generally does not meet the definition of historic fill and is not depicted on this map. Also, there may be historic fills that are not detectable on aerial photography or by archival map interpretation and so are not shown on this map, particularly along streams in urban and suburban areas.

Use of the maps related to the Technical Rules, N.J.A.C. 7:26E

This map is provided for informational purposes only. The use of this map as the only source of information regarding the presence of historic fill at a site does not fulfill the diligent inquiry requirements of the Preliminary Assessment set forth at, N.J.A.C. 7:26E-3.1(c). This map may be used as one source of information to fulfill the requirements of the Site Investigation at, N.J.A.C. 7:26E-3.12. **This map is not intended to fulfill the Remedial Investigation requirements associated with historic fill at, N.J.A.C. 7:26E-4.6(b).**

APPENDIX A
Past Operational History
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

2A. In accordance with N.J.A.C. 7:26E-3.1(c)1.ii, provide a clear and concise description of the past industrial/commercial operation(s) conducted on site by each owner and operator. To the extent available the site history shall include an evaluation of the following sources of information:

(1) Sanborn Fire Insurance Maps; (2) MacRae's Industrial Directory; (3) Title and Deed; (4) Site plans and facility as-built drawings; (5) federal, state, county and local government files; (6) The Department Geographic Information System. (7) and any additional sources which may be available for a specific site.

The approximate 200-acre area designated as the site of the new Meadowlands Stadium and Giants Practice Facility (Site) is located within the Meadowlands Sports Complex, which is situated in metropolitan northeastern New Jersey within the Borough of East Rutherford and the County of Bergen. The Site is near the center of an area designated as the Hackensack Meadowlands District. In the early 1900s tidal marshes occupied 18,580 acres and fresh meadows covered 1,465 acres in the area commonly referred to as the Hackensack Meadowlands. The Hackensack Meadowlands Development Commission, which was established in 1968 and is now called the New Jersey Meadowlands Commission, has jurisdiction over much of this area outside of the Sports Complex, including 20,000 acres, which is designated the Hackensack Meadowland District. The NJSEA has jurisdiction of the Sports Complex.

Prior to industrialization and the impoundment of the freshwater segment above the head of tide, the Hackensack River and its tributaries supported a diverse fishery in this area. These waters and the adjacent wetlands were likely utilized by an abundance of waterfowl, shorebirds and mammals. Although much of the area was composed of wetlands that were not suitable for human habitation, the resources that were available attracted settlements to the dry uplands adjacent to the meadows.

During the first half of the 18th Century, the population of Dutch and English settlers in the area grew and the land that these colonists farmed increased. The construction of several private toll roads in the region began around 1760. In the wetlands, plank roads were built by laying southern white cedar logs end to end, then attaching cedar planks at right angles to these stringers. The wooden foundations were then topped with gravel. By 1806, the Paterson and Hamburg Road was chartered, which included a bridge over the Hackensack River. Subsequently, Paterson Plank Road was built and completed by about 1854, leading to the abandonment of the Paterson Hamburg Road. These roads served to advance development within the region. Paterson Plank Road allowed improved transportation to and from the developing communities of northeastern New Jersey and resulted in increased residential, commercial and industrial development in the Hackensack Meadowlands District.

Based on historic aerial photographs and historical topographic maps, it appears that prior to the construction of Giants Stadium and its associated parking lots and access roads, a portion of the Site was occupied by a trucking facility or warehouse/distribution center. The facility, which appears to be comprised of two small buildings, one large L-shaped building, and a large area designated for the storage of tractor trailers, first appears on a 21 June 1966 aerial photograph. The facility is also depicted on the 1967 Weehawken topographic map. The structures were located on the eastern portion of the property, adjacent to Route 120, within the area that is currently occupied by the west peripheral road. Its parking area extended to the west into the area currently occupied by Giants Stadium parking lots 4, 7, and 8. A second structure, also located along Route 120, is depicted on the 1955 and 1967 Weehawken topographic maps, as well as aerial photographs from 1961, 1969, and 1974. This small structure was located along Route 120 near the northeastern corner of the Site, within the area currently occupied by the west peripheral road. Finally, a third structure that is depicted on the 1974 aerial photograph was located just north of the trucking facility and approximately 100 yards to the west of Route 120. To the west of the structure is a small area occupied by tractor trailers. Prior to 1947, the historic aerial photos and topographic maps depict the entire Site as undeveloped wetlands and as of 1976; the entire Site is occupied by Giants Stadium and its associated parking lots and access roads.

On 10 May 1971, the New Jersey Legislature enacted the New Jersey Sports and Exposition Authority Law, which established the New Jersey Sports and Exposition Authority (NJSEA). This law allowed for the provision of stadiums and other buildings and facilities in the Hackensack Meadowlands for athletic contests, horse racing, and other spectator sports and for trade shows and other exhibitions. The groundbreaking for Giants Stadium occurred on 19 November 1972. Giants Stadium hosted its first event, the Giants vs. Dallas Cowboys, on 10 October 1976. Since then, the Stadium has hosted numerous football games and soccer matches, as well as concerts and cultural events.

Based on our review of the *Environmental Impact Statement - Giants Stadium The Meadowlands* dated 1972, borrow fill materials were secured from off-site upland or hydraulic sources to supplement suitable materials on the property. These materials were used to establish design grades in areas of dikes, embankments and level elevated sites. Clay excavated within the property was utilized as impervious fill for tops of dikes, embankments, and other raised areas.

The Stadium was built under the direction of NJSEA in the early 1970's within an undeveloped marshland area. Prior to installation of pile foundations, a sheet pile cofferdam and a clay water barrier were installed along the perimeter of Giants Stadium. Organic peats and clays from the marsh were excavated from inside the cofferdam. The site was excavated to about five feet below sea level. A counterfort retaining wall was built around the perimeter of the stadium bowl and the area between the counterfort retaining wall and the sheet pile cofferdam was backfilled with a sandy fill.

The foundations for Giants Stadium were constructed between 1974 and 1975. They consisted of end bearing H piles driven to refusal (in till or on bedrock). During initial pile installation, a number of piles were reportedly driven out of alignment and/or location (deviated piles) during the production phase. This may have been due to obstructions and/or hard driving within the till layer. Additional piles were added to the pile caps to

account for the deviated piles. Eight spiral ramps were also built (two at each "corner" of the Stadium) as part of the initial construction. These spiral ramps were built outside of the counterfort wall in the area that had been backfilled with sand. Giants Stadium was expanded between 1995 and 1997 with the construction of the South Towers, about 178 ft high. The South Towers are supported on their own foundations, independent of the original stadium and counterfort wall foundations. Some of the South Tower foundations were installed between the existing counterfort wall pile caps.

APPENDIX B
Historical Aerial Photograph and Topographic Map Review
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

6. **If the site area exceeds two acres, an interpretation of the aerial photographic history of the site shall be submitted in accordance with N.J.A.C. 7:26E-3.1(c)1.vi. The interpretation shall be based on available current and historical color, black and white and infrared aerial photographs (scale 1:18,000 or less) of the site and surrounding area at a frequency that provides the evaluator with a historical perspective of site activities. The photographic history shall date back to 1932 or the earliest photograph available. Aerial photographs are available for review at the New Jersey Department of Environmental Protection, Tidelands Management Program, Aerial Photo Library, 9 Ewing Street, Trenton, New Jersey, (609) 633-7369. Note, the applicant is not required to provide the Department with copies of the aerial photographs reviewed only an interpretation of what was observed in each photograph, which may represent an environmental concern.**

Historical Aerial Photograph Review

A review of 10 historical aerial photographs of the site was completed. The dates and approximate scales of the photos are as follows:

- 6 April 1940 (two photographs) Scale – 1" = 200'
- 7 April 1951 Scale – 1" = 200'
- 5 December 1953 Scale – 1" = 750'
- 12 April 1961 Scale – 1" = 200'
- 21 June 1966 Scale – 1" = 750'
- 7 April 1969 Scale – 1" = 200'
- 25 March 1974 Scale – 1" = 200'
- 29 October 1976 Scale – 1" = 1000'
- 16 March 1985 Scale – 1" = 1000'
- 29 March 1995 Scale – 1" = 833'

1940:

A review of these two aerial photos shows that the Site exists as undeveloped marshland. Berrys Creek, which connects to the Hackensack River, and mosquito control ditches are visible within the marshland. Current State Highway Route 120 is located along the eastern border of the Site.

1951:

Based on this aerial photo, it appears that no major development has occurred on the Site, however; a small building that is located along the western side of Route 120 may occupy a portion of the northeastern corner of the Site. The surrounding area is a mix of residential, commercial, and industrial properties.

1953:

A review of the aerial photograph shows that the majority of the Site exists as undeveloped marshland. Minor tributaries of Berrys Creek and the Hackensack River are visible within the marshland. The only structures of note are located along Routes 3 and 120, which are located south and east of the Site, respectively.

1961:

While there have been no major changes to a majority of the Site visible on this aerial photograph, minor changes have occurred along the eastern border. The small structure that was first depicted on the 1951 aerial photograph is not visible on this aerial. Also, a structure is now located at the northeastern corner of the Site. The building is located along the western side of Route 120. With regards to the surrounding area, most of the development is focused along Routes 120, 3, and Paterson Plank Road.

1966:

The eastern portion of the site has been developed. It appears to be occupied by a trucking facility or warehouse/distribution center. The facility is comprised of three large buildings and a large parking area, which is occupied by numerous trailers. The facility is located along the western side of Route 120, while the parking area extends into current Giants Stadium parking lots 4, 7, and 8.

1969:

Site conditions are similar as those observed in the pervious aerial photograph. The expansion and addition of commercial properties continues along Routes 120, 3, and Paterson Plank Road. Finally, the Meadowlands Racetrack is under construction on the land to the immediate north of the Site.

1974:

The trucking facility/warehouse is still located on the Site. Just north of this facility is another trucking facility/warehouse-type structure. The facility is located approximately 100 yards west of Route 120 and the area to the west of this structure is utilized for tractor trailer parking. The footprints for Giants Stadium and a portion of the Meadowlands Racetrack are clearly visible on this photograph. The stadium is located on the southern portion of the Site, while the racetrack is located adjacent to the northern border. A majority of the wetlands on the Site have been drained and filled. The southern portion of the Site appears to still be undisturbed wetlands. The

area to the northeast of the Site continues to be developed with commercial properties. Most of this recent development has occurred along Paterson Plank Road. The newly constructed New Jersey Turnpike is located to the east of the Site.

1976:

The trucking facility/warehouse is no longer located on the Site. The Site is occupied by the newly completed Giants Stadium and its associated parking lots. To the northeast of the Site is the Meadowlands Racetrack and its associated parking lots.

1985:

There are no major changes to the Site visible on this photograph. With regards to the surrounding area, Brendan Byrne Arena (a.k.a. Continental Airlines Arena) and its associated parking lots and connecting loop road are now located to the east of the subject area, directly across Route 120.

1995:

The only major change to the Site visible on this photograph is the addition of two structures (i.e. practice facilities) on the southwestern portion of the Site.

Historical Topographic Map Review

A review of eight historical topographic maps of the subject area was completed. The dates and approximate scales of the maps are as follows:

- 1900 — Scale – 1" = 125,000'
- 1903 — Scale – 1" = 62,500'
- 1905 — Scale – 1" = 125,000'
- 1947 — Scale – 1" = 25,000'
- 1955 — Scale – 1" = 24,000'
- 1967-1981 — Scale – 1" = 24,000'
- 1995 — Scale – 1" = 24,000'

1900:

The Site is depicted in blue, denoting wetlands, and labeled as Boiling Springs, the original name of the Borough of East Rutherford. While there are no structures on the Site, it appears that there may be some small tributaries to Berrys Creek and the Hackensack River located in the immediate area. Also, the Erie railroad is located to the southwest of the subject area.

1903:

There do not appear to be any changes to the Site.

1905:

There do not appear to be any changes to the Site.

1947:

The Site, now labeled East Rutherford, is depicted as vacant on this map. It is located southwest of the intersection of Paterson Plank Road and Moonachie Road. Walden Swamp and Berrys Creek are located to the northwest of the Site. A tributary of Berrys Creek and a portion of the Erie railroad are located to the southwest of the Site.

1955:

The Site is still depicted as undeveloped marshland. The only improvement to the Site depicted on this map is a small structure located near the northeastern corner of the Site. It is located along the western site of Route 120. Newly constructed Route 3 is now located south of the Site.

1967:

A majority of the Site is depicted as undeveloped marshland on this map. A second structure is now located near the northeastern corner of the Site. The building is L-shaped and situated on the western side of Route 120.

1967-1981:

This map, which is a photo-revised version of the 1967 map, depicts the Site as being occupied by Giants Stadium and its associated parking lots and access roads. The immediate surrounding area is now occupied by the Meadowlands Racetrack and a network of access roads connecting the stadium and racetrack to each other, as well as to the surrounding roadways, which now includes the New Jersey Turnpike. The two structures that were located on the eastern border of the Site are not depicted on this map.

1995:

There are no changes to the Site. The only major change to the subject area is the addition of the Continental Airlines Arena to the area east of the Site.

APPENDIX C
State and Federal Government Database Search
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

For this Preliminary Assessment, Environmental Data Resources, Inc of Milford, Connecticut ("EDR") was utilized to compile information from the most recent Federal and State databases pertaining to environmental conditions on the site and surrounding area. A copy of EDR's complete report is provided within this Appendix. EDR's report summarizes environmental information about the site and/or environmental information about sites located within a search radius based on the American Society for Testing and Materials ("ASTM") guidance document entitled *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* designated as E1527-00. For sites located within the search area where addresses and/or site location information is not discernable during the inquiry, EDR lists the site as an "orphan" or unmappable site.

Information provided on mappable and orphan/unmappable sites is evaluated to determine if AOCs exist in relation to the site. These determinations are based on the information contained within EDR's report, Langan's knowledge and experience in the area, supplemental information ascertained through records review/site reconnaissance/interviews, and Langan's professional opinion. Specifically, the determination of an AOC is based on the following types of information evaluated:

- The database of the listed site(s);
- Case activity (active vs. inactivity) and stage of investigation/remediation;
- The constituents of concern at the listed site(s);
- The geology and hydrogeology of the local area and site(s);
- Migration pathways of the constituents of concern (i.e. groundwater flow direction(s), surface water flow, etc.); and
- Other available information.

The following is a summary of the standard Federal and State databases that were evaluated, the ASTM-specified radial search distances, and the number of mappable and orphan/unmappable sites identified by EDR within the radial search distance. Some sites may be listed in multiple databases and/or as mappable and orphan/unmappable sites.

According to the EDR Report, the subject property (Giants Stadium located at 50 State Highway 120, East Rutherford, New Jersey) is listed in seven of the environmental databases searched by EDR. It is listed in the NJPDES database for a stormwater permit, as a RCRA Large Quantity Generator, as a State Hazardous Waste Site, as an ERNS site, it is listed twice in the NJ Release database, twice in the NJ Spills database, and once in the FINDS database. The following table lists the number of sites by database within the prescribed search radius appearing in the EDR report.

DATABASE REVIEWED	MINIMUM SEARCH AREA	NUMBER OF SITES WITHIN AREA
Federal National Proprieties List (NPL), Proposed NPL, and Delisted NPL	1.25 Mile Radius	0
NPL Liens	¼ Mile Radius	0
Comprehensive Environmental Reponses, Compensation, and Liability Information System (CERCLIS) and CERCLIS designated "No Further Remedial Action Planned" (CERCLIS-NFRAP)	¾ Mile Radius	4
Corrective Action Tracking System (CORRACTS)	1.25 Mile Radius	2
Federal Resources Conservation and Recovery Information System (RCRIS) Treatment, Storage, and Disposal (TSD) Facilities List	¾ Mile Radius	0
Federal RCRIS Generators	½ Mile Radius	6 (Including Subject Property)
Federal Emergency Responses Notification System (ERNS) List	¼ Mile Radius	(Subject Property)
Hazardous Material Information Reporting System (HRIMS)	¼ Mile Radius	0
Engineering Controls Sites List (US ENG CONTROLS)	¾ Mile Radius	0
Sites with Institutional Controls (US INST CONTROL)	¾ Mile Radius	0
Department of Defense Sites (DOD)	1.25 Mile Radius	0
Formerly Used Defense Sites (FUDS)	1.25 Mile Radius	0

Superfund (CERCLA) Consent Decrees (CONSENT)	1.25 Mile Radius	0
Records of Decision (ROD)	1.25 Mile Radius	0
Uranium Mill Tailings Sites (UMTRA)	¾ Mile Radius	0
Open Dump Inventory (ODI)	¾ Mile Radius	0
Toxic Chemical Release Inventory System (TRIS)	¼ Mile Radius	0
Toxic Substance Control Act (TSCA)	¼ Mile Radius	0
FIFRA/TSCA Tracking System (FTTS)	¼ Mile Radius	0
Section 7 Tracking System (SSTS)	¼ Mile Radius	0
PCB Activity Database System (PADS)	¼ Mile Radius	0
Material Licensing Tracking System (MLTS)	¼ Mile Radius	0
Mines Master Index File (MINES)	½ Mile Radius	0
Facility Index System/ Facility Registry System (FINDS)	¼ Mile Radius	(Subject Property)
RCRA Administrative Action Tracking System (RAATS)	¼ Mile Radius	0
State Hazardous Waste Sites (SHWS)	1.25 Mile Radius	19 (Including Subject Property)
Publicly Funded Cleanups Sites Status Report (NJ PF)	¼ Mile Radius	0
Chromate Chemical Production Waste Sites (CHROME)	¾ Mile Radius	0

DATABASE REVIEWED	MINIMUM SEARCH AREA	NUMBER OF SITES WITHIN AREA
Voluntary Cleanup Program (VCP)	¾ Mile Radius	2
State Landfills or Solid Waste Facilities (SWF/LF)	¾ Mile Radius	0
Solid Waste Facility Directory (HIST LF)	¾ Mile Radius	0
Underground Storage Tank List (UST)	½ Mile Radius	2
State Spills Database – Leaking Underground Storage Tanks (LUST)	¾ Mile Radius	12
Approved Class B Recycling Facilities (SWRCY)	¾ Mile Radius	0
List of Major Facilities (NJ Major Facilities)	¾ Mile Radius	0
Hazardous Material Incident Database (NJ Release)	¼ Mile Radius	(Subject Property)
Spills (NJ Spills)	¼ Mile Radius	(Subject Property)
Declaration Environmental Restriction/Deed Notice Sites (ENG CONTROLS)	¾ Mile Radius	1
Classification Exception Area Sites (INST CONTROL)	¾ Mile Radius	1
Dry Cleaners List (DRYCLEANERS)	½ Mile Radius	0
Brownfields	¾ Mile Radius	0
New Jersey Pollutant Discharge Elimination System Dischargers (NJPDES)	¼ Mile Radius	(Subject Property)

A search of the Tribal Records revealed no sites within the prescribed search radius.

A search of the EDR Proprietary Historical Databases revealed no listings within the prescribed search radii.

The EDR report identified 45 "Orphan Sites." Orphan Sites are those sites that could not be mapped or "geocoded" due to inadequate address information. Please refer to page 129-130 of the EDR report for a list of these Orphan Sites. While Langan could not confirm whether any of these sites were within the specified radii, it appears from the information supplied that none of the sites are located within one-eighth of a mile of the subject property.

A description of the databases reviewed by Langan is provided in the EDR report. An evaluation of sites identified within the prescribed search area is presented below.

Federal Databases

NPL

The NPL identifies sites designated for priority cleanup under the United States Environmental Protection Agency (USEPA) Superfund Program. No NPL, Proposed NPL, Delisted NPL, or NPL Liens sites were identified within the prescribed search radii.

CERCLIS
The CERCLIS contains information on abandoned, inactive, or uncontrolled hazardous waste sites, which may require cleanup. CERCLIS contains sites that are either proposed to be or are on the NPL. Also included are sites that are in the screening or assessment stages for possible inclusion on the NPL. A CERCIS-NFRAP site is one where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. One CERCLIS and three CERCLIS-NFRAP sites were identified within the prescribed search radius. The CERCLIS site, Meadowlands Plating & Finishing, is located over one-half of a mile to the east of the subject property. All three CERCLIS-NFRAP sites identified within the prescribed search radius are located over one-half of a mile from the subject property.

RCRIS TSD Facility Report
The RCRIS TSD list includes selected information on sites that treat, store, or dispose of hazardous wastes as defined by the Resource Conservation and Recovery Act (RCRA). The EDR report did not identify any RCRIS TSD facilities within the prescribed search radius.

RCRIS Generators
Langan reviewed the list of sites which have filed notification with the USEPA in accordance with RCRA requirements. These sites include generators of hazardous waste regulated under RCRA. Under RCRA, hazardous waste generators are classified by the mass of hazardous waste generated in a calendar month into the following categories: Large Quantity Generator (LQG), greater than 1,000 kilograms (kg); Small Quantity Generator (SQG), 100 to 1,000 kg; and Conditionally-Exempt Small Quantity Generator, less than 100 kg. RCRIS Generators, while they represent some form of hazardous waste activity, are most significant if they are determined to have Class I Violations or to be non-compliant.

The EDR report identified six RCRA Generators within the prescribed search radius. One of the sites identified was the Sports Complex, which is classified as a LQG under the site name of New Jersey Sports & Exposition Authority (EPA ID# NJD980647895). There are three violations on record for the Sports Complex. All three violations date between 1986 and 1987 and compliance was achieved in all three instances. The remaining five sites are classified as SQGs. With regards to these five sites, only two (Sullivan Brothers Printers and Transcontinental Gas Pipe Line Corp) had violations on record. Compliance was achieved in all instances.

Corrective Action Tracking System (CORRACTS)
CORRACTS identifies hazardous waste handlers with RCRA corrective action activities. The EDR report identified two CORRACTS site within the prescribed search radius. Both sites are located over one-half of a mile from the subject property. J Landau & Company, Inc. is located to the northeast and US Ink, A Division of Sun Chemical, is located to the northwest. With regards to the statuses of these two cases, J Landau &

Company was assigned a low corrective action priority by the EPA and US Ink has had an RFA completed.

ERNS
The ERNS list records and stores information on reported releases of oil and hazardous substances. The EDR report identified the subject property on the ERNS database under the name Giants Stadium Loading Dock Area. According to the report, on 15 June 1990 approximately 75 gallons of diesel fuel was released when a cross over line was broken resulting in the fuel tank leak in the area of the loading dock. The spill was remediated with speedy dry and rags.

HMIRS
The Hazardous Materials Information Reporting System contains hazardous material spill incidents reported to DOT. The EDR report did not identify the subject property on the HMIRS database.

US ENG CONTROLS
The Engineering Controls Sites List is a listing of sites with engineering controls in place. The EDR report did not identify any US ENG CONTROLS sites within the prescribed search radius.

US INST CONTROL
The US INST Control database is a listing of sites with institutional controls in place. The EDR report did not identify any US INST CONTROL sites within the prescribed search radius.

DOD
The EDR Report did not identify any Department of Defense sites within the prescribed search radius.

FUDS
The EDR Report did not identify any Formerly Used Defense sites within the prescribed search radius.

US BROWNFIELDS
The EDR Report did not identify any US Brownfields sites within the prescribed search radius.

CONSENT
Superfund (CERCLA) Consent Decrees sites are major legal settlements that establish responsibility and standards for cleanup at NPL sites. No CONSENT sites were identified within the prescribed search radius.

ROD
The Record of Decision documents mandate a permanent remedy at an NPL site. The EDR report did not identify any ROD sites within the prescribed search radius.

UMTRA
The EDR Report did not identify any Uranium Mill Tailings sites within the prescribed search radius.

ODI
The Open Dump Inventory defines an open dump as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria. The EDR report did not identify any ODI sites within the prescribed search radius.

TRIS
The Toxic Chemical Release Inventory System identifies facilities which release toxic chemicals to the air, water, and land in reportable quantities under SARA. No TRIS sites were identified within the prescribed search radius.

TSCA
The Toxic Substance Control Act identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory List. No TSCA sites were identified within the prescribed search radius.

FTTS
The FIFRA/TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act) / TSCA (Toxic Substance Control Act). The FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA, and EPCRA (Emergency Planning and Community Right-to-Know Act). No FTTS sites were identified within the prescribed search radius.

SSTS
The Section Seven Tracking System requires all registered pesticide-producing establishments to submit a report to the EPA specifying the types and amounts of pesticides, active ingredients, and devices being produced. No SSTS sites were identified within the prescribed search radius.

PADS
The PCB Activity Database System identifies generators, transporters, commercial storers and/or brokers and disposers of PCBs who are required to notify the EPA of such activities. No PADS sites were identified within the prescribed search radius.

MLTS
The Material Licensing Tracking System is maintained by the Nuclear Regulatory Commission and contains a list of sites which possess or use radioactive materials which are subject to NRC license requirements. No MLTS sites were identified within the prescribed search radius.

MINES
The Mines Master Index File contains all mine identification number issued for mines active or opened since 1971. No MINES sites were identified within the prescribed search radius.

FINDS
The Facility Index System/Facility Identification Initiative Program Summary Report contains both facility information and pointers to other sources that contain more detail. The subject property, listed under the name New Jersey Sports & Exposition Authority, was identified in this database. The database points to the following databases as other sources of pertinent environmental activity at the site:

- Aerometric Information Retrieval System/AIRS Facility System
- Integrated Compliance Information System
- National Compliance Information Database System
- New Jersey-New Jersey Environmental Management System
- Permit Compliance System
- Resource Conservation and Recovery Act Information System

RAATS
The RCRA Administrative Action Tracking System contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. No RAATS sites were identified within the prescribed search radius.

New Jersey State Department of Environmental Protection Databases

State Hazardous Waste (SHW)
The EDR report identified 19 SHW sites within a one and one-quarter mile radius of the subject property, one of which is listed as the NJ Sports Complex. The NJ Sports Complex is listed as having on-site source(s) of contamination and the contact for the case is listed as the Bureau of Underground Storage Tanks. This SHW site listing is for the NJ Sports Complex Maintenance Garage area which is outside the New Meadowlands Stadium project limits.

With regards to the remaining 18 sites, they are all located over one-half of a mile from the subject property. The statuses of all these cases are as follows; three received a Letter of No Further Action from NJDEP, 13 are active, with on-site source(s) of contamination, and two are pending, also with on-site source(s) of contamination.

Solid Waste Facilities/Landfill (SWF/LF)
The EDR report did not identify any SWF/LF sites within a one-half mile radius of the subject property.

Approved Class B Recycling Facilities (SWRCY)
The EDR report did not identify any SWRCY facilities within the specified search radius.

Voluntary Cleanup Program (VCP)
The Continental Airlines Arena is listed in this database under case number 04-03-01-1542-35. A Memorandum of Agreement (MOA) was executed on 4 March 2004. There are two other sites listed in this database, however; both sites are located over one-half of a mile from the subject property.

Underground Storage Tanks (UST) Facility List
The EDR report identified two UST facilities within the specified search radius. The UST list is only an inventory of storage tanks and does not necessarily constitute a contamination condition. As such, we cannot determine if these registered storage tank sites have had a negative environmental impact on the subject property. However, neither of these sites is also listed in the Leaking Underground Storage Tank database.

Leaking Underground Storage Tanks Database (LUST)
The EDR report identified 12 LUST sites within the prescribed search radius. Two of these sites are located between one-quarter and one-half of a mile of the Sports Complex. These two sites have received letters of No Further Action (NFA) from NJDEP. The remaining 10 sites are located over one-half of a mile of the subject property. With regards to the statuses of these 10 sites; eight have received NFAs from the NJDEP, one site is assigned to a program and is listed as having on-site source(s) of contamination, and one is awaiting assignment and is also listed as having on-site source(s) of contamination.

HIST LF
There were no sites listed in the Solid Waste Facility Directory within the prescribed search radius.

ENG CONTROLS
The Declaration Environmental Restriction/Deed Notice Sites database lists sites that have legal documents that restrict the use of the property due to contamination. There is one site listed in the ENG CONTROLS database within the prescribed search radius. UNIMAC Graphics is located over one-half of a mile to the northeast of the subject property and has a Deed Notice in place for base neutrals and acids.

NJ Major Facilities
A major facility means all facilities, located on one or more contiguous or adjacent properties owned or operated by the same person, having a total combined storage capacity of 20,000 gallons or more for hazardous substances other than petroleum or petroleum products, or 200,000 gallons or more of hazardous substances of all kinds. There were no sites listed in this database that were located in the prescribed search radius.

Dry Cleaners
The List of Registered Dry Cleaners did not contain any sites within the prescribed search radius.

NJ PF
The Publicly Funded Cleanups Site Status Report lists sites that are being addressed by the NJDEP with public funds. The subject property was not listed in this database.

CHROMES
The Chromate Chemical Production Waste Sites database lists known chromate chemical production sites. There were no sites listed in the CHROMES database within the prescribed search radius.

INST CONTROL
This database lists Classification Exception Area Sites, which are sites that have institutional controls providing notice that ground water contamination exists in a particular location above State standards. There is one site listed in the INST CONTROL database within the prescribed search radius. The site, Transcontinental Gas Pipeline, is located over one-quarter of a mile to the east-northeast and has a CEA in place for benzene.

Brownfields Database
A search of the Brownfields database revealed no sites within the prescribed search radius.

NJPDES
The subject property is listed in the New Jersey Pollutant Discharge Elimination System Dischargers database for a stormwater permit. It is listed under the name New Jersey Sports & Exposition Authority for permit number NJ0023345 that is due to expire on 30 April 2010.

Tribal Records
A search of the **INDIAN RESERV** (Indian Reservations) database revealed no sites within a one mile radius of the subject property.

Brownfields Databases
A search of the US BROWNFIELDS, US INST CONTROL, Brownfields, INST CONTROL, and VCP databases revealed no sites within the prescribed search radii.

EDR Proprietary Historical Databases
A search of these databases revealed no Former Manufactured Gas (Coal Gas) Sites, Historic Dry Cleaner, or Historic Gas Station identified within the prescribed search radii.

NJ Release
The subject property is listed in the Hazardous Material Incident Database twice. The report regarding "Giants Stadium" states that persons in the X-ray department at stadium were illegally dumping chemicals down regular sink drains. The chemicals were radio-active. The incident occurred in September 1991 and was reported anonymously. Case number 91-8-2-1031-44 was assigned by NJDEP. The report involving case number 90-09-10-1558 states that an unknown amount of gasoline was released at the NJ Sports Complex on 7 September 1990.

NJ Spills
The Spills database lists initial notification information of hazardous material incidents, where there is land contamination, reported to the NJDEP Environmental Action Line. The subject property is listed in the Spills database twice. The report regarding "In Front of Giants Stadium" states that on 30 October 1992 approximately 50 gallons of diesel fuel was released at the site from a saddle tank on a tractor. Some product entered the storm drain. Case number 92-10-30-2023-26 was assigned. The report regarding "Front of Giants Stadium" states that on 13 December 1988 approximately 10 gallons of

gasoline was released. The report does not specify the cause or exact location of the spill. Case number 88-12-13-1817 was assigned.

The following table summarizes the environmental databases in which the subject property is listed:

Site Name	Address	Database Listings	Status / Case Number
Giants Stadium	Route 3 West	NJ Release	Open / 91-8-2-1031-44
Giants Stadium Loading Dock Area	Giants Stadium Loading Dock Area	ERNS	Open / Report # 26951
NJ Sports Complex	Route 20	NJ Release	Open / 90-09-10-1558
Front of Giants Stadium	Route 3 West Bound	NJ Spills	Open / 88-12-13-1817
In Front of Giants Stadium	Route 3 West Bound	NJ Spills	Open / 92-10-30-2023-26
NJ Sports Complex	50 Route 20	SHWS	Active / NJL600193601-001
New Jersey Sports & Exposition Authority	50 Route 20	NJPDES	Stormwater permit / NJ0023345
New Jersey Sports & Exposition Authority	50 Route 20	RCRA	Large Quantity Generator / Three violations (Compliance Achieved)
New Jersey Sports & Exposition Authority	50 Route 20	FINDS	Site also listed in the following databases: Aerometric Information Retrieval System/AIRS Facility System, Integrated Compliance Information System, National Compliance Information Database System, New Jersey-New Jersey Environmental Management System, Permit Compliance System, and Resource Conservation and Recovery Act Information System

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the minimum government records search requirements of EPA's Standards and Practices for All Appropriate Inquiries, 40 CFR Part 312 (AAI) and the ASTM Standard Practice for Environmental Site Assessments, E 1527-05. Search distances are per AAI and ASTM standards or custom distances requested by the user.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 09/19/2005 has revealed that there is 1 CERCLIS site within approximately 0.75 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
MEADOWLANDS PLATING & FINISHIN	***890 PATERSON PLANK ROAD***	***1/2 - 1 E***	***G26***	***49***

CERCLIS-NFRAP: As of February 1995. CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these

properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERC-NFRAP list, as provided by EDR, and dated 08/22/2005 has revealed that there are 3 CERC-NFRAP sites within approximately 0.75 miles of the target property.

RCRAInfo:RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store , treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facil

A review of the RCRA-SQG list, as provided by EDR, and dated 08/11/2005 has revealed that there are 5 RCRA-SQG sites within approximately 0.5 miles of the target property.

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D006	CADMIUM
D007	CHROMIUM
D008	LEAD
D010	SELENIUM
D018	BENZENE
D035	METHYL ETHYL KETONE
D038	PYRIDINE
D039	TETRACHLOROETHYLENE
D040	TRICHLOROETHYLENE
F001	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

EPA Waste Codes Addendum

Code	Description
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
K086	SOLVENT WASHES AND SLUDGES, CAUSTIC WASHES AND SLUDGES, OR WATER WASHES AND SLUDGES FROM CLEANING TUBS AND EQUIPMENT USED IN THE FORMULATION OF INK FROM PIGMENTS, DRIERS, SOAPS, AND STABILIZERS CONTAINING CHROMIUM AND LEAD.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Telephone: 703-603-8867
Last EDR Contact: 10/03/05
Next Scheduled EDR Contact: 01/02/06
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

SHWS: Known Contaminated Sites in New Jersey

BE ADVISED THAT THE KNOWN CONTAMINATED SITES DATABASE HAS NOT BEEN UPDATED SINCE 2001. FOR MORE CURRENT STATUS INFORMATION, THE DEP HAS REQUESTED THAT YOU CONTACT THE SITE REMEDIATION PROGRAM AT 800-253-5647 OR 609-984-3081.

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

EDR PROPRIETARY HISTORICAL DATABASES

EDR Historical Gas Station and Dry Cleaners: EDR has searched select national collections of business directories and has collected listings of potential dry cleaner and gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning and gas station/filling station/service station establishments. The categories reviewed included, but were not limited to: *gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, dry cleaner, cleaners, laundry, laundromat, cleaning/laundry, wash & dry, etc.*

This information is meant to assist and complement environmental professionals in their conduct of environmental site assessments, and is not meant to be a substitute for a full historical investigation as defined in ASTM E1527. The information provided in this proprietary database may or may not be complete; i.e., the absence of a dry cleaner or gas station/filling station/service station site does not necessarily mean that such a site did not exist in the area covered by this report.

(A note on "dry cleaning" sites: it is not possible for EDR to differentiate between establishments that use PERC on-site as a cleaning solvent and sites that function simply as drop-off and pick-up locations or that are traditional wet cleaning/laundry facilities. Therefore, it is essential for environmental professionals to incorporate professional judgment in the evaluation of each site.)

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

GEOCHECK ® - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

GIANTS STADIUM
50 STATE HIGHWAY ROUTE 120
EAST RUTHERFORD, NJ 07073

TARGET PROPERTY COORDINATES

Latitude (North):	40.810799 - 40° 48' 38.9"
Longitude (West):	74.074699 - 74° 4' 28.9"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	578043.8
UTM Y (Meters):	4517954.5
State Plane X (Feet):	609845.5
State Plane Y (Feet):	720555.1
Elevation:	7 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with EPA's Standards and Practices for All Appropriate Inquiries (AAI) and ASTM E 1527-05, Section 8.2.3.

Section 8.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

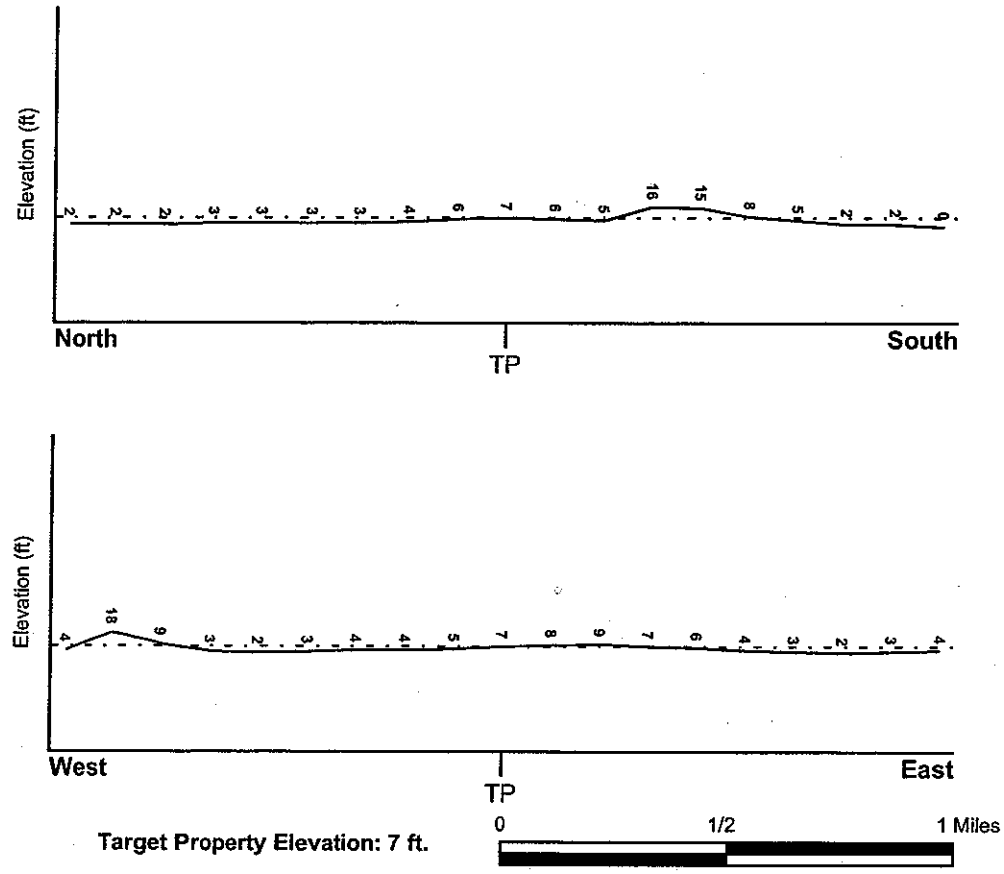
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map:	40074-G1 WEEHAWKEN, NJ NY
General Topographic Gradient:	General WNW
Source:	USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

34003C0261F

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WEEHAWKEN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles NW
Site Name:	United States Printing Ink
Site EPA ID Number:	NJD095171948
Groundwater Flow Direction:	NE IN RESPONSE TO PUMPING AND PARALLEL TO THE STRIKE OF THE BEDS.
Inferred Depth to Water:	14 feet based on the reported static water level in a local well.
Hydraulic Connection:	A direct hydraulic connection is present between the surface water and the underlying Passaic Formation bedrock (lower aquifer) in locations where the unconsolidated surficial glacial deposits are thick and permeable.
Sole Source Aquifer:	A sole source aquifer is not persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Mesozoic	Category:	Stratified Sequence
System:	Triassic		
Series:	Triassic		
Code:	Tr *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	SULFAQUENTS
Soil Surface Texture:	mucky-peat
Hydrologic Group:	Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class:	Very poorly. Soils are wet to the surface most of the time. Depth to water table is less than 1 foot, or is ponded.

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	HIGH
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	14 inches	mucky-peat	A-8	Highly organic soils, Peat.	Max: 20.00 Min: 0.60	Max: 7.30 Min: 4.50
2	14 inches	72 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 7.30 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: gravelly - sandy loam
extremely gravelly - sand
sand
sandy loam

Surficial Soil Types: gravelly - sandy loam
extremely gravelly - sand
sand
sandy loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: gravelly - sandy loam
extremely gravelly - sand
coarse sand
fine sand
stratified

LOCAL / REGIONAL WATER AGENCY RECORDS

According to ASTM E 1527-05, Section 8.2.2, "To enhance and supplement the standard environmental record sources in 8.2.1, local records and/or additional state or tribal records shall be checked when, in the judgment of the environmental professional, such additional records (1) are reasonably ascertainable, (2) are sufficiently useful, accurate, and complete in light of the objective of the records review (see 8.1.1), and (3) are generally obtained, pursuant to local good commercial or customary practice, in initial environmental site assessments in the type of commercial real estate transaction involved." One of the records sources listed in 8.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in research of over 4 million government records from more than 600 federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary ..... **Page 3**

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports ..... **Page 4**

All available detailed information from databases where sites are identified.

Section 3: Databases Searched and Update Information. ..... **Page 5**

Name, source, update dates, contact phone number and description of each of the databases searched for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

FACILITY AREA	FACILITY 1 GIANTS STADIUM LOADING DOCK AREA GIANTS STADIUM LOADING DOCK AREA EAST RUTHERFORD, NJ EDR ID #90168783
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	NO
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	YES - p4
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (CERCLIS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in a county/local unique database (LOCAL)	NO
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
TOTAL (YES)	1

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

WASTE MANAGEMENT

RCRIS: Resource Conservation and Recovery Act Information
Source: EPA
Telephone: 800-424-9346
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 10/14/2005
Database Release Frequency: Quarterly
Date of Last EDR Contact: 10/27/2005
Date of Next Scheduled Update: 12/26/2005

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2003
Database Release Frequency: Biennially
Date of Last EDR Contact: 06/17/2005
Date of Next Scheduled Update: 12/12/2005

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 09/06/2005
Date of Next Scheduled Update: 12/05/2005

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 10/13/2005
Database Release Frequency: Quarterly
Date of Last EDR Contact: 09/06/2005
Date of Next Scheduled Update: 01/16/2006

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-564-3887
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 08/30/2005
Database Release Frequency: Annually
Date of Last EDR Contact: 09/13/2005

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

APPENDIX D
City Directory
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

In order to gather additional information regarding past uses of the Site, a City Directory Abstract was obtained from *Environmental Data Resources, Inc. of Milford,* Connecticut ("EDR"). City directories have been published for cities and towns across the United States since the 1700s. Originally a list of residents, the city directory developed into a sophisticated tool for locating individuals and businesses in particular urban or suburban areas. *A copy of EDR's complete report is provided within this Appendix.*

A review of the City Directory Abstract revealed that the subject property's address was not listed in any research source.

Environmental Data Resources, Inc.
City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2, page 12.)

EDR's City Directory Abstract includes a search and abstract of available city directory data.

City Directories
City directories have been published for cities and towns across the U.S. since the 1700s. Originally a list of residents, the city directory developed into a sophisticated tool for locating individuals and businesses in a particular urban or suburban area. Twentieth century directories are generally divided into three sections: a business index, a list of resident names and addresses, and a street index. With each address, the directory lists the name of the resident or, if a business is operated from this address, the name and type of business (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural areas and small towns. ASTM E 1527-00 specifies that a *"review of city directories (standard historical sources) at less than approximately five year intervals is not required by this practice." (ASTM E 1527-00, Section 7.3.2.1, page 12.)*

NAICS (North American Industry Classification System) Codes
NAICS is a unique, all-new system for classifying business establishments. Adopted in 1997 to replace the prior Standard Industry Classification (SIC) system, it is the system used by the statistical agencies of the United States. It is the first economic classification system to be constructed based on a single economic concept. To learn more about the background, the development and difference between NAICS and SIC, visit the following Census website: http://www.census.gov/epcd/www/naicsdev.htm.

4. SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2003. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8 of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

APPENDIX E
Current Site Operations
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

2B. Include a detailed description of the most recent operations subject to this preliminary assessment.

The Site is currently occupied by Giants Stadium and its associated parking lots and access roads. The stadium hosted its first event, the Giants vs. Dallas Cowboys, on 10 October 1976. Since then, the Stadium has hosted numerous football games and soccer matches, as well as concerts and cultural events. Specifically, the Site is occupied by Giants Stadium, Giants practice fields, parking lots Y, 1 through 18, as well as the interior landscaped portions of the western peripheral road.

G:\Data1\4517101\Office Data\Reports\Environmental\PA\appendix e - current site operations.doc

APPENDIX F
Hazardous Substance/Waste Inventory
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

3. List all raw materials, finished-products, formulations and hazardous substances, hazardous wastes, hazardous constituents and pollutants, including intermediates and by-products that are or were historically present on the site.

The Giants Stadium is part of the Meadowlands Sports Complex. The Meadowlands Sports Complex is comprised of Giants Stadium, the Meadowlands Racetrack, and the Continental Airlines Arena. All of these facilities are operated by the New Jersey Sports and Exposition Authority (NJSEA). Numerous permits and various regulatory listings exist under the Meadowlands Sports Track and/or NJSEA nomenclature. However, not all activities covered by these permits and/or regulatory listings pertain to the individual facilities.

NJSEA is listed as a Resource Conservation and Recovery Act (RCRA) fully-regulated Large Quantity Generator (LQG) of hazardous wastes. The United States Environmental Protection Agency (USEPA) generator Identification Number for the NJSEA Sports Complex is NJD980648895. NJSEA has had a comprehensive RCRA waste management program in place for more than fifteen (15) years. No treatment or disposal of hazardous wastes occurs at the Site. Hazardous wastes are consolidated at the point of generation, shipped off-site by EPA-registered transporters and are disposed of at EPA-registered TSDR facilities. As an LQG, the facility is required under the RCRA, as amended, to meet certain regulatory requirements regarding storage, generation labeling, recording keeping and disposal of hazardous wastes. NJSEA has filed the biennial USEPA hazardous waste reports (Forms IC, GM, OI) since 1987.

Hazardous substances and/or wastes that are present on the stadium include minor quantities of both solid and liquid forms which are generated from on-site cleaning and/or maintenance activities. The actual quantity generated by the stadium is reportedly within de minimis quantities. Solid and liquid hazardous wastes are periodically gathered and brought to a central Sports Complex location where it is removed by an outside contractor, as detailed above. The handling, storage and disposal of hazardous waste is performed in accordance with the Sports Complex's current RCRA Hazardous Waste Facility Permit.

APPENDIX G
Summary of Disposal Processes/Points for Current and Historic Waste Streams
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

4B. Provide a narrative of disposal processes for all historic and current process waste streams and disposal points.

A. Historic process waste streams and disposal points:

A majority of the subject property was vacant prior to the construction of Giants Stadium.

B. Current process waste streams and disposal points:

Waste streams at the stadium facility can be classified as follows:

- Solid Waste
- Hazardous Waste
- Non-hazardous Waste
- Recyclable Material

Solid Waste: This waste is generated by daily operations of the Site and includes material generated from administrative functions, packaging materials that are not otherwise recycled, kitchen, cafeteria and concession stand wastes, etc. Solid waste is collected from the facility on a weekly basis, or as needed based on special events, and transported to a Bergen County-designated facility.

Hazardous Waste: This waste includes minor quantities of both solid and liquid forms which are generated from on-Site cleaning and/or maintenance activities. The handling, storage and disposal of hazardous waste is performed in accordance with the Sports Complex's current RCRA Hazardous Waste Facility Permit. Solid and liquid hazardous wastes are periodically gathered and brought to a central Sports Complex removal location where these wastes are removed by an outside contractor.

NJSEA is listed as a RCRA fully-regulated Large Quantity Generator (LQG) of hazardous wastes. The USEPA generator Identification Number for the NJSEA Sports Complex is NJD980648895. NJSEA has had a comprehensive RCRA waste management program in place for more than fifteen (15) years. No treatment or disposal of hazardous wastes occurs at the Site. As an LQG, the facility is required under the RCRA, as amended, to meet certain regulatory requirements regarding storage, generation labeling, recording keeping and disposal of hazardous wastes. NJSEA has filed the biennial EPA hazardous waste reports (Forms IC, GM, OI) since 1987.

Non-Hazardous Waste: This waste generally includes trash (including food waste, waste paper) and small quantities of used cooking oil. Trash is collected in compactors

on the arena loading dock or in dumpsters and transported to a Bergen County-designated facility.

Recyclable Wastes: Typical recycled materials include corrugated paper, mixed office paper, other paper/magazines/junk mail, glass aluminum cans, steel cans, construction and demolition debris, metal, wood, concrete and laser toner cartridges. These materials are collected and removed by an outside cartage company.

G:\Data1\4517101\Office Data\Reports\Environmental\PA\appendix g current and historic waste streams.doc

APPENDIX H
Potentially Contaminated Areas of Concern
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

5. **This question requires the applicant to conduct a diligent inquiry into the current and historic operations at the site to identify all of the potential areas of concern, which formerly or currently exists at the industrial establishment as defined in N.J.A.C. 7:26E-1.8.**

In accordance with N.J.A.C. 7:26E3.1(c)1.v., a narrative shall be provided for each area of environmental concern describing the (A) Type; (B) Age; (C) Dimensions of each container/area; (D) Chemical Content; (E) Volume; (F) Construction materials; (G) Location; (H) Integrity (i.e., tank test reports, description of drum storage pad); and (I) Inventory control records, unless a Department-approved leak detection system, pursuant to N.J.A.C. 7:1E or 7:14B, has always been in place and there is no discharge history. If sampling is not proposed for any identified area of environmental concern, please explain why it is believed that the area of environmental concern does not contain contaminants above the applicable remediation standards. Submit all necessary documentation to verify this belief.

Within this PA, a total of 12 potentially contaminated Areas of Concern (AOCs) have been identified which formerly or currently exist at the property. A diligent inquiry has been completed regarding the current and historic site operations in developing this PA and in the identification of AOCs.

Langan has indicated within the PA where AOCs will be sampled to evaluate whether or not any contaminants are present above the potentially applicable remediation standards. Sampling will be completed and findings will be summarized in a Site Investigation Report to be submitted pursuant to the NJDEP Technical Regulations (7:26E).

AOC #1: Underground Storage Tanks and Associated Piping:

The Meadowlands Sports Complex and the NJSEA are listed under NJDEP – Bureau of Responsible Party Site Remediation Case #00-06-19-1733-40. This case relates to Giants Stadium and the Meadowlands Racetrack area grounds (facility UST registration number 0005401). Approximately nine underground storage tanks (USTs) located on these two sites were closed in the fall of 2000. Three of these USTs (designated E4, E5, and E6) were located within Giants Stadium. All three received a Letter of No Further Action (NFA) from NJDEP. An NFA for two of the USTs was issued on 16 November 2001. The NFA for the third UST was issued on 14 November 2002. The Site is not believed to have been impacted from this AOC.

A) Type:	Three Underground Storage Tanks
B) Age:	Installed in approx. 1974 and closed in 2000
C) Dimensions of each container/area:	Various
D) Chemical Content:	Diesel Fuel for emergency generators.
E) Volume:	Tank E4: 550-gallon, Tank E5: 2,000-gallon, Tank E6: 2,000-gallon
F) Construction materials:	Steel
G) Location:	Tank E4 was located adjacent to the west gate Service Drive entrance near Substation-F5, Tank E5 was situated beneath the hallway that leads to Substation-F4, and Tank E6 was situated off the Service Drive along the northern side of Giants Stadium near Substation-F1.
H) Integrity:	All three USTs received an NFA from NJDEP
I) Inventory control records:	Not Available

AOC #2: Dumpsters:

A) Type:	Cardboard and Solid Waste Dumpsters
B) Age:	~1972-present
C) Dimensions of each container/area:	Various sizes
D) Chemical Content:	cardboard and municipal type waste
E) Volume:	Not Applicable
F) Construction materials:	Steel
G) Location:	Near stadium's eastern loading dock
H) Integrity:	No staining
I) Inventory control records:	Not Applicable

The dumpsters contain cardboard and municipal-type waste only and are stored on asphalt pavement. As such, sampling is not proposed.

AOC #3: Chemical Storage Cabinets:

A) Type:	Chemical Storage Cabinets
B) Age:	~1972-present
C) Dimensions of each container/area:	Various sizes
D) Chemical Content:	Various over the counter chemicals (i.e. paints, non-hazardous cleaning products, etc.)
E) Volume:	Unknown
F) Construction materials:	Not Applicable
G) Location:	Within Giants Stadium
H) Integrity:	No staining
I) Inventory control records:	Not Available

There were four chemical storage cabinets observed during the site inspection. Three are located in the subterranean floor of the stadium near the east gate and the fourth one is located on the sixth floor near seating section 330 and is associated with Verizon Wireless. All four areas sit atop concrete slabs. The chemicals were properly stored and no leaks or stains were observed. As such, sampling is not proposed.

AOC #4: Floor and Trench Drains:

A) Type:	Floor and Trench drains
B) Age:	~1972-present
C) Dimensions of each container/area:	Various sizes
D) Chemical Content:	None
E) Volume:	Not Applicable
F) Construction materials:	Unknown
G) Location:	Throughout the stadium's restrooms, cafeterias, concession stands, and hallways.
H) Integrity:	No staining
I) Inventory control records:	Not Available

There are numerous floor and trench drains located throughout the stadium. These drains do not appear to accept any hazardous chemicals and there was no staining

associated with any of them. The drains discharge into the sanitary system. As such, sampling is not proposed.

AOC #5: Stormwater Collection System:

A) Type:	Stormwater Concrete/Iron Piping system
B) Age:	~1981-present
C) Dimensions of each container/area:	Various sizes
D) Chemical Content:	Stormwater runoff
E) Volume:	Not Applicable
F) Construction materials:	Concrete and Iron Pipe
G) Location:	Stadium storm drains, asphalt-paved parking areas and driveways.
H) Integrity:	No staining
I) Inventory control records:	Not Available

The NJDEP issued a Water Quality Certificate to the NJSEA facility in 1974. One condition of this permit was that all water that is released from the Sports Complex to the surface waters of the State of New Jersey be discharged at a single point in Berry's Creek, to insure the control, and to facilitate the monitoring, of the quality of the water. In 1980, a gravity stormwater collection system was installed for the Continental Airlines Arena Complex. In order to connect to the West Site lagoon system, a single discharge line was installed under Route 120, and connected to an equalizer line beside Lagoon 3. Stormwater routed from the stadium to the lagoons is not anticipated to adversely impact the environment. As such, sampling is not proposed.

AOC #6: Historic Fill:

A) Type:	Historic fill materials
B) Age:	Prior to 1940 (not documented)
C) Dimensions of each container/area:	Not Applicable
D) Chemical Content:	Not Applicable
E) Volume:	Not Available
F) Construction materials:	Not Available
G) Location:	Throughout the Site
H) Integrity:	Not Available
I) Inventory control records:	Not Available

It is known that widespread historic fill exists throughout the majority of the property. Based on an understanding of the local geology and historic land features, it is believed that non-indigenous fill materials were placed on-site to raise the grade of the property to allow for development during the early 1970s. The origin and nature of materials placed on-site is unknown, however, a detailed narrative of available information relating to the historic fill on-site is provided in Appendix J. Further actions are recommended to characterize the non-indigenous fill materials.

AOC #7: Historic Spills:

A) Type:	Historic Spills
B) Age:	Between 1988 and 1992
C) Dimensions of each container/area:	Not Applicable
D) Chemical Content:	Various
E) Volume:	Various
F) Construction materials:	Not Available
G) Location:	Throughout the Site
H) Integrity:	Not Available
I) Inventory control records:	Not Available

A search of current Federal, State, and Local environmental databases revealed that there have been five spills/releases of hazardous substances on the subject property. The following is a summary of these incidents.

- **AOC – #7A** = NJ Release case number 91-8-2-1031-44 relates to an incident in the Giants Stadium X-ray department where person(s) were illegally dumping chemicals down regular sink drains. These chemicals were radio-active. The incident occurred in September 1991 and was reported anonymously.

  When contacted by Langan, the NJDEP stated that they had no information beyond the initial report.

- **AOC – #7B** = On 15 June 1990, approximately 75 gallons of diesel fuel was released at the site. The area of the site is described as "Giants Stadium Loading Dock Area". This spill is listed in the ERNS (Emergency Response Notification System) database, which described the incident as a "fuel cross over line was broken resulting in the right side fuel tank leaking." The spill was remediated with speedy dry and rags.

- **AOC – #7C** = An NJ Release report regarding the "NJ Sports Complex states that on 7 September 1990 an unknown amount of gasoline was released at the site. The report does not specify the cause or exact area of the spill. Case number 90-09-10-1558 was assigned.

  According to NJDEP, they have been awaiting a site investigation report for this case since 1999.

- **AOC – #7D** = An NJ Spills report regarding "In Front of Giants Stadium" states that on 30 October 1992, approximately 50 gallons of diesel fuel was released at the site from a saddle tank on a tractor. Some product entered the storm drain. Case number 92-10-30-2023-26 was assigned.

  According to NJDEP, this incident was the result of a traffic accident. No other information was available from the NJDEP.

- **AOC – #7E** = An NJ Spills report regarding "Front of Giants Stadium" states that on 13 December 1988, approximately 10 gallons of diesel fuel was released. The report does not specify the cause or exact location of the spill. Case number 88-12-13-1817 was assigned.

  According to the NJDEP, this incident is the result of a traffic accident involving a vehicle belonging to Shell Fuel Service, which has been identified as the responsible party in this case.

Langan will continue to gather information regarding the status of each of these cases to determine if site investigation activities are warranted.

AOC #8: Maintenance Shop:

A) Type:	Maintenance Shop
B) Age:	~1972-present
C) Dimensions of each container/area:	Not Applicable
D) Chemical Content:	Various over the counter chemicals are stored in this area (i.e. paints, non-hazardous cleaning products, etc.).
E) Volume:	Not Applicable
F) Construction materials:	Not Applicable
G) Location:	Subterranean level of stadium near east gate
H) Integrity:	No staining
I) Inventory control records:	Not Available

The maintenance area is located on a concrete slab. No spills or stains were observed in this area. As such, sampling is not proposed.

AOC #9: Carpenter Shop:

A) Type:	Carpenter Shop
B) Age:	~1972-present
C) Dimensions of each container/area:	Not Applicable
D) Chemical Content:	Various over the counter chemicals are stored in this area (i.e. paints, non-hazardous cleaning products, glues, etc.)
E) Volume:	Not Applicable
F) Construction materials:	Not Applicable
G) Location:	Southern side of stadium on the subterranean level
H) Integrity:	No staining
I) Inventory control records:	Not Available

The carpenter shop is located on a concrete slab. No spills or stains were observed in this area. As such, sampling is not proposed.

AOC #10: Electrical Transformers:

A) Type:	Transformers and substations
B) Age:	~1972-present
C) Dimensions of each container/area:	Various sizes
D) Chemical Content:	Not Applicable
E) Volume:	Not Applicable
F) Construction materials:	Not Applicable
G) Location:	All of the substations are located within the subterranean level of the stadium, while there is one set of non-PCB-containing transformers located outside of the western gate.

H) Integrity:	No staining
I) Inventory control records:	Not Available

No staining was observed around any of the substations or transformers. As such, sampling is not proposed.

AOC #11: X-Ray Room:

A) Type:	X-Ray Room
B) Age:	~1972-present
C) Dimensions of each container/area:	Not Applicable
D) Chemical Content:	Chemicals used in the development of x-rays
E) Volume:	Not Applicable
F) Construction materials:	Not Applicable
G) Location:	Subterranean floor of stadium near the western gate
H) Integrity:	No staining
I) Inventory control records:	Not Available

The x-ray room is located on a concrete slab. No spills or stains were observed in this area. As such, sampling is not proposed.

AOC #12: Photographic Darkroom:

A) Type:	Photographic developing rooms
B) Age:	~1972-present
C) Dimensions of each container/area:	Not Applicable
D) Chemical Content:	Chemicals used in the development of photographs
E) Volume:	Not Applicable
F) Construction materials:	Not Applicable
G) Location:	Three rooms located on the subterranean level of the stadium.
H) Integrity:	No staining

l) Inventory control records: Not Available

All of the photographic darkrooms are located on concrete slabs. No spills or stains were observed in these areas. As such, sampling is not proposed.

G:\Data1\4517101\Office Data\Reports\Environmental\PA\appendix h - potentially contaminated AOCs.doc

APPENDIX I
Other Environmental Permits
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

13. In accordance with N.J.A.C. 7:26E-3.1(c) xii, list all other federal, state, local government environmental permits for all previous and current owners or operators applied for and/or received for the Site.

Several substantial Federal Approvals were obtained prior/during the construction of the NJSEA Meadowlands Complex in the 1970s. On 13 November 1972, NJSEA applied to the Army Corps of Engineers, New York District, for a Permit to Authorize Construction Activities on areas of the Sports Complex that were within the jurisdiction of Department of Army (Application No. 72-009). These activities included the installation of the discharge structure on the bank of Berry's Creek at Lagoon 1; stormwater equalizer pipes; numerous utility lines; and the construction of sections of the perimeter embankment to protect the West Site of the Sports Complex against flooding.

Pursuant to Section 401 of the Federal Water Pollution Control Act Amendments of 1972 (Public Law 92-500), the NJSEA was also required to apply for a Water Quality Certificate from the NJDEP, before the Corps of Engineers could determine whether or not to issue a Federal permit. The State Water Quality Certificate was issued to NJSEA by the Department during 1974. The Department of Army Construction Permit was issued to NJSEA in January 1976. The NJPDES Permit for discharge from Lagoon 1 was issued by USEPA in July 1975.

APPENDIX J
Non-indigenous Fill Materials
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

13. In accordance with N.J.A.C. 7:26E-3.1(c) xiv, please provide a narrative description of all areas where non-indigenous fill materials were used to replace soil or raise the topographic elevation of the site, including the dates of emplacement.

The purpose of this narrative is to demonstrate that the existing non-indigenous material underlying the Site was deposited to raise topographical grade prior to the development of the Site in the late 1960s and early 1970s and thus can be appropriately classified as "historic fill" under the Department's current definition provided in the *Technical Requirements for Site Remediation (N.J.A.C. 7:26E).* The "historic fill" material is known to be ubiquitous in the vicinity of the Site as supported by aerial photographs and the NJDEP's Historic Fill of the Weehawken Quadrangle Map (See Figure 7).

We have provided a summary of the available information in this narrative including a description of known historic site uses and filling practices, and a review of available historic aerial photographs.

BACKGROUND SUMMARY

Parcels of land that now form the Site were acquired by the NJSEA in the early 1970s. Construction of Giants Stadium and the associated parking lot began in 1972. Based on historic aerial photographs, it appears that prior to the construction of Giants Stadium and its associated parking lots and access roads, a portion of the Site was occupied by what seems to be a trucking facility or warehouse/distribution center. The facility, which appears to be comprised of two small buildings, one large L-shaped building, and a large area designated for the storage of tractor trailers, first appears on a 21 June 1966 aerial photograph. The facility is also depicted on the 1967 Weehawken topographic map. The structures were located on the eastern portion of the property, adjacent to Route 120, within the area that is currently occupied by the west peripheral road. Its' parking area extended to the west into the area currently occupied by Giants Stadium parking lots 4, 7, and 8. A second structure, also located along Route 120, is depicted on the 1955 and 1967 Weehawken topographic maps, as well as aerial photographs from 1961, 1969, and 1974. This small structure was located along Route 120 near the northeastern corner of the Site, within the area currently occupied by the west peripheral road. Finally, a third structure that is depicted on the 1974 aerial photograph was located just north of the trucking facility and approximately 100 yards to the west of Route 120. To the west of the structure is a small area occupied by tractor trailers. Prior to 1947, the historic aerial photos and topographic maps depict the entire Site as undeveloped wetlands and as of 1976; the entire Site is occupied by Giants Stadium and its associated parking lots and access roads.

RECORDS REVIEW

The following documents were reviewed and summarized to evaluate the site conditions.

***Environmental Impact Statement - Giants Stadium The Meadowlands*, dated 1972**

Based on our review of the *Environmental Impact Statement - Giants Stadium The Meadowlands* dated 1972, borrow fill materials were secured from off-site upland or hydraulic sources to supplement suitable materials on the property. These materials were used to establish design grades in areas of dikes, embankments and level elevated sites. Clay excavated within the property was utilized as impervious fill for tops of dikes, embankments, and other raised areas.

***Final Environmental Statement "Permit to Construct an Embankment and Other Facilities on Berry's Creek, Bergen County, New Jersey"*, dated 1978**

Based on our review of the *Final Environmental Statement*, dredged materials from approved sites in Lower New York Harbor were used as fill to establish design grades in areas of dikes, embankments, parking lots, roadways and other elevated sites. The dredged materials were imported by hydraulic pipeline from a point on the Hudson River 4.5 miles from the Site. It was estimated that 3.5 million cubic yards of fill was needed to complete construction of the Sports Complex.

REVIEW OF HISTORICAL AERIAL PHOTOGRAPHS

The following aerial photographs were reviewed to evaluate pre-development conditions and to document the existence of placement over the years of fill materials at the above-referenced property. Copies of these aerial photographs are provided as Attachment A. A brief description of each aerial photograph follows.

6 April 1940 (two photographs) Scale – 1" = 200'

A review of these two aerial photos shows that the Site exists as undeveloped marshland. Berrys Creek, which connects to the Hackensack River, and mosquito control ditches are visible within the marshland.

7 April 1951 Scale – 1" = 200'

Site conditions are similar as those observed in pervious aerial photos. The only change observable is the addition of a small building near the northeastern corner of the Site.

5 December 1953 Scale – 1" = 750'

Site conditions are similar as those observed in pervious aerial photos.

12 April 1961 Scale – 1" = 200'

Site conditions are similar as those observed in pervious aerial photos. The only changes are that the small structure that was first depicted on the 1951 aerial photograph is not visible on this aerial and the addition of a structure located at the northeastern corner of the Site. The building is located along the western side of Route 120.

21 June 1966 Scale – 1" = 750'

The eastern portion of the site has been developed. It appears to be occupied by a trucking facility or warehouse/distribution center. The facility is comprised of three large buildings and a large parking area, which is occupied by numerous trailers. The facility is located along the western side of Route 120, while the parking area extends into current Giants Stadium parking lots 4, 7, and 8.

7 April 1969 Scale – 1" = 200'

Site conditions are similar as those observed in pervious aerial photos.

25 March 1974 Scale – 1" = 200'

The trucking facility/warehouse is still located on the Site. The footprints for Giants Stadium and a portion of the Meadowlands Racetrack are clearly visible on this photograph. The stadium is located on the southern portion of the Site, while the racetrack is located adjacent to the northern border. A majority of the wetlands on the Site have been drained and filled. The southern portion of the Site appears to still be undisturbed wetlands.

29 October 1976 Scale – 1" = 1000'

Major changes to the subject area include the newly completed Giants Stadium and the Meadowlands Racetrack and their associated parking lots. The Site is shown as being occupied by Giants Stadium and its associated parking lots and access roads.

16 March 1985 Scale – 1" = 1000'

There are no major changes to the Site visible on this photo.

29 March 1995 Scale – 1" = 833'

There are no major changes to the Site visible on this photo.

SUMMARY OF FINDINGS

Based on the information provided in this narrative, existing subsurface materials at Giants Stadium property conform to the definition of historic fill. Non-indigenous material was deposited at the site to raise the topographic elevation of the site and to allow development to occur. Any contamination associated with these materials occurred prior to emplacement.

APPENDIX K
Previous Remedial Activities
New Meadowlands Stadium Project
50 State Highway Route 120
East Rutherford, New Jersey

8. **In accordance with N.J.A.C.7:26E-3.1 (c) 1.vii, provide a description of any remediation activities previously conducted or currently underway at the site, including dates of discharges, remedial actions taken, and all existing sample results concerning contaminants which remain at the site. Copies of Department or other governmental agency no-further-action approvals should also be provided with a description of the areas to which the no-further-action approvals apply. This information is especially important if the approval was granted for the remediation of a portion of a site or a specific discharge event rather than the entire site subject to this preliminary assessment.**

The entire Meadowlands Sports Complex was assigned NJ Spill Case Number 00-06-19-1733-40 for leaks discovered during the decommissioning of a number of USTs at the Meadowlands Racetrack and Giants Stadium. Three of the USTs covered under this case number were USTs E4 (550-gallon diesel fuel), E5 (2,000-gallon diesel fuel) and E6 (2,000-gallon diesel fuel). They were decommissioning and abandoned in place within Giants Stadium in late 2000 and early 2001 under NJDEP Bureau of Underground Storage Tanks' supervision. All three of these USTs received Letters of No Further Action from NJDEP. These NFAs were issued on 18 April 2001, 16 November 2001, and 14 November 2002. The 14 November 2002 NJDEP correspondence, which summarizes the No Further Action Determination for all three USTs, is provided in this Appendix.
