

Be Aware

Due to high levels of metals in sludge and soil at the Ringwood Mines Superfund site, there is an investigation underway to determine levels of metals in area plants and game. Preliminary results indicate a need for investigation of additional species.

As results become available, additional information will be posted on the following websites:

www.epa.gov/region02/superfund/npl/ringwood/
www.nj.gov/dep/srp/ringwood
