CHECKLIST FOR COMPLETING THE CHILD CARE CENTER SAFE DRINKING WATER REQUIREMENTS FOR LICENSE RENEWAL N.J.A.C. 10:122-5.2

This checklist outlines the child care center requirements for obtaining a Certification of Acceptable Drinking Water Quality from the New Jersey Department of Environmental Protection (NJDEP) Bureau of Safe Drinking Water (BSDW) for a child care center **renewing** their license (if not a renewal, please use the checklist for a new or proposed center).

<u>NOTE</u>: Child care centers receiving drinking water from a public community water system **do not** have to complete this checklist but instead are required to provide either 1) a copy of the most recent water bill or 2) a letter from the public community water system certifying service to the appropriate address.

Instructions

In order for an existing child care center to receive a Certification of Acceptable Drinking Water Quality from the NJDEP for their license renewal, the child care center must complete and submit pages 2 and 3 of this form.

Sampling requirements, including a list of contaminants and the acceptable timeframe within which the test results are valid for the purposes of this program, may be found on page 3. Note: If a new well has been drilled or changes were made to the existing well (i.e. well deepened, pump replaced), then all of the contaminants listed on page 3 must be sampled and analyzed.

All sampling must be collected **raw** (except for lead and copper). If there is existing treatment (i.e. water softener) for a specific contaminant, a sample must be collected and analyzed for that contaminant before and after treatment. However, if the child care center is a noncommunity water system and has drinking water data following treatment, the data may be used as long as it was analyzed within the appropriate timeframe.

Please note, if drinking water data (excluding radiological results) was used for a previous drinking water quality certification it <u>may not</u> be used towards a drinking water quality certification renewal.

If sampling has occurred within the designated timeframe for any of the contaminants listed, <u>copies of</u> <u>the associated drinking water analyses must be submitted along with this completed checklist</u>. If the child care center is a public water system with its own State-issued PWSID or is served by a public "noncommunity" water system with its own PWSID, the sampling results must be submitted by the child care center's laboratory through NJDEP's E2 Reporting.

Review of the data will be conducted by the BSDW and if acceptable, a Certification of Acceptable Drinking Water Quality will be issued.

Child Care Center Information- LICENSE RENEWAL

Child Care Center Name:	
Address (Street/City/Zip):	
Director/Owner (Print):	
Phone Number:	Fax Number:
Email Address:	
Department of Children and Families license number:	
PWSID (if applicable): N J	
Current population (staff and children):	
Days and Hours of Operation:	Are there different AM & PM sessions? YES: NO:
Does the facility have a drinking water treatment unit	(i.e. water softener)? YES: NO:
If YES, what type of treatment unit and for w	hich contaminant?
Date of previously issued Certification of Acceptable I	Drinking Water Quality:
Did the Certification acknowledge contaminants above	e the maximum contaminant level and/or action level?
YES: NO:	
	i.e. treatment, public education) taken to address these contaminants
Since obtaining the Certification, have there been cha capacity, change in well depth)	inges to the well? (i.e. new well/replacement well drilled, change in pump
YES: NO:	
If YES, describe	

(Director/Owner Signature)

(Date)

Child Care Center <u>Renewal</u>-Required Testing for a Certification of Drinking Water Quality

Contaminant	Sample date must be within the last	Date sampled
Coliform	90 days	•
Nitrate	90 days	
Volatile Organic Chemicals	3 years	
Lead ¹	3 years	
Copper ¹	3 years	
Inorganic Chemicals		
Antimony	3 years	
Arsenic	3 years	
Barium	3 years	
Beryllium	3 years	
Cadmium	3 years	
Chromium	3 years	
Cyanide	3 years	
Fluoride	3 years	
Mercury	3 years	
Selenium	3 years	
Thallium	3 years	
Radiological Contaminants		
Gross Alpha ⁴	3 years	
Radium 226 ³	3 years	
Radium 228 ⁴	3 years	
Uranium ²	3 years	

¹ The chain of custody for the lead and copper sampling must be submitted with the results. Lead and copper samples must be first draw (minimum 6 hour standing time) and from approved sampling sites. Please consult with the laboratory prior to conducting the sampling.

² Uranium analyses are not necessary if the concentration of gross alpha particle activity is <15 pCi/l.

³ Radium 226 analyses are not necessary if the concentration of gross alpha particle activity is <5 pCi/l. However, it may be beneficial for a child care center to analyze for Radium 226 instead of substituting if they are planning on renewing their license in three years and their gross alpha particle activity is < 3 pCi/l. Please see the following for additional information. "If the child care center's gross alpha particle activity is <3 pCi/l and it substitutes for radium 226, a result of 1.5 pCi/l plus the previous radium 228 result will be used to determine if sampling for radium 228 for a license renewal is required. Please refer to the two substitution examples below:

Example A (Initial Gross Alpha result = <3 pCi/l and Radium 228 = .25 pCi/l): 1.5 pCi/l (for radium 226) + .25 pCi/l for radium 228 = 1.75 pCi/l which is less than $\frac{1}{2}$ the MCL of 5 pCi/l. Therefore the child care center does not have to sample for gross alpha and radium 228 until six years from the initial sampling date.

Example B (Initial Gross Alpha result = <3 pCi/l and Radium 228 = 1.1 pCi/l): 1.5 pCi/l (for radium 226) + 1.1 pCi/l result for radium 228 = 2.6 pCi/l which is greater than $\frac{1}{2}$ the MCL of 5 pCi/l. The child care center would need to sample for gross alpha and radium 228 for their renewal (three years after the initial sampling date).

⁴ Renewal sampling requirements for gross alpha and radium 228 for child care centers that have not had a change to their well and/or treatment are required to sample at a frequency determined by using the charts below.

	MDL	1/2 the MCL	MCL
Gross Alpha	3	7.5	15
Combined Radium**	1	2.5	5
Maximum Contaminant Level (MCL); Maximum Detection Limit (MDL); picocuries per liter (pCi/l)			

Gross Alpha and	Combined Radiur	m MCLs and MDLs
-----------------	-----------------	-----------------

Sampling Frequency Determination

Previous Sampling Result	Sampling Due
> the MCL	Quarterly
\leq the MCL and > $\frac{1}{2}$ the MCL	In 3 years
$\leq \frac{1}{2}$ the MCL and \geq the MDL	In 6 years
< the MDL	In 9 years

However, if based upon the previous results, gross alpha and radium 228 sampling are required at different frequencies (i.e. 9 years versus 3 years), sampling for both parameters must be conducted during the earlier due date.

If you have questions regarding drinking water sampling requirements for child care centers, please refer to http://www.nj.gov/dep/dccrequest/safedrink.html or http://www.nj.gov/dep/watersupply/pw child.html or http://www.nj.gov/dep/watersupply/pw child.html or http://www.nj.gov/dep.state.nj.us.
