Summary: FIBI520 is a sentinel site which is sampled every three years for Headwaters IBI monitoring to evaluate assemblage changes through time and to better understand natural variability. Havenmeyer Brook was in "excellent" condition when sampled in 2016, a slight increase from its previous sampling in 2013. This site continues to have a healthy brook trout, common crayfish and northern red salamander population. This site is secluded in a highly forested watershed within the Ramapo Valley County Reservation
