Right to Know
Hazardous Substance Fact Sheet

Common Name: TOLUENE

Synonyms: Toluol; Methyl Benzene; Phenyl Methane
Chemical Name: Benzene, Methyl-
Date: November 2007    Revision: April 2016

Description and Use
Toluene is a colorless liquid with a sweet, strong odor. It is used as a solvent, in aviation gasoline, and in making chemicals, perfumes, medicines, dyes, explosives and detergents.

- ODOR THRESHOLD=2.5 ppm
- Odor thresholds vary greatly. Do not rely on odor alone to determine potentially hazardous exposures.

Reasons for Citation
- Toluene is on the Right to Know Hazardous Substance List because it is cited by OSHA, ACGIH, DOT, NIOSH, DEP, IARC, IRIS, NFPA and EPA.
- This chemical is on the Special Health Hazard Substance List.

FIRST AID

Eye Contact
- Immediately flush with large amounts of water for at least 15 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while rinsing.

Skin Contact
- Quickly remove contaminated clothing. Immediately wash contaminated skin with large amounts of soap and water.

Inhalation
- Remove the person from exposure.
- Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
- Transfer promptly to a medical facility.

EMERGENCY NUMBERS
Poison Control: 1-800-222-1222
CHEMTREC: 1-800-424-9300
NJDEP Hotline: 1-877-927-6337
National Response Center: 1-800-424-8802

TERATOGEN
FLAMMABLE
POISONOUS GASES ARE PRODUCED IN FIRE CONTAINERS MAY EXPLODE IN FIRE

Hazard Rating Key: 0=minimal; 1=slight; 2=moderate; 3=serious; 4=severe

- Toluene can affect you when inhaled and by passing through the skin.
- Toluene should be handled as a TERATOGEN--WITH EXTREME CAUTION.
- Toluene may damage the developing fetus.
- Contact can irritate the skin and eyes.
- Inhaling Toluene can irritate the nose and throat.
- Toluene may affect the nervous system causing headache, dizziness and passing out.
- Repeated exposure may cause liver, kidney and brain damage.
- Toluene is FLAMMABLE LIQUID and a DANGEROUS FIRE HAZARD.

Workplace Exposure Limits

OSHA: The legal airborne permissible exposure limit (PEL) is 200 ppm averaged over an 8-hour workshift, 300 ppm not to be exceeded during any 15-minute work period, and 500 ppm as a 10-minute acceptable maximum peak during an 8-hr workshift.

NIOSH: The recommended airborne exposure limit (REL) is 100 ppm averaged over a 10-hour workshift and 150 ppm, not to be exceeded during any 15-minute work period.

ACGIH: The threshold limit value (TLV) is 20 ppm averaged over an 8-hour workshift.

- Toluene may be a teratogen in humans. All contact with this chemical should be reduced to the lowest possible level.
- The above exposure limits are for air levels only. When skin contact also occurs, you may be overexposed, even though air levels are less than the limits listed above.
**Determining Your Exposure**

- Read the product manufacturer’s Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health Hazardous Substance Fact Sheet, available on the RTK website (http://nj.gov/health/workplacehealthandsafety/right-to-know) or in your facility’s RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act, the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health Act (OSH A) if you are a private worker.
- The New Jersey Right to Know Act requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) require employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

### Health Hazard Information

**Acute Health Effects**
The following acute (short-term) health effects may occur immediately or shortly after exposure to **Toluene**:

- Contact can irritate the skin and eyes.
- Inhaling **Toluene** can irritate the nose and throat causing coughing and wheezing.
- **Toluene** may affect the nervous system causing trouble concentrating, headaches and slowed reflexes. Higher levels can cause dizziness, lightheadedness and passing out.

**Chronic Health Effects**
The following chronic (long-term) health effects can occur at some time after exposure to **Toluene** and can last for months or years:

**Cancer Hazard**
- While **Toluene** has been tested, it is not classifiable as to its potential to cause cancer.

**Reproductive Hazard**
- **Toluene** may be a TERATOGEN in humans since it is a teratogen in animals.
- **Toluene** may damage the developing fetus.

**Other Effects**
- Prolonged or repeated exposure can cause drying and cracking of the skin with redness and a skin rash.
- Repeated exposure may cause liver, kidney and brain damage.

### Medical

**Medical Testing**
For frequent or potentially high exposure (half the TLV or greater, or significant skin contact) the following is recommended before beginning work and at regular times after that:

- Urinary Hippuric acid excretion test (at the end of the shift) as an index of overexposure

If symptoms develop or overexposure is suspected, the following are recommended:

- Liver and kidney function tests
- EEG

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

Request copies of your medical testing. You have a legal right to this information under the OSHA Access to Employee Exposure and Medical Records Standard (29 CFR 1910.1020).

**Mixed Exposures**
- More than light alcohol consumption can cause liver damage. Drinking alcohol may increase the liver damage caused by **Toluene**.
**Workplace Controls and Practices**

Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at [www.cdc.gov/niosh/topics/ctrlbanding/](http://www.cdc.gov/niosh/topics/ctrlbanding/).

The following work practices are also recommended:

- Label process containers.
- Provide employees with hazard information and training.
- Monitor airborne chemical concentrations.
- Use engineering controls if concentrations exceed recommended exposure levels.
- Provide eye wash fountains and emergency showers.
- Wash or shower if skin comes in contact with a hazardous material.
- Always wash at the end of the workshift.
- Change into clean clothing if clothing becomes contaminated.
- Do not take contaminated clothing home.
- Get special training to wash contaminated clothing.
- Do not eat, smoke, or drink in areas where chemicals are being handled, processed or stored.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.

In addition, the following may be useful or required:

- Before entering a confined space where Toluene may be present, check to make sure that an explosive concentration does not exist.

**Personal Protective Equipment**

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

**Gloves and Clothing**

- Avoid skin contact with Toluene. Wear personal protective equipment made from material which can not be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing material for your operation.
- Safety equipment manufacturers recommend Viton, 4-H®/Silver Shield®, and Polyvinyl Alcohol for gloves and DuPont Tychem® CPF-3, CPF-4, BR and LV, Responder® and TK, and Kappler Zytron® 300 and 500 as protective materials for clothing.
- All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

**Eye Protection**

- Wear indirect-vent, impact and splash resistant goggles when working with liquids.
- Wear a face shield along with goggles when working with corrosive, highly irritating or toxic substances.
- Do not wear contact lenses when working with this substance.

**Respiratory Protection**

**Improper use of respirators is dangerous.** Respirators should only be used if the employer has implemented a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134).

- Where the potential exists for exposure over 20 ppm, use a NIOSH approved full facepiece respirator with an organic vapor cartridge. Increased protection is obtained from full facepiece powered-air purifying respirators.
- Leave the area immediately if (1) while wearing a filter or cartridge respirator you can smell, taste, or otherwise detect Toluene, (2) while wearing particulate filters abnormal resistance to breathing is experienced, or (3) eye irritation occurs while wearing a full facepiece respirator. Check to make sure the respirator-to-face seal is still good. If it is, replace the filter or cartridge. If the seal is no longer good, you may need a new respirator.
- Consider all potential sources of exposure in your workplace. You may need a combination of filters, prefilter or cartridges to protect against different forms of a chemical (such as vapor and mist) or against a mixture of chemicals.
- Where the potential exists for exposure over 200 ppm, use a NIOSH approved supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode.
- Exposure to 500 ppm is immediately dangerous to life and health. If the possibility of exposure above 500 ppm exists, use a NIOSH approved self-contained breathing apparatus with a full facepiece operated in a pressure-demand or other positive-pressure mode equipped with an emergency escape air cylinder.

**Fire Hazards**

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

- **Toluene** is a FLAMMABLE LIQUID.
- Use dry chemical, CO₂, alcohol-resistant foam or other foaming agent as extinguishing agents, as water may not be effective in fighting fires.
- **POISONOUS GASES ARE PRODUCED IN FIRE.** CONTAINERS MAY EXPLODE IN FIRE.
- Use water spray to keep fire-exposed containers cool.
- Vapors may travel to a source of ignition and flash back.
- Vapor is heavier than air and may travel a distance to cause a fire or explosion far from the source.
- Use water spray to reduce vapors.
Spills and Emergencies

If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If Toluene is spilled or leaked, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers.
- Ventilate and wash area after clean-up is complete.
- Keep Toluene out of confined spaces, such as sewers, because of the possibility of an explosion.
- It may be necessary to contain and dispose of Toluene as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.

Handling and Storage

Prior to working with Toluene you should be trained on its proper handling and storage.

- Toluene is not compatible with OXIDIZING AGENTS (such as PERCHLORATES, PEROXIDES, PERMANGANATES, CHLORATES, NITRATES, CHLORINE, BROMINE and FLUORINE); METAL SALTS; and STRONG ACIDS (such as HYDROCHLORIC, SULFURIC and NITRIC).
- Store in tightly closed containers in a cool, well-ventilated area away from COMBUSTIBLES.
- Sources of ignition, such as smoking and open flames, are prohibited where Toluene is used, handled, or stored.
- Metal containers involving the transfer of Toluene should be grounded and bonded.
- Use only non-sparking tools and equipment, especially when opening and closing containers of Toluene.
- Toluene may accumulate static electricity.

Occupational Health Information Resources

The New Jersey Department of Health and Occupational Health Service, offers multiple services in occupational health. These services include providing informational resources, educational materials, public presentations, and industrial hygiene and medical investigations and evaluations.

TOLUENE

GLOSSARY

ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGLs) are established by the EPA. They describe the risk to humans resulting from once-in-a-lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values are intended to provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database maintained by federal EPA. The database contains information on human health effects that may result from exposure to various chemicals in the environment.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOSH is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSH is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

Permeated is the movement of chemicals through protective materials.

PIH is a DOT designation for chemicals which are Poison Inhalation Hazards.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Hydrogen), at the same temperature and pressure.

The vapor pressure is a measure of how readily a liquid or a solid mixes with air at its surface. A higher vapor pressure indicates a higher concentration of the substance in air and therefore increases the likelihood of breathing it in.
Common Name: **TOLUENE**

Synonyms: Toluol; Methyl Benzene; Phenyl Methane

CAS No: 108-88-3

Molecular Formula: **C₇H₈**

RTK Substance No: 1866

Description: A colorless liquid with a sweet, strong odor

Hazard Class: 3 (Flammable)

**HAZARD DATA**

**PHYSICAL PROPERTIES**

- Odor Threshold: 2.5 ppm
- Flash Point: 40°F (4°C)
- LEL: 1.1%
- UEL: 7.1%
- Vapor Density: 3.1 (air = 1)
- Vapor Pressure: 21 mm Hg at 68°F (20°C)
- Specific Gravity: 0.87 (water = 1)
- Water Solubility: Very slightly soluble
- Boiling Point: 232°F (111°C)
- Ionization Potential: 8.82 eV
- Molecular Weight: 92.1

**EXPOSURE LIMITS**

- OSHA: 200 ppm, 8-hr TWA; 300 ppm, STEL; and 500 ppm, 10-min peak per 8-hr workshift
- NIOSH: 100 ppm, 10-hr TWA; 150 ppm, STEL
- ACGIH: 20 ppm, 8-hr TWA
- IDLH: 500 ppm
- ERPGs: ERPG-1 = 50 ppm; ERPG-2 = 300 ppm; ERPG-3 = 1,000 ppm

**PROTECTIVE EQUIPMENT**

- Gloves: Viton, 4-H®/Silver Shield® and Polyvinyl Alcohol (>4-hr breakthrough)
- Coveralls: DuPont Tychem® CPF-3, CPF-4, BR and LV, Responder®, TK and Kappler Zytron® 300 and 500 (>8-hr breakthrough)
- Boots: No information
- Respirator: >20 ppm - full facepiece APR with Organic Vapor cartridge
  >200 ppm - Supplied air

**HEALTH EFFECTS**

- **Eyes:** Irritation
- **Skin:** Irritation, drying, cracking and rash
- **Acute:** Nose and throat irritation with coughing and wheezing
  Headache, dizziness and passing out
- **Chronic:** Cancer (Not Classifiable)
  May be a teratogen in humans

**FIRST AID AND DECONTAMINATION**

- **Remove** the person from exposure.
- **Flush** eyes with large amounts of water for at least 15 minutes. Remove contact lenses if worn.
- **Quickly** remove contaminated clothing and wash contaminated skin with large amounts of soap and water.
- **Begin** artificial respiration if breathing has stopped and CPR if necessary.
- **Transfer** to a medical facility.
