## ACKNOWLEDGMENTS

The selection of the individual indicators, the collection and presentation of data, and the specific notes on interpretation are the work of the New Jersey Substance Abuse Needs Assessment Project. Special thanks are due to numerous individuals working in the New Jersey Departments of Health, and Senior Services, Education, Labor, Law and Public Safety, the Courts, and other agencies, which collected, compiled and analyzed the primary data on which this chartbook is based. Their contributions to this ongoing project are greatly appreciated. We also thank those who took their time to review the document and others whose encouragement and interest led to this document.

## Introduction

Community health and well-being have been long-standing concerns of the Department of Health and Senior Services (DHSS). To address these concerns, DHSS has encouraged the use of indicator data to assist health planners, researchers and policy makers in assessing the health and social risks of New Jersey residents. By developing accurate assessments of risk, health planners can more effectively target intervention protocols to those geographic areas and populations most in need.

This document is a revised edition of the 1996 Social and Health Indicators Chartbook developed by the Research and Information Systems (RIS) unit of the Division of Addiction Services (DAS), New Jersey Department of Health and Senior Services. The Chartbook provides data from secondary sources and summarizes social and health indicators for the state and its 21 counties. This edition incorporates several new indicators that have direct or indirect relationship with the use or abuse of ATOD, including recent data on the prevalence of problem behaviors related to alcohol, tobacco, and other drug (ATOD) use from the 2001 New Jersey Middle School Survey.

The 2002 Social and Health Indicators Chartbook is intended to help with the assessment of health problems directly or indirectly related to substance use. This is achieved, in part, by identifying risk and protective factors that affect health outcomes outlined in the Social Development Model (Hawkins, et. al, 1985, 1992). As described in greater detail below, the risk and protective factor domains identified in this model are used as a framework to understand the interaction between social problems and the development of alcohol and drug abuse problems (Hawkins, Catalano, and Miller,1992). The Chartbook also presents data relating to substance abuse-related health consequences and substance availability. The specific aims of the Chartbook are to:

- Present an objective profile of each county using social, health, and economic indicators that affect substance abuse-related health behaviors;
- Show the pattern of substance use and related health consequences in New Jersey's 21 counties;
- Provide information to support needs assessment and prevention and treatment planning at the county level.

## Data Sources

Data on social and health indicators are obtained from archival sources published by the U.S. Bureau of the Census and state governmental agencies, including the Departments of Human Services, Education, and Law and Public Safety. Data are also obtained from the Division of Addiction Services' (DAS) Alcohol and Drug Abuse Data System (ADADS) and from DAS-sponsored needs assessment surveys.

## Report Organization

The Chartbook has a section that describes The State Profile and one that describes The County Profiles of social and health indicators. Selected indicators are displayed using thematic maps, charts and tables accompanied with brief descriptive text. Indicators are grouped in sections according to the risk and protective factor domains identified in the Social Development Model. The maps display patterns of specific health indicators of each New Jersey county. The tables provide recent as well as trend data on selected indicators. The charts illuminate statistical tables, highlighting important aspects and extreme cases. A complete set of tables regarding data on social and health indicators for each county is provided in Appendix A. A short glossary of terms listed in Appendix B defines key technical terms.

The State Profile and the County Profiles are organized according to the four major domains of the risk and protective factors in the Social Development Model. These are: (1) Community Environment; (2)

Family Structure; (3) School Involvement; and (4) Individual/Peer Group Initiation of Problem Behaviors. We have also included two additional measures relevant for treatment needs assessment: (5) Substance Abuse Related Treatment, Morbidity and Mortality; and (6) Direct Prevalence Estimates of substance use.

The 2001 New Jersey Middle School Survey and the 2000 Census data are used to enhance the indicators set for each county. Maps and tables are provided to display the profile of each county for the following indicators: (1) Annual population growth rate, crime rate and unemployment rate; (2) Demographic characteristics by age and race; (3) Selected social and health indicators; (4) Alcohol tobacco and drug use; and (5) Risk factor scale scores and protective factor scale scores.

## Background for The Social Development Model (SDM)

The SDM, which served as a guide for the 2002 Chartbook of Social And Health Indicators, was originated by Hawkins (1985) and further developed for alcohol and substance abuse prevention providers by Hawkins, Catalano and Miller (1992). The model identifies the risk factors that increase the likelihood of problem behaviors and the protective factors that foster strong social bonds and buffer individuals against problem behaviors. These factors can then be organized into a template for action by community health planners interested in developing targeted and effective prevention strategies.

In this report, the risk and protective factor indicators (which number more than 100) were organized into the major domains and sub-domains of the Risk and Protective Factor model. Within each of these domains, a smaller number of indicators (10-15) were identified. Final decision on which indicator to include in this chartbook was based on literature on substance abuse prevention indicators, validity and reliability of the indicator, the frequency with which each indicator is updated and the availability of data on each indicator. Out of the selected indicators, those that are strongly associated with substance abuse were selected for presentation in the main body of the chartbook. The remainder are presented in Appendix A.

Both risk factor indicators and protective factor indicators were examined. However, because of space limitation, only risk factor indicators are included in the State Profile, while both risk and protective factors are displayed in the County Profile. It is clear that adequate indicators are not yet available for many of the domains, a gap that we will continue to address in the future.

## Indicators Used in Both the State and County Profiles

| Domains | Risk Factor Indicators |
| :--- | :--- |
| Community | Poverty rates |
|  | Violent crime rates |
|  | Temporary assistance for needy families |
|  | Voter participation rates |
| Family | Domestic violence rates <br>  <br>  <br>  <br>  <br>  <br>  <br>  <br>  <br> Tivorce rates birth rates <br> Child abuse rates |
| School | Dropout enrollment ratio <br> $\%$ High school graduates <br>  <br> \% 8th <br>  <br> grade below proficiency |
| Individual/Peer Group | Juvenile drug arrest rates |
|  | Juvenile DUI arrest rates |
| Other Health Indicators |  |
| Health Consequences | Drug abuse treatment admissions rate |
|  | Alcohol treatment admissions rate |
|  | Cirrhosis of the liver admissions rate |
|  | AIDS/IDU rate |
|  | Alcohol related mortality rate |
|  | Drug related mortality rate |
| ATOD Use by middle school students | Percent using cigarettes |
|  | Percent using alcohol |
|  | Percent using marijuana |
|  | Percent using inhalants |
|  | Percent using any illicit drug |

## Indicators Used in the County Profile

| Domains | Risk Factor Indicators | Protective factor Indicators |
| :--- | :--- | :--- |
| Community | Low neighborhood attachment <br> Community transition and mobility <br> Availability of drugs and firearms | Community rewards for pro-social <br> involvement |
| Family | Poor family supervision <br> Parental attitudes toward ATOD <br> use | Family attachment <br> Family rewards for pro-social <br> involvement |
| School | Poor academic performance <br> Low school commitment | School opportunities for social <br> involvement <br> School rewards for pro-social <br> involvement |
| Individual/Peer Group | Friends' use of drugs <br> Favorable attitude towards <br> antisocial behavior <br> Low perceived risk of drug use | Social skills <br> Belief in moral order |

## State Profile of Social and Health Indicators in New Jersey

## New Jersey Counties

## COMMUNITY ENVIRONMENT RISK FACTORS

## INTRODUCTION

Family indicators, school environment indicators, and peer group indicators are part of the community domain. The following list presents community attributes used as indicators of the general conditions of New Jersey and its counties. Those indicators chosen for presentation in the main body of the document are shown in capital letters. Those shown in lower case are included in Appendix A.

## COMMUNITY ENVIRONMENT INDICATORS:

Subcategory: Demographic Composition, Transitions and Mobility
$\bullet$ •POPULATION DISTRIBUTION ACROSS REGIONS
-DEMOGRAPHIC CHARACTERISTICS
$\bullet$-TRENDS IN URBAN GROWTH AND DECLINE
-AGE STRUCTURE
-Percent population age 5 and over who moved to a different house within the past five years
-Percent immigrants (\% of persons 5+ who were living abroad 5 years ago)
$\bullet$ Percent of the population born in a foreign country

## Subcategory: Economic Deprivation and Socioeconomic Status

- POVERTY RATE IN NEW JERSEY
- POVERTY RATE FOR FAMILIES BY RACE/ETHNIC GROUPS
- SSI PROGRAM (supplemental security income)
- VIOLENT CRIME RATE
- TEMPORARY ASSISTANCE FOR NEEDY FAMILIES
- Per capita income and median household income
- Annual unemployment rate
- "Extreme" poverty rate (percent of persons with incomes below $50 \%$ of poverty level)
- Unemployment rate (annual average)
- Rate of Mental Health case management program clients per 10,000 population
- Rate of Mental Health community residential program clients per 10,000 population

## Subcategory: Issues of Children Well-being, Health \& Economic Support

-CHILD POVERTY RATE
-Children receiving Temporary Assistance for Needy Families (TANF) rate
-Children Receiving Food stamps per 1,000
-Low Birth Weight (percent of all births)

- Births with no parental care (as percent of all births)
-Children receiving TANF per 1,000
-Child death

Subcategory: Elderly Population Issues
-ELDERLY POVERTY RATE
-Percent of elderly persons living alone (in 1-person households)
-Percent of elderly below poverty level
-Elderly SSI beneficiaries rate per 1000 population
Subcategory: Community Attachment/Disorganization

- VOTER PARTICIPATION RATE
- Percent of registered voters
-Percent of housing units owner-occupied
- Clergy/religious workers as \% of total experienced civilian labor force
$\bullet$-Percent of students enrolled in private schools
Subcategory: General Crime Level
-VIOLENT RATE PER 1,000 POPULATION
-Nonviolent crime index rate
-Total crime index rate
Subcategory: Housing Adequacy and Homelessness
-EMERGENCY \& TRANSITIONAL SHELTER RATE per 10,000 population
$\bullet$ Percent of housing units occupied by 1.01 or more persons per room
-Percent housing units built in 1939 or earlier
-Percent of owner occupied housing
-Percent of homeowner vacancy rate
-Percent of renter vacancy rate

- New Jersey entered the $20^{\text {th }}$ Century with a population of 1.86 million people. The 2000 Census shows that the state population has grown over four fold to $8,414,350$ people. For the last three decades, the state had a significantly slower population growth compared to national data and its share of the nation's population declined from $3.5 \%$ in 1970 to $3.0 \%$ in 2000. Despite a slow growth ( 0.58 per year), New Jersey remains the most densely populated state in the U. S. (1,100 people per square mile) and continues to grow at a moderate rate.
- New Jersey's "weak" population growth is due mainly to a higher out-migration compared to inmigration. However, it stood as a growth dynamo in its own region. New Jersey's 1990-2000 population growth rate ( $5.3 \%$ ) was almost five times that for New York ( $1.1 \%$ ) and six times that for Pennsylvania ( $0.9 \%$ ).
- New Jersey has long been the most suburban state in America. Since 1983, every county in the state has been in a metropolitan statistic al area, as defined by the U.S. Office of Management and Budget. The leading edge of suburban growth lies across the "New Jersey Wealth Belt" which encompasses six counties (Hunterdon, Mercer, Middlesex, Monmouth, Morris, and Somerset). In the 1990s, Ocean County was a leader in absolute population growth. In contrast, the older industrial heartland (Bergen, Essex, Hudson, Passaic and Union Counties) lagged, with Bergen continuing to be the largest in terms of total population (Hughes, Seneca \& Hughes, 2000).

## New Jersey Population - 2000

- Population size
- Density /sq. MI.
- Under 18 years
- 65 years \& over
- Median age

8,414,350

- Home ownership rate

- Average household size
- Non-family households
2.68
- Female-headed-household
29.7\%
12.6\%

Population Density (2000)
190-500/Sq.MI.
1501-3500
3501-6500
6501-13100

## Trends in Urban Growth and Decline

Compared to major industrial states in the U. S., cities in New Jersey account for a small share of the state's total population. Half a century ago, $25.7 \%$ of New Jersey's total population lived in the "Big Six' cities, namely Camden, Elizabeth, Jersey City, Newark, Paterson, and Trenton. While the cities' share of the state population is currently only $11.5 \%$, there are signs of urban stabilization in some cities, such as Jersey City, that continued to grow for two straight decades.

The 2000 census shows the maturity of New Jersey suburbs. Despite being partitioned into 567 municipalities, New Jersey has some vast suburban towns. Among these, Edison, Woodbridge, Dover, and Hamilton will exceed the population of two of New Jersey's major cities (Trenton \& Camden). Edison, with 97,687 people, and Woodbridge, with 97,202 people, emerged as the largest suburban municipalities in 2000.

| Big Cities' Share of Total Population |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 1990-2000 |  |  |  |  |
| Big Six Cities | 1990 |  | 2000 |  |
|  | Num. | \% | Num. | \% |
| Camden | 87,492 | 1.1 | 79,904 | 0.9 |
| Edison | 88,680 | 1.1 | 97,687 | 1.2 |
| Elizabeth | 110,002 | 1.4 | 120,568 | 1.4 |
| Jersey City | 228,517 | 3.0 | 240,055 | 2.9 |

| New Jersey | 7,747,750 | 100 | 8,414,350 | 100 |
| Source: U.S. Census Bureau |  |  |  |  |

## Age Structure

In general, differences in age distribution between groups reflect differences in death rates, fertility rates, and rates of net migration. It also contributes to differences in social, health, and economic status across population groups.

- The baby boom (35-54 years old in 2000) is the largest generation in New Jersey history. Almost one in three, or 2.6 million out of 8.4 million people, is a baby boomer. During the 1990's the 35-44 year-old state population grew by $18.6 \%$, while the $45-54$ year-old age group grew by $28.6 \%$.
- The baby bust ( $25-34$ years old) cohort matured fully in 2000. In the 1990 to 2000 period, this age group shrank the $20-24$ year-old population by $18.4 \%$ and the $25-34$ year-old group by $16.2 \%$. Since a large proportion of treatment populations fall in these age groups, the shrinking age groups suggest that there may be less demographic pressure for treatment services compared to the years baby-boomers crossed these age groups.
- The baby-boom echo is presently reflected in the sharp growth of the 5-14 year-old age group. The 5-9 year-old population grew by $18.7 \%$ while the 10-14 year old group grew by $13 \%$. These cohorts may challenge prevention services in the current decade as they enter adolescence.
- The senior population ( 65 years and over) accounts for $13.7 \%$ of the total population in 2000. Between 1990-2000, the number of seniors grew by $7.8 \%$ and is expected to grow even faster in the coming decade.

New Jersey Population by Age Group

$\square 1990 \quad 2000$

## Poverty in New Jersey

A widely used indicator of economic disadvantage is poverty rate. It measures the proportion of population whose cash income is below the federal poverty level. In 2,000, the poverty level for a family of four in New Jersey was $\$ 17,650$.

- Children make up a disproportionate share of New Jersey's poor population. In $1999,10.8 \%$ of all children under 18 were below the poverty level compared to $8.5 \%$ for the total population.
- New Jersey's child poverty rate declined significantly from $14.4 \%$ in 1997 to $12.2 \%$ in 1998. However, children continue to represent a disproportionately larger share of the state's poor population. In 1998, 35.5\% of the total number living in poverty were children although they represented only $25 \%$ of New Jersey's total population. Nationally, New Jersey is among the eight states that have reduced the poverty rates by $30 \%$ in the 1990 s.
- There is a wide variation in poverty rate by county, ranging from $2.9 \%$ in Hunterdon to $\mathbf{1 7 . 3 \%}$ in Hudson. Three counties, Cumberland, Essex, and Hudson, had rates in excess of the national average at $14.5 \%, 16.7 \%$ and $17.3 \%$, respectively. Four other counties, Atlantic, Camden Passaic and Salem, had poverty rates in excess of $10 \%$, while Bergen, Morris, Somerset and Sussex had rates below 5\%.

Note: The $100 \%$ Federal Poverty Level (FPL) in 2,000 for a family of one person is $\$ 8,500$, increasing to $\$ 11,610$ for two person family, $\$ 14,610$ for three person family and $\$ 20,610$ for five (We add $\$ 3,020$ for each additional member above 5).

## Poverty Rate for Families by Race / Ethnic Group

- In 1996, New Jersey's poverty rate ( $8.7 \%$ ) was below the national average of $13.8 \%$ and ranked the third lowest in the nation.
- Women and minorities are usually more vulnerable to poverty. In New Jersey, the average poverty rate for families was $7.1 \%$ during the 199798 period. Married families fared better ( $2.8 \%$ ) while female-headed families had the highest percent ( $24 \%$ ) living below poverty.
- In the 1990 s , the poverty rate among whites was considerably lower ( $6.2 \%$ ) than New Jersey's overall poverty rate ( $9.1 \%$ ). The rates for Blacks and Hispanics were markedly higher, at $23.6 \%$ and $17.5 \%$, respectively.
- Hispanics have made significant gains in the 90's, moving from a poverty rate of $23.9 \%$ in 1990 to $17.5 \%$ in 1999. Whites, by comparison, experienced no change over their 1990 rate of $6.2 \%$ while Blacks experienced a decline over the same period followed by an increase after 1995.

Indicator Group: Community Environment / Living Conditions

Indicator Group: Community Environment / Living Conditions

## Supplemental Income Recipients

- The Social Security program, 'Old Age Survivors, and Disability Insurance (OASDI)', provides monthly benefits to workers and their families when earnings stop or are reduced, due to retirement, death or disability. On the other hand, Supplemental Security Income (SSI) is a federal cash assistance program that provides monthly payments to low-income, aged, blind and disabled persons.
- In New Jersey, OSDI benefits were paid to 1,325,890 persons in December 1999. This number included 904,340 retired workers; 139,180 widows; 123,040 disabled workers; 62,770 wives and husbands; and 96,560 children. Social security beneficiaries represented $16.3 \%$ of the total population and $91.5 \%$ of the state's population aged 65 or older.
- In 1999, 145,565 persons (33,852 aged, and 111,713 disabled and blind) received SSI payments in December 1999. A total of $34 \%$ of these recipients were 65 years or older, $52 \%$ were between 18 and 64 , and $14 \%$ were under 18 years.

Percentage of Disabled S SI / Medical Assistance Eligibles in December1 999

## Violent Crime Rate 2000

- There were 265,840 index offenses in 2000, a $4 \%$ decrease compared to 1999. The crime rate of the state in 2000 , was 31.6 victims for every 1,000 inhabitants, a decrease of $8 \%$ from 1999.
- There were 32,276 violent crimes ${ }^{\mathbf{1}}$ reported in 2000, a $4 \%$ decrease compared to the number of violent crimes reported in 1999. The violent crime rate in 2000 decreased by $7 \%$ to 3.8 victims for every 1,000 inhabitants compared to 1999.
- Adults accounted for $79 \%$ of the violent crime arrests while the remaining $21 \%$ were juveniles. Adult arrests for violent crime decreased by $3 \%$ compared to $7 \%$ decrease for juvenile arrests.
- A total of $51 \%$ of those arrested were Black, $48 \%$ were White and $1 \%$ were other races. Hispanics accounted for $19 \%$ of the arrests.

1 This category of crime consists of the following offenses: Murder, Rape, Robbery, \& Aggravated Assaults.

## Violent Crime Rate Per 1,000 Population - 2000

Violent Crime Rate Per 1,000

| $\square$ |
| :--- |
| $0.5-1.3$ |
| $1.3-3.7$ |
| $\square$ |
| $3.7-7.2$ |
| $7.2-10.5$ |

## Emergency \& Transitional Shelter Population, TANF and GA Recipients

- The crude Temporary Assistance for Needy Families (TANF) participation rate declined from 46.6/1000 in 1993 to 13.1/1000 in 2000.
- There is a wide variation in TANF participation rate among counties, where the rate ranged from $0.7 / 1,000$ in Morris County to $33.5 / 1,000$ in Essex County in 2000.
- Constant with the decline in the TANF population rates, the crude rate of General Assistance (GA) Participation declined from 4.5/1,000 in 1993 to 2.9/1,000 in 2000.
- New Jersey's emergency and transitional population declined by $26.4 \%$ from 7,470 in 1990 to 5,500 in 2000. The crude rate declined from $9.6 / 10,000$ to $6.5 / 10,000$ in the same period.

## Definition

TANF Rate: Children aged 5-17 years receiving Temporary Assistance for Needy Families (TANF) per thousand persons.

## Emergency and Transitional Shelter / 1,000 Persons

## Voter Participation Rate

Social problems usually lead to little or no neighborhood or community attachment. Voter participation rate is presented here under the assumption that low participation rate indicates low attachment to the community.

- In the 2000 general elections, nearly $55 \%$ of New Jersey's 4,598,000 registered voters claimed no party affiliation. Of the registered voters, 1.2 million were Democrats, 899,000 were Republicans and 13,570 were Independent.
- The overall voter participation rate in New Jersey increased by $4.5 \%$ from 1984 to 1992, followed by a $12.5 \%$ decrease from 1992 to 2000.
- In the 2,000 general elections, only 7 counties (Bergen, Burlington, Hunterdon, Monmouth, Morris, Somerset and Sussex) scored above the state's average voter turnout of $70 \%$.

Definition: Percentage Voter Turnout is the number of ballots cast as a percentage of the number of persons registered to vote in the general elections.

## Voter Participation Rate in Year 2000

Voter Turnout (\%)

| $\square 61-65$ |
| :--- |

## FAMILY STRUCTURE/CHILD DEVELOPMENT RISK FACTORS

## INTRODUCTION

All indicators in this section represent characteristics of family structure and family management practices that place children and youth at increased risk for substance abuse problems. Indicators chosen for presentation are shown in capital letters. Those shown in lower case are included in Appendix A.

## FAMILY STRUCTURE/CHILD DEVELOPMENT INDICATORS

## Subcategory: Family Conflict/Disruption

- DOMESTIC VIOLENCE OFFENSE RATES
- DIVORCE RATES
- Marriage rate per 1,000 population
- Family court fillings for dissolution (rates per 1,000 )
- Family problem referrals (rates per 1,000 )

## Subcategory: Family Management/Child Development Issues

- TEEN BIRTH RATES
- PERCENT OF CHILDREN 0-17 LIVING WITH SINGLE PARENTS
- CHILD ABUSE AND NEGLECT RATE
- CHILDREN ACTIVE WITH THE DIVISION OF YOUTH AND FAMILY SERVICES (DYFS)
- Percent births to women not married
- Percent of children living in married couples households

## Domestic Violence Offenses

- There were 80,681 domestic violence police reports in 1999 compared to 81,454 in 1998, a $1 \%$ decrease. Overall, women were the victims in $80 \%$ of the cases.
- Children were involved or present in 35\% of all domestic violence offenses occurring in 1999. Specifically, $5 \%(4,254)$ of the children were involved and $30 \%(24,290)$ were present at the time of the incident. Wives and ex-wives were victims in $23 \%$ and $3 \%$, respectively, of the reported violence offenses in 1999.
- Alcohol and drugs were involved in $32 \%(25,780)$ of the reported offenses in 1999. Alcohol involvement alone accounted for $28 \%$ of total domestic violence offenses reported.
- During the 1997-98 period, four of the New Jersey's 21 counties reported increases in crime (Cape May: 7\%; Hunterdon: 32\%; Somerset: $0.5 \%$; Warren: $8 \%$ ).

Definition: Domestic violence is alleged spousal abuse or violence between adult members of a household. The chart shows the number of reported domestic violence offenses known to police per 1,000 of the total population.

Reported Domestic Violence Offense Rates Per 1,000 Population, 1955-1997

## Family Structure / Child Development Risk Factors

## Marital Status and Divorce Rate

- During the last decade the percentage of the population who are married increased by $1.7 \%$ ( $55.7 \%-54 \%$ ) for men aged $15 \&$ over, while it declined by $3.3 \%$ for women of the same age group from $51.4 \%$ to $48.1 \%$.
- Although the divorce rate for women ( $8.1 \%$ ) is higher than the divorce rate for men ( $5.9 \%$ ) in 2000 , the rate has increased for both men and women by $1.5 \%$ and $1.9 \%$, respectively.
- At the national level, 16.8 per 1,000 children under the age of 18 were involved in divorces in 1990.
- The share of non-family households grew faster than family households between 1990-2000 (17.7\% vs. $6.6 \%$ ) in New Jersey. The share of female-headed families with no husband present (14.3\%) increased more than three times as fast as the share for married-couple families.

## Births to Teens in New Jersey

A teen birth is defined as birth to an adolescent under the age of 20 . Teenage birth rate refers to the ratio of the number of births that occurred to 15-19 year old females relative to the total number of 15-19 years old females and is expressed per 1,000 population. Children born to adolescents are more likely to be of low birth weight, to have health problems and to suffer child abuse and neglect. Adolescent parents have fewer educational and career opportunities, thus perpetuating poverty for themselves and their children.

- New Jersey's teen birth rate in 1997 was 35 per 1,000 females (ages 15-19). It is relatively lower than the national average ( 52.3 per 1,000).
- There are substantial race/ethnic disparities in teen birth rates. In New Jersey, in 1997, the teen birth rate was 80 per 1,000 for African Americans, 14 for Whites, 76 for Hispanics. The national rates for African Americans, white non-Hispanics, and Hispanics were 85, 35, 94 per 1000, respectively.
- Teen births accounted for $7.8 \%$ of the total number of births in 1997. Nearly one-third of births were to women age $30-34(31.8 \%)$ and more than a quarter $(26.4 \%)$ were to women $25-29$ years old. The median age for mothers in New Jersey in 1997 was 30 years.
- The teen pregnancy rate in New Jersey remained constant $(97 / 1,000)$ during the 1990 s, while it fell by $18 \%$ in the U.S from its all-time high in 1990 to reach a record low of 94.3 per 1,000 women aged 15-19 years in 1997.
- Nationally, New Jersey ranks 35th (1 being best \& 51 worst) in the percentage of low-birth-weight births $(7.9 \%)$. The percentage for the U.S. was $7.5 \%$ in 1997.

Definition: In New Jersey, "low-birth-weight" is defined as the first weight of a newborn that is less than 2,500 Grams (approximately 5 pounds \& 8 ounces) after delivery.

## Family Structure / Family Management \& Child Development

## Living Arrangements for Persons Under 19 Years Old

The number of parents living with a child is generally linked to the human and economic resources available to that child. Children living in one-parent households are more likely to live in low-income households and live below the poverty line than children in two-parent households. Limitations in available resources may impact child development and indirectly place children and youth at increased risk for substance abuse.

- Since the early 1990s, the percentage of children living with only one parent has not changed significantly, averaging at about $24 \%$.
- In 2000, $75.3 \%$ of children in New Jersey lived with two parents, slightly down from $77 \%$ in 1997.
- Between 1990 and 2000, the number of non-family households in New Jersey grew substantially faster than the number of family households ( $17 \%$ vs. $6.6 \%$ ).
- In the past decade, families headed by women with no husband present increased more than three times as fast as married-couple families ( $14.4 \%$ vs.3.8\%).

## Child Abuse and Neglect

The Department of Human Services, Division of Youth and Family Services' (DYFS) report ${ }^{2}$ provides a statistical breakdown of reported and substantiated child abuse, neglect and family problem referrals.

- Five of every 1,000 children under 18 years of age were abused or neglected in 1998. The rate in 1998 was lowest in Morris County ( 1.4 children/1,000) and highest in Cape May County ( 15.2 children/1,000).
- $\quad 17.6$ of every 1,000 children under 18 years of age were the subject of a family problem referral in 1998. The highest figure was observed in Mercer County ( 32.3 per 1,000) in 1998. The lowest figures were in Hunterdon County (7.6) and Ocean County (6.6) in 1998.
- In 33\% of all abuse/neglect cases substantiated during 1998, care-givers were reported as having substance abuse problems. In 1998, DYFS substantiated 1,251 abuse/neglect reports that involved prenatal substance abuse. These cases accounted for $12.7 \%$ of all substantiated abuse/neglect cases .

Definition: The number of child abuse/neglect and family problems reported to New Jersey Division of Youth and Family Services (DYFS) is the ratio of cases per 1,000 children 0-17 years old.

## Family Structure / Family Management \& Child Development

## Out-of-Home Placements of Children

Child out-of-home placement represents characteristics of child development that may place children and youth at increased risk for substance abuse. Rates are limited to those relatively extreme cases that have been brought to the attention of DYFS. Out-of-home placements include foster care, group homes, maternity homes, emergency shelter and juvenile shelter.

- Five of every 1,000 children under 18 years of age were in out-of-home care placement in 1999. The highest rate ( 11 per 1,000 or 2,056 cases) was observed in Essex County. The lowest rates were in Hunterdon County ( 3 per 1000 or 32 cases) and Somerset County ( 1 per 1,000 or 90 cases).

Definition: Child Out-Of-Home placement rate is the number of children receiving out-of-home substitute care as clients of the New Jersey Division of Youth and Family Services (DYFS), per 1,000 children 0-17 years old in the population.

## SCHOOL INVOLVEMENT / EDUCATION LEVEL RISK FACTORS

## INTRODUCTION

A caring and supportive school environment is a protective factor for children from families affected by alcoholism, drug abuse, mental illness, and poverty. Teachers can serve as positive role models and can encourage positive and supportive relationships with peers. Students afforded these protective factors are less likely to become involved in substance abuse problems.

School policies restricting use of alcohol, tobacco and other drugs increase the likelihood of providing a drug-free environment for students and staff.

Academic failure is associated with the risk of drug abuse, delinquency, violence, pregnancy and school dropout. Children fail academically for many reasons and no causality is implied in this document.

Recent studies examining level of education and alcohol use and dependency in adulthood suggest that individuals who leave high school or college before completing a degree are more likely to have an alcohol use problem than those who complete a high school or college degree.

## SCHOOL INVOLVEMENT/EDUCATION LEVEL INDICATORS:

Indicators chosen for presentation are shown in capital letters. Those shown in lower case are included in Appendix A.

## Subcategory: High School Dropouts

$\bullet$ •PUBLIC HIGH SCHOOL STUDENT DROPOUT/ENROLLMENT RATIO
-Percent of population 16-19 years old who are not high school graduates and not currently enrolled in school

## Subcategory: General Adult Educational Level

- PERCENT ADULTS 25+ YEARS OLD NOT HIGH SCHOOL GRADUATES
- Percent of college graduates among adults 25+ years old

## Subcategory: Academic Failure or Achievement

- PERCENT OF STUDENTS FAILING GRADE 8 EARLY WARNING TEST
- Percent of students from lower socioeconomic areas passing reading section of Grade 11 High School Proficiency Test
- Net public school budget per pupil
- Special education students in restrictive settings as a percent of total special education enrollment
- Pupils classified as handicapped/disabled, as a percent of total school enrollment

## Public High School Student Dropout Rates

- In the 1999-2000 school year, 1,289,222 students were enrolled in elementary and high schools while 13,150 dropped out.
- The annual high school graduation rate declined from $84.1 \%$ in 1991 to $79 \%$ in 1999.
- The annual high school dropout rate declined from $4.1 \%$ in 1991 to $3.3 \%$ in1999.
- In the 1999-2000 school year, 1,289,222 students were enrolled in elementary and high schools in New Jersey while 13,150 students dropped out.

## Definition:

- Dropout rate is calculated by dividing the total number of dropouts from grades 9-12 in a given schoolyear by the total number enrolled in those grades in that year.
- Graduation rate is calculated by dividing the number of graduates in a particular year by grade 9 enrollment reported in October four-years earlier.

Indicator Group: School Involvement/Education Level Indicators

High Sch ool Dropout Rate (\%), 1994-1995

## Adults Not High School Graduates

The indicator "Adults Not High School Graduates" measures the general education level of adults in the community and is intended to indicate the priority that school involvement has for parents and children. A low level of commitment to school is usually associated with the development of substance abuse problems.

- In $2000,13.5 \%$ of the population 25 years old or older had less than a high school diploma compared with $47.5 \%$ in 1970.
- There is a wide variation in the percentage of adults without a high school diploma, ranging from $8.5 \%$ in Hunterdon, to $31.5 \%$ in Cumberland. Ten counties, namely Atlantic, Camden, Cape May, Cumberland, Essex, Hudson, Mercer, Passaic, Salem and Sussex, had higher than state average in 2000 (17.9\%).

## INDIVIDUAL/PEER GROUP CHARACTERISTICS AND EARLY INITIATION OF PROBLEM BEHAVIORS

## INTRODUCTION

Young people who take an active rebellious stance toward society are at higher risk of drug abuse, delinquency, violence and school dropout. Specifically, those who associate with peers that engage in problem behaviors are much more likely to follow a similar pattern of behavior themselves.

The earlier young people begin using drugs, committing crimes, engaging in violent activity, dropping out of school and becoming sexually active, the greater the likelihood that they will have problems with these behaviors later on in life. For example, research shows that young people who initiate drug use before the age of fifteen have twice the risk for having drug problems as those who wait until after the age of nineteen (Becker et al., 2000).

## INDIVIDUAL/PEER GROUP INDICATORS:

Indicators chosen for presentation are shown in capital letters. Those shown in lower case are included in Appendix A.

## Subcategory: Alcohol and Drug Abuse Arrests

- JUVENILE DRUG ARREST RATE (chosen for presentation)
- JUVENILE DRIVING UNDER THE INFLUENCE ARREST RATE
- Drug arrest rate - all ages
- Driving under influence of alcohol arrest rate (all ages)

## Subcategory: Juvenile Delinquency

- Juvenile arrest rate (all offenses)
- Rate of juvenile drug abusers
- Rate of juveniles on probation

## Subcategory: Adolescent Alienation, Rebelliousness and Lack of Social Bonding

- Reported incidents of school vandalism, violence and substance abuse
- Adolescent suicide rate (ages <=19)
- Child runaways: arrest rate
- Rate of juvenile arrests for malicious mischief and/or disorderly conduct

## Individual / Peer Group Initiation of Problem Behavior

## Juvenile Drug Arrest Rates

- There were 52,022 arrests reported by law enforcement agencies for drug abuse violations in 1999, a 9\% decrease compared to 1998.
- Juveniles accounted for 14 percent and adults 86 percent of the arrests.
- Thirty-eight percent of those arrested for drug abuse violations were under the age of 21. Males accounted for $84 \%$ of all arrests.
- Fifty-two percent of the persons arrested in 1999 were white and $47 \%$ were black. Hispanics accounted for $13 \%$ of those arrested.

Definition: Drug abuse violations include unlawful sale, manufacturing or procession / use of illicit narcotics and drug.

## SUBSTANCE ABUSE-RELATED HEALTH CONSEQUENCES: TREATMENT, MORBIDITY AND MORTALITY INDICATORS

## INTRODUCTION

This section presents summary data by county on the health consequences of alcohol and other drug use, such as substance abuse-related morbidity (illness) and mortality (death). Also presented are alcohol and drug abuse treatment admission rates by county. Substance abuse treatment data maintained by the NJ Division of Addiction Services through its Alcohol and Drug Abuse Data System (ADADS), which collects admissions data from approximately $85 \%$ of New Jersey treatment agencies, represents a valuable source for estimating the extent of substance abuse in the state.

Substance use and abuse has long been implicated in a variety of serious health disorders. Alcohol use, for example, is associated with cirrhosis, cancer, gastrointestinal disorders, cardiac dysfunction, mental health problems and impairment of the immune system. Similarly, drug use is associated with cardiovascular disease, eating disorders, mental health problems, and HIV/AIDS. Both alcohol and drug-related injuries occur as a result of impaired behavior while driving vehicles, working and participating in recreational activities. Finally, tobacco use has been consistently shown to lead to death from lung cancer, oral cancer, bladder cancer, heart disease, and other causes.

A variety of additional substance-related health problems directly affect infants and children through maternal use of substances during pregnancy. These include: low birth weight, infant mortality, Fetal Alcohol Syndrome/Fetal Alcohol Effects, pediatric HIV infection/AIDS, and neonatal addiction.

## SUBSTANCE ABUSE-RELATED TREATMENT, SUBSTANCE ABUSE-RELATED MORBIDITY AND SUBSTANCE ABUSE-RELATED MORTALITY

Indicators chosen for presentation are shown in capital letters. Those shown in lower case are included in Appendix A.

## Subcategory: Substance Abuse Treatment

- DRUG ABUSE TREATMENT ADMISSIONS RATE (ALL AGES)
- ALCOHOL ABUSE TREATMENT ADMISSIONS RATE (ALL AGES
- Youth alcohol and drug abuse treatment admissions rate (youth = under 18 years old)
- Elderly alcohol and drug abuse treatment admissions rate (elderly $=60$ years and older)

## Subcategory: Substance Abuse-Related Morbidity

- RATE OF AIDS CASES REPORTED WITH INJECTION DRUG USE (IDU)
- Pediatric AIDS cumulative case rate
- Adult/adolescent female AIDS cumulative case rate
- HIV/AIDS reported prevalence rate
- Tuberculosis reported case rate
- Tuberculosis cases
- CIRRHOSIS GENERAL HOSPITAL ADMISSIONS RATE
- Alcohol related motor vehicle accidents

## Subcategory: Substance Abuse-Related Mortality

- ALCOHOL CAUSES MORTALITY RATE
- DRUG ABUSE-RELATED MORTALITY RATE
- Alcohol-related mortality rate
- HIV/AIDS mortality rate
- Suicide mortality rate (all ages)
- Homicide mortality rate
- Motor vehicle accident mortality rate
- Infant mortality rate
- Cirrhosis of liver mortality rate (all forms of liver cirrhosis, for all ages and for persons age 65 and over)
- Age-adjusted death rate, all causes

Injection drug use (IDU) is the most frequently reported risk behavior among HIV/AIDS cases in New Jersey. There were 28,396 people living with HIV/AIDS as of June 30, 2001, of which 9,991 (35\%) were IDUs. The highest number of IDU related AIDS cases was reported in $1993(2,459)$ and accounted for $49 \%$ of HIV/AIDS cases in that year.

Rates for IDU related HIV/AIDS cases varied by region and were highest in the Mature Core Metropolitan Areas (MCMA). Four of the five counties (Essex, Hudson, Passaic, and Union) with rates of 140 or more were located in the MCMA. Atlantic County had 247 / 100,000 IDU related HIV/AIDS cases.

By sex, $41.5 \%$ ( 7,532 of 18,153 ) of those living with HIV/AIDS reported as of June 30, 2001 were men IDUs, and $35.6 \%(3,515$ of 9,886$)$ were women IDUs.

Indicator Group: Substance Abuse Related Treatment, Morbidity \& Morta lity In dicators.

## Substance Availability Indicators

## INTRODUCTION

This section presents indicators derived from the 2001 New Jersey Middle School Survey that is conducted by the New Jersey Department of Health, Division of Addiction Services. Prevalence of substance availability for each county is summarized for all counties except Bergen County, which did not participate in the survey. A total of $59(22.6 \%)$ New Jersey middle schools, evenly split between $7^{\text {th }}$ and $8^{\text {th }}$ grade, participated in the survey. Because of the relatively small representation of schools from some of these counties (Cumberland, Cape May, Essex, Hunterdon, Mercer and Morris), county level data should be interpreted with caution.

Summary of findings from the 2001 New Jersey Middle school survey:
-There was a decline in ATOD use from both 1995 and 1999.
-Alcohol was the most frequently used substance by middle school students, where $31 \%$ of students reported using alcohol in the past 12 months. This is a substantial decrease from $46.2 \%$ in 1999 and $49 \%$ in 1995. There was also a decline in binge drinking (defined as five or more drinks at one sitting in the past two weeks) from $9.7 \%$ in 1999 to $7.6 \%$ in 2001.

- Annual use of cigarettes declined from $20.2 \%$ in 1999 to $12.3 \%$ in 2001.
- In 2001, $4.9 \%$ of the surveyed students reported using marijuana in the past 12 months compared with $9.8 \%$ in 1999 and $13 \%$ in 1995.
$\bullet$ Annual inhalant use declined from $6.6 \%$ in 1999 to $4.9 \%$ in 2001.
The annual use of "any illicit drug" (defined as any drug use excluding alcohol \& tobacco products) declined from $17.5 \%$ to $10.2 \%$ between 1999 and 2001.

Any Illicit Drug Use by Ethnicity of Middle School Students, 2001

## County Profile of Social and Health Indicators

## Introduction

The County Profile of Social and Health Indicators is derived from the Census 2000 data and the 2001 New Jersey Middle School Substance Use Survey statistics. Key components of the county profile include: basic demographic data, selected social and health indicators, cancer incidence, the prevalence of alcohol, tobacco, and other drugs (ATOD) among middle school students, and the risk and protective factors affecting the behavior of middle school students in New Jersey.

The Middle School Substance Use Survey collects data on ATOD use among middle school students, as well as indicators of risk and protective factors that correlate with ATOD use. Indicators in the former category are expressed in percentages while risk and protective factors are expressed as scores. The 2001 New Middle School Survey is the third survey in the state and has data on all but Bergen County (Kline, Mammo, Pollard, Tsuru, et al.,).

A student's risk or protective factor scale score is expressed as a number ranging from 0 to 100 . A score of 50 indicates the average for the normative population, with scores higher than 50 indicating above average scores, and below 50 indicating below average scores. Because risk factors are associated with negative behavioral outcomes, and protective factors with positive outcomes, it is desirable to have risk scores that are low and protective scores that are high.

The presentation of information for each county is organized according to the four major domains of the Risk and Protective Factor Model. Maps and tables display current demographic profiles, key social and health indicators, and ATOD use by middle school students.

## Population:

- Population size, growth, unemployment rate and crime rate by municipalities
- County demographic characteristics (age, race, density and poverty level)

## Selected Social and Health Indicators of County Population (All ages):

- Community Domain (child poverty rate, voter participation rate, and violent crime rate)
- Family Structure (domestic violence rate, teen birth rate, and child abuse/neglect rate)
- School involvement (dropouts, grade $8{ }^{\text {th }}$ Early Warning Test)
- Individual / Peer Behavior (Juvenile drug arrest, and DUI arrest)
- Health Indicators (drug abuse treatment admissions, alcohol abuse treatment admissions, IDU risk, AIDS cases, cirrhosis of liver hospital admissions, alcohol related mortality, drug related mortality, unintentional injury, suicide and homicide)

## Cancer Incidence:

- Lung cancer rate
- Oral cancer rate
- Bladder cancer rate

## APPENDIX B <br> Glossary of Terms

Below poverty level. The number of persons below poverty includes all persons with a poverty status below the poverty threshold of a given family size.

Black or African American. A person having origins in any of the black racial groups of Africa. It includes people who indicate their race as Black, African American, or Nigerian, Kenyan, Haitian...etc.

Causes of Death (ICD-9 Codes): The National Center for Health Statistics (NCHS) is the source of the mortality data presented in this chartbook; the data are based on death certificates filed for New Jersey residents and are compiled by county of the decedent's residence (regardless of where the death occurred). Based on the combination of all contributory causes of death listed on the death certificate, NCHS assigns a single underlying cause for each death. For the period covered in this report, the NCHS coded cause of death according to the International Classification of Diseases, Ninth Revision (ICD-9) developed by the World Health Organization.

CAUSES OF DEATH WITH EXPLICIT MENTION OF ALCOHOL - The specific ICD-9 codes included in the "ALCOHOL CAUSES MORTALITY RATE" indicator presented in this chartbook are based on a 1994 definition used by the National Institute on Alcohol Abuse and Alcoholism (NIAAA). They include the following codes: $291,303,305.0,357.5,425.5,535.3,571.0,571.1,571.2,571.3$, 790.3, E860.0 and E860.1. For further information see NIAAA, County Alcohol Problem Indicators: 1986-1990, U.S. Alcohol Epidemiology Data Reference Manual vol. 3, 4th ed., published July 1994, pp. 1-7.

DRUG INDUCED UNDERLYING CAUSES OF DEATH - The specific ICD-9 codes included in the "DRUG-RELATED MORTALITY RATE" indicator presented in this chartbook are based on the category of "drug-induced" deaths defined by the U.S. Public Health Service for purposes of tracking progress toward the national "Healthy People 2000" objective for reducing drug-related deaths. The category of "drug induced" deaths encompasses the following specific ICD-9 codes: 292, 304, 305.2305.9, E850-E858, E950.0-E950.5, E962.0 and E980.0-E980.5. For further information see U.S. Public Health Service, Centers for Disease Control and Prevention, Healthy People 2000 Review, published August 1993.

Child abuse/neglect referrals. The number of child abuse and neglect referrals to New Jersey Division of Youth and Family Services (DYFS) for intervention, per 1,000 children 0-17 years old in the population.

Child out-of-home placement. The number of children receiving out-of-home care as clients of DYFS, per 1,000 children $0-17$ years old in the population.

Decennial Census and Current Population Survey: The census of population and housing, taken by the U.S. Census Bureau in years ending in 0 (zero), the most recent being in 2000. Article I of the constitution requires that a census be taken every ten years for the purpose of reapportioning the U.S. house of representatives. Several of the indicators included in this chartbook are based on 2000 U.S. Census data. To assess trends in selected data since 2000, the U.S. Bureau of the Census conducts the Current Population Survey (CPS), a monthly survey of a sample of households throughout the United States. The Census Bureau has partially released data on Census 2000 of certain indicators (e.g. race, age, sex, density, housing, living arrangements) for the State of New Jersey.

Drug abuse violations. The unlawful sale/manufacturing/possession/use of the following narcotics or drugs: cocaine and their derivatives (morphine, heroin, codeine), marijuana, synthetic narcotics and other dangerous non-narcotic drugs.

Driving Under the Influence (DUI). Under the New Jersey reporting program, the offence of DUI is defined as the operation of any motor vehicle while under the influence of alcohol or narcotics.

Eight grade early warning test. The percentage of students in eight grade who scored below the state minimum level of proficiency in at least one section (reading, math and/or writing) of the annual statewide New Jersey Early Warning Test.

Hispanic. Defined by self-identification, Hispanic origin refers to ethnicity, not race. Persons of Hispanic origin may be of any race. The terms "Spanish", "Hispanic origin" and "Latino" are used interchangeably by those who identify themselves in one of the specific categories listed in the census questionnaires as Mexican, Puerto Rican, or Cuban as well as those who indicate that they are "other Spanish /Hispanic/ Latino". "Other Spanish/Hispanic/Latino" are those whose origins are from Spain, the Spanish speaking countries of Central and South America, the Dominican Republic, or people who identify themselves as Spanish.

High school graduation rate. Graduation rate is calculated by dividing the number of graduates in a particular school year by the grade 9 enrollments reported four years earlier.

Household. A household includes all of the people who occupy a housing unit. A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied as separate living quarters.
Homeowner vacancy rate. The proportion of homeowner housing inventory that is vacant for sale. It is computed by dividing the number of vacant units for sale only, by the sum of the owner-occupied units and vacant units that are for sale only, and then multiplying by 100 .

Low-birth-weight. In New Jersey "low-birth-weight" is defined as the first weight of a newborn child that is less than 2,500 grams ( $5 \mathrm{lb} . \& 8 \mathrm{oz}$ ) after delivery.

Median. This measure represents the middle value in an ordered list of ' $n$ ' data values. The median divides the total frequency distribution into two equal parts: one-half of the cases fall below the median and one-half of the cases exceed the median.

Median age. This measure divides the age distribution into two equal parts: one-half of the cases falling below the median value and one-half above the value. Median age is computed on the basis of a single year age distribution.

Median income. The median income divides income distribution into two equal groups, one having income above the median, and the other having incomes below the median. Median income for Households, families, and unrelated individuals are based on all households, families, and unrelated individuals, respectively. The median income for individuals is based on people 15 years old and over.

Old-Age Survivors, and Disability Insurance (OSDI). The Social Security Program provides a monthly benefit to workers and their families when earnings stop or are reduced due to retirement, death, or disability.

Owner occupied A housing unit is owner occupied if the owner or co-owner lives in the unit even if it is mortgaged or not fully paid for, or if it is built on leased land.

Poverty rate. The ratio of persons below poverty to the total number of persons for whom poverty status
has been determined.

Poverty level. Following the Office of Management and Budget's (OMB's) Directive 14, the Census Bureau uses a set of money income threshold that vary by family size and composition to detect who is poor. If the total income for a family or unrelated individual falls below the relevant poverty threshold, then the family is classified as being "below the poverty level'. The poverty thresholds are updated each year by the Census Bureau to allow for changes in the cost of living as reflected in the Consumer Price Index. The 1999 weighted average poverty threshold of $\$ 17,028$ for a family of four represents the same purchasing power as the corresponding 1963 threshold of $\$ 3.128$. ). The number of persons for whom poverty status has been determined includes all persons except institutionalized persons, persons in military group quarters and in college dormitories, and unrelated individuals under 15 years old.
For further reading see Gordon M. Fisher (1992).

Race: The concept of race, as used by the Census Bureau, reflects self-identification by people according to the race or races with which they most closely identify. These categories are socio-political constructs and should not be interpreted as scientific or anthropological in nature. The racial classification standard established by OMB includes five minimum categories (White, Black or African American, American Indian or Alaska Native, Asian and or Pacific islander) and a sixth category, 'some other race'. In addition to the five race groups, Census 2000 offered the option of selecting one or more races.

Rate: A rate is computed as the number of events divided by the population at risk. For example, the number of cases of a disease occurring in a year in a given area, divided by the area's population at risk. Depending on the problem under consideration, the "population at risk" may be the area's total population or it may be limited to persons in specific age groups or other subgroups. Because the value of the rate per unit population is often very small and hard to interpret, the rate value is often multiplied by 100,000 or 10,000 or 1,000 or 100 , and the rate is then expressed as "cases per 100,000 population" or "per 10,000 population", etc. When the calculated rate is in terms of "cases per 100 population", it is expressed as a percentage of the population.

Rental vacancy rate. The proportion of rental inventory that is vacant for rent. It is computed by dividing the number of vacant units for rent by the sum of renter-occupied units and the number of vacant units for rent, and then multiplying by 100 .

School Test Score Indexes. These indexes show the performance of pupils on Grade 4 Elementary School Proficiency Assessment (ESPA), the Grade 8 Proficiency Assessment (GEPA) and the Grade 11 High School Proficiency Test5 (HSPT). In each the mean average scores on each part of the test have been indexed with 1,000 representing a perfect score and the indexes for the various parts of the test have been averaged.

Supplemental Security Income (SSI). A federal cash assistance program that provides a monthly payments to low-income, aged, blind, and disabled persons. The program is based on nationally uniform eligibility standards and payment levels. The SSI payment is determined by the recipient's countable income, living arrangement, and marital status. As of January 2000, the maximum monthly federal SSI payment for an individual with no other countable income is $\$ 512$, and for a couple, $\$ 769$.

Two or more races. The race response categories on Census 2000 are collapsed into the five minimum race groups and "Some other race" category. "Two or more races" refers to combinations of two or more of the race groups (White, Black, American Indian and Alaska Native, Asian, Native Hawaiian, and Some other race). There are 57 possible combinations of two or more races. Thus, according to this approach, a response of "white: and "Asian" was tailed as two or more races, while "Japanese" and "Chinese" was not because they are both Asian responses.

TANF (Temporary Assistance for Needy Families). Assistance provided by Federal Government to assist needy families with children aged 5-17 years so that children can be cared for in their own homes.

Teenage birth rate. The number of births to women under 20 years old, as a percent of all births.
Violent crime rate. The number of offences related to murder, rape, robbery and aggravated assault reported to police per 1,000 of the total population.

Voter turnout. The number of ballots cast as a percentage of the number of persons registered to vote in the general elections.

White. A person having origins in any of the original peoples of Europe, the Middle East, or North Africa. It includes people who indicate their race as 'white, Irish, German, Italian, Lebanese, Near-easterner, Arab, or Polish'.
