
And the State Treasurer...

The New Jersey Building Authority has managed an impressive collection of projects ranging from historical restorations to the construction of entire technical complexes. The Building Authority's leadership and expertise in finance and construction resulted in the successful completion of each of these projects. Their attention to detail brought back to life some of Trenton's historical treasures such as the State House and Dome, the War Memorial, the Old Barracks, and Thomas Edison College. Their vision transported New Jersey into the 21st century with such projects as the New Jersey Forensic Science Technology Center and the New Jersey State Police Regional Operations Intelligence Center.

Just when it seemed the Building Authority hit its stride, it took on the challenge of yet another extraordinary large scale and complex project. The latest project, the New Jersey Public Health, Environmental and Agricultural Laboratory located in West Trenton is the Building Authority's second largest project to date. The laboratory will provide a secure, central, state-of-the-art facility for various agencies to perform work in support of public health, environmental, and agricultural programs.

As State Treasurer, I am impressed by the Building Authority's effective management of multimillion dollar projects. It puts forth a quality product while making certain every dollar is well spent. I look forward to working with the Building Authority as we address the State's building needs and challenges in the future.

A handwritten signature in black ink, consisting of a stylized 'R' followed by a series of loops and a long horizontal stroke extending to the right.
