This training course offers the crash investigator insight into the operational function of the Bosch Crash Data Retrieval (CDR) System. At the end of this training, a Technician is expected to image and preserve data in a format such that the "CDR Data Analyst" would be able to use the collected data together with situational complete reconstruction. Although the CDR Technician course replaces a portion of the previously offered "CDR Operator's Certification Course", it does *not* address any analysis of the extracted/harvested data. This one day course is best suited for field/on-scene investigators; it is also required as a prerequisite for the CDR Data Analyst's course. If you have already attended an Analysts and/or a Technician course, this training will serve as a much needed update on new vehicles, software, and additional storage modules that are added every year.

Ownership of a CDR System is encouraged, but not required for the training. The design of this training is such that even those who have not yet obtained a system will better understand this evolving technology and benefit from the information. Course completion meets the requirements for recognition as a Bosch CDR System Data Collection Technician.

## Registration and Cancellations

Unfortunately, we cannot accept registrations by phone. A registration form must be completed for each individual registrant and mailed, faxed, and emailed as instructed.

**We strongly advise you to retain a copy of your registration form for your records.**

Please register me for the Crash Data Retrieval Technician Training at the following location:
