OVERVIEW

Motor vehicle crashes are the leading cause of death and acquired disability to US adolescents. To address this public health problem, New Jersey (NJ) enacted one of the most comprehensive Graduated Driver Licensing (GDL) laws in the US in 2001; the state also has the highest minimum age of licensure requirement and one of the lowest fatality rates among young drivers and their peer passengers ([Curry et al, Miles to Go, 2012](#)). Although GDL provisions have been proven effective at reducing fatal young driver crashes, crashes continue to be the leading health threat to New Jersey's youth. Thus, continuing to monitor the number of crashes involving young drivers is critically important in the effort to improve the health and well-being of New Jersey's youth. This report is designed to provide New Jersey's traffic safety advocates and educators with comprehensive data on the state's young driver crashes to assist them in their work to further reduce the burden of these crashes.

This report describes young driver crashes occurring in NJ over the five-year period from 2010 through 2014, with special focus on the crashes that occurred in 2014. For purposes of the report, young drivers are defined as drivers who are 16 to 20 years old at the time of their crash. Sixteen year old drivers may only hold a permit, 17 year-old drivers may hold either a permit or a probationary license, and 18 to 20 year-old drivers may hold a permit, probationary license, or basic license. Since crash risk varies substantially by a driver's age, when appropriate this report presents data by single years of age rather than grouping all young drivers together. Data for the report comes from two sources: the NJ Motor Vehicle Commission's Licensing Database and the NJ Department of Transportation's Crash Record Database. These two databases were individually linked in order to connect each driver who crashed with their

complete NJ license record and to provide per-driver crash rates.

From 2010 through 2014, there were 221,328 young driver crashes in NJ: 50,232 crashes in 2010; 46,896 in 2011; 44,022 in 2012; 42,198 in 2013; and 37,980 in 2014. In 2014, young drivers made up 7% of all drivers in NJ but accounted for 11% of all crashes; they also have the highest per-driver crash rates of any age group. In total, there were 236,002 young drivers involved in these crashes, or 47,200 per year on average during the period. Fortunately, there has been a substantial 25% decrease in the number of crash-involved young drivers over the five-year period: from 53,839 in 2010 to 40,236 in 2014.

There were more male than female young drivers involved in crashes and, relative to 17-20 year-olds, few 16 year-old drivers were involved in crashes. The majority of young driver crashes involved more than one vehicle. Crashes occurred year-round, with somewhat more crashes occurring during the months of June, January, May, and July. Friday was the most common day of the week for crashes and afternoon the most common time of day, with one-quarter of all crashes occurring from 2:00 p.m. to 4:59 p.m. In 2014, 71% of young drivers involved in crashes had a crash-contributing circumstance noted; the most common was driver inattention (42% of drivers). Additionally, in 2014, 27% of the young drivers involved in a police-reported crash were issued one or more citations by an investigating officer. Careless driving was the most common citation issued (58% of all citations). County-specific data can be found in sections beginning on page 12 and town-specific data in the section beginning on page 15.

OVERALL CRASHES

Overall, there were 236,002 young drivers involved in crashes from 2010 through 2014 in NJ (Table 1A, Figure 1A). The number of crash-involved young drivers decreased in each subsequent year and a total of 25% over the period: from 53,839 in 2010 to 40,236 in 2014. There also was a decrease in the number of drivers of each age, with the decrease most pronounced for 18 year-old drivers (28%), followed by 17 year-old drivers (26%), 20 year-old drivers (24%), and 16 and 19 year-old drivers (both 23%). Only 1% of young drivers who crashed were 16 years old at the time of the crash, reflecting the lower crash risk among permitted drivers;

each of the other ages composed approximately 25% of the young drivers who crashed.

Each year, 54% of young drivers involved in crashes were male (Table 1B, Figure 1B). In 2014, the difference by sex was slightly lower for 16 and 17 year-old drivers (52% and 51% were males, respectively) than for 18-20 year-old drivers (55% in each age were males). The decrease in the number of crashes from 2010 to 2014 was similar for male and female young drivers (26% versus 25%) as shown in Table 1C, Figure 1B.

TABLE 1A: NJ YOUNG DRIVERS INVOLVED IN CRASHES BY YEAR AND DRIVER AGE, 2010-2014

AGE AT CRASH	2010	2011	2012	2013	2014	TOTALS
16	785	706	706	659	607	3,463

TOTALS	53,839	50,131	46,919	44,877	40,236	236,002

FIGURE 1A: YOUNG DRIVERS (16-20) INVOLVED IN CRASHES IN NJ, BY YEAR, 2010-2014

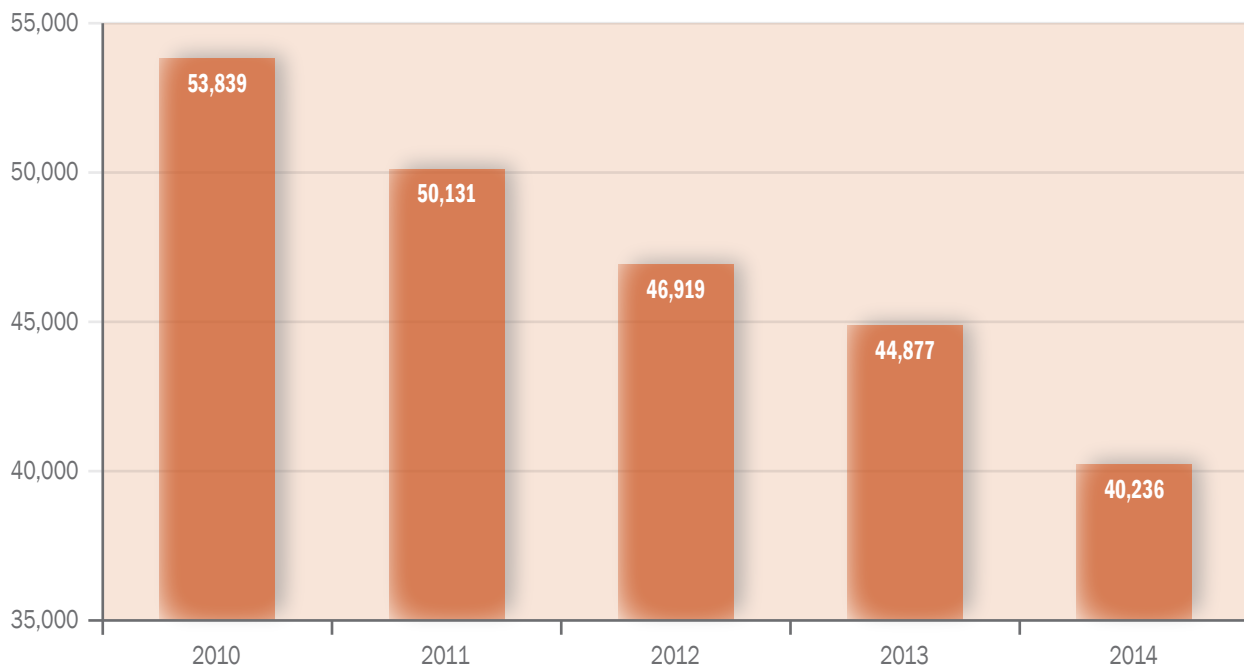

TABLE 1B: MALE YOUNG DRIVERS INVOLVED IN CRASHES IN NJ, BY YEAR AND DRIVER AGE, 2010-2014

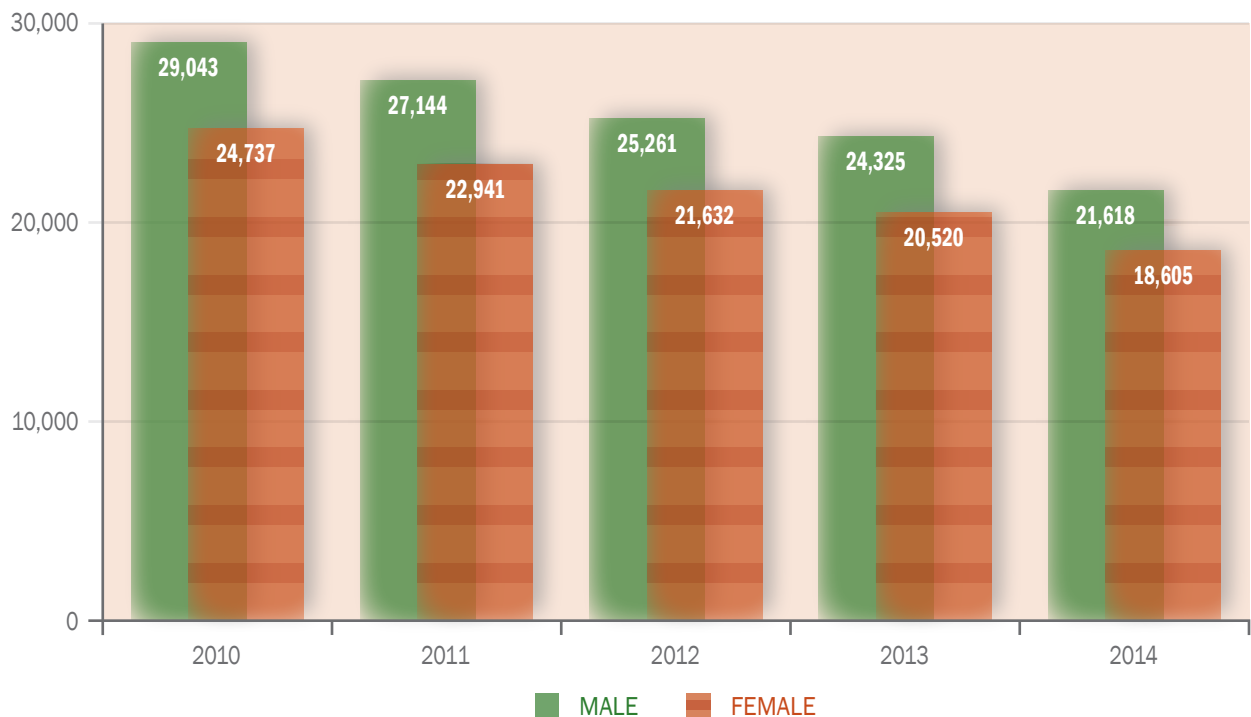

AGE AT CRASH	2010	2011	2012	2013	2014	TOTALS
16	390	387	356	329	317	1,779
17	6,935	6,327	6,032	5,560	5,029	29,883
18	7,644	6,874	6,369	6,425	5,515	32,827
19	7,171	6,776	6,247	5,969	5,488	31,651
20	6,903	6,780	6,257	6,042	5,269	31,251
TOTAL	29,043	27,144	25,261	24,325	21,618	127,391

Note: The number of young drivers for whom sex was not recorded on the crash report ranges from 13 to 59 drivers per year.

TABLE 1C: FEMALE YOUNG DRIVERS INVOLVED IN CRASHES IN NJ, BY YEAR AND DRIVER AGE, 2010-2014

AGE AT CRASH	2010	2011	2012	2013	2014	TOTALS
16	392	316	347	328	290	1,673
17	6,369	5,928	5,523	5,204	4,833	27,857
18	6,368	5,747	5,479	5,040	4,550	27,184
19	5,814	5,499	5,140	4,906	4,543	25,902
20	5,794	5,451	5,143	5,042	4,389	25,819
TOTAL	24,737	22,941	21,632	20,520	18,605	108,435

Note: The number of young drivers for whom sex was not recorded on the crash report ranges from 13 to 59 drivers per year.

FIGURE 1B: YOUNG DRIVERS (16-20) INVOLVED IN CRASHES IN NJ, BY YEAR AND GENDER, 2010-2014

FATALITIES AND INJURIES

Young drivers are not the only ones affected when they crash. Thus, in addition to young drivers themselves, the report identifies two other important groups: (1) 16 to 20 year-old passengers of young drivers (“young passengers of young drivers”); and (2) all others involved in young driver crashes (“all others”), which includes young drivers’ passengers who are younger than age 16 or older than age 20, older drivers and their passengers (some of whom are 16 to 20 years old) in other vehicles, and pedestrians.

During the five-year period, there were 345 fatalities associated with young driver crashes, with an average of 69 fatalities per year (66 in 2014) (Figure 2). Nearly one-third of all fatalities (32%) were to the young driver themselves, while 18% were to the young passengers of young drivers and half (50%) were to someone else.

This is consistent with national data from 2010 in which, among crashes involving 15 to 19 year-old drivers, the drivers themselves accounted for 38% of the fatalities ([Curry et al, Miles to Go, 2013](#)).

The number of fatalities among young drivers was generally highest for 20 year-olds (Table 2). In each year, there were from one to three fatalities to a passenger under age 16 driven by a young driver.

Each year, approximately 60% of those involved in young driver crashes were people other than the young driver. Annually, an average of more than 16,000 people experience a non-fatal injury (complaint of pain, moderate injury, or incapacitated)—14% of all those involved in a young driver crash (Table 3A).

LICENSED YOUNG DRIVERS AND CRASHES AMONG LICENSED DRIVERS

The annual number of young drivers in NJ with a learner’s permit, probationary license, and basic license is shown in Table 4 and the five-year trend shown in Figure 3. The number of young drivers with a probationary license has increased over the five-year period: from 151,025 in 2010 to 167,160 in 2014 (an 11% increase). Conversely, the number of young drivers with a basic license decreased over the time period from 198,222 in 2010 to 171,311 in 2014 (a 14% decrease). The number with a learner’s permit was relatively stable until 2014, when the number dropped to 81,296 (an 11% decrease over the number permitted in 2013).

Sixteen year old drivers may only hold a permit, 17 year-old drivers may hold either a permit or a probationary license, and 18 to 20 year-old drivers may hold a permit, probationary license, or basic license. Each year, approximately three-quarters of 17 year-olds who have started the licensing process had a probationary license. The proportion of 18 year-olds who had a basic license decreased from 51% in 2010 to 40% in 2014; the proportion of 19 year-olds who had a basic license also

decreased, although the decrease was smaller (67% in 2010 versus 63% in 2014). The proportion of 20 year-olds with a basic license ranged from 71% to 75% per year.

Figure 4A shows age group-specific percentages of all NJ permitted and licensed drivers and of crash-involved NJ permitted and licensed drivers. Younger drivers were overrepresented in crashes—that is, the percentage of crash-involved drivers. The two percentages were nearly equal at age 40, while the percentage of crash-involved drivers was lower than that of licensed drivers for those aged 45 or older, indicating that older drivers were under-represented in crashes. Since crash risk varies substantially by driver age, it is important to examine crash rates by single years of age. Over-representation in crashes is greatest for 17 year-olds and decreases with each year of age (Figure 4B). As shown in Table 5, the driver crash involvement rate dropped steadily with age, from 11 per 100 licensed drivers at age 17 to 3 per 100 licensed drivers at ages 85 to 90. For most age groups, crash involvement rates were higher for males than for females.

TABLE 4: NUMBER OF YOUNG DRIVERS*, BY LICENSE TYPE AND AGE, 2010–2014

YEAR	LICENSE TYPE	AGE					TOTALS

* Driver is defined as a permitted or licensed NJ driver; age was determined on the date of the crash.

** Numbers do not include drivers who were unlicensed or suspended on July 1, 2014; age was determined on July 1, 2014.

*** All 16 year-old drivers in NJ are permitted.

CRASHES BY TIME

Among the 37,980 young driver crashes in 2014, the highest percentage occurred in the month of June (10%), although the number of crashes did not vary greatly by month (Table 6). There was more variation by day of week: 17% of all crashes (N = 6,381) occurred on Friday, while 10% (N = 3,791) occurred on Sunday. Finally, with respect

to time of day, one-quarter of all young driver crashes (26%) occurred from 2:00 p.m. to 4:59 p.m. (Table 7); 6% of young driver crashes occurred from 11:00 p.m. to 4:59 a.m., which are restricted hours for permitted and probationary drivers in this age group.

* 109 young driver crashes were missing time of crash

CRASH-CONTRIBUTING CIRCUMSTANCES

For each crash-involved driver, investigating officers can record up to two factors that contributed to the crash; categories of crash-contributing circumstances include driver actions, vehicle factors, road or environmental factors, pedestrian factors, and other factors. Among the 40,236 young drivers involved in a crash in 2014, 71% (N = 28,585) had a crash-contributing circumstance noted. The most common was driver inattention (42% of drivers), which was noted for more than four times

as many drivers as the next most common factor noted (following too closely, 9% of drivers) shown in Table 8. The top four contributing circumstances among crash-involved young drivers were all driver actions; road surface condition was the top road or environmental contributing circumstance (recorded for 5% of drivers) and the fifth most common overall. The most common vehicle factor was brakes, which was recorded for only 1% of drivers. There were no pedestrian factors.

TABLE 8: CONTRIBUTING CIRCUMSTANCES OF YOUNG DRIVERS IN CRASHES (N=40,236), 2014

CRASH-RELATED CITATIONS

In addition to noting contributing circumstances for the crash, investigating officers can issue citations to drivers at the time of the crash. Twenty-seven percent of the 40,236 young drivers involved in crashes in 2014 were issued one or more citations by the investigating officer (N = 10,674) as shown in Table 9; the percentage was similar for drivers of specific ages (26% for 20 year-olds; 27% for 16 year-olds). Among those issued citations, the majority were issued only one citation. As shown in

Table 10, the most common citations issued to crash-involved young drivers were: careless driving, which accounted for 58% of all citations; failure to stop/yield, which accounted for 9% of all citations, and leaving the scene of a crash, which accounted for 5% of all citations. There were 254 citations issued for violations of GDL restrictions. Detailed information on how citations were coded is available in the Methods Section. (See Appendix A)

TABLE 9: NUMBER OF CITATIONS ISSUED TO YOUNG DRIVERS INVOLVED IN CRASHES, 2014

CRASHES BY COUNTY

The 2014 rate of young driver crashes (per 10,000 residents) by county is shown on the map, with darker colors representing areas with higher young driver crash rates. The five counties with the highest crash rates are: Ocean (888 young driver crashes per 10,000

residents); Cape May (849 per 10,000); Somerset (818 per 10,000); Monmouth (805 per 10,000); and Morris (757 per 10,000). Hudson County had the lowest young driver crash rate (312 per 10,000) in 2014, less than half the rate in Ocean County.

FIGURE 5: YOUNG DRIVER CRASH RATE PER 10,000 16-20 YEAR-OLDS, BY COUNTY, 2014

* Estimates of the number of 16-20 year-old residents were based on the 2010 Census. See Methods Section for more details . (Appendix A)

SINGLE VERSUS MULTIPLE-VEHICLE CRASHES, BY COUNTY

Table 11A shows, for each NJ county, the total number of police-reported crashes that occurred in 2014 and the number and proportion of these crashes that involved a young driver. Sussex County had the highest proportion of crashes that involved a young driver—23% of all crashes in 2014. This was followed by Ocean and Gloucester counties, where 18% of all crashes involved a young driver. The counties with the lowest proportion of crashes involving a young driver were Hudson (6%), Essex (10%), and Bergen (13%) counties.

In Table 11B, the number of crashes—both overall and those involving a young driver—are separated into those that involved only one vehicle (single-vehicle) and those that involved two or more vehicles (multiple-vehicle). The proportion of all single-vehicle crashes

that involved a young driver is also reflected in that table. Overall, 11% of all single-vehicle crashes in NJ involved a young driver. Sussex County had the highest proportion of single-vehicle crashes involving a young driver (18%), followed by Cape May, Warren, and Morris counties (all 14%).

The proportion of all young driver crashes that were single- versus multiple-vehicle can also be determined from Table 11B. Overall, 13% of young driver crashes that occurred in 2014 involved only the young driver's vehicle. Notably, the proportion varies greatly by county—from a low of 8% in Hudson County, 9% in Union County, and 10% in Essex and Middlesex counties to a high of 27% in Hunterdon, 30% in Sussex, and 34% in Salem counties.

CRASHES BY TOWN

The number of young drivers involved in crashes in each year 2010–2014, as well as for the combined five-year period, is shown for each town in Table 12. Overall, 453 of the 565 towns in NJ (80%) experienced a decrease

in the number of young drivers involved in crashes in 2014 compared with 2010, 79 towns (14%) experienced an increase, and 33 towns (6%) experienced no change.

* Abrupt changes in the number of young drivers involved in crashes for these towns may be due to data issues; in these cases, trends should be interpreted cautiously.

** Data from Princeton Boro, Princeton Twp, and Princeton (all in Mercer County) were combined.

METHODS (APPENDIX A)

This report was created in collaboration with The Children’s Hospital of Philadelphia Center for Injury Research and Prevention. Data management and analysis was conducted by the Center for Injury Research and Prevention.

DATA SOURCES

Young drivers in NJ progress through three Graduated Driver Licensing (GDL) phases: (1) learner’s permit, (2) probationary (i.e. intermediate) license, and (3) basic (full, unrestricted) license. NJ is one of only a handful of states that apply GDL requirements to new drivers aged 18 and older.

Data for this report comes from two sources: the NJ Motor Vehicle Commission’s Licensing Database and the NJ Department of Transportation’s Crash Record Database. Data in the Crash Record Database

are contingent on municipalities’ reporting to NJ Department of Transportation; in some instances, crash reporting may be incomplete or delayed. These two databases were individually linked in order to connect each driver who crashed with their complete NJ license record and provide per-driver crash rates. This results in having both in-depth data for each police-reported motor vehicle crash and the license status of NJ drivers at the time of the crash. Census information from 2010 was used for county-level population information (US Census Bureau).

ANALYTIC METHODS

This report primarily included counts of police-reported crashes occurring in NJ that involved a young driver, young drivers involved in these police-reported crashes, and a description of young drivers and their crashes by various factors of interest. A motor vehicle crash is reportable in NJ if it results in injury to or death of any person or damage to property of any one person in excess of \$500. Data for this report were limited to drivers who were 16-20 years old at the time of the crash and, in some instances, occupants, other drivers, and pedestrians involved in those crashes. Except where noted, data were not restricted to drivers who were licensed in NJ at the time of the crash nor to drivers who were residents of NJ. Similarly, all types of crashes were included, including all vehicle types.

Statewide population counts are available in Census data for single years of age, but county-level population counts are only available for the age groups of 15-19 year-olds and 20-24 year-olds. To estimate the number of 16-20 year-old residents of each county, we first calculated on the state level the proportion of 15-19 year-olds who were each year of age and the proportion of 20-24 year-olds who were 20 years old. These proportions were then applied to the county-level population counts for the age groups of 15-19 year-olds and 20-24 year-olds to calculate population estimates for single years of age. The single year of age estimates for 16-20 year-olds were then summed for each county. This method assumes the same proportion of young residents are in each county as are in the state overall; thus, results presented in the map should be considered estimates.

DEFINITIONS

POLICE-REPORTED CRASH:

Crashes in NJ that result in injury to or death of any person or result in property damage of any one person in excess of \$500.

YOUNG DRIVER:

Drivers who were 16–20 years old at the time of their police-reported crash.

YOUNG DRIVER CRASH:

A police-reported crash involving at least one driver who was 16–20 years old at the time of the crash.

PHYSICAL CONDITION:

Investigating officers record the physical condition of each person involved in the crash.

Physical condition definitions from the [NJTR-1 Form Field Manual](#) are as follows:

Killed: Victim is deceased.

Incapacitated: Victim has a non-fatal injury. Cannot walk, drive, or normally continue the activities that they could perform before the motor vehicle crash.

Moderate Injury: An evident injury, other than fatal and incapacitating. Injury is visible, such as a lump on head, abrasion, bleeding, or lacerations.

Complaint of Pain: A report or claim of injury that is not fatal, incapacitating, or moderate. Injury is not visible to the investigating officer.

CRASH-CONTRIBUTING CIRCUMSTANCES:

Investigating officers can record up to two factors that contributed to the crash for each crash-involved driver; categories of contributing circumstances are driver actions, vehicle factors, road or environmental factors, pedestrian factors, and other factors.

LICENSE PHASES:

New young drivers in NJ progress through three license phases:

1. *Learner's permit:* eligible at a minimum age of 16 (17 if no formal driver training) and six-month minimum holding period;
2. *Probationary license (also known as intermediate license):* eligible at a minimum of age 17, one-year minimum holding period, and subject to restrictions; and
3. *Basic license (also known as full license):* eligible at a minimum of age 18 following completion of phases 1 and 2.

TABLE AND FIGURE SPECIFIC NOTES:

FIGURES 1A–1B:

The number of males plus the number of females in each age do not necessarily sum to the total number of people in each age. Each year, there are from 13 to 59 drivers for whom sex was not recorded; these people are included in the overall figure but not the sex-specific figures.

FIGURES 4A–4B AND TABLE 1:

For these figures and table, the drivers involved in crashes were restricted to those who were licensed in NJ at the time of the crash in order to mirror the number of people licensed in NJ. Those who were unlicensed or had a suspended license were excluded from both categories. For drivers who crashed, age was determined on the date of the crash. Only the first crash in 2014 was used for drivers who crashed more than once, so that each person only was counted once in the analyses. The number of licensed drivers was the number with a valid license on July 1, 2014; age was determined on that date.

TABLE 3:

Excluded from the table are the 109 crashes that did not have time of crash recorded on the crash report.

TABLE 5:

The [New Jersey Crash Report](#) includes a single open-text field per driver in which the investigating officer is instructed to note citations issued that driver. This field can contain any combination of words and numbers, such as the statute violated (e.g., “39:4-89”) or the description of that statute (e.g., “following too closely”). In some cases, multiple citations were entered into this field. It is important to note that effective September 17, 2008, 16 to 20 year-old NJ drivers who were under GDL were not able to plea bargain point-carrying offenses. For each crash-involved young driver, the text fields were hand coded to identify the specific violation(s) for which a citation was issued. These were then grouped into the following categories:

CITATION CATEGORY	STATUTES INCLUDED
CARELESS DRIVING	19:9-1.17, 39:4-97, 39:4-97.1, 39:4-97.2, 39:4-97.4, 39:4-97A, 39:4-97B, 39:4-97D, 39:4-97F, 39:4-97N, 39:4-97Q
FAILURE TO STOP/YIELD	39:4-105, 39:4-119, 39:4-119A, 39:4-120, 39:4-120.9, 39:4-122, 39:4-128, 39:4-128.1, 39:4-144, 39:4-35, 39:4-36, 39:4-81, 39:4-87, 39:4-90, 39:4-90.1, 39:4-91, 39:4-92
LEAVING THE SCENE OF AN ACCIDENT	2C:11-5.1, 39:4-129, 39:4-129A, 39:4-129B, 39:4-129D, 39:4-130
UNLICENSED DRIVING	39:3-10, 39:3-10.1, 39:3-10.18, 39:3-10.6, 39:3-10.8, 39:3-10A, 39:3-10B, 39:3-37.1, 39:3-37.1A, 39:3-37.1B
ALCOHOL USE	2C:33-15, 39:4-50, 39:4-50.1, 39:4-50.14, 39:4-50.15, 39:4-50.2, 39:4-50.3, 39:4-50.8, 39:4-50.9, 39:4-50B, 39:4-50G, 39:4-51, 39:4-51A, 39:4-51B
GDL VIOLATION	39:3-13, 39:3-13.1, 39:3-13.2, 39:3-13.2A, 39:3-13.3, 39:3-13.4, 39:3-13.4G, 39:3-13.8, 39:3-13.8A, 39:3-13.8B, 39:3-13.8C, 39:3-13.8D, 39:3-13.8E, 39:3-13.8F, 39:3-13.8G
RECKLESS DRIVING	39:4-96
DRIVING WITH A SUSPENDED LICENSE	39:3-40, 39:3-40H
FOLLOWING TOO CLOSELY	39:4-39, 39:4-89
USE OF ELECTRONIC EQUIPMENT (NON-GDL)	39:4-97.3, 39:4-97.3A, 39:4-97G
SEAT BELT NONUSE (NON-GDL)	39:3-76.2, 39:3-76.2A, 39:3-76.2F, 39:3-76.3A
SPEEDING	19:9-1.2, 39:4-52, 39:4-98, 39:4-99, 39:5-1, 39:5C-1
DRUG USE	2C:35-10, 2C:35-10A, 2C:35-10B, 2C:36-2, 39:4-49, 39:4-49.1
OTHER NON-MOVING VIOLATIONS*	39:3-17, 39:3-29, 39:3-33, 39:3-36, 39:3-4, 39:3-44, 39:3-72, 39:3-74, 39:4-138, 39:4-67, 39:6B-2, 39:8-1
OTHER MOVING VIOLATIONS**	39:4-115, 39:4-123, 39:4-124, 39:4-125, 39:4-126, 39:4-127, 39:4-56, 39:4-66, 39:4-66.1, 39:4-82, 39:4-85, 39:4-85.1, 39:4-86, 39:4-88, 39:4-88B

* There were 260 statutes coded in this category; the 12 statutes with citations issued to 100 or more drivers are listed here.

** There were 40 statutes coded in this category; the 15 statutes with citations issued to 100 or more drivers are listed here.

IMPORTANT NOTES WHEN INTERPRETING DATA:

1. This report included all police-reported crashes involving a young driver that occurred in NJ regardless of whether the young driver was a NJ resident or NJ licensed driver.
2. The numbers represented here may not exactly match those in the New Jersey Teen Drivers 2010 report (<http://www.nj.gov/lps/hts/downloads/NJ-Teen-Drivers-2010.pdf>). Data used in this report were generated at a different time than data used for the previous report; thus, the two data sets may have slightly different data due to delayed reporting. Additionally, definitions for table elements may differ between the reports.
3. It may not be appropriate to compare data presented in this report to data presented in reports of other jurisdictions, such as other state or national-level data. Readers are advised to use caution when comparisons are made given the following: a) different definitions of or requirements for reportable crashes; b) different ages at which young drivers are eligible for licensure; and c) different definitions of young drivers. For example, reportable crashes in NJ include those with property damage of \$500 or more, whereas other jurisdictions may require more extensive damage or at least one injury in order to be considered a reportable crash.
4. Comparisons across years: It is important to note that year-to-year changes in the number of young drivers who crashed will to a certain extent reflect changes in the number of licensed young drivers.

COMPLEMENTARY ANALYSES ON NEW JERSEY'S YOUNG DRIVERS:
