### **Superstorm Sandy Update – November 21, 2012**

PVSC continues to repair and rebuild its systems and equipment which were damaged as a result of Superstorm Sandy. Primary process treatment is in operation. The oxygen activated sludge, secondary treatment process was seeded on November 16, 2012 with a healthy biomass which began rebuilding the biological system. Effluent discharge is being disinfected for pathogens.

Mobile solids dewatering equipment is in use for removal and disposal of biomass while work continues on PVSC's permanent dewatering processes.

PVSC encourages residents to follow all NJDEP advisories regarding water conservation and recreational use of the area waterways. [www.state.nj.us/dep](http://www.state.nj.us/dep)
