

Rev1: Changed some project limits (Project ID's ending in "R") to correspond to planned work

**POTENTIAL RECONSTRUCTION PROJECTS IN NJDOT MAINTAINED SYSTEM
865 Candidates - Sorted By Route Number**

Notes: (Use Legal Size Paper to Print)

- (1) Selection criteria: SDI ≤ 2.75, based on 2011 PMS data.
- (2) Allowable gap in consecutive segments meeting selection criteria and included in the same project = 0.3 mile.
- (3) All deficient segments are shown regardless of short length. Some of these areas are included in planned work.
- (4) AADT = Average Annual Daily Traffic. IRI = International Roughness Index. Normalized IRI = IRI converted to 0 - 5 scale. SDI = Surface Distress Index. FPR = Final Pavement Rating
- (5) Cost estimated as \$300,000 per lane mile. *Benefit = 0.9(5.0-Avg FPR) + 0.1(Traffic Factor) and Traffic Factor = (5/60000)(Avg AADT), with Max = 5.0*
- (6) For undivided routes (Dir = B): IRI, Normalized IRI, SDI, FPR, and Benefit shown represent the most critical set of values considering both directions of travel.
- (7) In Rte column, B=Business, T=Truck, L=Local. Rte 139L = lower roadway & 139U = upper roadway. Rte 095M = NJDOT maintained section of I-95.
