Baseline Document Change Announcement

Release of the Mean High Water Manual

BDC08T-04

Date: December 22, 2008

SUBJECT: Mean High Water Manual

The Mean High Water manual is now released as a supplement to the NJDOT Survey Manual.

The objective of this manual is to establish a uniform method for determining water level as applied to safety, construction projects and bridge clearances determination in tidal areas. It includes an introduction to the phenomena of tides, discussions on tidal and vertical datum, legal issues of tides, and methods for establishing the mean high water (MHW) at a construction site.

Implementation Code R (ROUTINE)
