Zika Virus

Signs and symptoms: fever, rash, joint pain, and conjunctivitis (red eyes).

No locally transmitted Zika cases have been reported in the continental United States, but cases have been reported in returning travelers.

The virus causes a mild illness that can last days to weeks: fever, rash, body aches, conjunctivitis. Even the most severe forms do not require hospitalization. The big problem is pregnant women. The virus does cross the placenta and affect the developing fetus, causing microcephaly and other severe birth defects. Pregnant women or women planning to become pregnant should avoid travelling to endemic areas. So far what we know is that while active with the virus, it can cause birth defects. Once you are virus free, there are no reported fetal effects. It can be sexually transmitted and has been found live after two weeks in semen.

Current outbreaks reported in Central and South America, Samoa (Oceania/Pacific Islands), Suriname, U.S. Virgin Islands and Cape Verde (Africa).

ALERTS

Check for current NJDOH ALERTS at http://www.nj.gov/911/resource/EMD%20Guidecards%201014%20ALERT%2020141110%201200%20ver 4.pdf

February 5, 2016

ALERTS

Zika Virus

If a more detailed interrogation is needed go to: INFECTIOUS DISEASE

Anyone from the general public with questions about Zika should be instructed to call the Infectious Disease Hotline 1-800-962-1253 (NJ Poison Control) ADVISE ALL RESPONDERS (Police, Fire, EMS, any others directly or through their dispatch) TO USE P.P.E.
1. “Where is your emergency?” (Address or Location)
2. “What is the number you are calling from?”
3. “What is the emergency?”
4. “What is your name?”
5. Determine age and sex of patient

6. “Is the patient conscious?” (Able to talk)

7. “Is the patient breathing NORMALLY?”
   - YES
     - Determine chief complaint and turn to appropriate card.
   - NO / UNCERTAIN
     - Go to CPR Instructions for age group

ANIMAL BITES
“Is the animal contained?”
“What type of animal bit the patient?”
“Is the patient short of breath or does it hurt to breathe?”
“What part of the body was bitten?”

SIMULTANEOUS ALS/BLS
Unconscious/not breathing normally.
Decreased level of consciousness.
Uncontrolled bleeding, after attempts to control.
Serious neck or face bites from animal attacks.
Bites from known poisonous animals.

BLS DISPATCH
Controlled bleeding.
Swelling at bite site.
Bite below neck, non-poisonous.

“Is the patient bleeding?”
IF YES, Go to: BLEEDING/LACERATION
“How long ago did they receive the bite?”
ANIMAL BITES

Pre-Arrival Instructions

Contain the animal, if possible.
Lock away any pets.

If severe bleeding go to

BLEEDING/LACERATION
Pre-Arrival Instructions

If little or no bleeding, irrigate human and animal bites with copious amounts of water.

Have the patient lie down, Cover patient with blanket and try to keep them calm.

For snake bites:

Apply direct pressure to the wound.
Do not elevate extremity.
Do not use ice.
Do not attempt to remove venom.

For jellyfish stings:

Wash with vinegar or baking soda.

If the patient’s condition changes, call me back.

Monitor for shock, Go To: TRAUMATIC INJURY

Prompts

Has law enforcement been notified?
Has Animal Control been notified?

ASSAULT / DOMESTIC, SEXUAL

State of New Jersey EMD Guidecards Version 02/16

“Is the assailant nearby?”

“Are you safe?”

“Was it a physical assault vs. sexual assault?”

“How was the victim assaulted?”

(Stabbing, gunshot or major trauma go to appropriate card)

“What part of the patient is injured?”

“Is the patient bleeding?”

IF YES, Go to BLEEDING/LACERATION

SIMULTANEOUS ALS/BLS

Unconscious/not breathing normally.
Decreased level of consciousness.
Crushing injury (except to hands or feet.)
Puncture injury (head, neck, torso, thigh.)
Multiple extremity fractures.
Femur (thigh) fracture.
Uncontrolled bleeding.

BLS DISPATCH

Penetrating/crushing injury to hands or feet.
Isolated extremity fracture.
Minor injuries.
Unknown injuries.
Concerned caller without apparent injuries to victim.
Police request stand-by/check for injuries.
ASSAULT / DOMESTIC, SEXUAL  Pre-Arrival Instructions

Remain in a safe place, away from the assailant. 
Obtain description of assailant(s). 
Have the patient lie down, Cover patient with blanket and try to keep them calm. 
Do not touch weapons. 
Monitor for shock, Go To: TRAUMATIC INJURY

Advise patient not to change clothing, bathe or shower. 
Keep patient warm. 
Gather patient medications, if possible. 
Do not allow the patient any food or drink. 
If the patient’s condition changes, call me back.

Prompts

Has law enforcement been notified? Relay details of incident and description of assailant(s).

Sexual Assault- non-injured, Follow County SART Protocols
Domestic Violence- non-injured, Follow local police protocols

Bleeding / Laceration

“Where is the bleeding from?”
If the patient is female with vaginal bleeding
“Could she be pregnant?”
If YES, go to PREGNANCY/CHILDBIRTH
“Does she have pain in the abdomen”
If YES consider ABDOMINAL PAIN

“How much blood can you see?”
“How long have they been bleeding?”
“Is blood squirting out?” (arterial bleeding)
“Is the patient a hemophiliac (a bleeder)?”
“Has the patient recently traveled outside of the state/country?”
IF YES: “Where?” (Check ALERTS)

Simultaneous ALS/BLS

Decreased level of consciousness.
Any arterial bleeding.
Bleeding with history of Hemophilia.
Rectal bleeding with significant blood loss.
Vomiting blood or coffee ground material.
Bleeding from mouth with difficulty breathing.
Bleeding from the neck, groin, or armpit with significant blood loss.
Vaginal bleeding if over 20 weeks pregnant, associated with lower abdominal pain or fainting.

BLS Dispatch

Minor bleeding from any other area that can be controlled by direct pressure.
**BLEEDING / LACERATION**  
**Pre-Arrival Instructions**

If bleeding, use clean cloth and apply pressure directly over wound. Do not remove. If cloth becomes soaked, add more to what is already there. Elevate bleeding extremities. IF Tourniquet is available apply following instructions on package.

If nosebleed, tell the patient to apply direct pressure by pinching the nose tightly between their index finger and thumb, sit forward and hold it until help arrives. Attempt to spit out blood, swallowing may make patient nauseous.

Locate any amputated part(s) and place in clean plastic bag, **NOT ON ICE.**

If teeth, locate, **DO NOT** touch the root, and place them in container with milk or clean water.

Have the patient lie down, Cover patient with blanket and try to keep them calm.

Monitor for shock, Go To: **TRAUMATIC INJURY**

Advise patient not to move, eat or drink anything.

Gather patient medications, if possible.

If the patient’s condition changes, call me back.

**Prompts**

Any bleeding that cannot be controlled by direct pressure should be considered critical.

Use of tourniquets cannot be properly instructed over the phone. They should be used only by people who have had proper training.

---

**BURNS**

*CHEMICAL*

"What chemical caused the burn?"

"Where is the patient burned?"

*IF HEAD OR FACE:*

"Is the patient short of breath, coughing or does it hurt to breathe?"

"Is the patient having difficulty swallowing?"

"Are there burns around their mouth and nose?"

"Are there any other injuries?"

*THERMAL*

"Is anything on the patient still burning?"

If YES, Stop the burning.

"Place burned area in cool water (not ice), if convenient"

*ELECTRICAL*

Go to **ELECTROCUTION**

*SIMULTANEOUS ALS/BLSS*

Decreased level of consciousness.

Burns to airway, nose, mouth.

Hoarseness, difficulty talking or swallowing.

Burns over 20% of body surface.

Electrical Burns/electrocution from 220 volts or greater power lines/panel boxes.

2nd & 3rd degree burns (partial or full thickness) to Palms (hands) Soles (feet) Groin

*BLS DISPATCH*

Less than 20% body surface burned.

Spilled hot liquids.

Chemical burns to eyes.

Small burn from match, cigarette.

Household electric shock.

Battery explosion.

Freezer burns.

---

*State of New Jersey EMD Guidecards Version 02/16*
BURNS  Pre-Arrival Instructions

THERMAL
Place burned area in cool water (not ice), if convenient

CHEMICAL
Have patient remove contaminated clothing, if possible.
If chemical, get information on chemical
(MSDS Sheet if available).
If chemical is powder, brush off, no water.
Flush chemical burns from eyes with water.
Remove contact lenses if present.
Gather patient medications, if possible.
If the patient’s condition changes, call me back.

Rule of Nines

Prompts

Dispatch Fire Department/HAZMAT, according to local protocol.

Check NJ DOH Website for Burn Centers

FOLLOW AIR MEDICAL DISPATCH GUIDELINES

EYE PROBLEMS / INJURIES

State of New Jersey EMD Guidecards Version 02/16

“What caused the injury?”

“Is eyeball cut open or leaking fluid?”

“Are there any other injuries?”
If YES go to appropriate Guidecard

SIMULTANEOUS ALS/BLS

Unconscious/not breathing normally.
Decreased level of consciousness.
Uncontrolled bleeding.

BLS DISPATCH

Any eye injury.
EYE PROBLEMS / INJURIES

Pre-Arrival Instructions

Do not remove any penetrating objects.
If eyeball is cut or injured, do not touch, irrigate, or bandage.
If a chemical injury, flush immediately with water. Continue until help arrives. Remove contact lenses.
Advise patient not to move.

Monitor for shock, Go To: TRAUMATIC INJURY

Cover patient with blanket and try to keep them calm.
Nothing to eat or drink.
Gather patient medications, if possible.
If the patient's condition changes, call me back.

Have patient SIT down.

Prompts

Removing object from the eye, direct pressure or flushing with water may cause further damage.
Large penetrating objects can cause damage to the upper airway. Monitor patient for breathing difficulties.

FALL VICTIM

State of New Jersey EMD Guidecards Version 02/16

“How far did the patient fall?”
“What kind of surface did the patient land on?”
“Are there any obvious injuries? What are they?”
“Did the patient complain of any pain or illness just prior to the fall?”

“Is the patient able to move their fingers and toes?”
(Do not have them move any other body part).

“Is the patient bleeding?”
IF YES, Go to BLEEDING/LACERATION

SIMULTANEOUS ALS/BLS

Increased level of consciousness.
Signs/symptoms of shock.
Falls greater than 10 feet.
Falls associated with or preceded by pain, discomfort in chest, dizziness, headache, or diabetes.
Patient paralyzed.
Uncontrolled bleeding.
Multiple extremity fractures.
Femur (thigh) fracture.

Unconscious, but now conscious without critical symptoms.
Falls less than 10 feet.
Neck or back pain without critical symptoms.
Controlled bleeding.
Cuts, bumps, or bruises.
Isolated extremity fracture.

BLS DISPATCH

FOLLOW AIR MEDICAL DISPATCH GUIDELINES

K E Y Q U E S T I O N S
**FALL VICTIM**  Pre-Arrival Instructions

Do not move the patient if there are no hazards.

Advise patient not to move

Monitor for shock, Go To: **TRAUMATIC INJURY**

Have the patient lie down, Cover patient with blanket and try to keep them calm.

No food or drink.

Gather patient medications, if possible.

If the patient’s condition changes, call me back.

---

**Prompts**

Is Rescue needed?

If unconscious, go to **UNCONSCIOUS/BREATHING NORMALLY AIRWAY CONTROL**

If unconscious, **NOT** breathing normally, go to CPR for appropriate age group.

---

**HEAT / COLD EXPOSURE**

State of New Jersey EMD Guidecards Version 02/16

**“What happened?”**

**“What was the source of the heat or cold?”**

**Heat Related**

“Is the patient sweating profusely?”

“Is the patient confused, disoriented or acting strange?”

“Is the patient having hallucinations?”

“Is the patient dizzy, weak, or feeling faint?”

**Cold Related**

“Can the patient be moved to a warm area?”

“What was the length of exposure?”

“Is the patient complaining of pain? If so, where?”

“Are there any obvious injuries?”

“Is the patient taking any medications?”

---

**SIMULTANEOUS ALS/BLS**

Decreased level of consciousness.

High body temperature **without** sweating.

Confused/disoriented/hallucinations.

Fainting (Syncope).

Cold Water Submersion.

Narcotics and Psych Medications may exacerbate and/or mask symptoms

**BLS DISPATCH**

Patient with uncontrollable shivering.

Heat Exhaustion:

Nausea, vomiting, fatigue, headaches, muscle cramps, dizziness, **with no critical symptoms.**
HEAT / COLD EXPOSURE

Pre-Arrival Instructions

Remove from hot/cold environment if possible.

**Heat Related**

If patient is over-heated, have them lie down in a cool place. Loosen clothing to assist cooling.

Nothing by mouth if heat stroke is indicated or there is a decrease of consciousness.

**Cold Related**

If patient is cold and dry, move to a warm environment and cover patient.

If patient is cold and wet, move to a warm environment, remove clothing and cover patient.

Do not rub frostbitten extremities.

Gather patient medications, if possible.

If the patient’s condition changes, call me back.

**Prompts**

**Heat Exhaustion:**
Nausea, vomiting, fatigue, headache, muscle cramps and dizziness.

**Heat Stroke:**
High body temperature, absence of sweating, rapid pulse, strange behavior, hallucinations, agitation, seizure and/or coma.

**Cold Related**

If patient is cold and dry, move to a warm environment and cover patient.

If patient is cold and wet, move to a warm environment, remove clothing and cover patient.

Do not rub frostbitten extremities.

Gather patient medications, if possible.

If the patient’s condition changes, call me back.

**INDUSTRIAL ACCIDENTS**

State of New Jersey EMD Guidecards Version 02/16

**KEY QUESTIONS**

- "What happened?"
- If patient is trapped in or under an object: "What part of the person is trapped?"
- "Are there any obvious injuries? What are they?"
- If amputation: "What part of the body has been amputated?" "Do you have the amputated parts?"

**BLEEDING/LACERATION**
If bleeding: Go to

**BURNS**
If burned: Go to

**ELECTROCUTION**
If Electrocrution: Go to

"Is the patient able to move their fingers and toes?"
(Do NOT have them move any other parts of their body).

**SIMULTANEOUS ALS/BLS**

Decreased level of consciousness.
Accident with crushing or penetrating injury to: head, neck, torso, thigh.
Patient entrapped. PROMPT (Dispatch Rescue Unit)
Amputation other than fingers/toes.
Patient paralyzed.
Uncontrolled bleeding.
Multiple extremity fractures.
Femur (thigh) fracture.

**BLS DISPATCH**

Unconscious, but now conscious without critical symptoms.
Amputation/entrapment of fingers/toes.
Neck or back pain without critical symptoms.
Controlled bleeding.
Cuts, bumps, or bruises.
Patient assist.
Involved in accident, no complaints.
## INDUSTRIAL ACCIDENTS

### Pre-Arrival Instructions

If machinery involved, turn it off (attempt to locate maintenance person).

Do not move patient if there are no hazards.

Advise patient not to move.

Do not enter a confined space to tend to the patient.

Have someone meet the ambulance to guide them to the patient.

Have the patient lie down, cover patient with blanket and try to keep them calm.

Nothing to eat or drink.

Locate any amputated parts and place in clean plastic bag, **NOT ON ICE**.

If teeth, locate, **DO NOT** touch the root, place in milk or clean water.

Monitor for shock, Go to: **TRAUMATIC INJURY**

If the patient’s condition changes, call me back.

---

## Prompts

If unconscious, go to UNCONSCIOUS/BREATHING NORMALLY 
AIRWAY CONTROL.

If unconscious, **NOT** breathing normally, go to CPR for appropriate age group.

Is Fire Department /Rescue needed?

---

## STABBING/GUNSHOT/ASSAULT

**“What part(s) of the body is injured?”**

**“When did this happen?”**

**“Was it intentional or an accident?”**

If intentional, **“Is assailant still present?”**

**“What type of weapon was used?”**

**“Is the weapon still present?”**

**“Is more than one person injured?”**

**“Is there bleeding?”**

IF YES, Go to **BLEEDING/LACERATION**

---

## SIMULTANEOUS ALS/BLS

Unconscious/not breathing normally. Decreased level of consciousness. Uncontrolled Bleeding. Leg injury above the knee. Wounds to head, neck, torso, or thigh. Multiple Casualty Incident.

---

## BLS DISPATCH

Wounds to the arms below the elbow or on the leg below the knee.
# STABBING/GUNSHOT/ASSAULT Pre-Arrival Instructions

Tell caller to remain safe (beware of assailant).  
Do not disturb the scene or move weapons.  
Do not pull out any penetrating weapons.  
Monitor for shock, Go to: **TRAUMATIC INJURY**

<table>
<thead>
<tr>
<th>Pre-Arrival Instructions</th>
</tr>
</thead>
</table>
| Have the patient lie down, Cover patient with blanket and try to keep them calm.  
If the patient’s condition changes, call me back. |

## Prompts

If unconscious, go to UNCONSCIOUS/BREATHING NORMALLY AIRWAY CONTROL  
If unconscious, *NOT* breathing normally, go to CPR for appropriate age group.

Has law enforcement been notified?  
Advise responders when scene is secure.

### FOLLOW AIR MEDICAL DISPATCH GUIDELINES

---

## TRAUMATIC INJURY

**“How was the patient injured?”**  
**“Where is the patient injured?”**  
**“Describe what happened.”**  
**“Is the patient bleeding?”**  
IF YES, Go to **BLEEDING/LACERATION**

---

### Indications of Shock

- “Is the patient’s skin cool and clammy, mottled, or profusely sweating?”  
- “Is the patient’s breathing rapid and shallow?”  
- “Are the patient’s pupils dilated?”  
- “Does the patient appear confused?”  
- “Does the patient feel weak or fatigued?”  
- “Is the patient’s mouth dry or do they feel thirsty?”

---

### SIMULTANEOUS ALS/BLS

- Unconscious/not breathing normally.  
- Decreased level of consciousness.  
- Penetrating/crushing injury to head, neck, torso, thigh.  
- Multiple extremity fractures.  
- Leg injury above the knee.  
- Uncontrolled bleeding.  
- Indications of shock.

---

### BLS DISPATCH

- Penetrating/crushing injury to hands or feet.  
- Unknown or internal injuries without indication of shock.  
- Minor injuries.  
- Concerned caller without apparent injuries to victim.  
- Isolated extremity fracture.  
- Police request stand-by/check for injuries.
**TRAUMATIC INJURY**

### Pre-Arrival Instructions

- Do not move patient, unless there are hazards to the patient.
- Do not remove or touch impaled object.
- Monitor for shock:
  - Skin cool and clammy or mottled, rapid shallow breathing, fatigue, altered mental state, dilated pupils.
- Use care not to obstruct the airway or breathing.
- Have the patient lie down, Cover patient with blanket and try to keep them calm.

- Do not disturb anything.
- Gather patient medications, if possible.
- Locate any amputated parts and place in clean plastic bag, **NOT ON ICE**.
- If teeth, locate, **DO NOT** touch the root, place in milk or clean water.
- If the patient’s condition changes, call me back.

### Prompts

- If unconscious, go to **UNCONSCIOUS/BREATHING NORMALLY AIRWAY CONTROL**.
- If unconscious, **NOT** breathing normally, go to CPR for appropriate age group.
- Is Law Enforcement and/of Fire Rescue needed?

---

### VEHICULAR COLLISIONS

**“Did you stop or drive by?”**

**“What type of vehicle(s) are involved?”**

**“How many patients are injured?”**

**“Are all of the patients free of the vehicle?”**

**“Is anyone trapped in the vehicle?”**

**“Was anyone thrown from the vehicle?”**

**“Are there any hazards present?”** (Is the scene safe?) Is there:
- Fire?
- Fluids leaking? (Consider HAZMAT)
- Wires down?

**“Describe what happened.” “Did the airbags deploy?” “How fast was the vehicle moving?”**

As injuries or medical conditions become known go to appropriate Guidecard(s).

---

### SIMULTANEOUS ALS/BLS

Reported injuries with following mechanisms:
- Vehicle vs. immovable objects.
- Vehicles involved in head-on or T-bone collision.
- Car vs. pedestrian, motorcycle or bicycle.
- Patient(s) trapped or ejected.
- Vehicle roll over.
- Critical criteria – injuries to head, neck, torso, thigh. Multiple Casualty Incident.

### BLS DISPATCH

Accident with injury, no critical criteria. Police request stand-by/check for injuries.
VEHICULAR COLLISIONS  Pre-Arrival Instructions

Do not approach vehicle if any indication of fire, downed wires or other hazards.

If able to enter crash scene, **DO NOT** move patient(s) unless there are hazards.

Monitor for shock, Go to: **TRAUMATIC INJURY**

If the patient's condition changes, call me back.

---

**Prompts**

Has Law Enforcement been notified?

Is Fire Department /Rescue/HAZMAT needed?

If caller can provide information about patient(s) go to appropriate Guidecard(s).

---

**ABDOMINAL PAIN**

</table>
ABDOMINAL PAIN  Pre-Arrival Instructions

Nothing to eat or drink.

Monitor for shock:
  Skin cool and clammy or mottled, rapid shallow breathing, fatigue, altered mental state, dilated pupils.

Gather patient medications, if any.

If the patient's condition changes, call me back.

Symptoms of an Addison or “adrenal” crisis include:
  - Severe vomiting and diarrhea
  - Dehydration
  - Low blood pressure
  - Loss of consciousness

If not treated, an Addison crisis can be fatal.

ALLERGIES / STINGS

Pre-Arrival Instructions

“Do you have a Epi-Pen or reaction kit?”
If Yes, “Have you used it as directed?”
If they have not used it, “Use it following the directions on the kit.”

Have the patient rest in the most comfortable position.

Brush the stinger off, if possible. Do not attempt to grasp stinger.

Keep neck straight – remove pillows.

Apply ice to site of sting.

Watch patient for signs of difficulty breathing (slow breathing), or cardiac arrest. Go to appropriate GUIDE CARD if indicated.

Gather patient medications, if any.

If the patient’s condition changes, call me back.

<table>

</tbody>
</table>

BACK PAIN

“Has the patient felt dizzy or fainted?”

“Does the patient have any other medical or surgical history?”

“Is the patient’s pain due to an injury or recent fall?”

“Is the patient incontinent of urine or have urinary retention?”

“Is the patient wearing a Medic Alert tag?”
IF YES “What does it say?”

“Does the patient take blood thinners?”

“Does the patient have Addisons Disease or adrenal insufficiency?”

SIMULTANEOUS ALS/BLS

Decreased level of consciousness.

Non-traumatic back pain with prior history of Addisons disease or adrenal insufficiency.

Non-traumatic back pain with prior history of heart problem.

Back pain with fainting or near fainting, patient over 50 years.

BLS DISPATCH

Flank pain/back (Kidney stone).

Back pain (non-traumatic).

Back pain unspecified.

Chronic back pain.
**BACK PAIN**  
**Pre-Arrival Instructions**

If the pain is due to an injury, tell the patient not to move unless hazards are present.

Nothing to eat or drink.

Have the patient rest in the most comfortable position.

Gather patient medications, if any.

If the patient's condition changes, call me back.

Symptoms of an Addison or “adrenal” crisis include:

- Severe vomiting and diarrhea
- Dehydration
- Low blood pressure
- Loss of consciousness

If not treated, an Addison crisis can be fatal.

### Prompts

| If unconscious, go to UNCONSCIOUS/BREATHING NORMALLY AIRWAY CONTROL. |
| If unconscious, NOT breathing normally, go to CPR for appropriate age group |

### Short Report

- Age
- Sex
- Specific location
- Chief complaint
- Pertinent related symptoms
- Medical/Surgical history, if any
- Other agencies responding
- Any dangers to responding units

---

**BREATHING PROBLEMS**

*State of New Jersey EMD Guidecards Version 02/16*

**KEY QUESTIONS**

- “Is the patient on asthma medication, or ever used them?”
- “Is the patient able to speak in full sentences?”
- “Is the patient drooling or having a hard time swallowing?”
- “What has changed about their breathing to prompt you to call?”
- “Has the patient ever had this problem before?”
- “How long has this been going on?”
- “Does the patient have to sit up to breathe?”
- “What was the patient doing just prior to when he/she became short of breath?”

**Simultaneous ALS/BLS**

Any patient complaining of breathing or respiratory difficulty, examples of symptoms may include:

- Difficulty breathing with chest pain.
- Unable to speak in full sentences.
- History of Asthma or respiratory problems.
- Inhaled substance.
- Recent childbirth/broken leg/hospitalization (within 2-3 months).
- Drooling/difficulty swallowing.
- Tingling or numbness in extremities/around mouth, 35 or older.

**BLS Dispatch**

- Cold symptoms.
- Stuff nose / congestion.
- Oxygen bottle empty.
- Patient assist.
- Long term, no change.

- “Does the patient have any other medical or surgical history?”
- “Does the patient have any allergies?”

If sudden onset:

- “Has the patient been hospitalized recently for childbirth or a broken leg?”

If female,

- “Does the patient take medication for birth control?”
**BREATHING PROBLEMS**  Pre-Arrival Instructions

- Keep patient calm.
- Patient may be more comfortable sitting up.
- Tell patient not to exert him/herself.
- Gather patient medications, if possible.
- If the patient's condition changes, call me back.

**CHEST PAIN/HEART PROBLEMS**

- **KEY QUESTIONS**
  - “Where in the chest is the pain located?”
  - “Does the patient feel pain anywhere else? If so, where?”
  - “How long has the pain been present?”
  - “Is the patient sweating profusely?”
  - “Is the patient nauseated or vomiting?”
  - “Is the patient weak, dizzy, or faint?”
  - “How does the patient act when he/she sits up?”
  - “Does the pain change when the person breathes or moves?”
  - “Has the patient ever had a heart problem, heart surgery, a device to help their heart work or a previous heart attack?”
  - “Is the patient experiencing rapid heart rate with chest pain?”

- **SIMULTANEOUS ALS/BLS**
  - Patient over 35 with any critical symptom.
  - Decreased level of consciousness.
  - Patient complaining of chest pain with any of the critical symptoms:
    - Short of breath, nausea, diaphoretic (sweating profusely), rapid heart rate, syncope (weak, dizzy or faint) or with cocaine/crack (drug) use.

- **BLS DISPATCH**
  - Patients under 35, without critical symptoms
CHEST PAIN/HEART PROBLEMS

Pre-Arrival Instructions

“Can the patient take aspirin?”
   If yes: “Have they had any bleeding from mouth or rectum?”
   If no bleeding, advise caller to assist patient to take 1 full size (325mg) adult aspirin or 4 low dose (81mg) tablets. Have the patient chew them before swallowing.

“Does the patient have nitroglycerin?”
   If yes: “Has the patient taken one?”
   if not taken, “Take as the physician has directed” (patient should be seated).

Have the patient sit or lie down, whichever is more comfortable.

Keep patient calm.

Loosen any tight clothing.

Gather patient medications, if any.

If the patient’s condition changes, call me back.

Unconscious/not breathing normally.
Decreased level of consciousness.
Unusual behavior/acting strange.
Profuse sweating.
Seizure.

Are they dizzy, weak, or feeling faint?

Is the patient complaining of any pain? Where is it located?

Is the patient sweating profusely?

Has the patient had a seizure?

SIMULTANEOUS ALS/BLS

Unconscious/not breathing normally.
Decreased level of consciousness.
Unusual behavior/acting strange.
Profuse sweating.
Seizure.

Awake/alert.
Not feeling well.

STEMI and PCI CENTERS
http://www.state.nj.us/health/ems/documents/stemi pci_centers.pdf
Nothing by mouth if the patient is unable to take it by himself/herself.

**IF** the patient is conscious enough to swallow and the patient’s blood glucose level is known and is **below 70 mg/dl** or the blood glucose level is **NOT KNOWN**, and the patient is acting inappropriately then give juice with 2 to 3 teaspoons of sugar in it.

(Giving this amount of sugar to a person with high blood glucose levels will not hurt them and may help a person with low levels).

Allow patient to find a comfortable position.

Gather patient medications, if any.

If the patient’s condition changes, call me back.

**HEADACHE**

**KEY QUESTIONS**

“Does the patient have a headache history?”

“Is the headache different than headaches the patient has had in the past?”

“Did the headache come on suddenly or gradually?”

“What was the patient doing when the headache started?”

“How is the patient acting? If unusual, how?”

“Does the patient take blood thinners?”

**SIMULTANEOUS ALS/BLS**

Headache with these critical symptoms:
- Decreased level of consciousness.
- Mental status change.
- Worst headache ever.
- Sudden onset.
- Visual disturbance, with no history of migraines.

**BLS DISPATCH**

Headache without critical symptoms.

State of New Jersey EMD Guidecards Version 02/16
**HEADACHE**  Pre-Arrival Instructions

Nothing by mouth.

Allow the patient to find position of comfort.

Gather patients medications, if any.

If the patient's condition changes, call me back.

**OD/POISONING/INGESTIONS**

State of New Jersey EMD Guidecards Version 02/16

**KEY QUESTIONS**

“Do you have any idea what the patient took?”
Get the name of the product or substance. Contact Poison Control.

“Was it a prescription medication, non-prescription over-the-counter medication, herbal supplement, street drug or a combination of medications?”

“Has the patient consumed alcohol?”

If cocaine or crack, “Is the patient complaining of any pain?”

“Is the patient having difficulty swallowing?”

“Is the patient acting normally?”
IF NOT, “What is different?”

**SIMULTANEOUS ALS/BLS**

OD/Poisoning/Ingestions with these critical symptoms:
Unconscious/not breathing normally.
Any overdose of medication with altered level of consciousness.
Cocaine/crack with chest pain.
Ingestion of household cleaners, antifreeze, solvents, methanol, cyanide, insecticides.
Difficulty swallowing.
Alcohol intoxication, patient cannot be aroused.
Combined alcohol and drug overdose.

**BLS DISPATCH**

Drugs intentional/accidental ingestion without critical symptoms.
3rd party report, caller not with patient.
Reported OD, patient denies taking medications or unknown if medications/substance taken.
Known alcohol intoxication without other drugs, can be aroused.
### OD/POISONINGS/INGESTIONS

**Pre-Arrival Instructions**

If the substance can be identified as Heroin or other opioid:
- Heroin
- Codeine (Tylenol #3)
- Morphine (Kadian, Avinza)
- Fentanyl (Actiq, Duragesic, Fentanyl)
- Hydrocodone (Vicodin, Lortab, Vicoprofen)
- Oxycodone (Percocet, Oxycontin)
- Hydromorphone (Dilaudid)
- Methadone
- Meperidine (Demerol)
- Tramadol (Ultram, Ultracet)
- Buprenorphine (Buprenex, Suboxone, Subutex)

"**Do you have a NARCAN or NALOXONE kit?**"

If yes "**Have YOU used it as directed?**"

If they have not used it, "**Use it following the directions on the package.**"

- Keep patient in area/house, if safe.
- Get container of substance taken, if at the scene.
- Do not force coffee or place patient in shower.

**Nothing by mouth, including Ipecac, unless advised by Poison Control.**

Monitor patient’s breathing and level of consciousness.

If the patient’s condition changes, call me back.

### PSYCHIATRIC/BEHAVIORAL PROBLEMS

**KEY QUESTIONS**

"**Is the patient acting in their normal manner?**"  
IF NOT, "**What is different or unusual?**"

"**Is the Patient:**
- Acting violent, aggressive, shouting or yelling?"
- "**Removing their clothing or naked?**"
- "**Sweating profusely?**"
- "**Breathing rapidly or drooling?**" (Excited Delirium)
- "**Is patient a diabetic?**"

Consider **DIABETIC PROBLEMS**

"**Has the patient harmed themself?**"  
IF YES: (Consider traumatic injury card)  
IF NO," **Do you think the patient might harm themself?** "

"**Does the patient have a history of depression?**"

"**Does the patient have a history of harming them self or others?**"

"**Has the patient ever attempted suicide?**"

"**Has the patient recently traveled outside of the state or country**"? IF YES: "**Where**"? (Check ALERTS)

---

### SIMULTANEOUS ALS/BLS

- Decreased level of consciousness.
- Patient presenting with
- Extreme violent or aggressive behavior
- Sweating profusely
- Removing clothes or naked
- Rapid breathing, drooling
- Incoherent shouting or yelling

**DISPATCH**

Lacerated wrist(s) with controlled bleeding.
Unusual behavior with a psychiatric history.
Known alcohol intoxication without other drugs (can be aroused).
Threats against self or others.
Police request for stand-by.
Patient out of psychiatric medications.

**BLS DISPATCH**
PSYCHIARTIC / BEHAVIORAL PROBLEMS

Pre-Arrival Instructions

Keep the patient in area, if safe.
Keep patient calm, if possible.
If you feel you are in danger, leave the scene.
Gather patient medications, if any.

- If suicide is indicated, try to determine the means. Attempt to help the patient using the appropriate Guidecard. Alert responders to hazards such as gas, chemicals, weapons etc.
- Suicidal callers may be reluctant to give location. Use interrogation skills, ALI screen, Phase II wireless information and contacting telephone service provider.

Prompts

Psychiatric and behavioral problems are usually not life threatening. However, that can change quickly if the patient is not treated appropriately. Specialized training and resources are available to help assist dispatch and field responders encountering these situations.

Consider Crisis Center.

Has Law Enforcement been notified? Is there an Excited Delirium Protocol for Law Enforcement and EMS?

SEIZURES / CONVULSIONS

State of New Jersey EMD Guidecards Version 02/16

**KEY QUESTIONS**

- “Is the patient still seizing?”
  IF YES “How long has the patient been seizing?”
- “Has the patient had a seizure before?”
- “Is the patient on medication or is he/she a recreational drug user?”
- “Has the patient had a recent head injury?”

**DIABETIC PROBLEMS**

- “Is the patient a diabetic?”
  Consider.

**SIMULTANEOUS ALS/BLS**

- Decreased level of consciousness.
- Not breathing after seizure stops.
- Extended seizures greater than 5 minutes.
- Multiple seizures.
- Febrile seizures.
- First time seizure or seizure, unknown history.
- Secondary to drug overdose, diabetic, pregnancy, or recent head injury.
- Any seizure that is different than normal.

**BLS DISPATCH**

- Single seizure with history of seizure disorder.
Pre-Arrival Instructions

Clear area around the patient.
Do not restrain patient.
Do not place anything in patient’s mouth.
If patient is a child, remove clothing to cool patient if hot and feverish.

After seizure has stopped, check to see if patient is breathing.
   IF NO, Determine appropriate age group.
   Go to CARCIAL ARREST/DOA instructions for appropriate age group.
   IF YES, Have patient lie on side. Monitor breathing.

Gather patient medications, if any.
If the patient’s condition changes, call me back.

SICK PERSON

**KEY QUESTIONS**

“Does the patient feel pain anywhere? If so, where?”
   (Consider appropriate card: Back, chest, abdomen)

“Does the patient feel lightheaded or dizzy?”

“Does the patient have Addison’s Disease or any other medical or surgical history?”

“What is the patient complaining of?”

“How does the patient look?”

**SICK PERSON SIMULTANEOUS ALS/BL S**

Decreased level of consciousness.
Prior history of Addisons disease or adrenal insufficiency with dehydration, severe vomiting and diarrhea or low blood pressure.
Multiple fainting episodes.

**SICK PERSON BLS DISPATCH**

Generalized weakness.
Medic alert from alarm company.
Flu symptoms:
   (Without critical signs, symptoms or other medical options)
High blood pressure without critical symptoms.
High temperature.
Patient assist.

State of New Jersey EMD Guidecards Version 02/16
Gather patient medications, if possible. If the patient’s condition changes, call me back.

**Symptoms of an Addison’s or “adrenal” crisis include:**

- Severe vomiting and diarrhea
- Dehydration
- Low blood pressure
- Loss of consciousness

If not treated, an Addison crisis can be fatal.

---

**STROKE / CVA**

**“When did this start?”**

Does the patient have:

**“Sudden numbness or weakness of the face, arm or leg?”** (Especially on one side of the body.)

**“Sudden confusion, trouble speaking (slurring) or understanding?”**

**“Sudden trouble seeing in one or both eyes?”**

**“Sudden trouble walking, dizziness, loss of balance or coordination?”**

**“Sudden severe headache?”**

**“Has the patient ever had a stroke?”**

**“Has the patient had any recent injury/trauma?”**

**“A history of diabetes?”**

**“Any other medical or surgical history?”**

---

**Unconscious/not breathing normally.**

**Marked change in level of consciousness.**

**New onset of one sided weakness with paralysis, facial droop, slurred speech, confusion, loss of vision, loss of coordination, severe headache.**

**Past history of stroke (CVA) with no new changes.**
STROKE / CVA  Pre-Arrival Instructions

Keep patient calm.
Don't allow patient to move around.
If unconscious or having difficulty breathing, go to **UNCONSCIOUS AIRWAY CONTROL**
Nothing by mouth (to eat or drink).
Gather patient medication, if any.
If the patient's condition changes, call me back.

**STROKE CENTERS**

**UNKNOWN / PERSON DOWN**

State of New Jersey EMD Guidecards Version 02/16

**“Are there any obvious injuries?”**

**“Can you see blood or any other fluid around the patient?”**

**“Have you checked for a medic alert tag? IF YES “What does it say?”**

If the caller knows the patient:

**“Has the patient recently traveled outside of the state or country?”** IF YES: **“Where?”** (Check ALERTS)

**“Does the patient have Addison’s Disease or any other medical or surgical history?”**

**SIMULTANEOUS ALS/BLS**
Unconscious/not breathing normally.
Decreased level of consciousness.
Multiple Casualty Incident Criteria.

**BLS DISPATCH**
Unknown (Third Party Call) without indications of unconsciousness.
Patient talking, moving, sitting, or standing.
If there is no danger, go to patient to see if patient is awake, breathing normally, or moving at all.

Watch for the emergency unit and direct them to the patient.

If the patient’s condition changes, call me back.

**Prompts**

If unconscious, go to UNCONSCIOUS/BREATHING NORMALLY AIRWAY CONTROL.

If unconscious, NOT breathing normally, go to CPR for appropriate age group.

**Short Report**

Age
Sex
Specific location
Chief complaint
Pertinent related symptoms
Medical/Surgical history, if any
Other agencies responding
Any dangers to responding units

---

**CO / INHALATION**

“Is a CO Detector activated?”

“Is patient complaining of: Headache, confusion, weakness, fatigue, nausea, vomiting or dizziness?”

“Is patient breathing normally?”
If NO go to BREATHING PROBLEMS

Inhalations

“What is the name of the inhaled substance?”

“What is the source of the inhaled substance?”

If a commercial property,
“Is the MSDS sheet available?”

---

**SIMULTANEOUS ALS/BLS**

CO Detector activation with Critical Symptoms:
Unconscious/LOC/not breathing normally.
Decreased level of consciousness.
Inhalation household cleaners, antifreeze, solvents, methanol, cyanide, or insecticides with difficulty swallowing/breathing.

**BLS DISPATCH**

Chemicals on patient’s skin or clothing, no critical symptoms.
Third party report, caller not with patient.
CO / INHALATION  Pre-Arrival Instructions

Get patient to fresh air immediately. If the patient’s condition changes, call me back.

If unable to go outside, open all doors and windows. If the caller is unable to move the patient or open windows ask caller to remain outside until help arrives.

Turn off any appliance with an open flame. (heaters, stoves, fireplaces, etc.)

Prompts       Short Report

CO Detector, Get everyone out of the house. Age
Consider Poison Control Center (1-800-222-1222, or one button Sex
transfer). Specific location
Dispatch Fire Department / HAZMAT per local protocol and proceed to Chief complaint
HAZMAT Pertinent related symptoms
HAZMAT Medical/Surgical history, if any
HAZMAT Other agencies responding
HAZMAT Any dangers to responding units

CARDIAC ARREST / DOA

If unsure about consciousness:
“Does the patient respond to you? Talk to the patient?”
“Does the patient move? Flinch? Move arms or legs?”
“Are the pupils fixed and dilated?”

If unsure about breathing:
“Look and see if the chest rises and falls.”
“Listen for the sound, frequency and description of breaths.”

Agonal respirations are often reported as:
gasping, snoring, or gurgling
barely breathing
moaning
weak or heavy
occasional

SIMULTANEOUS ALS/BLS

Unresponsive
Unconscious/not breathing adequately (Agonal) or not at all.
Possible DOA of unknown origin
Delayed response

BLS DISPATCH

FOLLOW LOCAL PROTOCOL
CONFIRMED HOSPICE
EXPECTED DEATH
Go to CPR card for the appropriate age group.

- Age 8 years and ABOVE: **ADULT CPR INSTRUCTIONS**
- Age 1 year to 8 years: **CHILD CPR INSTRUCTIONS**
- Age 0 to 1 year: **INFANT CPR INSTRUCTIONS**

**Prompts**

Agonal respirations are ineffective breaths which occur after Cardiac Arrest. Indicate the need for CPR.

Brief generalized seizures may be an indication of cardiac arrest.

**ADULT CPR INSTRUCTIONS**

“Does anyone there know how to do CPR?”

- NO
- YES

“Do you need help in remembering the procedures?”

- YES
- NO

“Begin CPR on the patient now. I’ll stay on the line if you need me until help arrives.”

- “Do you have a cordless phone?”
  - YES
  - NO
  - “Is there a phone that may be closer to the patient?”
  - “Can someone there relay my instructions to you?”
  - [If not] “I’ll give you the instructions, then return to the phone.”
  - “If I’m not here, stay on the line.”

“Listen carefully. I’ll tell you what to do. Get the patient FLAT on their back, on the floor.”

- OK
- CAN’T

“Is there anyone there that can help you gently roll or slide the patient to the floor?”

- OK
- NO HELP / CAN’T

Begin, make your best attempt.
ADULT CPR INSTRUCTIONS – Page 2 of 4 (02/16)

**CHOKING ADULT ENTRY POINT**

"Is there an automatic defibrillator in the area?"

NO  YES

**DO NOT OPERATE AED IN/OR AROUND:**
- Water, snow or ice.
- Bathtubs, pools or Jacuzzis.
- Metal, street ventilation gates.
- Hazardous materials.
- Any type of conductive medium.

**ADULT CPR INSTRUCTIONS**

- **AED Instructions**
  - **If alone**, have caller obtain AED and return to patient. Open the machine and turn it on. Follow the voice prompts and instructions from the machine. Use large size pads on adults.
  - **If others are present** have someone obtain AED while **caller begins CPR**. When AED arrives instruct person to set up AED for use without interrupting CPR in progress. Use large size pads on adults. Advise when AED is ready to use. Stop CPR and turn on the AED. Follow the voice prompts and instructions from the machine.

- **CPR Instructions**
  - "Kneel at the patient’s side and bare the chest, do you see any tubes or wires coming out of the chest or abdomen?"
  - **IF YES, STOP- DO NOT START CPR, Go to SPECIAL CONSIDERATIONS on Page 4**
  - **IF NO**
    - "Put the HEEL of your HAND on the CENTER of their CHEST, between the nipples"
    - "Put your OTHER HAND ON TOP of THAT hand."
    - "PUSH DOWN on the HEELS of your hands, at least 2 inches."
    - "PUSH HARD AND FAST 100 to 120 times per minutes."

If appropriate, the PSAP may have the caller put their cell phone on “speaker” to help with the timing of the compressions.

Video streaming from the callers cell phone may also be considered by the PSAP.

If an AED becomes available see AED Instructions on Page 2
SPECIAL CONSIDERATIONS

Patient has tubes or wires protruding from chest or abdomen:

“Does the patient have a ventricular assist device?” (May be called a VAD, heart pump, RVAD, LVAD, BVAD, or LVAS.)
If YES, Do not perform chest compressions.
If a patient has a pacemaker or internal defibrillator return to CPR instructions.

Patient has a Stoma

Breathing Instructions

“Keep the patient’s head STRAIGHT.”
“COMPLETELY COVER the STOMA with your mouth.”
“COVER the patient’s MOUTH and NOSE with your hand.”
“GIVE TWO BREATHS OF AIR inflating the patient’s LUNGS.”
“Make sure the CHEST GENTLY RISES.”

Patient has vomited

“Turn his/her head to the side.”
“Sweep it all out with your fingers before doing mouth-to-mouth.”
“Resume CPR.”

CHILD CPR (1-8 YRS) INSTRUCTIONS

Does anyone there know how to do CHILD CPR?

<table>
<thead>
<tr>
<th>NO</th>
<th>YES</th>
</tr>
</thead>
</table>

Do you need help in remembering the procedures?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
</table>

Begin CPR on the child now.
I’ll stay on the line if you need me until help arrives.

Do you have a cordless phone?
Is there a phone that may be closer to the patient?
Can someone there relay my instructions to you?
[If not] I’ll give you the instructions, perform the skills then return to the phone. If I’m not here, stay on the line.

Can you GENTLY roll or slide the child to the floor?
[If not] Can you get help and return to the phone?

<table>
<thead>
<tr>
<th>OK</th>
<th>NO HELP / CAN’T</th>
</tr>
</thead>
</table>

Begin attempts as best possible.

Does the patient have a ventricular assist device?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
</table>
**CHOKING CHILD ENTRY POINT**

"Kneel next to the child and bare the chest."

"Put the HEEL of ONE HAND on the CENTER of the child’s CHEST, between the nipples."

"PUSH DOWN FIRMLY, ONLY with the HEEL of your hand, 2 inches."

"Do it 30 times, PUSH HARD AND FAST."

**IF NOT PERFORMING MOUTH TO MOUTH BREATHING, ADVISE to PUMP the CHEST until help arrives or patient starts breathing or moving.**

**IF WILLING TO PERFORM MOUTH-TO-MOUTH BREATHING.**

"Then, PINCH the NOSE SHUT and LIFT the CHIN so the head TILTS BACK."

"Completely cover the child’s mouth with your mouth."

"Give TWO BREATHS each lasting about 1 second then PUMP the CHEST 30 times."

"KEEP DOING IT UNTIL HELP CAN TAKE OVER."

---

**After 2 minutes of CPR**

"Is there an automatic defibrillator in the area?"

- NO
- YES

**AED Instructions**

If alone open the machine and turn it on.
Use child AED pads if equipped. *(If using adult pads on a child be sure they do not touch each other).*
Follow the voice prompts and instructions from the machine.
Come back to the phone when the machine tells you to do CPR and I will help you again.

If others are present have someone obtain AED while caller continues CPR. When AED arrives instruct person to set up AED for use without interrupting CPR in progress.
Use child AED pads if equipped. *(If using adult pads on a child be sure they do not touch each other).*
Advise when AED is ready to use
Stop CPR and turn on the AED.
Follow the voice prompts and instructions from the machine.
Come back to the phone when the machine tells you to do CPR and I will help you again.

---

**DO NOT OPERATE AED IN/OR AROUND:**

- Water, snow or ice.
- Bathtubs, pools or Jacuzzis.
- Metal, street ventilation grates.
- Hazardous materials.
- Any type of conductive medium.

---

If there is more than one person present that is willing to perform CPR have them switch with the person doing CPR every 2 minutes.
SPECIAL CONSIDERATIONS

Patient has vomited

“Turn his/her head to the side.”

“Sweep it all out with your fingers before doing mouth-to-mouth.”

Patient has a Stoma

Breathing Instructions

“Keep the patient’s head STRAIGHT.”

“COMPLETELY COVER the STOMA with your mouth.”

“COVER the patient’s MOUTH and NOSE with your hand.”

“GIVE TWO BREATHS OF AIR each lasting about 1 second into the patients LUNGS.”

“Make sure the CHEST GENTLY RISES.”

INFANT CPR (0-1 yr) INSTRUCTIONS

Does anyone there know how to do INFANT CPR?

NO  YES

Do you need help in remembering the procedures?

YES  NO

Begin CPR on the baby now. I’ll stay on the line if you need me until help arrives.

BRING THE BABY TO THE PHONE!
“Listen carefully. I’ll tell you what to do next.”
“Lay the baby FLAT on its back on a hard surface, such as a table or the floor.”
“Put your INDEX AND MIDDLE FINGERTIPS on the CHEST, just BELOW the NIPPLE LINE.”
“PUSH DOWN 1 ½ INCH. Do it 30 times RAPIDLY Hard and Fast.”

If not performing MOUTH-TO-MOUTH BREATHING, ADVISE to PUMP the CHEST 200 times and then come back to the phone.

If performing mouth-to-mouth
“THEN, Tilt the head back SLIGHTLY by LIFTING the CHIN and cover the baby’s mouth and nose with your mouth.”
“GIVE TWO SMALL PUFFS of air SLOWLY.”
“Make sure the baby’s CHEST GENTLY RISES with each puff.”
“THEN, rapidly pump 30 times, and then give two more SLOW PUFFS.”
“KEEP DOING IT UNTIL HELP CAN TAKE OVER or the baby starts to move or breath on its own.”

“Is patient alert?”
“Is the patient able to speak or cry?”
“Describe the breathing.”
“Does the chest rise?”
“Does air enter freely?”
“Is the patient turning blue?”

Unresponsive/not breathing normally.
Unable to talk or cry.
Turning blue.

Able to speak or cry.
Exchanging air with no breathing difficulty.
Airway cleared, patient assist.
Go to choking card for the appropriate age group:

- **Age 8 years and ABOVE**  
  - ADULT INSTRUCTIONS
- **Age 1 year to 8 years**  
  - CHILD INSTRUCTIONS
- **Age 0 to 1 year**  
  - INFANT INSTRUCTIONS

<table>

</tr>
</tbody>
</table>

**CHOKING ADULT INSTRUCTIONS**

**PROMPT:**
If the event is **NOT WITNESSED** and the patient is **UNCONSCIOUS:** Go to CPR ADULT.

If mild obstruction is present and the victim is coughing forcefully, do not interfere with the patient’s spontaneous coughing and breathing efforts. Attempt to relieve the obstruction only if the cough becomes silent, respiratory difficulty increases or the victim becomes unresponsive.
**Conscious Patient Instructions**

"Listen carefully. I'll tell you what to do next. Stand **BEHIND** the patient. Wrap your arms **AROUND** the waist.*

Make a fist with **ONE** hand and place the thumb side against the **STOMACH**, in the **MIDDLE**, slightly above the **NAVEL**.

**GRASP** your fist with the other hand. **PRESS** into the stomach with **QUICK, UPWARD** thrusts. Repeat thrusts until the item is expelled.

*If unable to reach around waist or if patient is in late stage of pregnancy, reach under the arms and place hands on center of chest. **GRASP** your fist with the other hand. **PRESS** into chest with **QUICK** thrusts until item is expelled.

**Unconscious Patient Instructions**

Compressions Only

"Get the patient **FLAT** on their back on the floor."

"Kneel at the patient’s side and bare the chest, do you see any tubes or wires coming out of the chest or abdomen?"

**If YES, STOP- DO NOT START CPR, Go to ADULT CPR SPECIAL CONSIDERATIONS**

**If NO:**

"Put the **HEEL** of your **HAND** on the **CENTER** of their **CHEST** between the nipples."

"Put your **OTHER HAND ON TOP** of THAT hand."

"**PUSH DOWN** on the **HEELS** of your hands, at least 2 inches."

"Do it **30 times**, **PUSH HARD AND FAST.**"

"Then, **PINCH** the **NOSE SHUT** and **LIFT** the **CHIN** so the head **BENDS BACK.**"

"**LOOK IN THE MOUTH FOR OBJECT.** If seen, remove it."

"**KEEP DOING IT UNTIL HELP CAN TAKE OVER** or the patient starts breathing."

**GO TO** **UNCONSCIOUS AIRWAY CONTROL**

If an AED becomes available go to **ENTRY POINT FROM ADULT CHOKING**
Unconscious Patient Instructions
With Ventilations

“Get the patient FLAT on their back on the floor.”
“Kneel at the patient’s side and bare the chest, do you see any tubes or wires coming out of the chest or abdomen?”

**If YES, STOP- DO NOT START CPR, Go to ADULT CPR SPECIAL CONSIDERATIONS.**

**If NO:**
“Put the HEEL of your HAND on the CENTER of their CHEST between the nipples.”
“Put your OTHER HAND ON TOP of THAT hand.”
“PUSH DOWN on the HEELS of your hands, at least 2 inches.”
“Do it 30 times, PUSH HARD AND FAST.”
“Then, PINCH the NOSE SHUT and LIFT the CHIN so the head BENDS BACK.”
‘LOOK IN THE MOUTH FOR OBJECT, If seen, remove it.”
“Completely cover their mouth with your mouth.”
“Give TWO BREATHS each lasting 1 second then PUMP the CHEST 30 times.”
“KEEP DOING IT UNTIL HELP CAN TAKE OVER or the patient starts breathing.”

**IF PATIENT STARTS BREATHING GO TO:**

If an AED becomes available go to **ENTRY POINT FROM ADULT CHOKING**

---

**START**

Is the child able to TALK or COUGH?

**STOP**

If mild obstruction is present and the victim is coughing forcefully, do not interfere with the patient’s spontaneous coughing and breathing efforts.

Attempt to relieve the obstruction only if the cough becomes silent, respiratory difficulty increases or the victim becomes unresponsive.

---

**PROMPT:**
If the event is NOT WITNESSED and the child is UNCONSCIOUS: Go to CPR CHILD.

Conscious Patient Instructions

Listen carefully. I’ll tell you what to do next.
Remove any clothing from the baby’s chest, then PICK UP the baby.
Do that, and come back to the phone. If I am not here, STAY ON THE LINE.

Turn the baby FACE DOWN so it lies along your forearm; SUPPORT the baby’s JAW in your HAND.
Lower your arm onto your thigh so that the baby’s head is LOWER than its chest.
Use the HEEL of your other HAND to strike the BACK 5 times FIRMLY, right between the shoulder blades.
Do that, and come back to the phone.
SANDWICH the baby between your forearms, SUPPORT the head, and then turn the baby onto its back.
Put your INDEX AND MIDDLE FINGERS directly BELOW the baby’s NIPPLES.
Push down 1 ½ inches, 5 TIMES. Do that, and come back to the phone.

“Continue until Infant can breathe, cough or cry. Then monitor consciousness and breathing.”

IF INFANT BECOMES UNRESPONSIVE

Is the baby breathing or crying?

ROLL the baby on their SIDE and CHECK BREATHING until help takes over.

Listen carefully. I’ll tell you what to do. Lay the baby FLAT on its back on a hard surface, such as the floor or a table, and then BARE the baby’s chest.
Do that then come back to the phone. If I’m not here, stay on the line.

Put your INDEX AND MIDDLE FINGERTIPS on the CHEST, right BELOW the NIPPLE LINE.
PUSH DOWN 1 1/2 INCHES. Do it 30 TIMES, HARD AND FAST.
THEN, Tilt the head back SLIGHTLY by LIFTING the CHIN.
LOOK INTO THE BABY’S MOUTH, if you see anything try to remove it with your little finger by sweeping it out. DON’T push the object backwards.
GIVE TWO SMALL PUFFS of air SLOWLY.

THEN, rapidly pump thirty more times.
LOOK INTO THE BABY’S MOUTH, if you see anything try to remove it with your little finger by sweeping it out. DON’T push the object backwards.
Then give two more SLOW PUFFS.
KEEP DOING IT UNTIL HELP CAN TAKE OVER. I’ll stay on the line.
**DROWNING (POSSIBLE)**

## PREGNANCY / CHILDBIRTH

**State of New Jersey EMD Guidecards Version 02/16**

### Key Questions

“**Is this the first pregnancy**”?

If this is not the first pregnancy,

“How long was she in labor before delivery with her other pregnancies?”

“Were there any complications?”

“Was the delivery vaginal or surgical?”

“How far along is she?”

If less than 20 weeks: “**Has there been any discharge of blood or tissue?**”

“Has she had any problems during pregnancy or anticipated problems?”

“Is she having cramping pains that come and go?”

IF YES, “**How often?**”

(Time from beginning of contraction to beginning of next contraction).

### SIMULTANEOUS ALS/BLS

- Imminent delivery OR Delivery.
- Vaginal bleeding with fainting.
- Fainting/near fainting with patient sitting up.
- Prior history of complicated delivery.
- Bleeding, greater than 20 weeks pregnant.
- Premature active labor greater than 4 weeks premature.
- Abdominal injury, if greater than 20 weeks pregnant.
- Seizure.
- Multiple births.

### BLS DISPATCH

- Delivery not imminent.
- Vaginal bleeding without fainting if under 20 weeks pregnant.
- Abdominal injury, if less than 20 weeks pregnant.
- Water broke.
- Pregnant less than 20 weeks or menstrual with any of the following:
  - Cramps
  - Pelvic Pain
  - Spotting
CHILDBIRTH INSTRUCTIONS

Have the patient lie down on her left side.

Keep the patient warm.

Watch for the baby’s head to show.

If the patient feels the urge to go to the bathroom, do not allow her to use the toilet!

If patient was on the toilet and noticed discharge of blood or tissue: “Do not flush toilet or dispose of used pads.”

If post delivery:

“Is the baby breathing?”

If NO go to.

INFANT CPR INSTRUCTIONS

Gather patient medications, if any.

If the patient’s condition changes, call me back.

Imminent delivery (Regular contractions at 1-2 minute intervals and an urge to push or bear down) and post delivery, go to.

CHILD BIRTH INSTRUCTIONS

Miscarriage is defined as the loss of a pregnancy before 20 weeks of gestation. May include bleeding, abdominal cramps, lower back pain and/or discharge of tissue.

PROMPT: DO NOT allow patient to use the toilet!

Has she had a baby before?

YES

NO

How far apart are the contractions (pains)?

Less than 5 Min.

More than 5 Min.

Does she have a strong desire to push?

YES

NO

Listen carefully. I’ll tell you what to do.

Have her LIE in a comfortable position, LEFT SIDE IS BEST.

Have her take DEEP breaths.

Monitor patient’s condition.

If a STRONG DESIRE TO PUSH develops delivery may be imminent, if so continue.

Ask her to RESIST urge to PUSH or BEAR DOWN.

Get the phone next to her if you can.

Ask her to LIE on her BACK and relax, breathing DEEPLY through her MOUTH.

Ask her to remove her underwear.

Place clean towels UNDER her BUTTOCKS. Have additional towels ready.

Childbirth Instructions - Page 1 of 2 (02/16)
CHILDBIRTH INSTRUCTIONS

<< If she starts to deliver (water broken, bloody discharge, baby’s head appears) >>
The baby’s head should appear first. CRADLE it and the rest of the baby as it is delivered.

DO NOT PUSH OR PULL.
There will be water and blood with delivery. THIS IS NORMAL.
When the baby is delivered, CLEAN out its MOUTH and NOSE with a CLEAN, DRY CLOTH.
DO NOT attempt to CUT or PULL the cord.
Wrap the baby in a dry blanket, a towel, or whatever is handy, and place it between the mother’s legs on the floor. Massage the mother’s lower abdomen very gently.
If the baby DOES NOT start breathing on its own, rub its back or gently slap the soles of its feet.
If the baby DOESN’T begin breathing IMMEDIATELY, come back to the phone.

<< When the placenta (tissue on the other end of the umbilical cord) is delivered. >>
WRAP IT. This delivery may take as long as twenty minutes.
Keep the placenta LEVEL or SLIGHTLY ABOVE the baby.

<< If there are complications (leg, arm, buttocks, or umbilical cord presenting) >>
REASSURE the mother. Tell her you have dispatched aid.
Ask her to remain on her BACK with her KNEES BENT.
Ask her to RELAX and BREATHE through her MOUTH.
Tell her NOT TO PUSH.

GO TO CHOKING INFANT INSTRUCTIONS

UNCONSCIOUS / FAINTING

“What was the patient doing before they became unconscious?”

“How does the patient act when they sit up?”

“Is this the first time today the patient has been unconscious?”

“Is the patient able to respond to you and follow simple commands?”

“Has the patient taken any alcohol, medication or recreational drugs?”
If YES, go to OD/POISONING/INGESTIONS

“Does the patient have any medical or surgical history?”

“Does the patient have a medic alert tag?”
If YES, “What does it say?”

Fainting

SIMULTANEOUS ALS/BLS

Unconscious/not breathing normally.
Multiple fainting (syncopal) episodes (same day).
Confirmed unconscious/unresponsive.
Combined drugs and alcohol overdose.
Fainting associated with: Headache, Chest pain/discomfort/palpitations, Diabetic, GI/Vaginal Bleeding, Abdominal pain, Sitting/Standing, or continued decreased level of consciousness.
Single fainting if over 50 years.
Alcohol intoxication, can not be aroused.

BLS DISPATCH

Unconscious, but now conscious without critical symptoms.
Unconfirmed slumped over wheel.
Conscious with minor injuries.
Known alcohol intoxication without other drugs, can be aroused.
Near Syncope (fainting) without critical criteria.
UNCONSCIOUS / FAINTING

Pre-Arrival Instructions

Have patient lie down.

If patient is vomiting, lay patient on side.

Monitor patient’s breathing.

Do not leave patient, be prepared to do CPR.

Gather patient’s medications, if possible.

If the patient’s condition changes, call me back.

Agonal respirations are often reported as:
- gasping, snoring, or gurgling
- barely breathing
- moaning, weak or heavy
- occasional

Brief generalized seizures may be an indication of cardiac arrest.

UNCONSCIOUS PATIENT AIRWAY CONTROL INSTRUCTIONS

Go to UNCONSCIOUS/BREATHING NORMALLY AIRWAY CONTROL.

If unconscious, NOT breathing normally, go to CPR for appropriate age group.

Prompt

Short Report

- Age
- Sex
- Specific location
- Chief complaint
- Pertinent related symptoms
- Medical/Surgical history, if any
- Other agencies responding
- Any dangers to responding units

Patient vomits.  Patient stops breathing normally.

“Listen carefully. I’ll tell you what to do.”
“Extend one of the victim’s arms above the head and roll the body to the side so the victim’s head rests on the extended arm. Bend both legs to stabilize the victim. Check for normal breathing until help takes over.”
“Watch for the chest to rise and fall.”
“Put your cheek next to the nose and mouth to listen and feel for the air movement.”

Patient breathing normally.  Patient NOT breathing normally.

“Sweep it all out of the mouth with your fingers.”

GO TO CPR INSTRUCTIONS FOR AGE

GO TO CHOKING INSTRUCTIONS FOR AGE GROUP
“Listen carefully. I’ll tell you what to do.”
“DO NOT MOVE the patient (especially head and neck) unless imminent danger to life.”
“Check for normal breathing until help takes over.”
“Watch for the chest to rise and fall.”
“Put your cheek next to the nose and mouth to listen and feel for the air movement.”

**HAZMAT INCIDENT GUIDE**

**KEY QUESTIONS**

“Where is the emergency?” Actual incident location, direction of travel, best access if applicable:

“Are you in a safe location?”
If YES: continue questioning.
If NO: advise caller to move to safe location and call back.

“What happened?” (Type of hazardous material)
Explosion, Odor Complaint, Fire, Air release, Motor Vehicle Accident, Illegal dumping, Leak / Spill, Abandoned container / materials, Other.

“Are there any injuries?”
IF YES:
How many people are injured?
What is the nature of the injuries?
Refer to appropriate medical guidecard or local protocol for MASS CASUALTY INCIDENT.

“What is the name and/or ID # of material?”
Use DOT Guidebook or NLETS to obtain information about substance.

**EMERGENCY MEDICAL DISPATCH**

Refer to the appropriate medical guidecard or follow local protocol for Mass Casualty Incident.

**Hazardous Materials Agency Dispatch**

Notify County and all applicable agencies (NJDEP, Local and/or County OEM, etc.) per local protocol.
HAZMAT INCIDENT GUIDE

Pre-Arrival Instructions

If you are not in a safe location, leave the area and call back.
Gather available chemical information.
Deny entry to affected area. Secure premises, isolate area.
Isolate injured from scene if safely possible.

INFECTIONOUS DISEASE

State of New Jersey EMD Guidecards Version 02/16

**KEY QUESTIONS**

“Is the patient complaining of, 
fever, headache, tiredness, (can be aroused) cough, sore throat, runny or stuffy nose, body aches, diarrhea or vomiting (more common among children than adults)?”

Check breathing:
“Is the patient short of breath or unable to speak in complete sentences?”

Recent Travel
“Has the patient traveled outside of their normal area within the last month?” If so: “Where?”

“Is there any unusual bleeding from any part of the body?” IF YES: “Where?”

“Does the patient have a rash or blister on their body?”
IF YES: “Where?”

“Is the patient sensitive to light?”

Check the ALERT Card for current conditions.

**SCHIMULTANEOUS ALS/BLS**

Difficulty breathing
Uncontrolled bleeding
Decreased level of consciousness

**BLS DISPATCH**

NO critical symptoms
### INFECTION DISEASE  Pre-Arrival Instructions

Don’t allow the patient to move about.  
Keep the patient isolated. Prevent additional people from close contact.  
Try to obtain names of people who have been in close contact with the patient. If they are present ask them to remain until emergency services arrive to obtain their information.

#### Prompts

- Advise ALL responding units (including the initiating agency) of the signs and symptoms of patient and the need for P.P.E.
- Check ALERTS. If patient signs and symptoms match those of current ALERT advise responders and follow any protocols indicated.

#### Short Report

- Age
- Sex
- Specific location
- Chief complaint
- Pertinent related symptoms
- Medical/Surgical history, if any
- Other agencies responding
- Any dangers to responding units

---

### VEHICLE IN WATER

#### KEY QUESTIONS

- **“What kind of water are you in?”**
  - River, lake or flooded roadway
- **“Is the car sinking?”**
- **“Can you open the vehicle doors?”**
  - If NO
- **“Can you open the vehicle windows?”**
  - If NO go to Pre-Arrival Instructions

#### SIMULTANEOUS ALS/BLS

- Vehicle in water sinking, submerged or stuck in fast moving water.

#### BLS DISPATCH

- Vehicle in still water, not sinking, water not rising.

---

State of New Jersey EMD Guidecards Version 02/16
GUIDELINES TO REQUEST AN ON-SCENE HELICOPTER
Air transportation should be considered when emergency personnel have evaluated the individual circumstances and found any one of the following situations present.

**ENVIRONMENTAL FACTORS**
- The time needed to transport a patient by ground to an appropriate facility, **IF OVER 30 MINUTES**, poses a threat to the patient's survival and recovery.
- Weather, road, and traffic conditions would seriously delay the patient's access to Advanced Life Support (ALS).
- Critical care personnel and equipment are needed to adequately care for the patient during transport.
- Falls of 20 feet or more.
- Motor vehicle crash (MVC) of **20 MPH** or more without restraints.
- Rearward displacement of front of car by **20 inches**.
- Rearward displacement of front axle.
- Compartment intrusion, including roof: **>12 inches** occupant site; **>16 inches** any site.
- Ejection of patient from vehicle.
- Rollover.
- Deformity of a contact point (steering wheel, windshield, dashboard).
- Death of occupant in the same vehicle.
- Pedestrian struck at **20 MPH** or more.

**INDICATORS OF SEVERE ANATOMIC OR PHYSIOLOGIC COMPROMISE**
- Unconsciousness or decreasing level of consciousness.
- Systolic blood pressure less than 90 mmHg.
- Respiratory rate less than 10 per minute or greater than 29 per minute.
- Glasgow Coma Score less than 10.
- Compromised airway.
- Penetrating injury to chest, abdomen, head, neck, or groin.
- Two or more femur or humerus fractures.
- Flail chest.
- Amputation proximal to wrist or ankle.
- Paralysis or spinal cord injury.
- Severe burns.

Vehicle in still water
"*Open vehicle doors or windows, exit vehicle and wade to shore.*
If unable to wade to shore
"*Exit vehicle and go to vehicle roof.*"

Vehicle in water and sinking
"*Release your seatbelts and open the windows. If your windows will not open, try to break them. Hit the corner of the window with a key, seat belt buckle or metal headrest post. Exit through the window and get onto the roof of the vehicle.*"

Prompts

<table>
<thead>
<tr>
<th>Vehicle in still water</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;Open vehicle doors or windows, exit vehicle and wade to shore.&quot;</td>

</tr>
</tbody>
</table>

Vehicle is under the water
"If you are unable to open a window there should be enough air for the minute or two that it will take to prepare to escape. When the car is nearly full of water, take a deep breath and push a door open, you may need to do this with your feet. Exhale slowly as you swim to the surface."

If vehicle is sinking or in fast moving water concentrate on getting the occupants out of the vehicle and onto the roof. Once on the roof, verify location.

Consider need for boats, SCUBA or Tactical/Rapid Water Rescue.
