

Energy Efficiency Stakeholder Meeting

September 25, 2019

**Trenton War Memorial
Delaware Room
1 Memorial Drive
Trenton, New Jersey 08608
10:00 AM -12:30 PM**

This meeting is one in a series of topic-specific stakeholder meetings related to the Energy Efficiency Transition. Additional transition topics may include: programs; oversight; funding and budgets; cost recovery; performance incentives and penalties; application of utility targets and utility specific QPIs; demographic analysis; cost benefit analysis and evaluation, measurement, and verification; filing and reporting requirements; and peak demand response.

The intent of this meeting is to provide information regarding the anticipated transition process to all interested stakeholders and to solicit input from a wide range of parties regarding the administration of New Jersey's next generation energy efficiency and peak demand reduction programs. In particular, staff is interested in hearing stakeholder opinions regarding what administration structure(s) are most effective towards meeting the Clean Energy Act's goals while balancing energy efficiency program best practices, such as minimizing the cost of energy saved and increasing access to programs for all customers.

AGENDA

NJ Board of Public Utilities (10:00 am)

- Welcome & Overview
- Objectives
- Process
- Timeline
- History of Programs
- Governance & Administration

ACEEE Presentation (10:20)

Panel Discussion (10:35 – 10 minutes for each presenter)

Questions/Topics for Presenters

Staff is seeking specific discussion on questions of program structure from diverse perspectives. We invite the panelists to provide input on the following questions to facilitate conversations on program delivery.

1. Which types of programs and market supporting activities are best delivered by which entities?
2. Which programs and activities require statewide consistency, and for what (brand, pricing, etc.)?
3. What elements of existing program delivery in New Jersey are important to maintain in this transition?
4. Where do you see duplicative administration costs in programs now? Where are you concerned they might emerge in the transition?
5. What program administration structures best support delivering equitable access and outcomes for all ratepayers?
6. How should programs be delivered in order to maximize the energy efficiency opportunities and encourage deeper energy savings, while minimizing costs to consumers and ratepayers?

Questions & Answers (From Audience to Panelists) (11:25 am)

NJ Board of Public Utilities – Closing Remarks and Next Steps (12:25 pm)
