Summary of Changes

June 29, 1999 Version 1.0	Initial Release. Changes since last release: • Changed "EGS" to "ESP" and "EDC" to "LDC" throughout the guideline. Removed "NJ Definitions" and replaced it with "LDC Definitions" and "ESP Definitions" in the Notes section. • Added "How to use the implementation guideline" page. In addition, changed all headers to the true X12 definition. Also corrected the Table on Page 4 to reflect X12 definitions and added the words "X12 Structure" to the title on that page.
July 14, 1999 Version 1.1	Change Control Process Change #002 – Emergency Change: • Corrected X12 Error – changed BGN07 segment to BGN08
October 1, 1999 Version 1.1b	Change Control Process Change #004: • Fixed PER examples • Clarified FRF Rejection Code for 810 • Added FRG Rejection Code for 810 Additional changes: • Clarified that all day requirements in the Notes section are "business" days. • Moved NJ Notes to its own page • Added Conectiv Delaware information • Removed Rejection Codes "OBW" and "W06" for 867
November 4, 1999 Version 1.2	This is a FINAL version for Pennsylvania and New Jersey
December , 1999 Draft version 1.2MD1	• Add Maryland use to document – the changes were added to the version 1.2 of the regional standards • Added Table of Contents • Added Data Dictionary • Added example of rejecting an entire 820 transaction • Added "Accept" values for the BGN08 and OTI01 fields. These values still need to be verified and the rules for using them clarified.
December 23, 1999 Version 1.2MD2	• Added positive acknowledgement for 810 for Maryland • Corrected code for positive acknowledgement of 810 to "CF" (Confirm). • Added DTM segments for Date Bill Rendered and Bill Due Date • Added AMT segment for outstanding balance • Create example of rejecting a single account from an 820 • Create example of confirming a bill ready 810
January 17, 2000 Version 1.2MD3	• Clarified REF*45 only used when LDC is sending transaction • Clarified several error messages (FRF and TCN)
May 30, 2000 Version 1.2MD4	Clarified use of old account number for MD Corrected data dictionary to show customer name in MD as 60 characters Change Control Process Change #005 ▪ Added ADM, NCP, and 008 Rejection Codes for 810 Change Control Process Change #007 ▪ Added IIS Rejection Code for 867 Change Control Process Change #013 ▪ Added EXP Rejection Code for 810 Change Control Process Change #014 ▪ Added PCR Rejection Code for 810 Added Pennsylvania Notes section
July 22, 2000 Version 1.2MD5	• Modified MD use of NTE to reflect it is only required if TED02 value is A13 or API. • Remove TCN from valid 867 reject reason. • Correct references to BGN08 (was BGN07).

	• Added clarifications to improve understanding of transaction • Corrected information in examples, added further clarification notes to examples. • Add 867HU to list of PA transactions on Pennsylvania Notes page.
August 14, 2000 Version 1.2MD6	• Made REF*6O optional for 810 (never discussed as required) • Change MD email id to edi@psc.state.md.us • Add TED02 value TXI for invalid TXI information on the 810 • Add Note to New Jersey Notes for each LDC's Use of 824 transaction
August 22, 2000 Version 1.2MD7	• Incorporate PA Change Control X026 for no current charges on bill • Document PSE&G sending 824 when no supplier charges are on bill
September 10, 2000 Version 1.3	This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware (Conectiv only).
January 7, 2001 Version 2.0	Added Rejection codes to TED segment page 32
October 19, 2001 Version 2.0rev01	• Incorporate Delaware Electric Coop (DEC) information for Delaware • Correct BGN01 to allow value of 00 – some examples showed it, but BGN segment based had not included it.
January 9, 2002 Version 3.0	• Incorporate SMECO specifics for MD (MD Change Control 003) This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware.
December 21, 2004 Version 3.0.1D	• Included information about new MD Regulations which require LDCs to send customer balance and payment information whenever a consolidated bill is issued. • Also includes intent for Conectiv to send for DE and NJ.
January 26, 2005 Version 3.0.2D	• Made updates as a result of CTIWG discussions to add further clarifications regarding planned changes for the proactive 824.
January 20, 2006 Version 3.0.3D	• Incorporate NJ Change Control 005 (NJ CleanPower program changes) • Incorporate NJ Change Control 006 to reflect current operations
October 23, 2006 Version 3.0.4D	• Incorporate NJ Change Control 008 to reflect NJ CleanPower – unmetered usage for RECO)
February 12, 2007 Version 3.0.5F	• Considered FINAL for PA and NJ
February 22, 2009 Version 3.0.6D	• Incorporate NJ Change Control PSEG-E-Ref45

Purpose of 824

To automate the communication of application problems occurring with EDI transactions other than the 814's.

Situations and Procedure for Use

This list of "Situations for Use" reflects all situations used by any state using this document. To see which transactions are used by each state, refer to the state-specific "Notes" section.

1. **Non-billing party may reject bad 867MU or IU**
   a. If 824 action code indicates resend, metering party must correct and resend the transaction within 5 business days or contact the trading partner to agree on an alternative. You need only send the corrected 867, but you may send a cancel 867 and corrected 867 if your system requires that to correct the problem.

   b. If Rate Ready and you sent a good 810, you do not need to resend 810. But you may resend 810 if your system requires that to correct the problem.

   c. If Bill Ready Consolidated Billing, Billing Party must hold bill and restart bill window from time corrected 867 is sent. Corrected 867 shall contain new document due date.

      ♦ If corrected 867 is good, Non-Billing party must return good 810 by new document due date
      ♦ If corrected 867 is bad, repeat a-c, until a good 867 is received or other agreement is made between LDC and ESP.

2. **For Rate Ready Billing, non-billing party may reject bad 810**
   a. If 824 action code indicates resend, billing party must correct and resend corrected 810 within 5 business days or contact the trading partner to agree on an alternative.

   b. If sent good 867, do not need to resend 867. But may send cancel 867 and new 867 if your system requires that to correct the problem.

3. **For Bill Ready Consolidated Billing, billing party may reject bad 810**
   a. If 824 action code indicates resend, non-billing party may correct and resend 810 immediately if still time in billing window. If not, they must wait until next billing window to resend.

   b. If non-billing party resends 810 and misses billing window, they will receive another 824 stating the 810 was outside the billing window.

   This 824 notification replaces the current missed billing window e-mail or phone notifications.

4. **Non billing party may reject bad 568**

Because the 568 transaction may contain many accounts per transaction, it is difficult to automate resolution of problems. Therefore, 824's for bad 568's will be sent as notification only.
Corrective actions will be handled outside the EDI process as agreed upon by the billing and non-billing parties.

5. **Non billing party may reject bad 248**

    820 If action code is resend, billing party must correct and resend the 248 within 5 business days or contact the trading partner to agree on an alternative.

6. **Non billing party may reject bad 820 remittance received directly from Billing Party or from the Bank.**

    Because the 820 transaction may contain many accounts per transaction, it is difficult to automate resolution of problems. Therefore, 824's for bad 820's will be sent as notification only.
    Corrective actions will be handled outside the EDI process as agreed upon by the billing and non-billing parties.

7. **Non metering party may reject bad 867HU**

    a. If action code is resend, metering party must correct and resend the 867HU within 5 business days or contact the trading partner to agree on an alternative.

8. **Bill Ready Billing Party may acknowledge non-billing party charges appeared on bill**

    a. If the bill print has non-billing party charges, an 824 may be sent. It will contain the date the bill was rendered, the bill due date, and the total supplier amount due (which will include current charges and any arrearages)

9. **Bill Ready Billing Party issues bill with no non-billing party charges**.

Transaction Structure

867MU, 867IU, 867HU, 810, and 248:

   ♦ One 824 per LDC Account.
      Since these transactions are also one per LDC Account, the 824 will match one for one with the originating transaction in these cases.

820 and 568:

Since these transactions may contain many LDC Accounts per transaction, the 824 can be used either at the account or summary level as follows:

   ♦ If there is a problem with one or more accounts on the 820 (such as account number is not in receiver's system), one 824 will be sent for each problem account. Each 824 will be coded as a Transaction Set Partial Accept/Reject (OTI01 = TP) and the appropriate LDC account number will be provided.
   ♦ If there is a problem with the transaction that cannot be attributed to a specific LDC account, the 824 will be coded as a Transaction Set Reject (OTI01 = TR) indicating that the entire transaction is being rejected.

Rejection Reasons

To prevent abuse of the 824, the receiver should only send an 824 Rejection for reasons contained in this guide. The "Other" code (A13) may be used for situations needing immediate attention. However, each

time an A13 is used, you must e-mail the appropriate state's listserver so that a new code can be established. See TED segment for further explanation.

Action Code

An Action Code will be used to tell receiver what action to take, if any.

- ♦ Follow Up (BGN08 = 82): This indicates that the receiver of the 824 must resend the transaction. This code should be used when it is possible and desirable to resolve the problem by correcting and resending the transaction.
- ♦ Evaluate (BGN08 = EV): This indicates that the receiver of the 824 should evaluate the problem and make modifications to their system as necessary without resending the transaction. This code should be used when it is not possible to correct the situation automatically (such as problems with the 820 and 568 transactions) or it is not desirable to do so (such as when receiver chooses to make minor corrections because that is the easiest or quickest solution).
- ♦ Confirm (BGN08 = CF): This indicates that the sender of the bill has sent a bill to the customer, and is relaying balance information to the non-billing party. No action is required from the non-billing party.

Conditions for use of 824

- ♦ Party receiving 867, 810, 568, 248 or 820 may send an 824 when one of the valid reject reasons shown on the implementation guideline is detected.   The 824 is mandatory if a transaction cannot be processed by the receiver's system (rejection) and must be resent.   The 824 is optional if the receiver needs to manipulate any data required by their application system (accept with error) but they are not asking for the transaction to be resent.
- ♦ Bill Ready 810's that do not appear on the bill: An 824 containing an appropriate rejection code will be sent whenever an 810 is received but the charges are not included on the bill. An 824 will NOT be sent if an 810 is not received by the billing party. This allows the non-billing party to know that any 810's they sent, minus any 997 rejects, minus any 824 rejects, is what was accepted by the receiver and placed on the customer bill.
- ♦ Bill Ready 810's with use of 824 Acceptances: An 824 will be sent for every customer bill that should contain non-billing party charges. If the 810 received was not placed on the bill or no 810 was received, an 824 Rejection will be sent containing an appropriate rejection code. If the 810 received was placed on the bill, an 824 Acceptance will be sent. This allows the non-billing party to know what happened to each bill that should have contained their charges. The non-billing party should receive an 824 for each one-bill 867 they receive.
- ♦ If the receiver detects a problem as listed in the implementation guideline and chooses to send an 824, they must send it within 1 business day of receiving a bad transaction. Otherwise, the sender will not be held to their timing requirements. (i.e., If you do not send an 824 in response to a bad 867 within 1 business day, the billing window may not be held up and the bill may go out without your charges.)
- ♦ If the receiver detects a problem other than the valid reasons listed in the implementation guideline, they should phone or e-mail the sender as soon as possible. The sender should respond as soon as possible.
- ♦ If you receive an 824 with an action flag set to resend (Follow Up), you are required to respond either automatically or manually. You must correct and re-send the transaction within 5 business days or contact your trading partner and agree on an alternative. **Note:** An exception to this is that any rejection of a Bill Ready 810 will not change the billing window.
- ♦ If you receive an 824 with action flag set to notification only (Evaluate), a manual response (e-mail or phone call) to let the sending party know when the problem will be fixed is suggested.

♦ The proactive 824 is generated whenever the billing party renders a bill for the non-billing party. The proactive 824 is not used as an acknowledgement that the billing party received the non-billing party's invoice (810) transaction, or to provide information about the charges on the current bill.

General Notes

LDC Definitions:

The term LDC (Local Distribution Company) in this document refers to the utility. Each state may refer to the utility by a different acronym:
- EDC – Electric Distribution Company (Pennsylvania, Delaware)
- LDC – Local Distribution Company (New Jersey)
- EC – Electric Company (Maryland)

ESP Definitions:

The term ESP (Energy Service Provider) in this document refers to the supplier. Each state may refer to the supplier by a different acronym:
- EGS – Electric Generation Supplier (Pennsylvania)
- TPS – Third Party Supplier (New Jersey)
- ES – Electric Supplier (Delaware)
- ES – Electricity Supplier (Maryland)

Renewable Energy Provider Definition:

The term Renewable Energy Provider in this document refers to the party that provides Renewable Energy Credits (RECs). This party does not provide generation to the account. Each state may refer to the Renewable Energy Provider by a different acronym:
- GPM – Green Power Marketer (New Jersey)

Note: The transaction will either have an ESP or a Renewable Energy Provider, but not both.

Pennsylvania Notes

Pennsylvania Use:

This transaction is used for rejections of:
- 810 Rate Ready and 810 Bill Ready
- 867 MU and 867 IU
- 867 HU
- 248 Write Off
- 568 Collections
- 820 Payment transaction

PECO will also be sending an 824 when no current charges print on a bill for the non-billing party. (This is an optional purpose in PA)

New Jersey Notes

New Jersey Use:

This transaction is used for rejections of:
- 810 Rate Ready and 810 Bill Ready
- 867 MU and 867 IU
- 820 Payment transaction

PSE&G also sends when there are no ESP charges on the bill – see item below.

PSE&G Use as of CAS:

If no 810 is received within billing window, PSE&G will send bill to customer stating that no ESP charges were available and send an 824 to ESP.
- PSE&G will send at least one 824 for each 810 that PSE&G determines contains error(s). PSE&G will send each error condition found in an 810 as a separate 824.
- PSE&G will reject 810's (Action Code BGN08=82) for billings errors, and not print TPS charges or text message on the bill sent to the customer. However PSE&G will send an 824 evaluation notice (Action Code BGN08=EV) to TPS advising that there as an error with TPS's text portion of the 810 but **still** print the TPS charges on the customers bill if the 810 contained no billing errors.
- PSE&G will send 824 with the customer name missing for any 824 notifying TPS of a text error.
- PSE&G will send 824 with customer name missing for any customer account number not found in PSE&G's system.
.

Delaware Notes

Delaware (Conectiv only) Use:

- This transaction is optional when the market opens.
- At the current time, Conectiv plans to implement when the market opens, but only for a limited scope. Conectiv plans to only use the 824 Rejection to respond to Bill Ready 810 documents that are sent and are in error or have missed the billing window.
- The DE Use for Conectiv section within this document will reflect the ultimate use of the 824.
- Ultimately, Delaware Conectiv plans to also use the 824 Acceptance to notify the

non-billing party whether supplier charges printed on the bill or not.
- Note 1/2006: Conectiv (Delmarva) is using this transaction for all reasons stated within New Jersey that Atlantic City Electric uses.
- This transaction will not be used Day 1. When it is implemented, The "use" fields must be updated.

Delaware (Delaware Electric Coop) Use:

Maryland Notes

Maryland Use:

- This transaction will be used for rejection of:
    - 810 Rate Ready and 810 Bill Ready
    - 867 MU and 867 IU
    - 248 Write Off
    - 820 Payment transaction

- This transaction may also be used as:
    - Proactive 824 to confirm balance and payment information
      Note: The proactive 824 is not required, but may be used by some ECs to provide required balance and payment information to ESs. As of July 1, 2005, the following ECs plan to use it: AP, BGE, Conectiv, Pepco.

SMECO Notes:
Supplier rejection of bad 867 – If the action code indicates resend (BGN08 = "82"), SMECO will resend the 867 transaction. If the action code indicates evaluate (BGN08 = "EV"), SMECO will obtain a check reading on the account to verify the usage. If the check read indicates that the original transaction was correct, SMECO will resend the original 867, and will charge the supplier for a special meter read. If not, SMECO will correct and resend. In all cases, SMECO will reset the billing window for bill-ready consolidated customers to begin the date the valid 867 is sent.

Supplier rejection of bad 820 – SMECO will in all cases resolve this manually.

Supplier rejection of bad 248 – SMECO will in all cases resolve this manually.

LDC rejection of bad 810 – SMECO will reject supplier 810s for the following conditions: More than one IT1 loop (TED02 = "A13", NTE02 = "IT1 Loop Limit Exceeded"), account not found (TED02 = "A76"), invalid relationship ("A84"), invalid bill date ("DIV"), invoice for period greater than one year ago or in the future ("EXP"), billing type mismatch ("FRF"), billing calculation method mismatch ("FRG"), invalid tax information ("TXI"), and account exists but is not active ("008"). SMECO does not validate that the sum of the details equals the total, and does not check to ensure that service start and end dates match those on an 867. SMECO also does not validate invoice numbers to ensure against duplicates.

Transaction Set Notes

1. The OTI loop is intended to provide a unique identification of the transaction set that is the subject of this application acknowledgment.

2. The REF segment allows for the provision of secondary reference identification or numbers required to uniquely identify the original transaction set. The primary reference identification or number should be provided in elements OTI02-03.

3. The DTM segment allows for the provision of date, time, or date and time information required to uniquely identify the original transaction set.

4. The AMT segment should be utilized if monetary amount information is important to the unique identification of the original transaction set.

11	Response

Signifies that the requested service will be addressed as described in this transaction

	Ref. Des.	Data Element	Name	Attributes
Must Use	BGN02	127	**Reference Identification**	M AN 1/30

Reference information as defined for a particular Transaction Set or as specified by the Reference Identification Qualifier

A unique transaction identification number, assigned by the originator of this transaction. This number must be unique over time.

	Ref. Des.	Data Element	Name	Attributes
Must Use	BGN03	373	**Date**	M DT 8/8

Date expressed as CCYYMMDD

The transaction creation date – the date that the data was processed by the sender's application system.

	Ref. Des.	Data Element	Name	Attributes
Must Use	BGN08	306	**Action Code**	O ID 1/2

Code indicating type of action

82	Follow Up

Indicates that the receiver of the transaction must correct and resend the transaction.

EV	Evaluate

Indicates that the receiver of the transaction must evaluate the error, but the transaction should NOT be resent.

CF	Confirm

Used whenever a consolidated bill is issued to transmit information about the customer's balance.
Note: Valid in MD for Pepco, Conectiv, BGE, and AP.

Rules for Rejection Reason Codes

The codes on the next several pages have been identified by the UIG to convey rejection reasons. Only the codes listed for each service are valid for that service. If you require additional codes, send an email to the appropriate state's listserver.

"A13" (Other) must **only** be used when an existing error code does not convey the reason correctly. Each time "A13" (Other) is used for a new purpose, an E-mail must be sent to the appropriate state's listserver by the party sending the code, to notify the market participants about the text explanation for A13. This information will be compiled and new codes will be issued on a periodic basis.

   PA Listserver: edtwg@ls.eei.org
   NJ Listserver: njbpu@ls.eei.org
   MD: edi@psc.state.md.us
   DE: not determined as of July 2000

A76	Account Not Found
A84	Invalid Relationship
	Supplier is not the supplier of record
ABN	Duplicate Request Received
	Duplicate 810 received
ADM	Amount Does Not Match
	The amount within the 810 Cancellation/Reversal does not match the original 810.
API	Required Information Missing
CRI	Cross Reference Number Invalid
	The cross reference number provided on the 810 does not match the cross reference number on an open 867.
DDM	Dates Do Not Match
	810 Service Period Begin and End Dates do not match the same dates on an open 867
DIV	Invalid or missing date
	Includes date ranges for billing periods no longer supported by CIS system
EXP	810 Received for billing period older than that supported by the Billing System
FRF	Bill Type Mismatch
	Supplier and utility system do not have same bill type. For instance, an 810 was received by the LDC for a customer that is listed as a DUAL bill option in the receiver's system. BGN08 must be EV for this rejection reason.
FRG	Bill Calculator Mismatch
	An 810 was received for a customer with a bill calculator (REF*PC) different than what is listed in the recipient's system. BGN08 must be EV for this rejection reason.
IVL	SAC (charges and/or adjustments) sent in incorrect IT1 Loop

IVT	PID segment(s) sent in incorrect IT1 Loop
NCC	No current charges
	Used in PA and NJ (PSE&G) only when bill issued with no current charges
NCP	No Cancellation Processed
	810 re-bill received before or not with 810 cancellation
