	Notes
LDC Definitions:	<ul style="list-style-type: none"> The term GDC (Gas Distribution Company) in this document refers to the utility.
ESP Definitions:	<ul style="list-style-type: none"> The term ESP (Energy Service Provider) in this document refers to the supplier.
General Notes	<p>This document is used to define the requirements of the LDC Consolidated Bills which can be used for two purposes:</p> <ul style="list-style-type: none"> Sent by LDC to ESP – Used when the LDC calculates the ESP charges, based on the rates provided by the ESP to the LDC. This is referred to as Rate Ready billing. Sent by ESP to LDC – Used when the ESP calculates their own charges and the charges print on an LDC consolidated bill. This is referred to as Bill Ready billing. <p>Note: ESP Consolidated Bills will be defined in a separate 810 Implementation Guide.</p>
IT1 Loop	<p>The IT1 is used to indicate whether the charge/tax is at a rate level, account level, or unmetered level. In New Jersey for Bill Ready, charges will always be sent at the account level.</p> <p>IT109 = "ACCOUNT" for billing information that pertains to the entire account.</p> <ul style="list-style-type: none"> Account Loop may contain all charges and taxes for the customer's account, e.g., Customer Account Charge, Meter Charge, State Sales Tax, County Tax and generation charges. Account Loop may be used in Rate Ready LDC Consolidated Billing and may contain just account level charges and all taxes, e.g. Customer Account Charge, Meter Charge, State Sales Tax and County Tax, with generation charges itemized in the Rate Loop (IT109=RATE) and/or Unmetered Loop (IT109=UNMET). Account Loop is used in Bill Ready LDC Consolidated Billing and will all account charges and including all generation charges. Bill Ready and Rate Ready data examples at the end of this guide illustrate how to use the Account loop. <p>IT109 = "RATE" when billing information is being provided at a Rate level.</p> <ul style="list-style-type: none"> Rate Loop may be used for Rate Ready LDC Consolidated Billing
Rate Ready – Single IT1 Loop	<ul style="list-style-type: none"> Companies doing Rate Ready billing using only a single IT1 ACCOUNT Loop will not be required to provide the ESP Rate Code (REF*RB) since that code is provided in the RATE level.
Bill Ready – Sequencing Numbers	<ul style="list-style-type: none"> Print sequencing numbers must be unique and sequential within each 810. If print sequencing numbers are not unique and sequential, the billing party will determine the order on the bill (i.e., the 810 will not be rejected because the sequencing numbers are not unique). Not used by PSE&G
Budget Billing: Rate Ready Consolidated Billing	<ul style="list-style-type: none"> The <u>Actual</u> charges will be coded with their appropriate code (“A” = Allowance, “C” = Charge, or “N” = No Allowance or Charge) in the SAC01. SAC02 will be set to F950. SAC04 will be set to the appropriate value. The actual charge will be in SAC05. The <u>Budget</u> Amount information will be SAC02 = H151, SAC01 = N, SAC04 = BUD001. The actual charge will be in SAC05.
Late Payment Charges: Rate Ready	<ul style="list-style-type: none"> Late payment charges that the utility applies to the supplier charges must be sent on an 810 transaction. Inclusion of the charges on an 810 indicate an actual assessment of the late payment charges for the previous billing period indicating the customer did not pay the ESP charges in full by the previous billing period due date.
Cancellation Scenarios: Rate Ready	<ul style="list-style-type: none"> The prior 810 will be sent (you must cancel by billing period), however, it is not necessary to include the BAL segments in Rate Ready LDC Consolidated Billing scenario. The values will be identical in sign to what they were on the original bill. The way to indicate the bill is being reversed is through the use of the BIG08 field - value "01". If the LDC does an off-cycle cancel, the 810 cancellation must be sent before the rebill. The rebill will always be coded as an original (BIG08 - "00")
Cancellation Scenarios: Bill Ready	<p>Depending on whether a GDC is maintaining the suppliers’ balance, cancellation scenarios may not be necessary.</p>

<p>– Directly Related to Usage</p>	<p><u>LDC Consolidated with LDC Meter Read:</u> 1. The 867 cancellation from the LDC will inform the ESP that the billing (810) and usage (867) information is cancelled. 1. The 810 cancellation from the ESP to the LDC is optional Day 1. The issue of whether an LDC will process this information will be revisited at a later date.</p> <p><u>Bill Ready Scenarios – ESP Cancels 810 Not Related to Usage</u> These scenarios differ by utility and are documented within the state sections.</p>

New Jersey Notes

Billing Information:	<p>PSE&G - Supports Bill Ready. New Jersey Natural Gas – Supports Rate Ready. South Jersey Gas – Supports Rate Ready. Elizabethtown Gas will support LDC Consolidated Billing by end of 2013.</p>
Calculating Previous Unpaid Balance	<p>For Rate Ready, the billing party has the responsibility of calculating the previous unpaid balance. For Bill Ready, each utility determined whether they would be maintaining the previous unpaid balance. PSE&G is making the TPS whole and thus will maintain the supplier previous unpaid balance as part of PSE&G's unpaid balance.</p>
Processing Bill Ready Data	<p>PSE&G presents supplier charges on its bill that are included within the first 810 processed by PSE&G, that was received within the bill window.</p> <p>For ETG, a supplier can detail the components of their charges in the bill messaging section. Billing Window- ESP can return an 810 by the datetime mentioned in document due datetime on an 867 monthly usage</p>
Negative Total Invoice: Bill Ready	<p>Elizabethtown Gas Will accept 810 Invoice (Purpose Code 00)_with total negative charges (TDS. Will accept 810 Invoice (Purpose Code 01) with total negative charges (TDS) and will convert any positive changes to negative. PSEG: Accepts 810 Invoice with total negative charges (TDS).</p>
Cancellations due to usage:	<p><u>LDC Consolidated with LDC Meter Read:</u></p> <p>PSE&G: The 867 will automatically cancel the ESP's 810 charges. The ESP should not send a cancel 810.</p> <p>ETG will send an 867 cancellation to a TPS and automatically cancel the ESP's 810 charges. The ESP should not send a cancel 810.</p>
Cancellations not directly related to usage:	<p>PSE&G: Supplier must determine what value to place in next 810. PSE&G will ignore an 810 cancel.</p> <p>ETG: Will accept 810 cancellations (adjustments), the BIG08 must equal 01 for an 810 cancellation. The BIG05 must be the LDC Account Number. If any other value is sent, the 810 will be rejected with an 824. The 810 cancellation can be sent outside of the billing window if the customer is disputing the TPS charge and this invoice will be added to the next printed bill.</p>
Bill Ready – LDC Consolidated Billing - Supplier Switch	<p>The following outlines the rules each Bill Ready Utility has when there is a supplier switch and the previous ESP misses the billing window.</p> <p>PSE&G – The supplier will be responsible for collection of any outstanding funds due from the customer. If supplier misses bill window on a switch, PSE&G will NOT print original supplier charges on the next bill.</p>
Bill Ready - Missed Window:	<p>Each utility has distinct rules on how a missed bill window will be handled:</p> <p>PSE&G – will NOT hold charges. The suppliers next month's 810 should include charges for any missed bill windows. PSE&G will only use the LAST 810 received in the Bill Window for charges.</p> <p>ETG will accept charges received after the billing window closes and will also send an 824 with reason OBW to notify this. These 810 charges will appear in next bill sent to customer. ETG will however accept multiple 810s while the billing window is open. If a supplier misses a billing window and no TPS charge is billed, a notation will appear on the bill that the TPS charge is not included.</p>

<p>Minimum requirements:</p>	<p>Each LDC may allow different fields to be passed. The minimum fields that must be on a New Jersey bill are:</p> <p>PSEG will use the following segments for Bill presentation: Adjustment - SAC05 where SAC04=ADJ000, IT1 loop=ACCOUNT (optional) adjustments must not include payments. Current Charge - SAC05 where SAC04=GEN004, IT1 loop=ACCOUNT (must send) Only one Current Charge per 810 is expected. If additional Current Charges are sent the last Current Charge received in the 810 will be processed. • Total Charge - BAL*M*YB (must send) Total Charge Due must equal the sum of Adjustment and Current Charge.</p> <p>Note: PSE&G will print any PID records up to 60 chars. in length and up to 50 PID loops. PSE&G will ignore any SAC record with SAC04=ADJ002 and also ignores the SAC15.</p> <p>If an ESP is certified for LDC Consolidated Billing, PSE&G will print the following seven items on the PSE&G Bill.</p> <ol style="list-style-type: none"> 1. ESP Name 2. ESP phone number 3. ESP Logo (if ESP is certified for printing Logo) 4. Current Charge 5. Adjustment 6. Total charge (must equal the sum of Adjustment and Current Charge) 7. One Rolling Page containing up to 50 lines of text each containing up to 60 characters <p>Note: Items 1-3 above are not sent via EDI810 but are provided earlier.</p>
<p>ESP Price on Residential Customer Bill (Bill Ready)</p>	<p>New Jersey regulations require the ESP's price for the energy charge be printed on the LDC's consolidated customer invoice for residential customers (C&I optional). To meet this requirement, the following applies to the bill ready LDCs:</p> <ul style="list-style-type: none"> • PSE&G – the ESP must send the charge description in the PID segment to include the price (rate) of the energy charge. PSE&G does not support the use of the SAC15. Any information sent in the SAC15 will not be printed on the customer's consolidated invoice. <p>Example charge description: ENERGY CHARGE-60KWH@0.099833 PER KWH</p>
<p>Budget Billing</p>	<p>Budget Billing for the supplier portion of the bill is not provided on a Utility Consolidated Bill.</p>

How to Use the Implementation Guideline

Segment: **REF** Reference Identification
Position: 030
Loop: LIN Optional
Level: Detail
Usage: Optional
Max Use: >1
Purpose: To specify identifying information
Syntax Notes:
 1 At least one of REF02 or REF03 is required.
 2 If either C04003 or C04004 is present, then the other is required.
 3 If either C04005 or C04006 is present, then the other is required.
Semantic Notes:
 1 REF04 contains data relating to the value cited in REF02.
Comments:

This section is used to show the X12 Rules for this segment. You must look further into the grayboxes below for State Rules.

Notes:	Recommended by UIG
PA Use:	Must be identical to account number as it appears on the customer’s bill, excluding punctuation (spaces, dashes, etc.). Significant leading and trailing zeros must be included.
	Request: Required Accept Response: Required Reject Response: Required
NJ Use:	Same as PA
Example:	REF*12*2931839200

The “Notes:” section generally contains notes by the Utility Industry Group (UIG).

This section is used to show the individual State’s Rules for implementation of this segment.

810 Invoice

Functional Group ID=**IN**

Introduction:

This Draft Standard for Trial Use contains the format and establishes the data contents of the Invoice Transaction Set (810) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide for customary and established business and industry practice relative to the billing for goods and services provided.

Transaction Set Notes

1. Number of line items (CTT01) is the accumulation of the number of IT1 segments. If used, hash total (CTT02) is the sum of the value of quantities invoiced (IT102) for each IT1 segment.

Segment: **ST** Transaction Set Header
Position: 010
Loop:
Level: Heading
Usage: Mandatory
Max Use: 1
Purpose: To indicate the start of a transaction set and to assign a control number
Syntax Notes:
Semantic Notes: 1 The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).

Comments:

Notes: NJ Use: Required
 Example: ST*810*000000001

Data Element Summary

Ref.	Data Element	Name	Attributes
M	ST01	143 Transaction Set Identifier Code	M ID 3/3
		Code uniquely identifying a Transaction Set	
		810 Invoice	
M	ST02	329 Transaction Set Control Number	M AN 4/9
		Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	

Segment: **BIG** Beginning Segment for Invoice
Position: 020
Loop:
Level: Heading
Usage: Mandatory
Max Use: 1
Purpose: To indicate the beginning of an invoice transaction set and transmit identifying numbers and dates

Syntax Notes:
Semantic Notes:

- 1 BIG01 is the invoice issue date.
- 2 BIG03 is the date assigned by the purchaser to purchase order.
- 3 BIG10 indicates the consolidated invoice number. When BIG07 contains code CI, BIG10 is not used.

Comments: 1 BIG07 is used only to further define the type of invoice when needed.

Notes: NJ Use: Required

Note:

PSE&G will only process transactions with BIG08="00"

PSE&G will reject with transaction 824 if BIG05 not provided

ETG will process transactions with BIG08-"00 and 01" only.

ETG will reject with transaction 824 if BIG05 is not provided.

When BIG08 is 01 the BIG05 should be the LDC Account Number. ETG considers this an adjustment to the account, not specific to a usage transaction.

ETG only supports BIG07 = ME

Example: BIG*20120201*20120201123500001***2048392934504**ME*00

				Transaction Set Purpose Code		
				Code identifying purpose of transaction set		
			00	Original		
			01	Cancellation		
				Cancels an entire invoice		
				not supported by PSEG.		
			07	Duplicate		
				This code will be used only in a Rate Ready scenario when the LDC changes the bill due date for the customer. The LDC will send an 810 to the ESP, the only things changing from the original 810 are the duplicate code and the due date.		
				PSE&G will not use		
				PSE&G and ETG will not use		
			17	Cancel, to be Reissued		
				Reversal – used when 810 cancellation is not related to usage. (Bill Ready only)		
				PSE&G & ETG will not use		
			18	Reissue		
				Used in combination with code 17 – Reversal, to re-bill the charges that were previously reversed. (Bill Ready only)		
				PSE&G and ETG will not use

Semantic Notes: 1 IT101 is the purchase order line item identification.

- Comments:**
- 1 Element 235/234 combinations should be interpreted to include products and/or services. See the Data Dictionary for a complete list of IDs.
 - 2 IT106 through IT125 provide for ten different product/service IDs for each item. For example: Case, Color, Drawing No., U.P.C. No., ISBN No., Model No., or SKU.

Notes: Notes: ACCOUNT: Used to convey charges that apply to the entire account.
 Note: If tax is the only information conveyed in this loop, the SLN and SAC segments should not be sent.
 Note: IT1 loops may be sent in any order.
 There may only be ONE IT1 ACCOUNT Loop
 NJ Use: This loop is required to identify whether this is an electric or gas transaction. The ACCOUNT loop is the only one used for Bill Ready.

- 1 TDS02 is required if the dollar value subject to discount is not equal to the dollar value of TDS01.

Notes:

Notes: TDS01 is the total amount due for this invoice and must equal the algebraic sum of the amounts in the TXI02 and SAC05 segments with the exception of any charges that are designated to be ignored in the calculation in the TXI07 or SAC01. If this amount is negative, send the minus sign.

NJ Use: Required - The TDS will be the sum of all of the SAC lines. It will not necessarily equal the total charges sent for the current month. For instance, any adjustments sent in Bill Ready for PSE&G will be included in the TDS.

ETG- This should equal the sum of the current charges. ETG will validate the summing of multiple SAC05 lines. The TDS01 amount is what will be used to print on the consolidated bill. ETG will maintain the ESP previous balance. A negative debit charge is not acceptable, only credits can be negative. Negative total is accepted.

Example: TDS*10000 Note: This represents \$100.00 - there is an implied decimal.

Data Element Summary

Ref.	Data Element	Name	Attributes
M	TDS01	610 Amount	M N2 1/15
		Monetary amount	

Segment: CTT Transaction Totals
Position: 070
Loop:
Level: Summary
Usage: Optional
Max Use: 1
Purpose: To transmit a hash total for a specific element in the transaction set
Syntax Notes: 1 If either CTT03 or CTT04 is present, then the other is required.
 2 If either CTT05 or CTT06 is present, then the other is required.
Semantic Notes:
Comments: 1 This segment is intended to provide hash totals to validate transaction completeness and correctness.
Notes: NJ Use: Required
 Example: CTT*4

Data Element Summary

Ref.	Data	Name	Attributes
<u>Des.</u>	<u>Element</u>		
M	CTT01	354 Number of Line Items	M N0 1/6
		Total number of line items in the transaction set	
		The number of IT1 segments.	

Segment: SE Transaction Set Trailer
Position: 080
Loop:
Level: Summary
Usage: Mandatory
Max Use: 1
Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments)

Syntax Notes:

Semantic Notes:

Comments: 1 SE is the last segment of each transaction set.

Notes: NJ Use: Required
 Example: SE*28*000000001
