Summary of Changes February 22, 2000 Initial Release Version 1.0 March 29, 2000 Corrected examples, changed LDC to GDC, corrected spelling errors. Version 1.1 May 24, 2000 Instituted redlining of the document. • Version 1.2 Deleted examples that do not pertain to New Jersey. • Deleted codes that are not applicable to New Jersey. Corrected units of measure to reflect natural gas. June 13, 2000 Changed NJ Notes section to reflect new change types required for New Jersey Natural Version 1.3 Gas Updated change codes to reflect options applicable for natural gas in New Jersey Moved ESP rate code information from the account to the meter level Moved ESP rate amount information from the account to the meter level Added REF segments to incorporate New Jersey Natural Gas requirements: REF*PRT - Capacity Release Option • REF*BN - ESP Rate Amount • REF*DO – Highest Month Average Daily (HMAD) REF*SJ – Maximum Daily Quantity (MDQ) • Deleted "COMBO" as a valid measurement type Modified notes on REF*NH and REF*PR to reflect New Jersey Natural Gas requirements: Supplier may send REF*NH to indicate Transportation Service Type Supplier may send REF*PR to indicate Temperature Sensitive Delivery option December 15,2000 Modified segment REF* SJ New Jersey Natural Gas requirements to add note on Version 1.4 REF03 May 24, 2000 Segment REF*BN (Rate Amount) moved REF03 description to REF02 and deleted Version 1.5 REF03 Clarified NJ Use on segment REF*RB Modified notes on segment REF*NH to clarify NJNG transportation service options and updated examples. Modified notes on segment REF*SJ to clarify NJNG transportation service options. • Segment REF*NH updated examples. Segment REF*PR, clarified NJNG use note and updated example Segment REF*PRT, corrected element name ٠ Added Table of Contents. • • Added Data Dictionary. Alphabetized REF segments at logical levels. Changed REF*PRT use valid values to Y,N and updated data dictionary to reflect change June 21, 2001 Removed note referencing SJG on segment REF*BN Version 1.6 Added "Tracking number on Request and Response transactions" note in Notes ٠ section. Corrected Use Note on Segment REF*11 (ESP Account Number)

	• Updated note "Unknown LIN05 codes" in Notes section
August 8,2001 Version 1.7	 PSEG CAS changes NJ Notes – added Billing type to GDC changes page 13 REF*7G (rejection Reason Code) update code "CO2" to also be valid in NJ page 51
March 27, 2002 Version 1.8	 Corrected Use Note on Segment REF*45 (Old GDC Account Number) Added Examples for Change of GDC Account Number
April 30, 2002 Version1.8.1	 Modified NJ Use; notes to clarify, this was done due to TPS misunderstanding of notes that became apparent during EDI Certification testing Corrected examples, changed LDC to GDC, corrected spelling errors. Removed reference to other states
December 12, 2003 Version1.9	 Changes by State – Required Implementation Date page update for PSE&G 2/2004 Implementation Date NM1MA – Meter Addition NM1MR – Meter Removal NM1MX – Meter Exchange
February 23, 2012 Version 2.0	 For South Jersey Gas: Updated NM1 segment Notes that SJG only accepts NM109 = ALL Updated REFBN segment notes to include SJG Updated REFRB segment notes to include SJG
December 12, 2012 Version 2.1	 For Elizabethtown Gas Co. 814C Request and Response Updated to reflect ETG now supports GDC initiated changes.
December 21, 2012 Version 2.2	 Removed N12C and N1PK segments and removed from REFTD codes
April, 2013 Version 2.3	 Removed Segments AMTDP, REFSJ, and REFPRT and removed from REFTD codes. Added note to clarify Bill Option changes for SJG
September 10, 2014 Version 2.4	 Updated Change Reason Code Table for SJG. Added note that SJG requires both REFBLT and REFPC on change requests. Removed NJ Notes line regarding SJG bill option changes
April 30, 2019 Version 2.5	• Incorporated CC NJG016 to add that SJG supports REF*NH Incorporated CC NJG019 to add REF*PG Aggregation segment and new REF02 REFPG to REF*TD

	Notes
One Account per 814	One customer account per 814.
Tracking number on Request and Response transactions	• On the request, the LIN01 is a unique tracking number for each line item (LIN) in this transaction. This number must be unique over all time, and is assigned by the sender of the request transactions. This number must be returned on the response transaction (accept or reject), in the same element (LIN01).
Multiple LINs	 There may be multiple detail LIN loops for each customer account. It is important that the sender order the LIN loops in the order they would like them processed for all primary services. Refer to the LIN segment within this document for a better understanding of primary and secondary services. The sender may send one service per account per 814 instead of using multiple LIN segments.
Response per LIN	 There must be one response LIN for each request LIN. These responses may be created and sent at different times in different 814 transactions, but all LINs must be responded to within the time limits set by the Commission.
Unknown LIN05 codes	 Preferred: If an GDC receives a request for a service that it does not support (whether the state supports it or not), the GDC should reject it with a REF*7G*SDE*SERVICE DOES NOT EXIST
	 Optional: If an GDC receives a request for a service that it does not support (whether the state supports it or not), the GDC should accept it, but then send a status code REF*1P*SNP*SERVICE NOT PROVIDED
Rejection vs. Acceptance with Status Reason code	• A Status Reason code is different than a Rejection Reason code. The Status Reason code is used to give additional information to the receiving party (an FYI). For example, if a request for Historical Usage is sent and the transaction is valid, but historical usage is not available for that customer, the transaction is accepted and a status reason code is provided to explain that the historical usage will not be sent. If a transaction is rejected, the requester is expected to follow up and resubmit; whereas if a transaction is accepted with a status reason code, the requester is not expected to take any further action.
GDC Definitions:	• The term GDC (Gas Distribution Company) in this document refers to the utility.
ESP Definitions:	• The term ESP (Energy Service Provider) in this document refers to the supplier.

	Change Transaction Detailed Notes:
Meter Additions, Removals, Exchanges and Meter Level Information Changes	 Assumptions: There will be only one NM1 Loop per Meter or Unmetered Service (i.e., if a meter has multiple units of measure, they will all be represented within the one NM1 loop). The NM101 indicates the action to be taken for the specified meter If a meter reading date (meter reading cycle) is changed, GDC may need to notify any suppliers of the consequent change in their effective start or end dates. GDC will send these changes (REFTZ, REFBF, and either DTM150 or DTM151) concurrently and along with effective start or end date.
	4. What must be sent?
	• Meter Addition:
	NM1*MA
	REF*TD*NM1MA All Meter Level Information for the new meter
	All Meter Level information for the new meter
	Meter Level Information Change:
	 For change in the items listed below: Load Profile (REF*LO) *
	GDC Rate Class (REF*NH) *
	GDC Rate Subclass (REF*PR) *
	ESP Rate Code (REF*RB)
	Meter Cycle (REF*TZ)
	The following must be sent: NM1*MQ
	REF*TD(s) associated with segment(s) listed above
	Item that is changing
	* The Load Profile, GDC Rate Class and GDC Rate Subclass may be sent in combination on one 814 Change transaction or separately
	• For change in the meter attributes listed below:
	Meter Type (REF*MT)
	Meter Constant (REF*4P)
	Number of Dials (REF*IX) Information Sent on 867 (REF*TU)
	The following must be sent:
	NM1*MQ
	REF*TD*NM1MQ
	REF*MT
	REF*4P for each Unit of Measure
	REF*IX for each Unit of Measure
	REF*TU for each Meter Type for each Unit of Measure * Note that a change in any one of these attributes requires that all
	attributes be resent.
	• Meter Removal:
	NM1*MR
	REF*TD*NM1MR
	Meter Exchange :
	The following must be sent :
	NM1*MX
	REF*TD*NM1MX (Required for Request, Optional for Response)

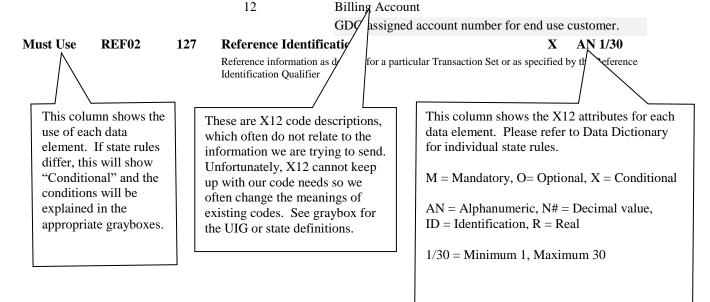

REF*MT REF*4P REF*IX REF*TU REF*LO REF*NH REF*PR	
REF*IX REF*TU REF*LO REF*NH	
REF*TU REF*LO REF*NH	
REF*LO REF*NH	
REF*NH	
REF*RB	
REF*TZ	
REF*46 (implies meter removed)	
5. Expectations:	
• Add Meter(s):	
One NM1*MA Loop for each meter added	
Meter Level Information Change	
• One NM1*MQ Loop with the appropriate change(s) for that meter. Please see	
rules regarding which changes may be sent in combination.	
• Remove Meter(s) :	
One NM1*MR Loop for each meter removed	
• 1-to-1 Exchange: One old meter replaced with one new meter	
One NM1*MX Loop	
• 1-to-2 Exchange: One old meter replaced with two new meters	
One NM1*MX Loop, One NM1*MA Loop for the meter being added	
2-to-1 Exchange: Two old meters replaced with one new meter	
One NM1*MX Loop including the old meter number of the meter exchanged Or	ie
NM1*MR Loop for the meter being replaced.	
Use of REF*TD • The REF*TD segment is used to indicate to the receiver what type of change to expe	ct.
segment At least one REF*TD is required on a Request transaction. The REF*TD(s) may	
optionally be returned on the Response transaction.	
• The REF*TD will be located in one of two locations within the document.	
• Any field that changes within the Header or LIN level will have the associated	
REF*TD in the LIN loop	
• Any field that changes within the NM1 loop will have the associated REF*TD in	L
the NM1 loop.	
• Example: If ESP account number is being changed, the document will contain a	CD
segment REF*TD*REF11 as well as the associated REF*11 segment with the new E Account Number (REF*11*2349710802189)	SP
Changing Billing related The transaction is intended to have only one change per LIN loop. It is recognized that the	ara
fields as it relates to one are a few fields that must be sent in conjunction with each other to take effect. The only	sie
change per LIN valid fields that may be sent in combination are the ones documented here. If any other	
change per Liv value news that may be sent in combination are the ones documented nere. If any other changes are sent in combination within one LIN/NM1 loop, they may be rejected by the	
receiving party.	
Change from DUAL Bill to GDC Rate Ready	
 Following REF*TD codes must be sent: REF*TD*REFBLT, REF*TD*REFPC, 	
REF*TD*REFRB	
Note: REF*TD*REFRB is in NM1 loop.	
• Following fields must be sent: Bill type (REF*BLT), Bill Calculator (REF*PC),	
ESP Rate Code (REF*RB), ESP Rate Amount (REF*BN) – SJG.	
Change from DUAL Bill to GDC Bill Ready	
 Following REF*TD code must be sent: REF*TD*REFBLT 	
• Following field must be sent: Bill type (REF*BLT)	
Change from GDC Rate Ready to DUAL Bill	

	 Following REF*TD codes must be sent: REF*TD*REFBLT and REF*TD*REFPC Following fields must be sent: Bill type (REF*BLT), Bill Calculator (REF*PC) GDC will initialize following fields - ESP Rate Code (REF*RB). Change from GDC Bill Ready to DUAL Bill Following REF*TD codes must be sent: REF*TD*REFBLT Following field must be sent: Bill type (REF*BLT) If customer is already GDC Rate Ready, and only the ESP Rate Code (REF*RB) is changing, this may be sent alone. The associated REF*TD will be REF*TD*REFRB. For SJG Rate Ready, if changing Rate Amount (REF*BN) only the ESP Rate Code (REF*RB) is not required. The associated REF*TD will be REF*TD*REFBN
Response Transaction	 The Change Response Transaction will be formatted as follows: An Accept Response will provide the "Required" fields and the optionally REF*TD(s) from the Request Transaction. It will not provide the segment that was changed. A Reject Response will provide the "Required" fields, the rejection reason and optionally the REF*TD(s) from the Request Transaction. It may also provide, optionally, the segments that were in error.
Adding ESP Account Number	• Note that the change transaction may be used to request that the GDC start to carry the ESP account number, if one had not been provided on the initial Enrollment Request transaction.

	NJ Notes
GDC Initiated Changes	 If the following fields are changed within the utility's system, a supporting 814 Change document must be sent to the supplier: GDC account number Meter read cycle Billing cycle Billing Type HMAD value (New Jersey Natural Gas only)
	All other changes are considered optional upon market opening. They may be made mandatory at a later time.
ESP Initiated Changes	 The utilities must support receiving the following changes: ESP account number Billing determinants of Bill type, Bill Calculator, ESP Rate Code (Rate Ready), ESP Rate Amount (Rate Ready)

814 General Request, Response or Confirmation

Functional Group ID=GE

Introduction:

This Draft Standard for Trial Use contains the format and establishes the data contents of the General Request, Response or Confirmation Transaction Set (814) for use within the context of an Electronic Data Interchange (EDI) environment. This standard can be used to request actions to be performed, to respond to a request for actions to be performed or to confirm information related to actions performed.

Transaction Set Notes

Μ

1. The N1 loop is used to identify the transaction sender and receiver.

2. The NM1 loop is used to identify the parties associated with the individual line item (LIN), such as an individual consumer in a consolidated third party Consumer Service Provider transaction.

Segment:	ST T	ransaction Set Header				
Position:	010	010				
Loop:						
Level:	Heading	Heading				
Usage:	Mandato	'y				
Max Use:	1					
Purpose:	To indica	te the start of a transaction set and to assign a control	number			
Syntax Notes:		-				
Semantic Notes:	inter	1 The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).				
Comments:

			WQ	Accept	
Μ	ASI02	875	Maintenance Ty	pe Code	M ID 3/3
			Code identifying	he specific type of item maintenance	
			001	Change	

Segment:	REF Reference Identification (TD = Reason for Change)					
Position:	030					
Loop:	LIN Optional					
Level:	Detail					
Usage:	Optional					
Max Use:	>1					
Purpose:	To specify identifying information					
Syntax Notes:	1 At least one of REF02 or REF03 is required.					
	2 If either C04003 or C04004 is present, then the other is required.					
	3 If either C04005 or C04006 is present, then the other is required.					
Semantic Notes:	1 REF04 contains data relating to the value cited in REF02.					
Comments:						
Notes:	Notes: This convention of the REF segment is used for account maintenance, to					
	convey change reason codes. The first portion of the code identifies the segment that					
	contains the data that has been changed; the remaining portion of the code identifies the					
	relevant code qualifier for the data that has been changed. The changed data will appear					
	in the appropriate element of the identified segment. For example, a REF02 code of					
	REBLT indicates that data in the REF segment that is identified by the qualifier BLT					
	(i.e., Bill Presenter) has been changed to the value now shown in REF02.					
	NJ Use:					
	Request: Required if change is at an account (LIN) or header level					
	Response: Optional					
	Example: REF*TD*REFBLT					
	See ADDENIDIV A stand of document of table of which shapped are supported					

See APPENDIX A at end of document of table of which changes are supported

			Code identifying a party or other code					
			Meter Number					
			UNMETERED - for Unmetered Services					
			ALL - for ALL meters on the Request Transaction ("ALL" is only valid for a					
			Meter Level Information Change). Used to change information					
			transmitted at the meter level, but applies to "ALL" meters fo	r this	s customer,			
			i.e., REF*LO, REF*NH, REF*PR, REF*TZ, REF*RB					

Segment:	REF Reference Identification (TD = Reason for Change)
Position:	130
Loop:	NM1 Optional
Level:	Detail
Usage:	Optional
Max Use:	>1
Purpose:	To specify identifying information
Syntax Notes:	1 At least one of REF02 or REF03 is required.
·	2 If either C04003 or C04004 is present, then the other is required.
	3 If either C04005 or C04006 is present, then the other is required.
Semantic Notes:	1 REF04 contains data relating to the value cited in REF02.
Comments:	
Notes:	Notes: This convention of the REF segment is used for Account Maintenance and
	Update transactions, to convey meter-level and entity relationship change reason codes.
	The first portion of the code identifies the segment that contains the data that has been
	changed; the remaining portion of the code identifies the relevant code qualifier for the
	data that has been changed. The changed data will appear in the appropriate element of
	the identified segment. For example, REF02 code of REFRB indicates that data in the
	REF segment that is identified by the qualifier RB (i.e. ESP Rate) has been changed to
	the value now shown in REF02 of the REF*RB segment.
	NJ Use:
	Request: Required if change is at a meter level
	Response: Optional
	Example: REF*TD*REFRB

Segment:	REF Reference Identification (RB = ESP Rate Code)
Position: Loop: Level: Usage: Max Use: Purpose: Syntax Notes: Semantic Notes:	 130 NM1 Optional Detail Optional >1 To specify identifying information 1 At least one of REF02 or REF03 is required. 2 If either C04003 or C04004 is present, then the other is required. 3 If either C04005 or C04006 is present, then the other is required. 1 REF04 contains data relating to the value cited in REF02.
Comments: Notes:	Notes: If an ESP Rate Code is changed, the NM1 segment will contain NM1*MQ*3*****32*ALL.
	If only the ESP Rate Code is changed, the associated REF*TD will be REF*TD*REFRB.
	NJ Use: Required by South Jersey Gas only if GDC Rate Ready billing option is selected for customer. Required by NJNG only if GDC Rate Ready billing option is selected for customer. Allows a supplier to choose between three calculation methods to derive a customer's total bill. The actual rate used in the calculation is provided at the meter level using segment REF*BN
	Valid calculation values and description:
	1 - % discount, A percentage discount off what the customer would have been billed at NJNG's Non-Transportation rates.
	4 - per therm rate. A commodity rate applied to customers metered consumption
	5 - rebundled flat rate or Burner tip price. A straight per therm rate relative to the customers metered consumption, which is inclusive of all fixed charges.
	In the case of a multi-metered account a supplier must apply the same option value (1,4 or 5) to each meter, however they could have a different rate per meter (REF*BN). In other words, meter 1 could not be opt (5) and meter 2 option (4), however, meter 1 could be opt (5) rate 0.345 and meter 2 could be opt (5) and rate .456.
	GDC to ESP Request:Not UsedESP to GDC Response:Not Used
	ESP to GDC Request: Optional. Required by South Jersey Gas if Reason for Change is REFRB
	GDC to ESP Accept Response: Not Used GDC to ESP Reject Response: Optional
	Example: REF*RB*A29
