The value of the REF02 field for the REF*17 segment will either be "SUMMARY" or "DETAIL". Note: The REF*17 is being sent under the LIN05 code of "CE" as part of the move.
	Conditional – always sent if the LDC supports setting of interval summary/detail at the account level, and this is an interval account. If the EGS's prior option is able to be ported to the new location, the LDC would pass that option. If the EGS's prior option is unable to be ported (different meter configuration, type, etc.) to the new location, the LDC would pass their default interval data option.

Position: 060
Loop: LIN
Level: Detail
Usage: Optional
Max Use: >1

Purpose: To ind

Syntax Notes: Semantic Notes: Comments: To indicate the total monetary amount

PA Implementation:

This field is used for the non-billing party to tell the billing party the tax exemption amount that should be entered into the billing party's system in order to calculate a bill on the sender's behalf. This is required only for rate-ready LDC Consolidated billing where the LDC has loaded the ESP rates into their system, the LDC calculates the ESP charges, and places the ESP charges on the LDC bill. The following generic rules are offered to better explain the use of the segment for PA:

- Residential customers default to '1' (AMT*DP*1~) as 100% tax exempt unless the residence is used for business purposes or vacation home.
- Commercial customers default to '0' (AMT*DP*0~) being 0% tax exempt unless the customer presents a sales tax exemption certificate. Should the customer have a tax exemption percentage less than 100% but greater than 0%, the value would be reported as a decimal (AMT*DP*.5~). A tax exemption certificate must be secured from the customer.

It's the ESP's responsibility to ensure the value in the AMTDP is accurate based on the customer's tax status. Under Rate Ready billing, correcting inaccurate customer bills due to incorrect tax exemption is not the LDC's responsibility and in most cases requires the Supplier to address directly with the customer.

When REF01 is MT, the meter type is expressed as a five-character field. The first two characters are the type of consumption, the last three characters are the metering interval., except for the combination meter that records more than one measurement and is noted as "COMBO". Valid values can be a combination of the following values:

Type of C	Consumption	Metering Into	erval
K1	Kilowatt Demand	Nnn	Number of minutes from 001 to 999
K2	Kilovolt Amperes Reactive Demand	ANN	Annual
K3	Kilovolt Amperes Reactive Hour	BIA	Bi-annual
K4	Kilovolt Amperes	BIM	Bi-monthly
K5	Kilovolt Amperes Reactive	DAY	Daily
KH	Kilowatt Hour	MON	Monthly
T9	Thousand Kilowatt Hours	QTR	Quarterly

For Example:

KHMON Kilowatt Hours Per Month

K1015 Kilowatt Demand per 15 minute interval

Other Valid Codes

COMBO This code is used to indicate that the meter has multiple measurements, e.g., one meter that

measures both kWh and Demand.

M – Interval data NOT available

Comments:

There will be one REF*4P segment for each Meter Type. This means that there may be more than one REF*4P segment per meter.
