Summary of Changes

June 12, 1999 Version 1.0	• Added clarification that Rockland Electric's system maintains the duplicate bill and notice to third party. • Added information about an LDC informing the ESP how the LDC will transmit interval data; at the summary level via an 867IU (if this was supported by the LDC at the account level and previously requested by the ESP), or at the detail level (867IU). If the account is not an interval account, this segment (REF*17) is not sent. **Note:** This option may not be offered at the account level by all LDCs – some LDCs may only offer it for all customers of an ESP. Transaction is considered FINAL in Pennsylvania. Please note that the codes used for request summary information for an interval account still need to be approved by UIG. There is a small chance the 'value' used may change, but the method will not and therefore, it should not impact programming efforts.
June 29, 1999 Version 2.0	• Issued as FINAL for New Jersey. • Changed "EGS" to "ESP" and "EDC" to "LDC" throughout the guideline. Removed "NJ Definitions" and replaced it with "LDC Definitions" and "ESP Definitions" in the Notes section. • Changed LIN01 to say that the tracking number must be unique over all time. • Corrected LIN03 to "Identifies the product" instead of "Indicates a customer request to obtain Electric Service" • Corrected spelling errors and formatting. • Added "How to use the implementation guideline" page. In addition, changed all headers to the true X12 definition… correcting some mistakes that were missed in 4010. Also corrected the Table on Page 4 to reflect X12 definitions and added the words "X12 Structure" to the title on that page. • Added LIN Notes from Enrollment • Added examples (Zip+4 on N4, FX & EM on PER, etc.) • Updated rules for rejection reason codes. • Combined "PA Implementation" with "PA Use" • Changed REF*MT - "This segment must also be sent when account has UNMETERED services available for generation service For UNMETERED services, the segment will typically be REF*MT*KHMON." to "This segment will **not** be provided in the NM1 loop for UNMETERED services." • Changed REF*TU text to: "This is provided for UNMETERED services and reflects the type of usage that is reported on the 867". • Changed Note from "One 814 per Account" to "One Account per 814". • Removed the following note from all QTY02 elements: " Note that a more appropriate segment would be the QTY (quantity), however until we can petition X12 to add a QTY segment to the 814, we must use the AMT segment"

General Notes

Use	• The Reinstatement Request can be used for any of the following situations:
	    • Customer Contacts LDC to Rescind (LDC sends Reinstatement to previous active ESP)
	    • Customer Contacts LDC to Rescind, alleging a slam (LDC sends Reinstatement to previous pending ESP)
	    • LDC reinstates customer after a temporary drop

Tracking number on Request and Response transactions	On the request, the LIN01 is a unique tracking number for each line item (LIN) in this transaction. This number must be unique over all time, and is assigned by the sender of the request transactions. This number must be returned on the response transaction (accept or reject), in the same element (LIN01).
Initiated by LDC	This transaction can only be initiated by the LDC. The customer will need to contact the LDC to rescind a switch.
Information Provided	When the LDC sends the Reinstatement to the ESP, it will contain much of the same information as the original 814 Enrollment Response. The reason for this is to allow the ESP to verify all of the information about the ESP/Customer information relationship.
One Account per 814	One customer account per 814.
Multiple LINs	For the Reinstatement transaction, there may only be one LIN per account per 814.
Response per LIN	There will be one 814 Reinstatement response for each 814 Reinstatement request. In Pennsylvania it's the option of the EGS to send the reinstatement response to LDC imitated reinstatement requests. The 997 Functional Acknowledgement is required by all parties. In the event the EGS opts out of sending the 814 response, the 997 becomes more critical being the proof the EGS processed the utility request.
Echoing Data on Reject	If a transaction is rejected due to invalid information, the Response may echo back the invalid data along with the reason code.
Temporary Drop	If there was an 814D for temporary reasons, the contract should be reactivated by sending a reinstatement (814R).

LDC Definitions:	The term LDC (Local Distribution Company) in this document refers to the utility. Each state may refer to the utility by a different acronym:
	    • EDC – Electric Distribution Company (Pennsylvania, Delaware)
	    • LDC – Local Distribution Company (New Jersey)
	    • EC – Electric Company (Maryland)

ESP Definitions:	The term ESP (Energy Service Provider) in this document refers to the supplier. Each state may refer to the supplier by a different acronym:
	    • EGS – Electric Generation Supplier (Pennsylvania)
	    • TPS – Third Party Supplier (New Jersey)
	    • ES – Electric Supplier (Delaware)
	    • ES – Electricity Supplier (Maryland)

Renewable Energy Provider Definition:	The term Renewable Energy Provider in this document refers to the party that provides Renewable Energy Credits (RECs). This party does not provide generation to the account. Each state may refer to the Renewable Energy Provider by a different acronym: • GPM – Green Power Marketer (New Jersey) **Note:** The transaction will either have an ESP or a Renewable Energy Provider, but not both.

	New Jersey Notes
Rockland Electric Co (RECO)	Rockland Electric Co. does not follow this regional EDI implementation guideline. Instead RECO utilizes the New York EDI standards.
NJ Clean Power Choice	Pursuant to Board Order, Docket No. QO18040393, the Clean Power Choice Program is coming to an end effective February 28, 2019. The EDI segments and data elements used for Clean Power Choice will remain in the EDI Implementation Guidelines to support any cancel/rebill scenarios or for future use in the event another program is established that may need these data elements.

These are X12 code descriptions, which often do not relate to the information we are trying to send. Unfortunately, X12 cannot keep up with our code needs so we often change the meanings of existing codes. See graybox for the UIG or state definitions.

This column shows the X12 attributes for each data element. Please refer to Data Dictionary for individual state rules.

Rules for Rejection Reason Codes

The codes on the next several pages have been identified by the UIG to convey rejection reasons. Only the codes listed for each service are valid for that service. If you require additional codes, send an email to the appropriate state's listserver.

"A13" (Other) must **only** be used when an existing error code does not convey the reason correctly. Each time "A13" (Other) is used for a new purpose, an E-mail must be sent to the appropriate state's listserver by the party sending the code, to notify the market participants about the text explanation for A13. This information will be compiled and new codes will be issued on a periodic basis.

PA Implementation:	This field is used for the non-billing party to tell the billing party the tax exemption amount that should be entered into the billing party's system in order to calculate a bill on the sender's behalf. This is required only for rate-ready LDC Consolidated billing where the LDC has loaded the ESP rates into their system, the LDC calculates the ESP charges, and places the ESP charges on the LDC bill. The following generic rules are offered to better explain the use of the segment for PA: • Residential customers default to '1' (AMT*DP*1~) as 100% tax exempt unless the residence is used for business purposes or vacation home. • Commercial customers default to '0' (AMT*DP*0~) being 0% tax exempt unless the customer presents a sales tax exemption certificate. Should the customer have a tax exemption percentage less than 100% but greater than 0%, the value would be reported as a decimal (AMT*DP*.5~). A tax exemption certificate must be secured from the customer. It's the ESP's responsibility to ensure the value in the AMTDP is accurate based on the customer's tax status. Under Rate Ready billing, correcting inaccurate customer bills due to incorrect tax exemption is not the LDC's responsibility and in most cases requires the Supplier to address directly with the customer.

When REF01 is MT, the meter type is expressed as a five-character field. The first two characters are the type of consumption, the last three characters are the metering interval, except for the combination meter that records more than one measurement and is noted as "COMBO". Valid values can be a combination of the following values:

Type of Consumption

K1	Kilowatt Demand
K2	Kilovolt Amperes Reactive Demand
K3	Kilovolt Amperes Reactive Hour
K4	Kilovolt Amperes
K5	Kilovolt Amperes Reactive
KH	Kilowatt Hour
T9	Thousand Kilowatt Hours

Metering Interval

Nnn	Number of minutes from 001 to 999
ANN	Annual
BIA	Bi-annual
BIM	Bi-monthly
DAY	Daily
MON	Monthly
QTR	Quarterly

For Example:

KHMON	Kilowatt Hours Per Month
K1015	Kilowatt Demand per 15 minute interval

Other Valid Codes

COMBO   This code is used to indicate that the meter has multiple measurements, e.g., one meter that measures both kWh and Demand.
