

GREEN YOUR LAWN CARE GO Electric

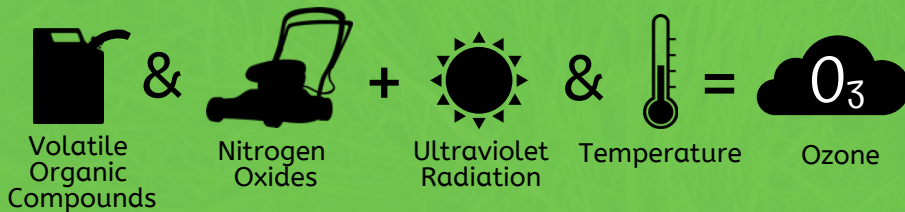

Improve Air Quality

Reduce Noise

Combat Climate Change

Despite their size, gas-powered mowers produce a lot of air pollution. In the summer months the emissions from your mower react with sunlight and high temperatures to form ozone!

Breathing ozone can be harmful to your health, cause lung damage and increase your risk of asthma.

Gas-powered lawn and garden equipment are also sources of carbon dioxide, which causes climate change.

**Be part of the solution.
Switch to electric or battery-powered
lawn equipment today!**
