

# PATHWAYS TO A GREEN CAMPUS

**Tips for higher education institutions to foster sustainability on campus.**

## **Adopt short and long term sustainability goals.**

Short term goals could include installing renewable energy, reducing food waste and waste reduction. Long term goals could focus on greenhouse gas reductions.

## **Track your progress with AASHE Stars.**

AASHE's Sustainability Tracking Assessment & Rating system is a great way to gauge your school's progress towards sustainability goals.

## **Start a campus community garden.**

Growing a garden on campus can get students and the community involved. Cafeteria waste can be composted and used in the garden as fertilizer.

## **Organize a donation program during moving season.**

Move out donation programs can help reduce waste and reuse materials by collecting items students leave behind that may otherwise be thrown away.
