

cool down with **HOT SAVINGS**

Try these cool ways to save on your energy bills this summer!

Check your heating and cooling system's air filter every month

A dirty filter will slow down air flow and make the system work harder to keep you cool, wasting energy and money.

Install a programmable thermostat

Programmable thermostats are ideal when work spaces are unoccupied. Systems can be set to shut off during regular off-hours.

Have your heating and cooling system serviced annually

Just as a car tune-up can improve gas mileage, a yearly tune-up of your HVAC system can improve efficiency.
