

STATE OF NEW JERSEY
DEPARTMENT OF ENVIRONMENTAL PROTECTION

DIVISION OF AIR QUALITY AIR QUALITY, ENERGY, AND SUSTAINABILITY

RISK SCREENING WORKSHEET UPDATE

INDUSTRIAL GROUP STAKEHOLDER MEETING
FEBRUARY 1, 2019

Presented by Joel Leon

OVERVIEW

- General Risk Screening Worksheet (RSW)
- Natural Gas Risk Screening Worksheet (NG-RSW)

DRAFT GENERAL RSW

- ❑ Revised General RSW will be issued for public comment
 - ❑ Draft General RSW and Fact Sheet will be posted
 - ❑ Fact Sheet will describe all proposed changes

- ❑ Methodology for risk determination
 - ❑ Based on recently issued Technical Manuals 1002 and 1003
 - ❑ Most current air quality model (AERMOD)
 - ❑ Most current meteorological data
 - ❑ Most current toxicology factors

RISK SCREENING WORKSHEET

NATURAL GAS COMBUSTION

Development began to address additional contaminants subject to risk assessments

- Reporting thresholds lowered for HAPs which are emitted during natural gas combustion
 - Formaldehyde
 - Prior RT 400 lb/yr
 - Current RT 3.5 lb/yr
 - Benzo(a)pyrene
 - Prior RT 2 lb/yr
 - Current RT 0.04 lb/yr

RISK SCREENING WORKSHEET

NATURAL GAS COMBUSTION

- ❑ Sufficient data to characterize discharge parameters for a Natural Gas Combustion Units
 - ❑ Large number of Units permitted
 - ❑ Stack flowrates generally above 1000 acfm
 - ❑ Discharge Temperature above 250° F

- ❑ NG-RSW will provide more realistic risk potentials
 - ❑ **Two orders of magnitude** in risk levels between existing RSW and refined modeling conducted for:
 - ❑ 10.5 MMBTU/hr natural gas boiler
 - ❑ Stack height range 15 to 25 feet
 - ❑ Distance to the property line of 30 feet
 - ❑ **One order of magnitude** in risk levels between existing RSW and refined modeling conducted for:
 - ❑ 49.8 MMBTU/hr natural gas boiler
 - ❑ Stack height range 20 to 40 feet
 - ❑ Distance to the property line of 30 feet

RISK SCREENING WORKSHEET NATURAL GAS COMBUSTION

- ❑ NG-RSW will be structured to allow its usage for specific capacities which meet minimum:
 - ❑ Stack heights
 - ❑ Distances to the property line
 - ❑ Discharge temperature
 - ❑ Stack flowrate/exit velocity

RISK SCREENING WORKSHEET NATURAL GAS COMBUSTION

- ❑ NG-RSW will have meteorological data and terrain defaults

- ❑ Upon request, the Department will reevaluate the NG-RSW results to take into account unique site parameters
 - ❑ Urban vs. rural terrain
 - ❑ Use data from a different meteorological station
