

Rescission of Technical Manual 3001, Guidance for Odor Control at Municipal Wastewater/Sludge Handling and Treatment Facilities and changes to Technical Manual 1002 Guidance on Preparing an Air Quality Modeling Protocol (TM 1002); and State of the Art Manual for Sludge Treatment Systems

New Jersey Register Public Notice 53 N.J.R. 945(a).

Public Notice published in NJ Register on May 17, 2021, Deadline for Submission of Comments June 16, 2021

Technical Manual 3001 developed in 1997, to provide guidance to owner and operators of wastewater and sludge treatment facilities on odor control. It is comprised of 3 sections: Section A – Permitting; Section B – Odor Modeling, Section C – Odor Testing.

All portions of Sections A and B are in TM 1002 and SOTA Manual. This is outlined in the Public Notice. Section C– Odor Testing was moved to Appendix C of TM 1002. Consequently, no new or modified guidance.

All references to TM 3001 in TM 1002 and the SOTA manual have been deleted and Department contact information has been updated.
