General Information

The DEP Bulletin is an information service provided by the New Jersey Department of Environmental Protection. In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Flood Hazard Area (FHA) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed do not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed on the inside back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Contested Case Hearings are held between the State and a particular party involving an application, enforcement violation or an appeal. Interest in these hearings is generally limited to those directly involved.

DEP Events of Public Interest include public hearings, council meetings, workshops, public information meetings, and exams.

This is a renewal permit action for Cable Vision of Oakland. The facility consists of an office building and a warehouse with 67,005 square feet of floor space. Sanitary wastewater generated by the facility is treated by an on-site treatment plant and discharged to the ground water of the State via a subsurface disposal bed. A second, reserve disposal bed is also available. The wastewater is treated to Ground Water Quality Standards for all parameters of concern, except fecal coli form bacteria, prior to discharge. Although ultraviolet disinfection is provided, final treatment to Ground Water Quality Standards is provided by the unsaturated soils within the disposal bed. One piezometer well monitors the hydraulic performance of the disposal area. Flow from the facility is limited to 2,000 gpd.

Residuals generated at this facility will be managed off-site at an approved residuals management operation.

This renewal permit action is for a facility which is a warehouse that stores retail merchandise in a 813,000 square foot building, and can employ up to 600 people. There are no industrial activities at this site. There are four (4) ground water monitoring wells, one (1) discharge monitoring point, and two (2) piezometers. Ground Water Quality Standards (GWQS) for nutrients are being met prior to discharge and GWQS for fecal coli form bacteria are being met in the monitoring wells. Approximately 11,000 gallons per day (GPD) of sanitary wastewater is treated by an on-site wastewater treatment plant before being discharged to the ground waters of the state via two (2) subsurface disposal beds. The Department is granting a reduction in the number of parameters that must be reported on the annual residuals WCR at monitoring location SL1A, pursuant to N.J.A.C. 7:14C-1.13(c). The new residuals WCR with reduced reporting parameters will replace the existing annual residuals WCR beginning the calendar year that the permit becomes effective. Residuals generated on-site will be managed off-site at an approved residuals management operation.

Marlboro Psychiatric Hospital has applied to the NJDEP for a renewal NJPDES-DGW permit. This facility is a psychiatric hospital that has an existing potable water treatment plant operated by the New Jersey Department of Human Services. Water pumped from the Raritan-Magothy Aquifer is treated through an iron-manganese filtration system. The filter backwash is discharged to a basin which infiltrates into the ground waters of the state. In addition, there is well blow-off which discharges to the same basin.

This application is for a renewal of a NJPDES permit. The facility’s NJPDES flow value is 0.4 MGD of treated domestic wastewater.
