

DEP Announces Upcoming Air Quality Workshop: "Reducing Air Pollution Together"

What is occurring that may affect me?

Meeting the new air quality standards will be a challenge for New Jersey, requiring the State to look at new emission control strategies for additional reductions, in addition to enhancing existing strategies. The New Jersey Department of Environmental Protection (DEP) is establishing workgroups to develop and refine recommended control measures for possible future implementation by the State.

How can I participate?

The DEP invites you to participate in a public workshop on **Wednesday, June 29, 2005 at the War Memorial Building in Trenton, NJ**. The workshop is designed to: 1) provide information to the regulated community and other affected and interested parties on how New Jersey is addressing the new federal health-based air quality standards, and 2) solicit ideas from participants for attaining cleaner air.

The workshop format will include informational presentations in the morning, lunch on your own, followed by afternoon breakout sessions in workgroups designed to discuss potential control measures for specific source categories.

The workgroup categories include:

- Homes and restaurants (wood smoke, cooking smoke, fuel burning)
- Gasoline cars and trucks
- Non-automobile gasoline engines (yard equipment, boats, other engines)
- Diesel engines (on-road, off-road, marine)
- Stationary combustion sources (boilers, heaters, peaking units)
- Volatile organic compounds from manufacturing processes and consumer products (surface coating, storage)

Where can I get more information?

To get more information, email airworkshop@dep.state.nj.us , call 609-292-6722 or visit <http://www.state.nj.us/dep/airworkshop/> on the Web.

Please note this advisory is intended to be a summary explanation of a DEP initiative. It does not include all potentially applicable requirements. If you have any questions related to participation with this initiative, please contact the number listed above.
