<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/19/13</p>	<p>Covanta Essex has done the following Green Building Implementations at their site: 1) Covanta Essex recently has switch-out all lights in their Administration Building (Admin Building) from Sodium Mercury Lights to all new T-5 Fluorescent Bulbs. - This replacement of lights reduced the amount of mercury emission being emitted from the older lights. 2) Covanta Essex also changed out recently all the lights in the Tipping Bay Floor and Atrium from Fluorescent Lights to LED Lights. 3) Covanta Essex also installed "Sky-lights" on the Tipping Floor, and in the areas of the Ash Bunker and Ferrous Bunker at the facility. 4) The Air Handlers for the air conditioning system for the control room at Covanta Essex has been upgraded to VFD Motor Drives. The VFD (Variable Frequency Drives) - These motor drives are more efficient and use less energy since you can operate the VFD at any speed below its maximum, thus you can vary airflow by controlling the motor speed instead of the air outlet damper. (The change to VFD motor drives for the Air Handling System that controls the air conditioning system in the control room at Covanta Essex occurred between 3 to 4 years ago). .</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>6/19/13</p>	<p>Many of the refuse trucks that come to Covanta Essex operate on diesel fuel. Many of the Waste Hauling Companies that send their vehicles to Covanta Essex had expressed to Covanta Essex Personnel that they would like to replace their fleet of Diesel Trucks with cleaner CNG Trucks, but that there were no CNG facilities in the area to fuel CNG fuel trucks. Covanta Essex decided to build a CNG fueling station at their site so that their Waste Haulers could have a place to fuel up new CNG trucks if the waste haulers decided to switch out their fleet of vehicles from diesel trucks to CNG trucks. Starting in the fall of 2012, Covanta Essex began construction of the CNG Facility at their site. Covanta Essex and their partner in this endeavor, Clean Energy Fuels, completed the CNG site at Covanta Essex and the on-site compressed natural gas (CNG) fueling station commenced commercial operations in January of 2013. The station is open and accessible to all CNG powered refuse vehicles that deliver to the Covanta Essex facility. CNG provides many benefits including: 1) Being the cleanest burning fuel for heavy duty vehicles further lowering the impact of Covanta Essex's operations. 2) It reduces greenhouse gas emissions by 23% compared to diesel fuel. 3) CNG vehicles are 90% quieter than their diesel vehicle counterparts. 4) CNG is considerably less expensive than diesel fuel. At this time roughly 3 to 5 % of the trucks coming to Covanta Essex use CNG Fuel. Most of the waste haulers are from the Department of Sanitation in Newark. The city of Newark plans on slowly switching over their fleet from diesel fuel vehicles to CNG fueled vehicles over the next couple of years by purchasing a couple of CNG trucks a year to replace some of the older diesel fueled vehicles.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>6/19/13</p>	<p>Covanta Essex Outreach Programs for 2012 1) Covanta Essex sponsors each year an Earth Day Environmental Exhibit at the Essex County Environmental Center in Roseland NJ (located on Eagle Rock Ave). 2) Covanta Essex provides public tours of their site to students and to the General Public.. In 2012, Covanta Essex gave tours of the site to high school students from Jersey City as well as students from Rutgers University. 3) Covanta Essex participates with the City of Newark annually in an event called "Dump the Junk", where participants clean up trash on the the entrance roadway leading to the facility in Newark. 4) Covanta Essex also is a participant in "Adopt a Median." - again cleaning of trash from the median at Raymond Blvd. / Lockwood St. near the facility in Newark. 5) Covanta Essex hosts an annual open house and information session at the facility to give the public an opportunity to tour the facility and find out information about the facility, as to what the facility does, how they operate, and the environmental controls that are located at the facility. The latest open house was held in September, 2012 and information on the new emissions control technology being installed at the site (baghouses to control particulate emissions) starting in 2014 was presented. 6) Covanta Essex partnered with Newark's Ironbound Business Improvement District (IBID) and the City of Newark to host an e-waste collection event near Penn Station. Covanta's e-waste recycling subsidiary, ECOvanta, collected over 8,000 lbs. of TV's, 2,000 lbs. of monitors, 700 lbs. of computers and another 3,800 lbs. of mixed electronics at this inaugural event. Additional events are being planned for 2013. 7) Covanta Essex sponsored the sea lion exhibit at the County's standout Turtleback Zoo. 8) Covanta Essex worked closely with the Department of Transportation, New Jersey Turnpike Authority, the City of Newark, Daidone Electric, and the Public Service Energy and Gas to improve the aesthetics and safety of the Raymond Boulevard / New Jersey Turnpike gateway entrance to the City of Newark.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/19/13</p>	<p>The Company does have an Environmental Policy that establishes the environmental goals and principles of the Company. The policy is signed by current senior officer of the Company (Anthony Orlando - President and CEO) as well as signed by the Senior Vice President (John M. Klett). A copy of the Environmental Policy is posted in various places throughout Covanta Essex. Covanta Energy Environmental Policy (Outlined Below) Covanta Energy has adopted an environmental policy for its renewable energy projects and other operations that consists of five principals: 1. Protection - We will conduct our business in an environmentally sound manner that is protective of human health and the environment. 2. Compliance - We will manage our work to ensure compliance with all applicable environmental regulations and requirements. 3. Conservation - We will minimize impact to the environment by encouraging pollution prevention at the source, waste minimization, facilitating use of recycling opportunities and responsible disposal of any production by-products. 4. Qualification - We will ensure that all employees have the necessary information, resources and training to make informed environmental decisions. 5. Commitment - Covanta is committed to be an industry leader in environmental protection by achieving superior awareness and performance through a process of continuous improvement. We believe that environmental awareness and performance is the responsibility of every employee. By embracing this philosophy, we can all make a difference.</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/19/13</p>	<p>Starting in November of 2010, Covanta Essex now operates under an Environmental Management System. Covanta's Environmental System is called EMIS which stands for "Environmental Management Information System". The system is much like a tracking system. The EMIS System lists all permit conditions from any permit that Covanta Essex has with the DEP and EPA.. The system submits weekly and monthly reminders of reports due that month or that week that need to be completed by the Company. A task list is generated by the EMIS System and weekly inspection reports need to be completed as part of this EMIS System. The EMIS System also lists all the "incidents" that occur at Covanta Essex, Hot Loads, Opacity Exceedances, Permit Emission Exceedances are all reported on this EMIS System as well as information on what caused the exceedance and possibly (if known), what was done to rectify the exceedance. The RCA Section of the Incident Section of the EMIS (Root Cause Analysis - RCA), is updated weekly by Covanta Essex. In conjunction with this new EMIS System, Covanta Essex 's Environmental Program operates under "Technical Standard 204 - Environmental Management Program Requirements"</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>6/19/13</p>	<p>Starting in 2010, Covanta Essex is now creating an Annual Environmental Report that can be viewed by the General Public. The Annual Report called the Annual Sustainability Report can be viewed under the following web address: http://www.covantaenergy.com/en/what-we-do/sustainability/corporate-sustainability-report-2012.aspx Page 19 and 20 of the Sustainability Report shows information on Compliance. The Company to date has two Annual Sustainability Reports for 2009 to 2010 and 2010 to 2011. The 2011 to 2012 Report will be out soon.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/10/09</p>	<p>The facility has substituted aqueous based parts washer for solvents.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/10/09</p>	<p>The facility reclaim and reuse process wastewater and stormwater.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/10/09</p>	<p>The facility has installed low NOx system on one boiler in order to reduce reagent usage while maintaining NOx emission level.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>6/10/09</p>	<p>The site's community outreach programs include: Boy's and Girl's Club, Essex County Teachers Challenge, Facility Tours. Participation in litter removal activities twice per year in partnership with the City of Newark, New Jersey Clean Communities Council, and the League.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/10/09</p>	<p>The site is operated under a written environmental policy. A signed copy of the environmental policy is available on-site. A version of the policy is accessible from the facility's website: http://www.covantaholding.com/site/solutions/environmental.html</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/10/09</p>	<p>The site is operated based on a set of comprehensive technical standards, which includes environmental standards.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>6/10/09</p>	<p>The site has changed from solvent to aqueous based parts washer.</p>

FIRMENICH INC

Site ID: FIRMENICH INC

NEWARK, NJ 07114

Stewardship Activities	Date Acknowledged	Comments
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>2/23/12</p>	<p>NEW SOLAR ELECTRIC ARRAY, 300+MW. PLANS TO ADD TWO WIND GENERATORS.</p>

FIRMENICH INC CHEM FLEUR DIV

Site ID: FIRMENICH INC CHEM FLEUR DIV
8318 150 FIRMENICH WAY,
PORT NEWARK, NJ 07114

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	5/17/18	<p>Firmenich has managed to decrease its overall hazardous waste generation by about 40% since 2008 while increasing its production. This is mainly due to the isolation of a methanol coproduct from the Hedione™ process. This material was once generated as a hazardous waste to where we have a supply agreement in place for the sale of Methanol Coproduct to various customers based on the Methanex index. It's a two way agreement, where the material is purchased, but Firmenich may be required to pay a small amount for off-setting transportation costs depending on the cost of methanol.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	5/17/18	<p>Firmenich has managed to decrease its overall water usage over the past few years by reducing cleaning cycles.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	5/17/18	<p>Firmenich has several projects which reduce energy such as: installation of VFD on Compressors; installation of Passive Harmonic Reactive Power Correction Systems and installation of Reactive Power Correction Systems.</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	5/17/18	<p>Firmenich has completed life cycle assessments for its major products including Hedione, Habanolide and Fructulate. Other life cycle assessments have been completed for smaller campaigns, but not for once a year product campaigns.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	5/17/18	<p>Firmenich has an on-going replacement project of fluorescent lighting to LED lighting.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>5/17/18</p>	<p>Firmenich has joined forces with several governmental agencies, along with the City of Newark and National Fish and Wildlife Foundation (NFWF) to be part of the Hurricane Sandy Coastal Resiliency project adjacent to its property. The project will result in the creation of woody vegetative stands and tidal pools that will provide habitat for New Jersey threatened species, including the yellow and black crowned night herons, which are documented to inhabit the immediate area, as well as, improve flood storage capacity and potentially aid in improving the quality of stormwater discharged from freshwater wetlands upgradient before reaching Newark Bay.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/17/18</p>	<p>Firmenich has installed 3 Barn Owl nests, several Purple Martin Gourds and an Osprey nest along with several other nests (terrapin turtle, bees, etc.).</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>5/17/18</p>	<p>Firmenich has both a Corporate and local site Health, Safety & Environmental (HS&E) Policy. Our HS&E charter contains our commitment and policy. Note that this document is signed by our CEO Gilbert Ghostine.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>5/17/18</p>	<p>The site has been operating with ISO 14001 certification since 2005 with our current certification expiring on May 29, 2021. The certification is for having an active and functioning environmental management system. SGS is our certifying body.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>5/17/18</p>	<p>Firmenich publishes an annual sustainability report. The current report is from 2017.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/17/18</p>	<p>Firmenich owns and operates two solar panel systems with GeoPeak Energy and PSE&G. Currently two solar panel arrays are operating: in the Administration Buildings parking lot and on the roof of the Ingredients warehouse.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>5/17/18</p>	<p>Firmenich has been performing greenhouse gas calculations since 2014.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>11/6/17</p>	<p>Firmenich has managed to decrease its overall hazardous waste generation by about 40% since 2008 while increasing its production. This is mainly due to the isolation of a methanol co-product from the Hedione Manufacturing Process.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/6/17</p>	<p>Passive Harmonic Reactive Power Correction System: The Passive Harmonic Reactive Power Correction System reduces the harmonic energy normally demanded by Firmenich's processing equipment by canceling a substantial portion of the 5th and 7th harmonic current supplied to the load. This saves energy, reduces heat generation inside equipment, and frees up new electrical capacity in the facility. Most importantly, the Passive Harmonic Reactive Power Correction System produces a direct kilowatt hour reduction on the electricity bill by reducing the alternating current distribution losses in a facility. Variable Frequency Drives (VFDs), DC drives, rectified DC power systems, welders, robotics, and arc lighting, harmonic current is becoming a more predominant part of every business's electrical demand. The Passive Harmonic Reactive Power Correction System cancels a portion of this harmonic power normally drawn by these loads, thereby reducing kilowatt hour consumption, as well as any problems associated with harmonics at the manufacturing operations at Firmenich. Passive Harmonic Reactive Power Correction Systems do the following:</p> <ul style="list-style-type: none"> Extend the life of the process equipment Reduces harmonics problems Increases electrical capacity Cools overheated lines & panels Lowers kW consumption & demand Improves facility power factor Helps meet IEEE-519-1992 standards Lasts for 140,000 plus hours of service <p>13 Power Liner units have been installed at 13 locations throughout the Ingredient Facility at Firmenich which improves the Power Factor at the load being treated (MCC, Panel, individual load), thus removing reactive current from the distribution system. Harmonic currents are reduced below IEEE standards thus reducing skin effect, transformer eddy current losses, and distribution losses. Twenty-three (23) EasiLiner units at Firmenich improve the PF at the load being treated (MCC, Panel, individual load), thus removing reactive current from the distribution system. Since the installation of the 13 Passive Harmonic Reactive Power Correction Systems, 23 Reactive Power Correction System and 743 LED Lighting fixtures, the Firmenich Ingredient plant has saved about 12% in utility costs.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>11/6/17</p>	<p>LED Lighting: Firmenich has installed over the last 3 years LED lamps which have replaced 743 fluorescent lamp fixtures in select areas throughout the facility. LED fixtures have replaced HID (High Pressure Sodium Light) fixtures in non-employee areas. 25 Watt T8 Fluorescent Lamps have replaced 32 Watt T8 Fluorescent lamps in office areas at the site. The energy consumption savings for LED lighting compared with existing HID and fluorescent fixtures yields 40% to 70% while increasing total lumen output. LED tubular lamps contain internal drivers which eliminate the need and cost associated with ballasts. LED lamps can utilize the existing fluorescent fixture without requiring any major modifications. Existing HID fixtures have been replaced on a one-for-one basis with a new complete LED fixture.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>11/6/17</p>	<p>In late 2015, Firmenich joined forces with several governmental agencies, along with the City of Newark and the National Fish and Wildlife Foundation (NFWF) to be part of the Hurricane Sandy Coastal Resiliency project that is located adjacent to the Company's property. The project resulted in the creation of woody vegetative stands and tidal pools that provide habitat for New Jersey threatened species such as the yellow and black crowned night herons which inhabit the immediate area. The project has also improved the flood storage capacity and has aided in the improvement of the quality of storm water discharged from freshwater wetlands upgradient before reaching the Newark Bay. Firmenich's signed an agreement with the National Fish and Wildlife Foundation (NFWF) to improve 3-acres of their property. The Company has removed invasive species plants and has replaced them with native species plants. Firmenich has installed 3 Barn Owl Nesting Platforms, several Purple Martin Bird Houses (Gourds) , and an Osprey Nesting Platform.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/6/17</p>	<p>Firmenich has both a Corporate and local site Health, Safety & Environmental (HS&E) Policy. The HS&E charter contains the Company's commitment and policy. The HS&E document is signed by Gilbert Ghostine - the Chief Executive Officer of Firmenich. The HS&E Policy focuses on: 1) Providing the best-in-class product quality and services to their clients 2) Assuring the health and safety of their employees, their families, their business partners and their clients. 3) Protecting the communities in which they operate in. 4) Protecting the Environment</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>11/6/17</p>	<p>Firmenich has been operating with ISO 14001 certification since 2005. The certification is for having an active and functioning environmental management system at the site. SGS is the Company's certifying body.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>11/6/17</p>	<p>Firmenich publishes an annual performance and sustainability report. The current report is from 2017.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>11/6/17</p>	<p>Firmenich owns and operates two solar panel systems with GeoPeak Energy and PSE&G. Both solar panel arrays are in operation. For 2017, the Solar Panels have produced 1,638.87 Giga Joules of Electricity that is sold as renewable energy credits. As of July 1, 2017, Firmenich purchases 100% of their electricity from Renewable Energy (WIND) from GeoPeak Energy. For 2016, the Solar Panels produced 1,176.88 Giga Joules of Electricity of which was sold as renewable energy credits. 1,239.88 Giga Joules was used by the Company as an Environmental Benefit. One of the solar panel systems is located in the Administration Building parking lot. The other solar panel system is located on the roof of the Ingredients Warehouse Building.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>11/6/17</p>	<p>Firmenich has been performing greenhouse gas calculations since 2006. Their Goal is to reduce CO2 Emissions by 20% by the year 2020. CO2 emissions reduced to date are 9.3% as of the beginning of FY17.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/5/14</p>	<p>Firmenich has managed to decrease its overall hazardous waste generation by about 40% since 2008 while increasing its production. This is mainly due to the isolation of a methanol coproduct from their Hedione process. The Methanol Co-Product was once generated as a hazardous waste product from the Hedione Process at the facility and sent off-site as Hazardous Waste in the past. Now Firmenich Company has a supply agreement in place for the sale of the Methanol Coproducts with Eastman Kodak Chemical Company based out of Rochester NY. Firmenich and Eastman Kodak Chemical Company use Methanex index. (The Methanex Index Site posts regional contract methanol prices for North America, Europe and Asia.) It's a two way agreement between Firmenich and Eastman Kodak Chemical Company, where the material (Methanol Co-product) is sold by Firmenich and purchased by Eastman Kodak Chemical Company. However, Firmenich may be required to pay a small amount for off-setting transportation costs to ship the product up to Rochester NY. Right now virgin methanol sells for \$1.45 per gallon, so Firmenich is paid \$0.075 per gallon instead of paying \$0.43 per gallon for disposal. With the Methanol Coproduct Firmenich estimates that they had a \$60,200 cost savings for fiscal year 2013. Another waste stream at Firmenich is their IPA waste stream. Firmenich sells their waste IPA to ShuChem Company. With the IPA waste, Firmenich estimates that they had an \$87,000 cost savings for fiscal year 2013. (Note: So far for 2014 to date, the IPA Waste has not been manufactured at the site because the product has currently been discontinued temporarily, but may be produced later in the year).</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/5/14</p>	<p>Firmenich installed in 2013 a VFD Motor on their Air Compressor: By varying the compressor motor speed to adjust the plant air consumption, this has reduced the electrical requirements for the compressor. The electrical usage has reduced costs and emissions required for power generation. Reduced electrical usage has reduced costs for the Flavor Plant by \$11,000/year. Company will reduce CO2 emissions by 274 tons/yr. and will reduce the energy from the Air Compressor by 4,622 dekatherms a year. Firmenich also installed 13 Passive Harmonic Reactive Power Correction Systems on their Refrigeration Equipment (13 Units), as well as 23 Reactive Power Correction Systems on their HVAC Units (13 Units) at the site. Since the installation of the 13 Passive Harmonic Reactive Power Correction Systems and 23 Reactive Power Correction Systems at the site, Firmenich Ingredient plant has saved about 12% in utility costs or an estimated annual savings of 1,172 MWh in electricity and 530 tons of CO2 emissions. Company also has installed a Natural Gas Injection System on their Thermal Oxidizer Unit in 2010 - by doing this, the Company saves 33,100 KCHF a year in reduced gas usage. Also by installing a Natural Gas Injection System, the system extends the life of the ceramic media in the Thermal Oxidizer by reducing higher burner temperatures and localized overheating. This new Natural Gas Injection System reduces the operating cost of the Thermal Oxidizer by up to 35,600 dollars a year as well as reduces the CO2 emissions from the Oxidizer by up to 383 tons/yr. The Natural Gas Injection System reduces energy from the unit by up to 6,480 dekatherms per year.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/5/14</p>	<p>Firmenich has installed LED lamps at their site over the last couple of years (2 to 3 years), to replace 743 fluorescent lamp fixtures in select areas throughout the facility. LED Light Fixtures also replaced HID Light fixtures in non employee work areas. Firmenich has installed 25 Watt T8 Lamps which replaced their 32 Watt T8 lamps in office areas over the last couple of years (2 to 3 years). LED Lighting: The energy consumption savings for LED lighting compared with existing HID and fluorescent fixtures yields 40% to 70% while increasing total lumen output. LED tubular lamps contain internal drivers which eliminates the need and costs associated with ballasts. LED lamps can utilize the existing fluorescent fixture without requiring any major modifications. Existing HID fixtures have been replaced on a one for one basis with a new complete LED fixture. It is estimated that the Company will save roughly \$1,541 dollars on month in electricity from using these new LED Lights.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/5/14</p>	<p>Company has an Corporate Environmental Policy as well as a local site, Health, Safety & Environmental (HS&E) Policy. The Corporate HS&E Policy is signed by Upper Management Patrick Firmenich. The Company's Site EHS policy states: 1) - The Company commits to educate and communicate to their employees, contractors, temporary workers, etc. regarding responsible care of the environment, protecting the well being of their employees and to encourage their active participation in improving Firmenich, Port Newark's performance. 2) - The Company commits to preserve and enhance the health, safety & environmental quality and protecting the well being of their employees of the Firmenich, Port Newark facility. 3) The Company commits to the prevention of pollution through the study of their performance to identify opportunities for improvement with the first priority being operational control and source reduction, followed by recycling and proper waste management. 4) The Company commits to reviewing their health, safety & environmental performance in search of continuous opportunities for improvement.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/5/14</p>	<p>The site has been operating with ISO 14001 certification since 2005. Firmenich's current ISO 14001 certification expires on September 10, 2015. The certification is for having an active and functioning environmental management system. SGS is their certifying body.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>6/5/14</p>	<p>Firmenich publishes an annual sustainability report. The current report is from 2013 and can be found under the following website. The 2014 report will be available on line sometime in late July, early August. www.firmenich.com/SustainabilityReport/</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>6/5/14</p>	<p>Firmenich owns and operates two solar panel systems with GeoPeak Energy and PSE&G. Currently two solar panel arrays are in operation at the site. One of the solar panel arrays is located in the Administration Building parking lot. The other new solar panel array installed in 2013 is located on the roof of the Ingredients Warehouse Bldg.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>6/5/14</p>	<p>Firmenich has been performing greenhouse gas calculations since 2006. Also, available in the Firmenich IMS are live, up-to-date GHG reports. Company lists both Direct CO2 emissions from Engery Sources as well as Indirect CO2 Source Emissions (Transportation). Information can be found in the Company's Corporate Sustainability Report for 2013 under the following website: www.firmenich.com/SustainabilityReport/ Note: Information is under Page 46 of the report under "Our Performance in Numbers"</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/8/11</p>	<p>Information provided by Firmenich - Firmenich has managed to decrease its overall hazardous waste generation by about 40% since 2008 while increasing its production. This is mainly due to the isolation of a methanol coproduct from the Hedione? process. This material was once generated as a hazardous waste to where we have a supply agreement in place for the sale of Methanol Coproduct to Kodak based on the Methanex index. It's a two way agreement, where the material is purchased, but Firmenich may be required to pay a small amount for off-setting transportation costs. Right now methanol sells for \$1.28 per gallon, so we are paying \$0.075 per gallon instead of \$0.43 per gallon. With the Methanol Coproduct we estimate that we had a \$99,200 cost savings for the last fiscal year. Another waste stream is our IPA (isopropyl alcohol) which we sell to ShuChem. With the IPA we estimate that we had an \$87,000 cost savings for the last fiscal year.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/8/11</p>	<p>Firmenich, Port Newark, is a flavor and fragrance manufacturing company, which is committed to continued excellence, leadership, promoting health & safety awareness and stewardship in protecting the environment. Health, Safety & Environmental protection is a primary management responsibility, as well as the responsibility of every employee. In keeping with this policy, Firmenich, Port Newark, will conduct its activities in a responsible manner and in compliance with all applicable laws and regulations, as well as other requirements to which we subscribe. In order to carry this out we adopt the following principles: o To educate and communicate to our employees, contractors, temporary workers, etc. regarding responsible care of the environment, protecting the well being of our employees and to encourage their active participation in improving Firmenich, Port Newark's performance. o To preserve and enhance the health, safety & environmental quality and protecting the well being of our employees of the Firmenich, Port Newark facility. o We will commit to the prevention of pollution through the study of our performance to identify opportunities for improvement with the first priority being operational control and source reduction, followed by recycling and proper waste management. o To review our health, safety & environmental performance in search of continuous opportunities for improvement.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/8/11</p>	<p>"ISO 14001 till 12/2011. The site has been operating with ISO 14001 certification since 2005. The certification is for having an active and functioning environmental management system. SGS is our certifying body." (In the company's own words).</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>6/8/11</p>	<p>Firmenich publishes an annual sustainability report. Current report is 2010. Also, available in the Firmenich IMS which are live, up-to-date, reports which is located at Firmenich.com.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>6/8/11</p>	<p>Firmenich is installing a 436 kW DC PV system with GeoPeak Energy and PSE&G. Currently two solar panel arrays are operating and a third array is to be installed. In addition, as of July 15th a second solar panel project has been approved for another 400+ kW. This project is in design. A test windmill is also scheduled to be installed by December 31, 2011</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>6/8/11</p>	<p>Firmenich has been performing greenhouse gas calculations since 2005. Also, available in the Firmenich IMS are live, up-to-date, GHG reports.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/29/08</p>	<p>Firmenich has both a Corporate and local site Health, Safety & Environmental Policy.</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/29/08</p>	<p>The site has been operating with ISO 14001 certification since 2005.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>9/29/08</p>	<p>Firmenich publishes an annual sustainability report.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>9/29/08</p>	<p>Facility and corporate-wide comprehensive Green House gas emission calculations have been performed since 2004.</p>

GETTY TERMINALS CORP

------------------------	-------------------	----------

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>1/14/10</p>	<p>Installation of motion sensitive water fixtures to reduce water use at the new facilities.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>1/14/10</p>	<p>The DPW building has energy efficient components; lights, hand dryers, motion detectors for lights, etc., thermal windows and infrared heaters. The facility also installed an oil/water separator to reduce pollution to surface water.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>1/14/10</p>	<p>The DPW has a waste oil collection tank and accepts waste oil from all residents to encourage recycling.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>1/14/10</p>	<p>The Boro has a shuttle bus service available to its employees to reduce commuting trips.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>1/14/10</p>	<p>The facility only purchases energy efficient equipment.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/23/08</p>	<p>Installation of motion sensitive water fixtures to reduce water use.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/23/08</p>	<p>The Boro has a shuttle bus service available to its employees to reduce commuting trips.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/23/08</p>	<p>Newly completed DPW facility has energy efficient components: lights, hand dryers, motion detectors for lights etc., thermal windows, Auto Flushmeters and infrared heaters. In addition, the facility installed an oil/water separator to reduce pollution to surface water.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>5/23/08</p>	<p>Facility only purchases energy efficient equipment.</p>

Stewardship Activities	Date Acknowledged	Comments
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	8/20/08	A distiller is used to separate inks from press wash. The ink is stored in 55 gallon drums and removed by a recycler and the press wash water is reused.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	8/20/08	The policy requires that the facility uses soy based inks and recycled paper as standard practice.

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	11/19/09	For details see previous checklist dated 6/2/2008
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	11/19/09	For details see previous checklist dated 6/2/2008
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	11/19/09	For details see previous checklist dated 6/2/2008

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>11/19/09</p>	<p>For details see previous checklist dated 6/2/2008</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/19/09</p>	<p>For details see previous checklist dated 6/2/2008</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>11/19/09</p>	<p>For details see previous checklist dated 6/2/2008</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>11/19/09</p>	<p>For details see previous checklist dated 6/2/2008</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/19/09</p>	
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>11/19/09</p>	<p>For details see previous checklist dated 6/2/2008</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>11/19/09</p>	<p>EPA Climate Leader</p>

17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	11/19/09	For details see previous checklist dated 6/2/2008
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	11/19/09	For details see previous checklist dated 6/2/2008
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	11/19/09	Installation of the 45 KW solar voltaic panels
8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?	11/19/09	For details see previous checklist dated 6/2/2008
Climate Leaders.	6/2/08	
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	6/2/08	Reduction in chemical inventory by switching to non-hazardous materials has allowed the site to drop out of the TCPA program.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/2/08	Recycling water at the pilot plant.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/2/08	Updating of site has resulted in a 14% energy use reduction.

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/2/08</p>	<p>Site makes donations to non-profit programs for outdated materials (computers, boxes, paints, syringes, etc.).</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/2/08</p>	<p>Roche has a fleet of hybrid cars for the sales fleet. Targeting fleet average of 31 MPG by 2012.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>6/2/08</p>	<p>SHE goal for ecobalance (which is an environmental footprint meter and is tracked for goals set for 2015).</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>6/2/08</p>	<p>Community outreach to schools.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/2/08</p>	
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/2/08</p>	<p>Internal Safety, Health and Environmental Protection objectives & guidelines in place.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>6/2/08</p>	<p>Climate Leaders</p>

17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	6/2/08	Vanpool, preferred parking for car pools and transit checks.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	6/2/08	30% office paper must be of recycled stock. Janitorial supplies all eco friendly and made of recycled paper.
8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?	6/2/08	3rd party audits of suppliers.

HOME DEPOT INC #0980

Site ID: HOME DEPOT INC #0980
 171511 381 SPRINGFIELD AVE, & BERGEN ST
 NEWARK CITY, NJ 07101

Stewardship Activities	Date Acknowledged	Comments
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	6/6/11	Provide recycling options for CFL's and rechargeable batteries.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	6/6/11	
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	6/6/11	Home Depot has a "Wood Purchasing Policy" where wood in their stores (lumber to broom handles) is from forests that are responsibly managed and not from endangered regions.

HONIG CHEMICAL & PROCESSING CORP

Site ID: HONIG CHEMICAL & PROCESSING CORP
 8448 414 WILSON AVE,
 NEWARK, NJ 07105

Stewardship Activities	Date Acknowledged	Comments
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/22/16</p>	<p>In 2012 Honig's 3 boilers were converted from burning #4 fuel oil to natural gas. In that conversion, Honig invested additional money for 10:1 turndown burners. This results in much lower fuel consumption, especially during low demand periods.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>2/22/16</p>	<p>Honig continues the process of replacing lighting in the production areas with Energy Efficient Lighting Systems. T12 lamps are being replaced with T8 fluorescent lamps with highly reflective fixtures producing more lumens and improving lighting. Also where possible, incandescent bulbs are being replaced with compact fluorescent or LED bulbs.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>2/22/16</p>	<p>Honig sells a line of surfactants known as alkyl polyglucosides, or APGs. They are all entirely derived from renewable sources. They have low eco-toxicity due to their quick decomposition to simple sugars, carbon dioxide, and water. In addition Honig now sells an environmentally friendly chelating agent, replacing the traditional phosphonates, named Biopure GLDA.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>1/23/15</p>	<p>Honig is in the process of installing Energy-Efficient Lighting systems in the production areas. Rotunno stated that project is approximately 50% complete. Honig is switching from T12 to T8 fluorescent lamps.</p>

ILLINOIS TOOL WORKS INC

Site ID: ILLINOIS TOOL WORKS INC
8211 565 EAGLE ROCK AVE,
ROSELAND, NJ 07068

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	1/19/10	In 2009 American Safety Technologies recycled 4,200 gallons of solvent that would have been otherwise disposed of as hazardous waste. American Safety Technologies uses Phoenix Environmental Technology LLC for solvent recycling.

KAMPAK INC

Site ID: KAMPAK INC
 14226 100 FRONTAGE RD, 58 108 FRONTAGE RD
 NEWARK CITY, NJ 07114

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	12/4/13	Kampack decommissioned a 15,000 gallon aboveground storage tank, that stored #4 Heating Oil. Kampack has since switched over to using natural gas as the heating source for their facility. Documentation has been provided in the attachment section of NJEMS.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	12/4/13	Kampack retrofitted the entire administrative offices, and the manufacturing areas with energy efficient lighting. Details provided in documentation found in the attachment section of NJEMS.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	12/4/13	Kampack installed a series of solar panels on their roof to supplement the energy usage onsite. Documentation was provided, and placed into the Attachements section of NJEMS.

KASON CORP

Site ID: KASON CORP
174541 67 71 E WILLOW ST,
MILLBURN, NJ 07041

Stewardship Activities	Date Acknowledged	Comments
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	11/3/10	The facility recycles all scrap steel that is not used in the manufacturing process. In addition, the facility reuses glass beads that are used in the Dust Hog and Empire steel parts glass bead blasters. Also, the facility reuses shipping boxes.

LEMCOR INC

Site ID: LEMCOR INC
8641 170 FRELINGHUYSEN AVE,
NEWARK, NJ 07114

Stewardship Activities	Date Acknowledged	Comments
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	2/13/08	The facility has constructed homes for bats. This provides habitat and decreases the insect population without having to use pesticides. I was informed the facility was able to reduce its chemical pesticide use in this way. The facility maintains the immediate local neighborhood, including pruning trees, litter clean-up, street-sweeping, and sidewalk repair. The facility uses a state-of-the art scale that measure weight distribution across the entire vehicle, promoting safer hauling. None of these items are required by NJDEP.

LIVINGSTON TWP DPW POLLUTION CONTROL FACILITY

Site ID: LIVINGSTON TWP DPW POLLUTION CONTROL FACILITY
47185 81 NAYLON AVE,
LIVINGSTON, NJ 07039

Stewardship Activities	Date Acknowledged	Comments
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	7/1/18	The facility is a participant in the Department's Passaic River Nitrate Initiative.

LTS CORP LOHMANN THERAPY SYSTEMS @ W ESSEX IND PK

Site ID: LTS CORP LOHMANN THERAPY SYSTEMS @ W ESSEX IND PK
 14893 21 HENDERSON DR,
 WEST CALDWELL, NJ 070060000

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	8/1/18	LTS continues to recycle their spent ethyl acetate from their Nicotine Process. Currently, LTS is recycling approximately 3,000 gallons each calendar quarter (or roughly 12,000 gallons annually of Ethyl Acetate). LTS Lohmann Therapy Systems has switched over from a solvent based adhesive that they used to clean out the coating line oven # 3 to a water-based adhesive.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	8/1/18	The company has installed water savings fixtures on the faucets and toilets in the restrooms located at building # 1. New water savings fixtures have been installed on the faucets and toilets in Building 2 men's and women's locker rooms and bathrooms.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	8/1/18	The Company has installed motion sensors on the lights in the offices located in building 1. The Company has also installed LED light on the outside of Building 2, in the parking area and in the building 2 administration offices
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	8/1/18	A work from home policy is still active at the site.

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>9/17/13</p>	<p>The Company within the last year has limited the amount of ethyl acetate disposed of at the site as hazardous waste for their Nicotine Process and ENA Tank Processes. The spent ethyl acetate from these two processes used to go out as hazardous waste, but now the facility has hired a Hazardous Waste Hauler (Veolia, of Flanders NJ) to come to the facility to pick up the spent ethyl acetate and have it recycled. For 2012, the savings on the amount of ethyl acetate that used to be hauled out as Hazardous Waste was: ENA Production ethyl acetate reductions: 1,500 kg (403 gallons) to 700 kg (188 gallons) - Total gallons not going out as hazardous waste = 215 gallons Nicotine Production ethyl acetate reductions: 2,700 kg (725 gallons) to 450 kg (121 gallons) - Total gallons not going out as hazardous waste = 604 gallons Therefore, a total of 819 gallons of ethyl acetate were recycled and did not get disposed of as hazardous waste by the Company. LTS Lohmann Therapy Systems has switched over from a solvent based adhesive that they sued to clean out the Coating Line Oven # 3 (the oven that uses the most VOC coatings), to a water-based adhesive. The Company used a product called GELVA in the past, which used to contain Ethyl Acetate, Heptane and Toluene to clean the oven for their coating line (Coating Line # 3). The product (GELVA) was applied onto a roll of paper, The paper was then sent through the coating line and through the ovens. Air was blown into the oven and the material that had been collecting in the oven over use (time) was blown onto the GELVA adhesive on the paper. The GELVA paper acted as fly paper and picked up the excess waste on the oven on the paper. The Company states that four to six 55 gallon drums of GELVA were use monthly to clean the oven for Coater # 3. The VOC emissions from the GELVA would be sent through the Thermal Oxidizer(s) and be emitted as VOC emissions. The Company would generate roughly 1/2 cubic yards of GELVA waste a month which is considered Hazardous Waste. the Company had to have a waste hauler come to their facility and ship the GELVA waste to a Hazardous Waste facility to be properly disposed of.. The Company is now using a water based adhesive to coat the paper that is used to clean out the oven section for Coating Line # 3. Since the new adhesive is water-based, there is now solvents in the adhesive and therefore their are not VOC emission going to the Thermal Oxidizer and out the stack to the atmosphere and there is no longer any Hazardous Waste that needs to be disposed of.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>9/17/13</p>	<p>The company has installed motion sensors on the faucets and toilets to control the amount of water used in the bathrooms located at 15 Henderson Ave. Building # 1.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>9/17/13</p>	<p>The Company is part of the "Coverage Program" with PSEG. When PSEG is asking companies to help them out to prevent possible brown-outs that could occur within the state, PSEG contacts LTS to cut back on their power. LTS will shut down their coating operations and HVAC System to conserve electricity and just operate phones, computers and lights in the offices. Note: The generator is not use or operated at this time - generator usage during brownouts as part of a deal with an electric utility is not allowed by their permit. The Company is shutting down its production at their site only to save on electricity, and in return, PSEG will reduce their electric rate. For 2013, the Company has shut down their production equipment for a total of 8 hours electricity during high electrical demand days.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/17/13</p>	<p>The Company has installed motion sensors on the lights in the offices located in Building # 1 located at 15 Henderson Drive in January of 2012 so the lights will go out when nobody is in the room/office.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/17/13</p>	<p>The Company is working under an Environmental Policy that they call collectively their SHE Policy which is made up of multiple policies.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>9/17/13</p>	<p>The Company now has an official Work From Home Policy that is now open to all employees ,and not just Management. This new policy went into effect in February of 2012. The policy is on a case-by-case basis for each employee based on the business needs of the organization. Employees requesting a Work from Home Arrangement must have exhibited above average performance at the Company. The work from home arrangement will be on a trial basis for the first 3 months and can be terminated by the employee or by management if necessary. The Company provides the appropriate equipment (including hardware, software, modems and phones) for the person to work from their home. Employees that are participating in this program will not be coming to the office as often which will reduce the amount of commutes to and from the office.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/26/11</p>	<p>Facility has an environmental policy that demonstrate their commitment to the environment and human health.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/15/08</p>	<p>LTS Lohmann Therapy Systems has switched over from a solvent based adhesive that they used to clean out the Coating Line Oven # 1 (the only oven that uses VOC Coatings), to a water-based adhesive. The Company used a product called GELVA in the past, which contained Ethyl Acetate, Heptane and Toluene to clean the oven for their coating line (Coating Line # 1). The product (GELVA) was applied onto a roll of paper. The paper was then sent through the coating line and through the ovens. Air was blown into the oven and the material that had been collecting in the oven over use (time) was blown onto the GELVA adhesive on the paper. The GELVA paper acted as fly paper and picked up the excess waste on the oven on the paper. The Company states that four to six 55-gallon drums of GELVA were used monthly to clean the oven for Coater # 1. The VOC emissions from the GELVA product would be sent through the Thermal Oxidizer and leave as VOC emissions. The Company would generate roughly 1/2 a cubic yard of GELVA waste which is considered Hazardous Waste monthly. The Company had to have a waste hauler come out monthly to ship the GELVA waste to a hazardous waste facility to be properly disposed of. The Company is now using a water based adhesive to coat the paper that is used to clean out the oven section for Coating Line # 1. Since the new adhesive is water-based, there is no solvents in the adhesive and therefore there are no VOC emissions going to the Thermal Oxidizer and out the stack to the atmosphere and there is no longer and Hazardous Waste that needs to be disposed of.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/15/08</p>	<p>LTS Lohmann Therapy Systems bought out a facility at 15 Henderson Drive (the old 3M Plant) in 2004 to use as a warehousing facility. The new site sits on a large piece of land and has some large open land that borders a school. LTS Lohmann decided instead of building anything on this open land (for their own purposes), the Company decided to donate the land to the Township for public use. LTS Lohman built two soccer fields on this piece of land that can be used by not only the local town school district but also for any organization in town that wishes to use these soccer fields to play on [as long as the organization is local (in West Caldwell)]. The soccer fields do not have any lights (energy savings), and there is no water use facilities on the site. LTS Lohman maintains the up-keep of the 2 soccer fields.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>5/15/08</p>	<p>LTS Lohmann Therapy Systems has volunteered to reduce the amount of days they operate each week to reduce or eliminate commuting trips to work. The Company which used to operate 5 days a week, recently decided to save costs and expense of having their employees commute an additional day to work, by switching to a 4-day workweek. The Company is now closed on Fridays which saves on the emissions their employee's cars would be emitting into the air during their commute to work. Most of their employees live in Pennsylvania or in Central New Jersey (near Cranbury and Jackson NJ). Most of their employees have over an hour and a half commute to work each day so the 4-day work week saves on the amount of car exhaust emissions being emitted into the air. Also, because the facility is now closed on Fridays, that means there is no production going on for an additional day of the week, so the amount of natural gas consumption for all 5 of their boilers and for the ovens on their 3 coating lines is reduced because the ovens and boilers are not operating on Friday. Also, less VOC emissions are being emitted into the air because their 3 Coaters are not used an additional day during the week. The Company has also implemented a telework program for their Upper Management. The telework program is currently only for Upper Management and most Upper Management will telework during inclement weather days.</p>

LUMMUS TECHNOLOGY INC

Site ID: LUMMUS TECHNOLOGY INC
9198 1515 BROAD ST,
BLOOMFIELD, NJ 07003

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	12/1/10	Lummus Technology's parent company, Chicago Bridge & Iron, has an environmental, health & safety policy, that applies to all of their subsidiaries. A copy of the policy was provided to this inspector before completing the RCRA inspection.

MAPLEWOOD TWP MUNICIPAL BUILDING

8819 574 VALLEY ST,
MAPLEWOOD, NJ 07040

Stewardship Activities	Date Acknowledged	Comments
ENERGY STAR.	5/29/08	ENERGY STAR PLEDGE AND CHANGE A LIGHT PLEDGE PROGRAMS.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/29/08	2008 INITIATED PURCHASE OF HYBRID VEHICLES TO REDUCE ENERGY USE. PURCHASED ONE VEHICLE. IN PROCESS OF PURCHASING 3 MORE.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	5/29/08	GREEN DESIGN INCLUDED IN ALL NEW CONSTRUCTION PROJECTS. ENERGY AUDIT OF MUNICIPAL HVAC SYSTEMS AND LIGHTING.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	5/29/08	ANNUAL GREEN FAIR

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/29/08</p>	<p>CLIMATE INITIATIVE MEETINGS AND ANNUAL GREEN FAIR. LAST YEAR MAPLEWOOD TOTAL TOWN WIDE ENERGY USAGE REDUCED BY 4.2 %.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>5/29/08</p>	
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>5/29/08</p>	<p>GREEN CLEANING PRODUCTS, RECYCLED OFFICE SUPPLIES, FURNISHINGS AND HYBRID VEHICLES.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>5/29/08</p>	<p>NEW POLICE AND COURT BUILDING HAVE LEED CERTIFICATION.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/29/08</p>	<p>GREEN MOUNTAIN ENERGY CO. FOR NEW POLICE AND COURT BUILDING PLUS SOLAR ELECTRIC.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>5/29/08</p>	<p>CLEAN AIR AND CLIMATE PROTECTION SOFTWARE, INTERNATIONAL COUNCIL ON LOCAL ENVIRONMENTAL INITIATIVES (ICLEI).</p>

MIMI SUPERB CLEANERS

12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	6/6/11	Newark Refrigerated Warehouse has installed occupancy sensors, has installed 5 inches of inside insulation, is installing insulating strip curtains on the outside, and has installed a reflective white membrane on the roof. Newark Refrigerated spent around \$700,000 to improve the energy efficiency of the building, and is saving 10 to 12% in energy costs resulting in yearly savings of approximately \$100,000.

NEW ESSEX CNTY HOSPITAL CENTER

Site ID: NEW ESSEX CNTY HOSPITAL CENTER
 200304 240 GROVE AVE ,
 CEDAR GROVE, NJ 07009

Stewardship Activities	Date Acknowledged	Comments
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>4/5/17</p>	<p>Most of the General Bathrooms at the Hospital and all 242 patient bathrooms all have automatic motion sensors on both the toilets and faucets. Faucets will turn off after 15 seconds of usage. All the Patient Rooms also have timed showers. The patients have to push a button in their showers for water to come out of the shower head. The water comes out a minute at a time. So every minute if the patient wants more water or to continue their shower, they have to push the button for the shower to work. These buttons save on water usage at the site because the patients used to forget to turn off their showers and either leave the water running for hours or flood out their bathrooms.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/5/17</p>	<p>The Hospital still has automatic light sensors in some of their offices, the cafeteria, all the bathrooms and all the locker rooms at the site that allow the lights to come on in these rooms only if an individual walks into the room and the sensor indicates that the person is in the room...then the lights go on. If no one is in the room and the sensor does not detect a person or movement in these rooms after 1 minutes, the lights will go off. - These light sensors save on electricity because the lights are not left on in these rooms while the rooms are unoccupied. The Hospital is also still using light sensors outside on all the light posts and in-ground lighting outside around their grounds. The lights will automatically come on when the sun goes down and it becomes dark outside and the lights will go off when the sun rises and the sensors detect sunlight. - These sensors save on electricity because the lights are not on all day when the sun is out. There is also lights under some of the trees that are on timers. These timers are set for day-light savings time and the lights only come on at night when the sun goes down.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/26/12</p>	<p>Most of the General Bathrooms and all the patient room bathrooms (242 Patient Rooms), all have Automatic Water Shutoff toilets - An automatic sensor is used to flush the toilets and turn the water off. All the patient room bathrooms and some of the General bathrooms have spring loaded timed faucets. There is a spring in the faucet that will be triggered when someone turns on the faucet. The faucet will allow the water to run for 15 seconds at a time and then shut off. All the Patient Rooms have timed showers. The Patients have to push a button in their shower stall which will allow the water to run in the shower for 1 minute and then the water will be turned off until the button is pushed again.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/26/12</p>	<p>The Hospital installed automatic light sensors in some of the offices, the cafeteria, all the bathrooms and all locker rooms at the site. The lights will only come on when someone walks into these rooms and will stay on for maybe 1 minute. If there is no movement detected after a minute, the lights will turn off automatically. - This saves electricity because lights are not left on in areas where no one is occupying. The Hospital also has light sensors on all the light posts and in-ground lighting outside around their grounds. The lights will come on when the sun goes down and it becomes dark outside and will go off when the sun rises and the sensors detect the sunlight. - This saves electricity because lights are not left on outside all day long when it is sunny and not necessary for the lights to be on.</p>

NEW PETERS CLEANERS

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	2/17/12	Co. has spent \$2,000 on a wet cleaning garment machine and has completely eliminated dry cleaning activities on-site. The Co. was previously cleaning using perc. as the cleaning agent.

NJ AMERICAN WATER CO SHORT HILLS

Site ID: NJ AMERICAN WATER CO SHORT HILLS
8788 150 167 JFK PKWY,
SHORT HILLS, NJ 07078

Stewardship Activities	Date Acknowledged	Comments
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	3/25/08	Rahway River Clean-up Program. Annual Event. http://www.amwater.com/njaw/About-Us/community-project.html
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	3/25/08	Written environmental policy. http://www.amwater.com/njaw/about-us/community-project.html
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	3/25/08	New Jersey American Water Environmental Management Plan for Short Hills - E.M.P.

NJ MONTCLAIR STATE UNIVERSITY

Stewardship Activities	Date Acknowledged	Comments
Combined Heat and Power Partnership (CHP).	4/25/17	MSU has been a member of the CHP Voluntary Program since 2011. The CHP Partnership seeks to reduce the environmental impacts of electric power generation by promoting the use of CHP.
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/25/17	MSU uses integrated pest control initiatives to control pests around the campus. No hazardous materials/poisons are used to control pests. The vendor that the university uses to control the pest population, uses more humane ways to rid the campus of pests. MSU uses water-based paints and thinners as oppose to solvent based paints and thinners. MSU has combined the ordering of chemical products for their academic labs and now has one chemical storage area for all their academic labs. Since July 2017, the University created a Chemical Purchasing Policy. The policy covers all the universities labs including the CELS Building and Richardson Hall.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/25/17	The cogeneration plant recycles their cooling tower make-up water. The make-up water for the cooling tower is recycled 10 times through the cooling tower before it is discharged to the city sewer system which cuts down on the amount of water that is discharged to the sewer system. Since 2004, MSU has installed 35 waterless urinals saving roughly 427,500 gallons a year of water. Since 2010, MSU has installed low flow water savings fixtures in their dormitories (shower heads, faucets, toilets) that has saved roughly 770,500 gallons of water a year. Since 2013, MSU has installed bottle filling station water fountains in their buildings encouraging students and staff to bring their own reusable water bottles. The hope for these Hydration Stations is to reduce the number of plastic water bottles used/purchased on campus. Since 2013, MSU has installed over 40 moisture sensing sprinklers which only work if the sensors determine the ground is too dry and needs watering. MSU estimates that these water sensors are saving the University 540,000 gallons of water.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	4/25/17	MSU continues to recycle all brand name ink toner cartridges through a program called "Charitable Emporium.com Inc". Several pallets of cartridges have been recycled. MSU continues to recycle laser toner cartridges through the Central Stores Department at MSU. MSU calls "International Laser" to come out to the University to pick up the cartridges to have them recycled. MSU faculty recycles 80% of all their electronics and computers through Urban Renewal a company based in Newark, NJ. The Company removes the information from the computers and then gives them back to the faculty to be used again. Computers are leased to MSU faculty for a 2 year period and then returned to Urban Renewal, stripped clean of the memory and then brought back to be re-used. MSU also has a student led campaign called "Take Back the Tap Program" which attempts to reduce the amount of plastic water bottles used at the campus. With the installation of the hydration stations and student awareness on the resources used to create plastic water bottles, the students are slowly limiting the amount of plastic water bottles used on campus.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/25/17	80% of DCO Cogeneration Plant fleet vehicles that have been switched over to hybrid vehicles. MSU has low sulfur, diesel campus shuttle vans/buses that they use to transport their students around campus. MSU offers a free shuttle system to its students in order to discourage single occupant vehicle travel to the University by Students and Faculty. Electric cars and vans are used by the Trade Shop, Mail-Room and Dining Services Faculty to travel around campus. MSU also offers discounted parking permits for drivers of hybrid vehicles, drivers of clean fuel vehicles and student who participate in carpooling.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/25/17</p>	<p>MSU changed all the lighting in their Red Hawk Parking Deck, Campus Police Station, Morehead Hall and College Hall from T-12 Flourescent Bulbs to LED Lighting within the last 2 years. Mallory Hall is currently having their lights changed over from T-12 Flourescent Bulbs to LED Lighting.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>4/25/17</p>	<p>MSU uses native species of plants and trees to conserve water usage at the University. Hundreds of native trees and plants have been planted at the campus in the last couple of years and new plantings are planted each year as the campus expands.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>4/25/17</p>	<p>MSU is currently conducting an Organic/Food Waste Composting Project. Food scraps are collected form the kitchens on campus in 5 to 10 gallon buckets. These buckets are picked up 3 times a week to be collected and weighed. The scraps are then processed in an in-vessel aerobic digester after being mixed with wood chips (which serve as a bulking agent and carbon source for the bacteria that biologically decompose the food scraps). MSU received a grant from the state to continue this project. The School converts roughly 6,200 to 8,200 lbs of food scraps a year into high quality compost to be used for landscaping projects at the Campus. Approximately 7.7 metric tons of carbon dioxide emissions have been avoided each year as a result of this project. The composting project is located near the Ward Fueling Yard/Vehicle Maintenance Yard. The composting project does not operate during the summer months. MSU submits work orders electronically. This process reduces the amount of paper used on campus. Starting in 2016 and 2017, MSU is now placing permit requirements and recordkeeping requirements on "Maximo", an electronic data collecting device that can be retrieved by individuals i-phones and i-pads. MSU staff can see what the DEP Air Permit requires and what documents they should gather during these Preventative Maintenance Inspections.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>4/25/17</p>	<p>DCO has an outreach program for high school students in both Newark and Atlantic City. The facility conducts a 6 week program for high school students which trains them for environmental jobs. The program is called "Training to Hire Program" . It teaches students to either work as plant operators at cogeneration facilities or work in other areas of the environmental field. MSU created the "Passaic River Institute for Environmental Research and Education" in 2003. The Institute uses computerized mapping systems to study pollutant sources and develop a method for rapid direction of organic contaminants in sediments, highlighting the importance of environmental research within the Passaic River Basin and the complexity of the issues. MSU is involved with the Brownfields Initiatives and is a member of the Brownfield Commission for Passaic County. The Commission provides environmental assessments of brownfield sites to promote redevelopment of sites that are abandoned or underutilized and which pose health concerns. MSU conducts technical background information in regards to brownfield properties located in Paterson, NJ. MSU determines the cost it would take for an interested buyer or township to clean up a brownfield property prior to the site being purchased. MSU does all the background technical information so that the consultant can use this information in their phase 1 and 2 environmental assessments. MSU also has a "Green Team" which started up in 2016. The program is in conjunction with the PSEG Institute for Sustainability Studies. Students from MSU visit large facilities in NJ and determine how the company can become more sustainable and reduce their carbon foot print. The group of students involved in this 10 week summer project become LEED accredited.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/25/17</p>	<p>There is an Environmental Policy that is signed by Frank DiCola the President/CEO of the DCO Cogeneration Plant. DCO is the name of the Company that operates the Cogeneration Unit at Montclair State University. Montclair State University also has a comprehensive written Environmental Policy that is signed by the President of the University , Susan Cole and by the Regional Administrator of EPA Region II. The Environmental Policy is called the "Memorandum of Understanding Between the United States Environmental Protection Agency and Montclair State University". The "Environmental Policy" is updated every 6 months and sent to EPA.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>4/25/17</p>	<p>The Cogeneration Plant has its own EMS System called "E-Maintenance" which is an Air Permit Matrix System. Tasks will be generated daily/weekly/quarterly/annually for the facility to address. The facility is then audited quarterly (at least) by DCO Upper Management ensure tasks are being completed. MSU is utilizing an Environmental Management System (EMS) that came about after the University did a Voluntary Site Audit by the EPA in 2001. MSU purchased an EMS System called Web Ware from the University of Massachusetts in Lowell, MA. The EMS WebWare is an easy to use web-based software application that enables all public and private organizations the opportunity to develop and manage a successful Environmental Management System. MSU is currently trying to get some of the information from the EMS System to be available on Smart Phones and I pads.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>4/25/17</p>	<p>Montclair State University does put out an Annual Sustainability Report each year.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>4/25/17</p>	

<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>4/25/17</p>	<p>During the summer month, MSU goes from a 7-day Campus Week to a 4-day Campus Week. Class is held from Monday to Thursday and the students and teachers are off on Friday through Sunday. This saves on both electricity and gas used to heat or cool the buildings. MSU has a train station on campus so faculty and students can take mass transit to the University instead of taking their personal vehicles. MSU also offers shuttle busses to take their students to the different malls and shopping centers in the area. Freshmen are prohibited from having vehicles on Campus during their first year at MSU. The University and NJ Transit have a deal where freshmen get free trips to MSU during their first year of college.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>4/25/17</p>	<p>The University purchases green cleaning supplies. 80% of all cleaning supplies/products used at MSU are green cleaning supplies, including glass cleaners, all-purpose cleaners, floor stripper, neutral disinfectants, floor cleaners, and floor and wax shampoo.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>4/25/17</p>	<p>The following buildings at MSU are LEED Certified: University Hall - LEED SILVER CERTIFIED - prior to 2015 CELS Building - LEED GOLD CERTIFIED - March 2017 MSU is currently in the process of getting the John J. Cali School of Music Building and Recreational Facility LEED Certified.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>4/25/17</p>	<p>Montclair State University does conduct Carbon Footprint Analysis Calculations as part of their MOU (Memorandum of Understanding) with the EPA Region 2 and submits the information to the EPA every 6 months.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>4/25/17</p>	<p>Montclair State University is part of the NJ Higher Education Partnership for Sustainability Program (NJ HEPS). The group meets monthly to discuss "sustainability" issues and solutions at colleges and universities in New Jersey. The mission on NJHEPS is to transform the New Jersey higher education community to consistently practice sustainability and contribute to the state, region and world's emerging understanding of sustainability, through teaching, research, outreach, operations, and community life.</p>
<p>ENERGY STAR Energy Management.</p>	<p>4/28/15</p>	<p>MSU Participates in this Program. Program includes the following: 1) STEP 1: Commit to Continuous Improvement 2) STEP 1.1: Appoint an Energy Director 3) STEP 1.2: Establish an Energy Team 4) STEP 1.3: Institute an Energy Policy 5) STEP 2: Assess Performance 6) STEP 2.1: Gather and Track Data 7) STEP 2.2: Establish Baselines 8) STEP 2.3: Benchmark 9) STEP 3: Set Goals 10) STEP 3.1: Determine Scope 11) STEP 3.2: Estimate Potential for Improvement 12) STEP 3.3: Establish Goals 13) STEP 4: Create Action Plan 14) STEP 4.1: Define Technical Steps and Targets 15) STEP 4.2: Determine Roles and Resources 16) STEP 5: Implement Action Plan 17) STEP 5.1: Create a Communication Plan 18) STEP 5.2: Raise Awareness 19) STEP 5.3: Build Capacity 20) STEP 5.4: Motivate 21) STEP 5.5: Track & Monitor 22) STEP 6: Evaluate Progress 23) STEP 6.1: Measure Results 24) STEP 6.2: Review Action Plan 25) STEP 7: Recognize Achievements 26) STEP 7.1: Providing Internal Recognition 27) STEP 7.2: Receiving External Recognition (5 Buildings at MSU are currently under this EPA Voluntary Program and are going through these steps)</p>

<p>Combined Heat and Power Partnership (CHP).</p>	<p>4/28/15</p>	<p>MSU has been a member since 2011. The CHP Partnership seeks to reduce the environmental impacts of electric power generation by promoting the use of CHP. CHP Includes: 1) The Catalog of CHP Technologies - which provides an overview of how CHP systems work and the key concepts of efficiency and power-to-heat ratios. It also provides information about the cost and performance characteristics of five commercially available CHP prime movers. 2) The CHP Emissions Calculator - calculates the difference between the anticipated carbon dioxide (CO2), methane (CH4), nitrous oxide (N2O), sulfur dioxide (SO2), and nitrogen oxide (NOx) emissions from a CHP system to those of a separate heat and power system. The calculator also presents estimated emissions reductions as metric tons of carbon dioxide equivalent (CO2e) and emissions from passenger vehicles. 3) (CHP Policies and incentives database) - is an online database that allows users to search for CHP policies and incentives by state or at the federal level. 4) The CHP Project Development Handbook - provides information, tools, and insights on project development, CHP technologies, and the resources of the CHP Partnership. The Handbook will help you become an educated CHP Champion who can save your organization time and money, reduce business risk and environmental impacts, and improve the power reliability of your facility. 5) The CHP Spark Spread Estimator (XLSM, 1MB) - calculates the difference between the delivered electricity price and the total cost to generate power with a prospective CHP system. The Estimator will help you easily evaluate a prospective CHP system for its potential economic feasibility.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>4/28/15</p>	<p>MSU uses Integrated Pest Control Initiatives to control PESTs around the Campus. No Hazardous Materials/Poisons are used to control PESTS. The Vendor that the University uses to control the PEST Population around the Campus uses more humane ways to getting rid of PESTs. MSU also uses only water-based paints and thinners at their University and no longer uses any solvent based paints or thinners at the University. MSU has combined the ordering of chemical products for their academic labs and now has one chemical storage area for all the chemicals used their academic labs. MSU has been using a Desktop version of CHEMSW for several years now to keep track of hazardous materials on campus. The different academic labs use the data base like a Shop-Rite Inventory System to manage chemicals for RTK & Hazcom.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>4/28/15</p>	<p>Cogeneration Plant - The facility recycles their cooling water tower make-up water. The make-up water for the cooling tower is recycled 6 times through the cooling tower before it is discharged to the city sewer system which cuts down on the amount of water that is discharged to the sewer system.. Montclair State University - MSU has installed 35 waterless urinals (Ecotrap System - which contains a lightweight biodegradable fluid called Blue Seal) since 2004 saving roughly 427,500 gallons a year of water. MSU has installed 42 low flow urinals since 2004 saving roughly 96,000 gallons of water a year. MSU has installed 670 low flow shower heads in the dorms since 2010 saving roughly 770,500 gallons a year of water. MSU more recently (within the last 2 years) has installed water-fountains in their buildings that can be used to re-fill water bottles. - So students now can just bring their Stainless Steel Water Bottles or Nalgene Water Bottles to these hygienic, hands-free Hydration Stations and fill them up. By doing this, students save on the purchasing of bottled water - The Program is called the " Take Back the Tap Program" - is a student-led campaign that opposes the privatization of water, particularly the bottling of water and its numerous negative environmental, social and health impacts. Students hope that these hope the presence of the Hydration Stations on campus will result in a noticeable decrease in the consumption of bottled water on campus. MSU has installed over the last couple of years moister sensing sprinklers (40 of them) that will only work if the sensors determine the ground is too dry and needs watering. MSU estimates that 240,000 gallons of water have been conserved by these sprinklers.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>4/28/15</p>	<p>MSU in 2007 launched a recycling program in collaboration with "Charitable Emporium.com Inc ." to recycle all brand name ink toner cartridges. To date, several pallets of cartridges have been recycled. MSU in 2007 launched a recycling program through the Central Stores Department at MSU to recycle laser toner cartridges. MSU calls "International Laser" to come out to the University to pick up the cartridges and have them recycled. MSU also recycles 80% of all their electronics and computers through a Company called "Urban Renewal" from Newark NJ. - The Company removes the information from the Computers and then sends the Computers back to MSU for them to use again and again. Computers are leased to MSU for a 2 year period and then after the lease is up, the Computers are taken to Urban Renewal - insides removed and changed out and then brought back to MSU to be re-used again. "Take Back the Tap Program" - is a student-led campaign that opposes the privatization of water, particularly the bottling of water and its numerous negative environmental, social and health impacts. Students hope that the presence of the Hydration Stations on campus will result in a noticeable decrease in the consumption of bottled water on campus - thus less plastic water bottles will be used and thrown out on campus.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/28/15</p>	<p>Cogeneration Plant - DCO (the Company that owns and operates the Cogeneration Plant at MSU) - has 70% of their fleet vehicles that have been switched to hybrid vehicles. Roughly 30 vehicles have been switched out to hybrid vehicles. Montclair State University: MSU has low sulfur diesel campus shuttle vans/buses that they use to transport their students around campus. MSU offers a free shuttle system to its students in order to discourage single occupant vehicle travel to the University by Students and Faculty. MSU has some electric cars that their Faculty use to get around campus. These electric cars are used by the Trade Shop, Mail-Room and Dining Services Faculty. The Facility in 2014 also purchased to electrical vans for these operations last year and plan on purchasing more electric vehicles later this year. MSU also offers discounted parking permits for drivers of hybrid vehicles and for drivers of clean fuel vehicles. MSU also offers discounts on parking permits for car-poolers to encourage high occupancy vehicle use to their students.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/28/15</p>	<p>MSU has done some Green Building Implementation on construction projects at some of the buildings on their campus. The recently constructed "Center for Environmental and Live Sciences (called CELS) as well as the Cali School of Music Building are both going through LEED Certification but neither has obtained the certification to date. University is hoping by the fall of 2015 for both of these buildings to be LEED SILVER Certified. MSU has also done some Green Building Implementation on construction projects on the following buildings on the campus: 1) MSU Recreational Facility - This facility is not going for LEED Certification. Montclair State University is currently changing all their T-12 Lightbulbs in the Red Hawk Parking Deck (3 floors) as well as the Police Station on Campus to more efficient LED Lights. Montclair State University is also changing out all the light as well as the lighting fixtures to compact fluorescent lighting in all the dorms at the University.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>4/28/15</p>	<p>MSU uses native species of plants and trees to conserve water usage at the University. MSU has planted roughly 190 trees native trees and plants since 2008 at the campus.</p>

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>4/28/15</p>	<p>MSU has been conducting over the last couple of years and is still conducting an Organic/Food Waste composting Project - Food Scraps are collected from the kitchens on campus in 5 to 10 gallon buckets. These buckets are picked up 3 times a week to be collected and weighed. The scraps are then processed in an in-vessel aerobic digester after being mixed with wood chips (which serve as a bulking agent and carbon source for the bacteria that biologically decomposes the food scraps). MSU received a grant from the state to continue this project. This project is conducted both at MSU (Montclair) and MSU (The School of Conservation at Stokes State Forest). The School converts roughly 6,200 to 8,200 lbs of food scrap a year into high quality compost to be used for landscaping projects at the Campus. Approximately 7.7 metric tons of CO2 emission have been avoided each year as a result of this project. MSU has recently within the last two years converted work order over to their i-pads and tablets. MSU no longer uses paper for their work orders - everything is done electronically and sent to the individuals i-pads or tablets thus reducing the amount of paper used on Campus.</p>
--	----------------	---

10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.

4/28/15

MSU created the "Passaic River Institute for Environmental Research and Education (commonly known as the "Passaic River Institute" or "PRI" in 2003). The research uses computerized mapping systems to study pollutant sources and develop a method for rapid detection of organic contaminants in sediments, highlighting the importance of environmental research with the Passaic River Basin and the complexity of the issues. The Passaic River Institute Website is: <http://www.montclair.edu/csam/passaic-river-institute/> Robert Prezant - a Dean at MSU is a member of the Passaic River Flood Advisory Board. MSU is involved with Brownfields Initiatives and is a member of the Brownfields Commission for Passaic County. The Commission provides environmental assessments of brownfield sites to promote redevelopment of sites that are abandoned or underutilized and which pose health concerns. They assist municipalities with open space preservation initiatives while promoting smart growth. They conduct site investigations of the Brownfields Properties that will help assist municipalities in prioritizing redevelopment activities. They assist in marketing properties to potential redevelopers and comply with state requests to provide information on Brownfield Sites within Passaic County. The Passaic County Brownfield Assessment Program is funded through the US EPA. Passaic County Brownfield Assessment Program - Tel: 973-569-4720 MSU conducts technical background information in regards to Brownfield Properties that are located in Paterson NJ. MSU (with help from information obtained from the DEP's Bureau of Site Remediation), determine the cost it would take for a prospected buyer or township who is interested in purchasing a Brownfields Property to clean up the property prior to it being purchased. MSU does all the background technical information for the Brownfields Commission so that a consultant can use this information in their Phase 1 & 2 Environmental Assessment Studies. MSU conducts lectures to Elementary, Junior High and High School kids grades K to 12 on their Integrated Pest Management Program. The students learn ways of dealing with unwanted PESTs without using environmentally harmful chemicals or pesticides. MSU promotes more humane ways of dealing with PESTs (such as catch and release methods). MSU on March 27, 2015 held a Sustainability Career Seminar opened to the public and businesses and sponsored by the NJ Education Partnership for Sustainability. The Seminar was an interactive session in which the present state of sustainability employment and the potential futures that lie in wait for sustainability practitioners seeking to craft careers as change agents in the Private, Governmental and Non-Profit sectors was explored. MSU Personnel (Anna Pinto) belong to the Association of Energy Engineers (AEE). who are certified energy managers that identify ways for MSU to save and manage energy in a fiscally and environmentally responsible way. AEE provides training and nationally recognized certifications in many areas of energy, sustainability and the environment. It is a source for info & networking in the dynamic fields of energy engineering, energy management, renewables, power generation, energy services, sustainability, and related areas. AEE's overall strength is augmented by its strong membership base of over 17,000 professionals in 90 countries and its widely recognized energy certification programs. Its network of 95 local chapters located throughout the U.S. and abroad meet regularly to discuss issues of regional importance. MSU also has the School of Conservation located in Stokes State Forest in Branchville NJ. The mission of Montclair State University's School of Conservation is to gather knowledge of Earth systems through research and to communicate this knowledge through education.

<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>4/28/15</p>	<p>MSU has one building on Campus (University Hall) an Academic Bldg. that is LEED Certified as a Green Building (LEED SILVER CERTIFIED)</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>4/28/15</p>	<p>Montclair State University installed in 2011 a large solar array on the roof of the Ward Trucking Building (now their maintenance/fuel yard at MSU), that sends its power (125,000 Kilowatts) over to the Alice Paul Dormitory on Clove Road.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>4/28/15</p>	<p>Montclair State University does conduct Carbon Footprint Analysis as part of their MOA with EPA Region 2 and submits the information to EPA every 6 months to a year. The latest report that I could find on-line was for 2014. Website is listed below. Since the University started calculating and submitting their Carbon Footprint Analysis calculations to EPA in 2008, the University has reduced their Green House Gas emissions by 113,985 Metric Tons of CO2. (2008 to 2014). http://www.epa.gov/region02/greenteam/pdf/montclair_state_environmentalassessment_report_jun2014.pdf</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>4/28/15</p>	<p>Montclair State University is part of the NJ HEPS Program (NJ Higher Education Partnership for Sustainability) created in 1999 - The group meets monthly to discuss "Sustainability" Issues and solutions at Colleges and Universities in New Jersey. Mission Statement Below: To transform the New Jersey higher education community to consistently practice sustainability and contribute to the state, region and world's emerging understanding of sustainability, through teaching, research, outreach, operations, and community life. We accomplish this through interaction with our primary stakeholders in the NJ higher education community: http://www.njheps.org/Projects (Website showing Environmental Projects done by this Workgroup/ Organization).</p>
<p>Combined Heat and Power Partnership (CHP).</p>	<p>6/4/12</p>	<p>Montclair State University recently became a member of the EPA Combined Heat and Power Partnership (CHP) voluntary program in 2011.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/4/12</p>	<p>MSU uses Integrated Pest Control Initiatives to control PESTs around the Campus. No Hazardous Materials/Poisons are used to control PESTs. The Vendor that the University uses to control the PEST population around the Campus uses more humane ways to getting rid of unwanted PESTs. MSU also uses only Water-Based Paints and Thinners at their Campus. MSU no longer uses Solvent Based Paints or Thinners at their University.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/4/12</p>	<p>MSU has installed waterless urinals in the bathrooms located in University Hall (done in 2004) Waterless urinals use something called Ecotrap (which contains a lightweight biodegradable fluid called Blue Seal). The waterless urinals do not overflow and have reduced the water usage in these bathrooms by 45,000 gallons/yr. per urinal. MSU also plants drought resistant and native plants to NJ for all newly constructed buildings at the campus. The University does not need to install sprinkler systems or irrigation systems to water these plants.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/4/12</p>	<p>MSU has combined the ordering of chemical products for their academic labs and now has one chemical storage area for all the chemicals used their academic labs. MSU has been using a Desktop version of CHEMSW for several years now to keep track of hazardous materials on campus. The different academic labs use the data base like a Shop-Rite Inventory System to manage chemicals for RTK & Hazcom. MSU in 2007 launched a recycling program in collaboration with "Charitable Emporium.com Inc ." to recycle all brand name ink toner cartridges. To date, several pallets of cartridges have been recycled. MSU in 2007 launched a recycling program through the Central Stores Department at MSU to recycle laser toner cartridges. MSU calls "International Laser" to come out to the University to pick up the cartridges and have them recycled.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/4/12</p>	<p>MSU has low sulfur diesel campus shuttle vans/buses that they use to transport their students around campus. MSU offers a free shuttle system to its students in order to discourage single occupant vehicle travel to the University by Students and Faculty. MSU has some electric cars that their Faculty use to get around campus. These electric cars are used by the Trade Shop, Mail-Room and Dining Services Faculty. MSU also offers discounted parking permits of 50% off for drivers of hybrid vehicles and 100% off for drivers of clean fuel vehicles. MSU also offers discounts on parking permits for car-poolers to encourage high occupancy vehicle use to their students.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/4/12</p>	<p>MSU has done some Green Building Implementation on construction projects in their new Center for Environmental and Life Sciences Facility (CELS),. Cali School of Music and new Recreational Facility (Gymnasium). Buildings are currently going through review to be "LEED Certified", but have not been certified to date. MSU is hoping that some of these building get LEED certified in the "Silver Category" Some of the Green Building Implementations the Buildings are trying to get LEED Certification for include: Sustainable Sites Category 1) Site Selection 2) Development Density and Community Connectivity 3) Alternative Transportation (Public Transportation Access and Parking Capacity) 4) Stormwater Design - Quantity Control and Quality Control 5) Heat Island Effect (Non Roof) Water Efficiency Category 1) Water Efficient Landscaping - reduce by 50% and No Potable Use and no Irrigation. 2) Water Use Reduction - 30 to 35% Reduction Energy & Atmosphere Category 1) 12% to 22% Energy Reduction for New Buildings 2) Enhanced Commissioning 3) Enhanced Refrigerant Management 4) Measurement and Verification Materials & Resources Category 1) Construction Waste Management - Divert 75% from Disposal 2) Recycled Content - 10 to 20% post consumer and 1/2 pre-consumer 3) Regional Materials - 10 to 20 % Extracted, Processed and Manufactured Regionally. Indoor Environmental Quality Category 1) Outside Air Delivery Monitoring 2) Increased Ventilation 3) Construction IAQ Plan - both during construction and before occupancy 4) Low Emitting Materials - Adhesives & Coatings, Paints & Coatings. Flooring Systems, Composit Wood Products and Agrifiber Products 5) Indoor Chemical and Pollutant Source Control 6) Controllability of Lighting, Temperature and Ventilation Systems 7) Thermal Comfort Design and Verification 8) Daylight and Views - Daylight 90% of all Spaces Innovation & Design Process Category 1) Green Cleaning 2) Education Package 3) Low Mercury Lighting 4) LEED Accredited Professional</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>6/4/12</p>	<p>Organic/Food Waste Composting - Food Scraps are collected from two kitchens on campus. The scraps are collected daily in 5 or 10 gallon buckets and are picked up from the kitchens 3 times a week to be collected and weighed. The scraps are then processed in an in-vessel aerobic digester after being mixed with wood chips (which serve as a bulking agen and carbon source for the bacteria that biologically decompose the food scraps). This Food Waste Composting program has been going on at MSU since 2007. MSU just received a grant from the state to continue this project. MSU is now conducting this Food Waste Composting Project both at MSU (in Montclair) as well as at the MSU School of Conservation located at Stokes State Forest in North Jersey. Since 2007, the Program has converted _____lbs. of food scraps in high quality compost in a process that takes 3 days to do. The compost is being used for campus landscaping projects. Approximately _____metric tons of CO2 emissions have been avoided as a result of this project.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>6/4/12</p>	<p>MSU Faculty are involved with active research related to the Passaic River. The research uses computerized mapping systems to study pollutant sources and develop a method for rapid detection of organic contaminants in sediments, highlighting the importance of environmental research with the Passaic River Basin and the complexity of the issues. MSU recognized the need for a formal University-based Institute that would undertake long-term, extensive, multi-disciplinary scientific studies. So MSU created the "Passaic River Institute for Environmental Research and Education (commonly known as the "Passaic River Institute" or "PRI" was formed within the College of Science and mathematics in 2003. The Passaic River Institute Website is below: http://pages.csam.montclair.edu/pri/ Robert Drelant - a Dean at MSU is an Active Member with the Passaic River Flood Advisory Board MSU is also involved with Brownfields Initiatives and is a member of the Brownfields Commission for Passaic County. The Brownfields Commission of Passaic County identifies and provides environmental assessments of brownfield sites to promote redevelopment of sites that are abandoned or underutilized and which pose health concerns. The Commission assists municipalities with open space preservation initiatives while promoting smart growth. The Commission conducts site investigations of the Brownfields Properties that will help assist municipalities in prioritizing redevelopment activities. The Brownfields Commission assists in marketing properties to potential developers and in complying with state requests to provide information on brownfield sites within Passaic County. Passaic County Brownfield Assessment Program, Passaic County Department of Economic Development Tel: 973-569-4720 The activities of the Passaic County Brownfield Assessment Program are funded through the United States Environmental Protection Agency. MSU conducts technical background information in regards to Brownfield Properties that are located in Paterson NJ (Passaic County). MSU (with help from information obtained from the DEP's Bureau of Site Remediation), determines the cost it would take a prospected buyer or township who's is interested in purchasing a Brownfields Property to clean up the property prior to it being purchased. MSU does all the background technical information for the Brownfields Commission so that a consultant can use this information in their Phase 1 & 2 Environmental Assessment Studies. MSU conducts lectures to Elementary, Junior High and High School kids grades K through 12 on their Integrated Pest Management Program. The students learn ways of dealing with unwanted PESTs without using environmentally harmful chemicals or pesticides. MSU promotes more humane ways of dealing with PESTs (such as catch and release methods).</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/4/12</p>	<p>The University does have a comprehensive written Environmental Policy that is signed by the President of the University (Susan Cole) and by Alan J. Steinberg (Regional Administrator of EPA Region 2) The Environmental Policy is called "Memorandum of Understanding Between The United States Environmental Protection Agency and Montclair State University" The "Environmental Policy/Memorandum" is updated every 6 months and sent to the EPA. http://www.montclair.edu/facilities/environmental-health-and-safety/campussustainability/initiatives/</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/4/12</p>	<p>The University is utilizing an Environmental management System (EMS) that came about after the University did a Voluntary Site Audit by the EPA in 2001. MSU purchased an EMS WebWare from the University of Massachusetts-Lowell. The EMS WebWare is an easy to use web-based software application that enables all public and private organizations the opportunity to develop and manage a successful Environmental management System. The EMS website used at the University is: https://emswebware.uml.edu/emsnet/common/testimony:</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>6/4/12</p>	<p>Montclair State University is now a member of Combined Heat and Power Partnership Program as of 2011. (see below).</p>

<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>6/4/12</p>	<p>During the summer months (starting early June of each year), MSU reduces the amount of commuting trips for their Faculty and Students by going from a 7-day work week to a 4-day work week. MSU only has classes from Monday to Thursday during the summer months (which saves 3 commuting days for Faculty and Students). Also, since MSU only has classes 4 days a week instead of 7 days a week in the summer, the University saves on both electricity and gas used to heat/cool buildings because buildings are closed 3 days a week and do not need to be heated/cooled during the summer months. MSU has a train station on campus now so Faculty and Students can take mass transit to the University instead of taking their personal vehicles to the campus for classes. Since Freshmen are prohibited from having vehicles on Campus during their first year at MSU, the University and NJ Transit have a deal where Freshmen can get free bus trips to MSU during their first year of college.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>6/4/12</p>	<p>The University purchases 100% recycled paper to use in their copier machines. MSU also purchases roll paper towels and toilet paper that are made out of recycled materials. The University also purchases green cleaning supplies - 80% of all cleaning products used on the campus are green cleaning products (this includes: glass cleaners, all purpose cleaners, neutral disinfectant floor cleaner, floor stripper, floor wax and carpet shampoo.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>6/4/12</p>	<p>MSU has one building on their Campus (University Hall - Academic Building) that has been LEED Certified as a Green Building.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>6/4/12</p>	<p>Montclair State University installed 6 months (December of 2011), a new solar panel photovoltaic array on Schmidt Hall (formally Finley Hall off of Clove Road). This solar panel to date has contributed 200 kW hours of electricity to the University with no pollution and no cost to the University.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>6/4/12</p>	<p>Montclair State University (MSU) does conduct Carbon Footprint Analysis in regards to Greenhouse Gas Emissions. Under the Campus Sustainability Website: http://www.montclair.edu/facilities/ehs/sustainability/index.html Look under "Campus Initiatives" and you can see the Greenhouse Gas calculations done there for MSU.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>4/16/10</p>	<p>MSU uses Integrated Pest Control initiatives to control pests around the campus. No hazardous materials are used to control pests. The contractor uses humane methods to get rid of unwanted pests.</p>

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>4/16/10</p>	<p>MSU has employed a program to reduce water usage at the University. MSU installed waterless urinals in the bathrooms located in University Hall in 2004. The waterless urinals use Ecotrap which consists of a lightweight biodegradable fluid called Blue Seal. The liquid traps the odors and sediment drops to the bottom of the trap to help prevent the pipes from clogging. The waterless urinals do not overflow and have reduced water usage by 45,000 gallons per year for each urinal. MSU has also reduced water by planting drought resistant and native plants for all newly constructed buildings. The facility does not need to install sprinkler systems or irrigation systems to water these plants.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>4/16/10</p>	<p>The Office of Information Technology at MSU has established a computer life cycle replacement program to keep all computers for faculty and staff and those in public and teaching computer labs up to date. An inventory of all computers at MSU was compiled and a replacement program plan was created. The goal of the program was to replace the computers in the public and teaching labs and provide all full time faculty and staff members with 1 primary computer. The program was later expanded to include some computers for part time employees, students and graduate assistants. The Office of Information Technology does 3 year leases on the facilities computers. MSU has agreements with DELL, IBM and Hewlett Packard to send back old computers to the manufacturers so they can be recycled. MSU has contracted with a computer and electronics recycling firm to properly handle the retirement of all E-Waste that is not leased or returned to the supplier at the end of the life cycle. In 2007, MSU launched a recycling program in collaboration with "Charitable Emporium.com, Inc." to recycle all brand name ink toner cartridges. MSU has combined the ordering of chemical products for all their academic labs and now has 1 chemical storage area for all of the chemicals used in their academic labs. MSU has been using a Desktop version of CHEMSW for several years to keep track of hazardous materials on campus. The different academic labs use the system to manage chemicals for RTK and Hazcom.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/16/10</p>	<p>MSU has low sulfur diesel campus shuttle vans/ buses that they use to transport their students around the University. A free shuttle system is also offered to discourage single occupant vehicle travel to the University by students and faculty. MSU has some electric cars for staff to use to get around campus rather than diesel powered golf carts. The electric cars are used by the Trade Shops, Mailroom and Dining Services. MSU offers discounted parking permits of 50% off for drivers of hybrid vehicles and 100% off for drivers of clean fuel vehicles. Discounts for car-poolers are also offered to encourage high occupancy vehicle use.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/16/10</p>	<p>The following is a list of the strategies used to receive LEED Recognition of University Hall: Protect or Restore Open Space Stormwater Management, featuring filtration systems Reduce Heat Island, Trees and pavement selections Light Pollution Reduction Water efficient Landscaping, drought resistant plants Water Use Reduction, plumbing fixture selections including waterless urinals Building Commissioning CFC reduction, specify non-CFC refrigerants Optimize Energy Performance, +20% efficiency over base case. Ozone Protection, R-134a (HFC) and absorption refrigerants only Storage and Collection of Recycling, built in casework Construction Waste Management, divert +50% Recycled content in steel, concrete, aluminum, gypsum board, ceiling tile, carpet. Local and Regional Materials, <20% Local materials (documented) Certified Wood, specified >50% FSC cert. wood Improved Indoor Air Quality Carbon Dioxide monitoring, multiple sensors throughout the building. Low-emitting materials, adhesives, paint, carpet, composite wood Furniture - Green guard certified and recycled content.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>4/16/10</p>	<p>Organic/ Food Waste Composting: Food scraps are collected from 2 kitchens on campus. The scraps are collected daily in 5 or 10 gallon buckets. 3 times a week, these buckets are collected and weighed. The scraps are then processed in an in-vessel aerobic digester after being mixed with wood chips (which serve as a bulking agent and carbo source for the bacteria that biologically decompose the food scraps). The compost is used for campus landscaping projects. This activity eliminates the CO2 that results from this process.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>4/16/10</p>	<p>MSU is involved with Community Outreach Programs: MSU faculty has been involved with research related to the Passaic River. This research includes using computerized mapping systems to study pollutant sources and developing a method for rapid detection of organic contaminants in sediment. The Passaic River Institute for Environmental Research and Education ("PRI") was formed within the College of Science and Mathematics in 2003. MSU has been involved with the development of a product through PRI called "Ecomelt". It is a cement product that is made to replace Portland cement. It is a sediment based product made from the dredged sediments from the Passaic River. MSU intends to file for a patent on this product.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/16/10</p>	<p>The University has a comprehensive written environmental policy that is signed by the President of the University (Susan Cole) and by Alan J. Steinberg (Regional Administrator of EPA Region 2). The Environmental Policy is called "Memorandum of Understanding between The United States Environmental Protection Agency and Montclair State University".</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>4/16/10</p>	<p>The University is utilizing and Environmental Management System (EMS) that came about after the University did a Voluntary Site Audit by the EPA in 2001. MSU purchased EMS Web Ware from the University of Massachusetts-Lowell. The EMS WebWare is a web-based software application that enables all public and private organizations the opportunity to develop and manage a successful Environmental Management System. The EMS website used at the University is: https://emswebware.uml.edu/emsnet/common/testimonials.aspx</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>4/16/10</p>	<p>To promote mass transportation, MSU and NJ Transit have a deal where students can get free bus trips to the University during the first college semester. There is now a train station at MSU, so faculty and students can take mass transit to the University instead of taking their personal vehicles to the University for classes.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>4/16/10</p>	<p>MSU purchases 100% recycled paper to use in their copy machines. MSU also purchases roll paper towels and toilet paper that are made out of recycled materials. MSU also purchases green cleaning supplies. 80% of all cleaning products used on the campus are green cleaning supplies including glass cleaners, all purpose cleaners, neutral disinfectant floor cleaner, floor stripper, floor wax and carpet shampoo.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>4/16/10</p>	<p>University Hall is a Green Building certified under LEED.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>4/16/10</p>	<p>MSU has a photovoltaic array installed on Finley Hall that generates a small amount of electric power to the building. The solar panel photovoltaic array contributes electricity to the University with no pollution and no cost to the University.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>5/6/08</p>	<p>The University uses Integrated Pest Control initiatives to control Pests around the Campus. No Hazardous Materials are used to control Pests. The Company the University uses to control the PEST population around the facility uses more humane ways of getting rid of unwanted PESTs.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/6/08</p>	<p>The University has employed a program to reduce water usage at the University. The University installed waterless urinals in the bathrooms located in University Hall in 2004. The waterless urinals use something called Ecotrap which consists of a lightweight biodegradable fluid called Blue Seal. The liquid traps the odors and sediment drops to the bottom of the trap to help prevent the pipes from clogging. The waterless urinals do not overflow and have reduce water usage by 45,000 gallons per year per each urinal. The link for the waterless urinals is listed below. http://files.bnppmedia.com/EDC/Protected/Files/PDF/2005_01-GBTB-WaterlessUrinal.pdf The University has also reduced water by planting drought resistant and native plants to New Jersey for all newly constructed buildings. The facility does not need to install sprinkler systems or irrigation systems to water these plants.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/6/08</p>	<p>The Office of Information Technology at MSU decided 4 years ago to establish a computer life cycle replacement program to keep all computers for faculty and staff and those in public and teaching computer labs up-to-date. An inventory of all computers at MSU was compiled and a replacement project plan was created. The goal of the program was to replace the computers in the public and teaching labs and provide all full time faculty and staff members with one primary computer. The program was later expanded to include some computers for part time employees, students, and graduate assistants. To date, the Office of Information Technology has replaced over 2,000 computers campus wide. The first replacement of the leased computer equipment was finished in the summer of 2007 in MSU's teaching public computer labs. MSU has agreements with DELL, IBM and Hewitt Packard to send back all old computers to the manufacturer so they can be recycled. MSU has contracted with a computer and electronics recycling firm to properly handle the retirement of all E-Waste that is not leased or returned to the supplier at the end of its life cycle. MSU launched in 2007 a laser toner cartridge recycling program through the Central Stores Department at MSU. MSU calls "International Laser" to come out to the University to pick up the cartridges and have them recycled. In 2007, MSU launched a recycling program in collaboration with "Charitable Emporium.com Inc." to recycle all brand name ink toner cartridges. To date several pallets of cartridges have been recycled. MSU has combined the ordering of chemical products for all their academic labs and now has one chemical storage area for all the chemicals used in their academic labs. MSU has been using a Desktop version of CHEMSW for several years now to keep track of hazardous materials on campus. The different academic labs use the data base like a Shop-rite Inventory System to manage chemicals for RTK & Hazcom.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/6/08</p>	<p>The University has low sulfur diesel campus shuttle vans/buses that they use to transport their students around the University. A free shuttle system is also offered to discourage single occupant vehicle travel to the University by students and faculty. The University also has some electric cars that their faculty use to get around the campus (instead of diesel fuel golf cart cars). These electric cars are used by the Trade Shops, Mail-Room and Dining Services. The University also offers discounted parking permits of 50% off for drivers of hybrid vehicles and 100% off for drivers of clean fuel vehicles. Discounts for car-poolers are also offered to encourage high occupancy vehicle use.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/6/08</p>	<p>The University will soon have an additional two Green Buildings that will be LEED Certified. The new Recreation Center will be LEED Certified within the next 6 months and the new Cali Music Department Building that is currently under construction will be LEED Certified after construction of the building is completed.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/6/08</p>	<p>(MSU) Innovative Environmental Program 1) Organic/Food Waste Composting - Food scraps are collected from two kitchens on campus. The scraps are collected daily in 5 or 10 gallon buckets. 3X times a week, these buckets are collected and weighed. The scraps are then processed in an in-vessel aerobic digester after being mixed with wood chips (which serve as a bulking agent and carbon source for the bacteria that biologically decompose the food scraps). Since 2007, 21,000 lbs. of food scraps have been turned into high-quality compost in a process that takes 3 days. The compost is being used for campus landscaping projects. Approximately 17 metric tons of CO2 emissions have been avoided as a result of this project.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/6/08</p>	<p>MSU is involved with Community Outreach Programs. Several MSU faculty have been and are still active in research related to the Passaic River over the last few years. This research, such as using computerized mapping systems to study pollutant sources and developing a method for rapid detection of organic contaminants in sediments, highlighted the importance of environmental research within the Passaic River Basin and the complexity of the issues. Montclair State University recognized the need for a formal university-based institute that would undertake long-term, extensive, multi-disciplinary scientific studies. Thus, the Passaic River Institute for Environmental Research and Education (commonly known as the "Passaic River Institute" or "PRI") was formed within the College of Science and Mathematics in 2003. Passaic River Institute Website below: http://pages.csam.montclair.edu/pri/ MSU is also involved with Brownfields Initiatives. The University, conducts technical background information in regards to Brownsfield Properties that are located in East Orange, Orange and Paterson NJ. The University (with help from information obtained from the Department's Bureau of Site Remediation), determines the cost it would take a prospected buyer or township who is interested in purchasing a Brownfields Property to clean up the property prior to it being purchased. The University does all the background technical information so that consultants can use this information in their Phase 1 & 2 Environmental Assessment studies. MSU conducts lectures to Elementary, Junior High and High School kids grades K through 12. The University teaches these students about their Integrated Pest Management Program. The students learn ways of dealing with unwanted Pests without using environmentally harmful chemicals or pesticides. The University promotes more humane ways of dealing with Pest (such as catch and release methods and using more humane type traps).</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>5/6/08</p>	<p>The University does have a comprehensive written environmental policy that is signed by the President of the University (Susan Cole) and by Alan J. Steinberg (Regional Administrator of EPA Region 2). The Environmental Policy is called "Memorandum of Understanding between The United States Environmental Protection Agency and Montclair State University"</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>5/6/08</p>	<p>The University is utilizing an Environmental Management System (EMS) that came about after the University did a Voluntary Site Audit by the EPA in 2001. Montclair State University purchased an EMS WebWare from the University of Massachusetts-Lowell. The EMS WebWare is an easy to use web-based software application that enables all public and private organizations the opportunity to develop and manage a successful Environmental Management System. The EMS website used at the University is listed below: https://emswebware.uml.edu/emsnet/common/testimonials.aspx</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>5/6/08</p>	<p>During the Summer Months, the University reduces the amount of commuting trips for their faculty and students to the University by going from a 7 day work week to a 4 day work week. The University only has classes during the summer months from Monday to Thursdays during the summer months. (Which saves 3 commuting days for teachers and students). Also, since the University does not have classed on Fridays, Saturdays and Sundays in the Summer, they do not need to heat the buildings or produce steam from their Cogeneration Facility for these buildings, so heating and natural gas usage savings occur in the Summer months. There is also now a train station at Montclair State University, so faculty and students can take mass transit to the University instead of taking their personal vehicles to the University for classes. Also, to promote mass transportation, the University and NJ Transit have a deal where students can get free bus trips to the University during the first college semester.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>5/6/08</p>	<p>The University purchases 100% recycled paper to use in their copier machines. The University also purchases roll paper towels and toilet paper that are made out of recycled materials. The recycling centers throughout the campus are made of recycled milk cartons. The University also purchases green cleaning supplies. 80% of all cleaning products used on the campus are green cleaning supplies including glass cleaners, all purpose cleaners, neutral disinfectant floor cleaner, floor stripper, floor wax and carpet shampoo.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>5/6/08</p>	<p>The University does have one of their buildings (University Hall) that is Green Building Certified under LEED. The following is a list of some of the strategies used for LEED Recognition in the New Academic Building: Protect or Restore Open Space Stormwater Management, featuring filtration systems Reduce Heat Island, Trees and pavement selections Light Pollution Reduction Water efficient Landscaping, drought resistant plants Water Use Reduction, plumbing fixture selections including waterless urinals Building Commissioning CFC reduction, specify non-CFC refrigerants Optimize Energy Performance, +20% efficiency over base case. Ozone Protection, R-134a (HFC) and absorption refrigerant only Storage and Collection of Recycling, built in casework Construction Waste Management, divert +50% Recycled Content in steel, concrete, aluminum, gypsum board, ceiling tile, carpet. Local and Regional Materials, <20% Local materials (documented) Certified Wood, specified >50% FSC cert. wood Improved Indoor Air Quality Carbon Dioxide monitoring, multiple sensors throughout the building. Low-emitting materials, adhesives, paint, carpet, composite wood Furniture - Green guard certified and recycled content</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/6/08</p>	<p>The University does have solar panel photovoltaic array installed on Finley hall that generate a small amount of electric power to the building. The solar panel photovoltaic array has contributed 3,450 Kilowatt Hours of electricity to the University with no pollution and no cost to the University.</p>

<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>4/21/08</p>	<p>University Hall has been LEED certified.</p>

NJ RUTGERS UNIVERSITY

Site ID: NJ RUTGERS UNIVERSITY
8346 360 MARTIN LUTHER KING BLVD,
NEWARK, NJ 07102

Stewardship Activities	Date Acknowledged	Comments
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>7/30/08</p>	<p>Rutger's has substantially reduced energy use by installing energy efficient heating and air conditioning systems that utilize microprocessor/pneumatic based controllers and auxillary systems at buildings throughout the Rutgers complex. In addition, Rutgers continues to upgrade existing lighting fixtures and provide more energy efficient replacement lamps.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>7/30/08</p>	<p>Environmental Enhancement projects include creating and maintaining a green roof above two large lecture halls. This project includes a sustainable garden featuring plant materials indigenous to this area. Another project involved removal of impervious concrete slabs from numerous areas of the Student Plaza and replacement with brick walkways, trees, shrubs, grass and ivy groundcover.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>7/30/08</p>	<p>Innovative Program : Waste Information Locator is a comprehensive database that lists all waste types that may be generated at Rutgers Univeristy and how to properly dispose of these materials. http://halflife.rutgers.edu/wif/index.php</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>7/30/08</p>	<p>Community Outreach Programs include activities such as, a Sustainability presentation at East Amwell Township School Environmental Club, and responding to health, safety and environmental questions from the general public.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/30/08</p>	<p>Environmental Policy is posted online. http://rehs.rutgers.edu/pdf_files/policy-w-siganture.pdf</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>7/30/08</p>	<p>EMS is posted online. http://rehs.rutgers.edu/rehs_ehms.htm</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>7/30/08</p>	<p>Employee Trip Reductions. Rutgers has won the Best Workplace for Commuters Award for it's campus bus system.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>7/30/08</p>	<p>Environmental Purchasing policy is posted online. http://purchasing.rutgers.edu/green/Green%20Purchasing/Rutgers%20Green%20Purchasing%20Policy.pdf</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>7/30/08</p>	<p>Rutger's total Greenhouse Gas Emissions = 315,954 metric tonnes of eCO2.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>7/30/08</p>	<p>Vendor/Supply Chain Requirements are posted online. http://purchasing.rutgers.edu/green/Green%20Purchasing/Rutgers%20Green%20Purchasing%20Policy.pdf http://purchasing.rutgers.edu/green/Green%20Purchasing/RU%20Greenwashing%20Form.doc</p>

15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/3/09	An interconnection monitoring and leak detection program has lowered water use from 3.9 MGD in 2003 to just under 3.0 MGD today.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	4/3/09	Nutley organizes clean-ups of the Third River as a Clean Community Program.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	4/3/09	Nutley has installed solar powered parking meters and uses solar powered signs providing direction to municipal parking lots.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	3/26/08	Nutley organizes clean-ups of the Third River as a Clean Community Program.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	3/26/08	Nutley has installed solar powered parking meters and uses solar powered signs providing direction to municipal parking lots.

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>7/7/14</p>	<p>A compressed , summer work schedule reduces greenhouse gas emissions, as a result of lowered energy use and reduced commuting for employees.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>7/7/14</p>	<p>All hydraulic elevators on campus were transformed to utilize sustainable, biodegradable oil.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>7/7/14</p>	<p>NJIT selects native plants to minimize water use and maintenance efforts.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>7/7/14</p>	<p>NJIT has a recycling program that includes everything from paper and glass to concrete and cooking oil.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>7/7/14</p>	<p>NJIT hosts many educational presentations on sustainability; audiences include undergraduate students, the NJ Chapter of USGBC Emerging Green Builders, and NJHEPS (NJ Higher Education Partnership for Sustainability).</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>7/7/14</p>	<p>NJIT received LEED certification for Greek Village complex and Central King Building.</p>

20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	7/7/14	NJIT participated in the PV incentive program by installing a 160 solar panel system that produces 52 MW of electricity and eliminates 86,832 pounds of CO2 emissions per year.
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	7/7/14	NJIT is part of the 56 NJ colleges and universities who are endorsing Sustainability Greenhouse Gas Action Plan for New Jersey.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	7/7/08	Installation of Solar Panels on Campus Center.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	7/7/08	The Campus Center has solar panels that provide 50 KW of electricity to the building - this is a partial total of the electricity that this building needs.

PASSAIC VALLEY SEWER COMM

8439 652 670 DOREMUS AVE, & WILSON AVE
NEWARK, NJ 07105

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	10/22/15	Reuse treated effluent for water cooling at Newark Energy Plant.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	10/22/15	Participates in response program for Direct Energy to lower electrical output when required usually in the summer. 5.9 MW for 6-hour period.

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>10/22/15</p>	<p>PVSC's has done extensive Green Infrastructure work with Rutgers in several of PVSC's member CSO communities, including the construction of two cisterns at local schools for capturing and using rain water. Follow these two links for more information: http://www.nj.gov/pvsc/news/articles/2015/20150908_The_Observer_Online.pdf http://www.nj.gov/pvsc/news/articles/2015/20150519_The_Record.pdf Visit the following link for more information: http://www.nj.gov/pvsc/news/articles/</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>10/22/15</p>	<p>The New Jersey Harbor Dischargers Group (NJHDG) is a consortium of nine (9) sewerage agencies, representing eleven (11) wastewater treatment plants in northeastern New Jersey, which all discharge their treated effluents to the waters of the New York/New Jersey Harbor Estuary. The NJHDG was formed in 1992 to jointly fund studies related to the water quality of the NY/NJ Harbor Estuary. In 2003, the NJHDG initiated a Long-Term Ambient Water Quality Monitoring Program for the NJ portion of the NY/NJ Harbor Estuary. The main objective of the NJHDG program is to develop a comprehensive database on the existing water quality of the NY/NJ Harbor by routinely and extensively monitoring the waters of the Passaic River, Hackensack River, Newark Bay, Arthur Kill, Raritan River, Raritan Bay, and the Hudson River. Thirty-three (33) locations throughout the region are monitored for a list of eighteen (18) conventional chemical water quality parameters, including temperature, pH, dissolved oxygen (DO), salinity, solids, nutrients, and bacteria. Monitoring is performed at each station weekly from May through September and monthly from October through April. All resources for the monitoring program, including sampling personnel and laboratory analyses, are provided by the NJHDG member agencies.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>10/22/15</p>	<p>RIVER RESTORATION 1. In 1998, the Passaic Valley Sewerage Commission created the Passaic River/Newark Bay Restoration Program. The program was designed to combat pollution as well as assist in flooding abatement within PVSC's five county service area on Newark Bay, the Passaic River and its tributaries while promoting their recreational and economic uses. The program is comprised of three elements – volunteer shoreline clean-ups, skimmer vessel floatables removal, and community or municipality requested clean-ups. The volunteer shoreline clean-up element has been among the most successful programs of its kind in the nation. Beginning in 1998, PVSC began assisting volunteer groups including public and private schools, Boy Scout and Girl Scout troops and community organizations in conducting shoreline clean-ups to remove litter and debris from along waterways within its service area by providing all necessary clean-up supplies including debris removal. In 1999, PVSC added floatables removal to the program using grant monies to purchase a 50-foot surface skimmer vessel. Christened the S.V. Newark Bay, this vessel embarks on daily patrols on the Newark Bay and Passaic River, removing floating debris and litter. PVSC is currently working on securing funding for a second 50-foot skimmer vessel to double our collection capacity. Finally, PVSC conducts community requested clean-ups in response to community or municipal requests for assistance. These projects require the specialized equipment, experience and resources of PVSC's River Restoration crew that community groups or municipalities may not possess. Since the creation of the PVSC's River Restoration Program in 1998, which is charged with preserving and protecting over 100 miles of area waterways, the PVSC has removed over 11,620.29 tons of debris from the Newark Bay, the Passaic River and its tributaries, and sponsored over 1,085 individual clean ups along shorelines and in communities. 2. PVSC has Community Outreach Program which works to educate children and adults about sewer systems, treatment plants, and how to protect our waterways. The Outreach Program goes to schools, gives demonstrations and presentations, and PVSC is one of the few treatment plants that regularly conducts plant tours for local schools. The mascot is "Messy Marvin". For more info, go to: http://www.nj.gov/pvsc/education/</p>

<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>10/22/15</p>	<p>PVSC's has done extensive Green Infrastructure work with Rutgers in several of PVSC's member CSO communities, including the construction of two cisterns at local schools for capturing and using rain water. Follow these two links for more information: http://www.nj.gov/pvsc/news/articles/2015/20150908_The_Observer_Online.pdf http://www.nj.gov/pvsc/news/articles/2015/20150519_The_Record.pdf</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>4/28/08</p>	<p>PVSC sponsors volunteer clean up efforts of stream and river banks. Up to 450 tons/yr of garbage were removed from river banks in this manner. PVSC also removed up to 250 tons/yr of garbage from the Passaic River with two skimmer boats.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>4/28/08</p>	<p>PVSC has an environmental education outreach program. PVSC staff visits different schools every day and provides educational materials on how to keep the environment clean.</p>

19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	11/23/09	Replacement of the security van fleet with hybrid vehicles.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	11/23/09	Prudential has installed energy efficient lighting, heating and cooling. Reduced its carbon emission by 39,250 metric tons.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	11/23/09	Partnered with other organizations to sponsor the annual Green Expo. Also, provides financial assistance to support the Prudential Outdoor Learning Center.
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	11/23/09	
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	11/23/09	Prudential encourages employees to use mass transit through participation in the TransitCheck Transit Reimbursement Incentive Program. Also approves alternative work arrangements, such as compressed workweeks and telecommuting. In 2008, these programs resulted in a reduction of an estimated 6,000 metric tons of carbon emissions.

If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/3/10	UMDNJ ambulances run exclusively on biodiesel. UMDNJ has free shuttles for employees running throughout the day from the campus to local Newark Points including Penn Station.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	5/3/10	UMDNJ has undergone an expansive lighting retrofit project - 33,000 fixtures were replaced with energy efficient types. UMDNJ also has instituted "setback policies" during weekends to reduce energy consumption.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	5/3/10	UMDNJ's Physical Plant department uses Green Seal certified cleaning products - janitorial cleaning agents, paper goods and low VOC/low odor paints.

SEABRA BROTHERS III

Site ID: SEABRA BROTHERS III
 8594 574 606 FERRY ST,
 NEWARK, NJ 07105

Stewardship Activities	Date Acknowledged	Comments
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	4/15/15	Three Quarters of the Company Personnel participate in Employee Trip Reduction. 1/4 of the Employees take Public Transportation to get to work (5 employees) 1/2 of the Employees car-pool or are brought to work by spouse thus not bringing their own cars to work. (10 employees) Total # of employees at site = 20 employees

SHELL OIL PRODUCTS US

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>7/26/17</p>	<p>Shell Oil Products US periodically reviews operating procedures to determine potential reduction of hazardous materials. Past and ongoing practices include: 1) Use of cable suspension internal floating roofs to reduce air emissions (gasoline & ethanol emissions) 2) Mechanical shoe tank roof seals have replaced log type seals - which has reduced the disposal quantities when the seals are replaced.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/26/17</p>	<p>Shell Oil Products US Newark Facility conserves electricity by using the Pump-Smart System which controls the electricity demand of pumps thus reducing the electricity consumption. Company has also recently installed VFD pumps onto three of their product storage tanks: Tank 3 (2015) Tank 4 (2015) Tank 10 (2017)</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/26/17</p>	<p>Although Shell Oil Products US (Newark Facility) does not operate trucks for product distribution, distribution of products by contract trucking is optimized by an Order Management Center. The Order Management Center scheduled deliveries such that deliveries are optimized from a business perspective (for lowest cost) , which also minimizes the number of deliveries resulting in less fuel being used. Shell Oil Products US also does a combine pick-up for Universal Waste from their Sewaren and Newark Facilities (Company only comes out once a year to pick up Universal Waste for both sites instead of going to one site on one day and one site on another day). This practice conserves fuel and energy.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>7/26/17</p>	<p>The Shell Oil Product US Facility in Newark has changed out 80% of their lights in their office building from incandescent lights to LED Lights and roughly 40% of the lights outside in the tank terminal from incandescent lights to LED Lights. Change of lights at facility is still on-going.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/26/17</p>	<p>Shell Oil Products has an Environmental Policy that is signed by Ben Van Beurden, the Chief Executive Officer of Shell Oil Products. The Environmental Policy focuses on Sustainability and reducing their Carbon Foot Print. Shell Oil strives to create a world-class investment case for shareholders and strengthen their leadership in the oil and gas industry, while positioning the company for growth as the world transitions to a low-carbon energy system.</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>7/26/17</p>	<p>Shell Oil Products utilizes an Environmental Management System called "In Control" at their Newark Facility that is comprised of 8 elements that include: 1) Leadership & Commitment 2) Policies and Objectives 3) Organizational Responsibilities and Resources 4) Risk Management 5) Planning and Procedures 6) Implementation 7) Monitoring and Reporting 8) Assurance and Management Review</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>7/26/17</p>	<p>Shell Oil Company submits an Environmental Sustainability Report each year. The 2016 Environmental Sustainability Report was submitted in April of 2017 and can be found under the following website: http://reports.shell.com/sustainability-report/2016/ .</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>7/26/17</p>	<p>Shell Oil Products US strongly encourages their employees to practice a new program at their sites called "trip planning". Any work related trip that any employee needs to take, the employee must look at this "trip planning" journey management program and pick the "shortest and most efficient route" for their trip to conserve fuel, energy and time.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>7/26/17</p>	<p>All of the Shell Oil Facilities submit their Green House Gas Emission Information to the Main Corporate Headquarters in Houston, Texas. The Green House Gas information from all the Shell Oil Product Companies is tabulated and entered into the Annual Sustainability Report which reports Green House Gas Emissions and Carbon Dioxide Emissions from all of the facilities that Shell Oil Company owns around the world .</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>11/16/10</p>	<p>Motiva periodically reviews operating procedures to determine potential reduction of hazardous materials. Past and ongoing practices as noted above include: - Use of cable suspension internal floating roofs to reduce air emissions. - Mechanical shoe tank roof seals have replaced log type seals, which has reduced disposal quantities when the seals are replaced. - Use of biodegradable detergents/cleaners where feasible to reduce hazardous material usage. - Policy recommends where feasible, use of non aerosol containers for dispensing materials such as cleaners and lubricants.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/16/10</p>	<p>Electricity conservation has been achieved using the Pump-Smart System, which controls electricity demand of pumps thus reducing electricity consumption.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/16/10</p>	<p>Although Motiva does not operate trucks for product distribution, distribution of products by contract trucking is optimized by an Order Management Center. The Order Management Center schedules deliveries such that deliveries are optimized from a business perspective (for lowest cost), which also minimizes the number of deliveries resulting less fuel being used.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>11/16/10</p>	<p>Motiva terminals generally participate in various community activities in the communities where they are located. These programs include fund raising for charities, support of local organizations, beach cleanups and operating a small tree farm to provide trees in Woodbridge, NJ</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/16/10</p>	<p>Motiva has an environmental policy and commitment signed by the Executive Committee. The policy is posted in the lobby of the office building.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>11/16/10</p>	<p>Motiva Enterprises LLC utilizes a Management System comprised of 8 elements that include: Leadership & Commitment, Policies and Objectives, Organizational Responsibilities and Resources, Risk Management, Planning & Procedures, Implementation, Monitoring and Reporting, Assurance and Management Review</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>11/16/10</p>	<p>Motiva Enterprises LLC is a joint venture company of Shell Oil Products US and Saudi Refining. Much of Motiva's Environmental programs and procedures are modeled after those of Shell Oil Products US. As part of the Shell organization, data from Motiva's operations are included in the Shell Oil Annual Sustainability Report. http://www.shell.com/home/content/environment_society/reporting/</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>11/16/10</p>	<p>Motiva employees may opt for a 9/80 schedule, which eliminates commuting to work one day every two weeks. Depending on local requirements, some employees may also work four ten hour days per week, instead of a normal five day 40 hour week, reducing commuting by 1 day per week.</p>

ST BARNABAS MEDICAL CENTER

 LIVINGSTON, NJ 07039

Stewardship Activities	Date Acknowledged	Comments
Hospitals for a Healthy Environment.	2/23/09	Hospitals for a Healthy Environment
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	2/23/09	St. Barnabas had received an award from the EPA for their hazardous waste minimization plan: 1. 2 xylene distillations units were installed to recover approximately 95% of the xylene waste. 2. Purchase of indicator thermometers instead of mercury thermometers 3. Replaced 90% of the fluorescent lamps with green tipped low mercury lamps.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	2/23/09	Changed all faucets so that there is less amount of water on each flush.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	2/23/09	Ken Richter of Environmental Services advised me that they did.
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	2/23/09	Hospitals for a Healthy Environment

12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	4/19/17	The Nursing Home is replacing all their old fluorescent lights and exit lights with new energy saving LED Lights. To date, the Nursing Home has replaced 2/3 rds of the fluorescent lights at their facility with LED Lights. 2nd and 6th Floors - 100% of the Patient Rooms have been switched to LED Lights. 1st and 5th Floors - 50% of the Patient Rooms have been switched to LED Lights. All fluorescent lights should be replaced by LED Lights by the end of 2017. Project started in the summer of 2016.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	4/19/17	Nursing Home has Solar Panels in their Parking Lot to operate the lighting system for their outside parking lot. - Installed in 2014.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/21/12	Starting in 2009, the Nursing Home has replaced 70% of the toilets in the patient bathrooms (roughly 112 patient rooms out of a total 160 rooms), from 3 gallon toilets to 1.6 gallon toilets - reducing the water usage from the toilets.

SUBURBAN DISPOSAL INC

18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	8/17/16	The facility has installed a natural gas fueling station and has converted at least 30 trucks to run on natural gas.

TROY CHEMICAL INC

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	8/18/15	<p>Starting in 2009 and continuing today, Troy Chemical has been able to reduce the amount of Methanol used at their facility by changing the formulation of one of their major products (Polyphase) that is produced in Building # 71. Due to this Formulation Change for the Polyphase Reactor (Reactor 7149), the amount of methanol reduction has equaled to 600 gallons/batch or roughly 1800 to 2000 lbs. of Methanol a week. Starting in 2014 and continuing today, Troy Chemical has been able to reduce the amount of High Flash Naphtha Use by also reformulating the product that they produce (P-100). The Company is adding a wet cake to the dry Polyphase Product after the product goes through the Separation Tank. The use of the wet cake is lowering the usage of Modsol or High Flash Naphtha. The Company is reducing the amount of Naphtha usage by 3,000 to 4,000 gallons/yr.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	8/18/15	<p>Within the last 4 years, Troy Chemical has replaced or is in the process of replacing the pumps on all equipment used in the production of their Polyphase Product Operation (Located in Building # 71) and the Powder Coating Production Equipment (Located in Building 61) with new more efficient pumps. - This is an on-going project.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	8/18/15	<p>Troy Chemical roughly 2 years ago changed out all lighting in all their office buildings (3 Office Buildings) to green tip Fluorescent Lights. Green-tipped fluorescent lamps contain lower amounts of mercury than regular fluorescent lamps. These lamps are called green-tipped because they are usually marked with a green tip or labeled as "low mercury." The facility also installed in 5 offices, sensors that detect movement so when no one is in the room the lights will turn off. The new Production Building # 50 that is just finishing construction uses solar lights outside to light the building.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	8/18/15	<p>Troy Chemical has conducted Outreach Discussions and has had lectures with one of the local Environmental Groups in the Ironbound Area of Newark in regards to Chemical Industries and the Environmental Requirements and Regulations they must follow for the State of NJ as well as any Federal Requirements that apply to them. The Vice President of Troy's Human Resource Department met with the ICC (Ironbound Community Corporation of Newark) about 2 months ago for the latest Outreach Discussion. - The latest discussion dealt with Idling Trucks in the Newark Ironbound Area.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	8/18/15	<p>Troy Chemical has a one page Environmental Policy posted in the lobby of the building and in other areas of the building. The Environmental Policy (signed by the CEO - Bob Orkin) can be found under the following website: http://www.troycorp.com/company_new.asp?cat=company&subcat=Environment</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/23/10</p>	<p>Troy has a one page Environmental Policy posted in the lobby of the building and Internet site. http://www.troycorp.com/company.asp?cat=company&subcat=environment</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/23/10</p>	<p>Troy is registered to ISO 14001:2004</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/12/08</p>	<p>Troy has implemented several process and operational changes for the reduction of energy use. Mr. Capasso stated that Process examples include fixing steam line leaks & insulating piping; Operational examples include purchasing & installing an Energy Star Air Conditioner & increasing the number of energy efficient lighting throughout the plant. The reduction of energy use is tracked in an internal Fuel Oil Consumption Report (Attachment A).</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/12/08</p>	<p>Troy has a one page Environmental Policy posted in the lobby of the building and Internet site. http://www.troycorp.com/company.asp?cat=company&subcat=Environment</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/12/08</p>	<p>Troy is registered to ISO 14001:2004.</p>

UNIFOIL CORP

Site ID: UNIFOIL CORP
 149044 12 DANIEL RD,
 FAIRFIELD, NJ 070042507

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	1/13/11	Vapor deposition of aluminum is non-laminated, film-free, foil-free, and applied without solvents. The facility also uses water based inks and paints if need. Solvent based paints and coatings are no longer used.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	1/13/11	Vapor deposition of aluminum uses less energy and fewer materials when compared to competitive products. The finished product weighs significantly less so they are less expensive to ship.
13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.	1/13/11	Approximately three years ago, facility implemented vapor deposition, a new technology that applies aluminum on a substrate without laminating or using solvents. The site conducted a life cycle assessment on their product that led to the development of the vapor deposition. Vapor deposition applies aluminum at a rate of 0.00000016 inch making the material biodegradable and recyclable. Previously the material was not biodegradable and recyclable.

NEWARK, NJ 07114

Stewardship Activities	Date Acknowledged	Comments
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	8/21/13	Facility installed a Telematics system in its fleet. This system monitors several parameters such as seat belt use, idling time, speed, etc. With this system, fuel consumption went down, and idling by the fleet was reduced by 30 %.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	8/21/13	In the past three to four years, facility replaced all the light fixtures with energy efficient light fixtures. Also installed were motion detectors that turn off the lights if no one is around. Facility is saving ~\$4,000.00 per month.

US VETERANS ADMIN NJ HEALTH CARE SYSTEM FACILITY MANAGEMENT SERVICE

Site ID: US VETERANS ADMIN NJ HEALTH CARE SYSTEM FACILITY
9033 MANAGEMENT SERVICE
385 TREMONT AVE, BLDG 7
EAST ORANGE, NJ 07019

Stewardship Activities	Date Acknowledged	Comments
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	10/26/17	DVA Healthcare Systems for Veterans, East Orange Campus has an Environmental policy that governs their efforts to protect the environmental while operating.
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	10/26/17	DVA Healthcare Systems has an Environmental System in place to guide their activities, protect their resources and monitor their efforts.
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	8/13/15	The Hospital has in its Histology Lab a Hand-Held Stainer Booth with a Hood where stains are used to stain tissue so that the makeup of the tissue can appear better when looked on a slide under a microscope. Xylene and Alcohol are used to wash the stain down from the lab tissues. Roughly 8 gallons of Xylene are used a month in this laboratory. In 2010, the hospital bought a Solvent Recovery Machine (a CBG Recycler Biotech Machine).....the Solvent Recycling Machine will separate out the Alcohol from the Xylene and thus make the Xylene re-usable to be re-used in the hand held Stainer Hood. Originally prior to the Solvent Recovery Machine, 30 gallons of Xylene used to go out each month at Hazardous Waste, but with the new Stainers installed in 2010 as well as the new Solvent Recovery Machine used, no Xylene to very little Xylene has to be sent out as Hazardous Waste anymore.
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	8/13/15	In 2014/2015, the Hospital replaced two of their Water Cooled Condensers with two Air Cooled Condensers. These two new Air Cooled Condensers do not use water which the old Water Cooled Condensers did so (roughly 720 gallons a day for each condenser).....so roughly 1440 gallons of water are now conserved daily from the installation and use of the two new Air Cooled Condensers. Also, the Hospital is just finishing up changing out all their older water fixtures in all their patient rooms and public bathrooms with newer low flow water fixtures.
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	8/13/15	1) The Hospital continues to recycle the light ballast for their fluorescent lights. The light ballasts are the electrical unit that allows the fluorescent lights to come on or go off. 2) The Hospital still recycles their x-ray film. They send the x-ray film to a facility in Illinois to get recycled.
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	8/13/15	The Hospital has leased through GSA, hybrid vehicles that are used at both the VA Hospital In East Orange and Lyons VA Hospital in Liberty Corner Hospital currently leases 9 Ford Fusions and 21 Hyundai Elantras - due fuel vehicles for their fleet cars.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/13/15</p>	<p>Hospital is starting (last year in 2014) to change over their T-8 Fluorescent bulbs over to LED Lights. LED Lights have a 50,000 hour (12-20 yrs) plus life span and an average lumen per watt output of 90-130. LED's produce better quality light more efficiently than any other lighting product. LED's can duplicate any light, are environmentally safe, and reduce energy cost over all other lighting. Roughly 10% of the lights at the hospital have been changed over to the new LED Lights (this is an ongoing project). When a section of a building at the Hospital is not being used for patients or personnel, a sensor will shut off half of the lighting in that section of the Hospital to reduce energy use. Also, in the evening hours, the air handlers will shut off in the evenings if the section of the building is not being used to conserve energy usage.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/13/15</p>	<p>Hospital has posted in various offices a MOU or "Memo of Understanding" called the Green Environmental Management System (GEMS) Policy which they deem as their Environmental Policy. The Policy is signed by the Director of the Hospital - Kenneth Mizrach. Part of the Policy is copied below: PURPOSE: Executive Order 13148, Greening the Government through Leadership in Environmental Management, directed that federal agencies have a governing environmental policy in place for the operation of its facilities. This Executive Order also required that VHA facilities develop and implement environmental management systems. The objectives of an environmental management system are to ensure that facilities are in full compliance with environmental regulations and are operated and managed in such a way as to result in the continual improvement of the environmental program. This VA Medical Center policy facilitates the use of its Green Environmental Management System (GEMS). POLICY: The Department of Veterans Affairs is committed to the health of the environment, promotes pollution prevention, energy efficiency, acquisition of environmentally preferable products and services, and reduces, reuses and recycles wastes.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/13/15</p>	<p>The VA Hospital is using an Environmental Management System called GEMS (or Green Environmental Management System) GEMS - is an environmental management system that's an important part of the overall operations of the New York Harbor Healthcare System. GEMS - is a management tool that is used to monitor and improve the environmental performance of the VA Hospital. GEMS helps the VA Hospital protect the environment and the health and safety of everyone at the Hospital and in the local community.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>8/13/15</p>	<p>Employee Trip Reduction Practices at the VA Hospital in East Orange: 1) Some of the employees at the Hospital are involved in carpooling and vanpooling. (% of people involved in this is not known). The Hospital posts the following websites on Posters in the Hospital encouraging their employees to vanpool/carpool: a) For those working in Essex County, contact Meadowlink b) If you work in Somerset County, contact RideWise at www.ridewise.org. c) For staff in our CBOCs working in other counties, check out NJDOT Rideshare, select the county where you work, and follow the link for information. 2) Many of the employees that live locally take a NJ Transit bus to work. These employees are involved in a NJ Transit Benefit Program which permits employers to subsidize employees costs of commuting to work in other than single occupancy vehicles. The Transit Benefit Program is designed to: 1. Improve air quality; 2. Reduce traffic congestion; 3. Conserve energy by encouraging employees to commute to work on a daily basis by means other than single occupancy motor vehicles. 3) There is a shuttle service between Lyons VA Hospital in Somerset County to the VA Hospital in East Orange for patients so the patients do not have to drive their own vehicles between the two VA Hospitals.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/15/10</p>	<p>The VA Hospital in East Orange recently (within the last two months), installed and is operating a new Stainer Machine in the Histology Lab. This Stainer Machine stains tissue and produces tissue slides to be used under the microscopes in some of the other labs at the hospital. This new Stainer Machine uses less Xylene than the older Staining Machine. The Hospital also has recently purchased a new solvent recovery machine. The Hospital now can take the spent Xylene from the Staining Machine and instead of sending it out as Hazardous Waste, place the spent Xylene into the Solvent Recovery Machine to clean the Xylene so that it can be reused in the Staining Machine. The two machines above are both closed systems. Each machine uses roughly 1 gallon of Xylene. According to the Hospital Representative, 30 gallons of Xylene used to go out as "Hazardous Waste" each month from the usage of the previous Staining Machine. Since the new Staining Machine has been in operation, the new Staining Machine only uses 8 gallons of Xylene a month and that 8 gallons of xylene is cleaned through the recycling machine and placed back in the Stainer to be re-used again and again so no Xylene goes out as Hazardous Waste now. The Hospital also has purchased new Floor Care Machines. The Machines that use to buff and clean the tiles on the floors of the hospital used to use chemicals, but the new machines only use water (no chemicals).</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/15/10</p>	<p>Starting in 2006 and ending in 2015, the VA Hospital is replacing all their old faucets, toilets and urinals at the hospital with low flow faucets, toilets and urinals when the current faucets, toilets and urinals need to be replaced.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/15/10</p>	<p>The Hospital has the following Material Conservation Programs at their site: 1) The Hospital recycles the mercury in their Blood Pressure Instruments. Instruments are taken to a Recycling Facility (Baum) to have the mercury recycled. 2) The Hospital recycles the light ballasts for their fluorescent lights. The light ballasts are the electrical unit that allows the fluorescent light to come on or go off. 3) The Hospital recycles their x-ray film. They send the x-ray film to a facility in Illinois to get recycled. 4) The Hospital sends their used Printers (ink and toner cartridges) to Unicor Company to be recycled and to be re-used in the Federal Prison System.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/15/10</p>	<p>The Hospital has purchased recently (within the last couple of years) dual fuel vehicles that operate on gasoline or E-85 which is a fuel made up of 85% Ethyl Alcohol. There is a station in East Orange that the Hospital uses to fuel the vehicles up with 85% Ethyl Alcohol. The Hospital also currently has an utility truck at the site that operates on electricity (batteries). The Hospital is currently waiting to receive an additional utility vehicle which operates on electricity. The Hospital has also 10 hybrid cars (Ford Fusions) that operate on gasoline and electricity (batteries).</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/15/10</p>	<p>The Hospital is replacing their fluorescent lights (T-12 Lights to T8 Lights that have less mercury and that are more energy efficient). When a building or section of a building at the Hospital is not being used at the Hospital, a sensor will shut off the lights and the set back thermostats will lower the temperature of these areas to reduce energy usage in un-manned areas of the hospital.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/15/10</p>	<p>Hospital has posted in various offices a MCM or "Memo of Understanding" called the Green Environmental Management System (GEMS) Policy which they deem as their Environmental Policy. The Policy is signed by the Director of the Hospital - Kenneth Mizrach. Part of the Policy is copied below: PURPOSE: Executive Order 13148, Greening the Government through Leadership in Environmental Management, directed that federal agencies have a governing environmental policy in place for the operation of its facilities. This Executive Order also required that VHA facilities develop and implement environmental management systems. The objectives of an environmental management system are to ensure that facilities are in full compliance with environmental regulations and are operated and managed in such a way as to result in the continual improvement of the environmental program. This VA Medical Center policy facilitates the use of its Green Environmental Management System (GEMS). POLICY: The mission of the VANJ Health Care System is to deliver quality healthcare to our nation's veterans. In order to accomplish this mission, the VA Medical Center recognizes that it must operate so as to protect both the environment and health and safety of patients, employees and visitors. This Memorandum establishes a governing environmental policy to accomplish this mission.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/15/10</p>	<p>The Hospital is using an Environmental Management System called GEMS or Green Environmental System. A website to access this Environmental Management System can be found at: The GEMS Guidebook at http://vaww.ceosh/Guidebooks/GEMS2004/gems.htm</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>6/15/10</p>	<p>Employee Trip Reduction Practices at the VA Hospital in East Orange: 1) Some of the employees at the Hospital are involved in carpooling and vanpooling. (% of people involved in this is not known). The Hospital posts the following websites on Posters in the Hospital encouraging their employees to vanpool/carpool: a) For those working in Essex County, contact Meadowlink at www.meadowlink.org. b) If you work in Somerset County, contact RideWise at www.ridewise.org. c) For staff in our CBOCs working in other counties, check out NJDOT Rideshare, select the county where you work, and follow the link for information. d) http://vaww.newjersey.med.va.gov/carpooling/commutcost.asp 2) Many of the employees that live locally take a NJ Transit bus to work. These employees are involved in a NJ Transit Benefit Program which permits employers to subsidize employees costs of commuting to work in other than single occupancy vehicles. The current maximum tax-free amount is \$115 per month. The Transit Benefit Program is designed to: 1. Improve air quality; 2. Reduce traffic congestion; 3. Conserve energy by encouraging employees to commute to work on a daily basis by means other than single occupancy motor vehicles. http://vaww.va.gov/ofcadmin/transben_page.asp 3) There is a shuttle service between Lyons VA Hospital in Somerset County to the VA Hospital in East Orange for patients so the patients do not have to drive their own vehicles between the two VA Hospitals. 5) Tele Conference Calls - The Hospital is conducting for their Administration Teleconference calls between the VA Hospitals in NJ and NY instead of meetings at the site so that the Administrators do not have to waste gas driving to the VA Hospitals for meetings.</p>

<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>6/15/10</p>	<p>The Hospital does have an Environmental Purchasing Policy. Part of the Hospital Purchasing Policy is listed below: Individuals who make procurement requests, including those who are part of the Government Purchase Card Program, are responsible for: Identifying and documenting whether green products and services are available and can sufficiently satisfy the requirements of price, availability and performance. Identifying green procurement requirements/ specifications prior to submission to contracting officers or other supply sources. Documenting all exceptions to the green procurement requirements. Contracting Officers must require that vendors: Certify that the percentage of recovered materials to be used in the performance of the contract will be at least the amount required by applicable specifications or other contractual requirements, and...Estimate the percentage of total material utilized for the performance of the contract that contains recovered materials. Certify the percentage of recycled content of the product purchased.</p>

VERONA TWP DPW

Site ID: VERONA TWP DPW
13029 10 COMMERCE CT,
VERONA, NJ 07044

Stewardship Activities	Date Acknowledged	Comments
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>8/21/08</p>	<p>Solar panels have been installed atop the main building and are in use to reduce the facility's use of electricity.</p>

VILLAGE SERVICE CENTER

Site ID: VILLAGE SERVICE CENTER
 8195 101 S ORANGE AVE W,
 SOUTH ORANGE, NJ 07079

Stewardship Activities	Date Acknowledged	Comments
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	2/29/08	Electronics recycling program for citizens to bring in old computers and cell phones done every other month. Products are taken to Advanced Recycling & Recovery for refurbish and resale.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	2/29/08	The library has been converted to an energy efficient HVAC system and light bulbs have been switched to compact fluorescents.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	2/29/08	An "Energy Day" event was held in which a light bulb exchange was offered to allow citizens to trade their incandescent bulbs for compact fluorescent to bring awareness regarding energy use reduction.

WHEAL GRACE CORP

Site ID: WHEAL GRACE CORP
 19679 300 RALPH ST,
 BELLEVILLE, NJ 07109

Stewardship Activities	Date Acknowledged	Comments
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	5/17/13	Wheal Grace has developed Green Print which is offered to their customers as eco-friendly printing. This entails recycled paper, vegetable based inks and alcohol free components.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	5/17/13	http://www.wheal-grace.com/environmental/enviromental_policy.html
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	5/17/13	Wheal-Grace Corp purchases wind energy from Community Energy for its entire plant operations.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	9/30/11	The Wheal Grace company has developed a Green Print program which is offered to customers. The program provides printed products that utilize green printing practices such as using recycled paper, vegetable-based inks, alcohol-free components and recycling of by-products. Wheal Grace is also a certified Forest Stewardship Council member.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	9/30/11	The facility has an environmental policy that describe how the company will operate regarding a clean and sound environmental company. Stewardship efforts are noted in this area and therefore credit is recommended at this time.

400 NORTH WOODBURY ROAD CORP

Site ID: 400 NORTH WOODBURY ROAD CORP
 12891 400 N WOODBURY AVE, & LAMBS RD
 PITMAN, NJ 08071

Stewardship Activities	Date Acknowledged	Comments
Green Power Partnership.	10/13/10	Sony is a Green Power Partner and received Green E recognition (Top 50 list from EPA) for its corporate wind farm. The company's green power purchase and on-site solar generation are part of its ongoing commitment to reducing its environmental impact globally and supporting renewable energy.
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	10/13/10	Most of the hazardous waste at Pitman Sony is the internal recycling of nickel which is done on-site. They reduced their oil usage by switching to electric operated parts instead of hydraulic oil, and 99% of that is recycled.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	10/13/10	Lawns at the site are no longer watered. Faucet sensors have been installed in all sinks throughout the plant. Temperature controls have been added to the water chillers to prevent evaporation. The water chillers are shut down in the winter, which reduces the amount of evaporation and saves water.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	10/13/10	Charts have been provided, showing that they were able to increase production and reduce energy consumption through their lighting changes, specifically powering down equipment when not in use.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	10/13/10	Sony uses a "closed loop" recycling policy for corrugated boxes and paper and wood. (Closed Loop = they only use recycled materials and then recycle the material they use). Different types of packaging is used to reduce the product packaging sizes. The sprue (which is the inside of the CD) is recycled right away and used to make new CD's.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>10/13/10</p>	<p>Sony is using high efficiency T5 lighting with motion sensors throughout most of its buildings.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>10/13/10</p>	<p>Sony's corporate office works with children each year and makes a calendar using the children's drawing and ideas for water conservation as its Innovative Program. This calendar is distributed worldwide.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>10/13/10</p>	<p>Sony has an Environmental Policy as part of its ISO 14000 certification.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>10/13/10</p>	<p>Sony became ISO 14000 Certified in 1997. They were the second site in NJ to become ISO 14000 Certified and the second Sony site in the county to become ISO 14000 Certified. (certification is on-site)</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>10/13/10</p>	
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>10/13/10</p>	<p>Sony is only using copiers that are capable of creating double-sided copies (either rented or purchased machines). Sony only uses recycled paper and recycled corrugated materials, and then they also recycle these materials.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>10/13/10</p>	<p>Sony uses Wind Credits for its Pitman facility. Corporate Sony purchases these credits from the Green-E-Recycling and these credits account for ~40% of Sony Pitmans energy consumption.</p>

<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>10/13/10</p>	<p>Every vendor that Sony uses must fill out a "Social Responsibility Form" in order to sell or buy anything from Sony. Sony also has a "Green Partner Program" with its vendors, and this is a legal agreement, and Sony provides them with a certificate and is renewed every year.</p>

A FERRUCCI & SON

Site ID: A FERRUCCI & SON
122898 1421 PINEY HOLLOW RD,
 FRANKLIN TWP, NJ 08344

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>4/15/14</p>	<p>The farmer recycles the pesticide empty container with Helena Company and the State program.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/15/14</p>	<p>In the farm high efficiency lighting is used.</p>

A FERRUCCI & SON NURSERY

Site ID: A FERRUCCI & SON NURSERY
616271 454 PINEY HOLLOW RD ,
NEWFIELD, NJ 08344

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/8/18	To reduce hazardous material use, the farmer controls weeds and grass mechanically, monitors the fields for pests and rotates the crops. The business also uses cover crops to fertilizer the soil.

ANGELO GRASSO & SON FARMS

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	10/31/17	To reduce hazardous material use, grass and weeds are cut mechanically and the farmer monitors the fields for pests prior to applying pesticides.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	10/31/17	High efficiency LED lighting is used in the business to save energy.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	10/31/17	A drip irrigation system is used to save water.

BALD EAGLE FARM

Site ID: BALD EAGLE FARM
 201490 1917 KINGS HWY,
 SWEDESBORO, NJ 08085

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	8/29/14	The business has 54 acres in drip irrigation system to save water.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	8/29/14	the farm recycles the pesticides empty containers with Helena and the State program.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	8/29/14	The farm uses high efficiency lighting T8, and has high efficiency heater and air conditioner.

BELLONES NURSERY

Site ID: BELLONES NURSERY

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/29/13	Facility reformulated products to minimize ammonia hydroxide usage. Ammonia as hazardous waste has been greatly reduced.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	5/29/13	I reviewed the Environmental Policy which is prominently posted in several areas of the facility. Employees are actively made aware of the policy. Policy signed by Bob Marquette, President.
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/2/08	Facility is reformulating products to reduce/eliminate hazardous materials (e.g. Ammonia)
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	4/2/08

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	11/13/13	The farmer controls weeds mechanically, he does not apply herbicides. To avoid insects attack after the polinization of the pears, the farmer covers the flowers with paper bags or vinyl plastic. He does not apply any pesticide.

CLAYTON BORO

Stewardship Activities	Date Acknowledged	Comments
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>10/17/18</p>	<p>All street lights in Clayton is currently being replaced with LED lighting.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>10/17/18</p>	<p>In collaboration with the boy scouts, the Boro constructed bat boxes at the park to provide habitat for bats and reduce mosquito populations.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>10/17/18</p>	<p>Provide recycling of cooking oil as a service to all residents, this reduces the potential of it being dumped into drains.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>10/14/15</p>	<p>The Borough of Clayton has installed high efficiency, low wattage incandescent bulbs in its Municipal Building, Wastewater Treatment Plant and at the concession stands at the ball field. Motion detectors were also installed in Borough Hall. A high efficiency air conditioner was installed at the Recreation Center and a new high efficiency heater and air conditioner was installed at Borough Hall.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>10/14/15</p>	<p>Clayton Township hosts a kids clean up day, where students are involved in several activities including community garden planning and start up, and composting. Local elementary and high schools are involved.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>11/15/12</p>	<p>The Borough of Clayton has installed new high efficiency, low wattage incandescent bulbs in its Municipal Building, Wastewater Treatment Plant and at the concession stands at the ball field. Motion detectors were also installed in Borough Hall. A high efficiency air conditioner was installed at the Recreation Center and a new high efficiency heater and air conditioner was installed at Borough Hall.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>11/15/17</p>	<p>COIM continues to reduce its Hazardous Material footprint by actively reducing and/or recycling many of the raw materials and finished goods that may have hazardous components. The Company actively identifies key areas in their production process that has allowed a more efficient and permanent reduction raw materials consumed and wastes generated.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>11/15/17</p>	<p>COIM has reduced its water usage and corresponding waste and sewage discharge over the past 18 months by recycling commonly used process' such as boiler blow down water and cooling tower make up water.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>11/15/17</p>	<p>COIM continues to produce, market and sell its Low Free products that are considered 99% solvent free. This product allows the company to recover and reuse raw materials that previously stayed in the finished goods, thus reducing both the total volume of raw materials needed for production and amount of hazardous materials that make up their product offerings.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>11/15/17</p>	<p>The site is currently testing biological water treatment options to further reduce its disposal costs. This study centers around the effective destruction through biological digestion of several hazardous components.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>11/15/17</p>	<p>COIM is a member in good standing of both the West Deptford Community Advisory Panel (WD – CAP) and the Gibbstown-Paulsboro CAP.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/15/17</p>	<p>Company EH&S policy is posted throughout both COIM facilities and is always available for review on the Company's intranet site. The policy is signed and championed by the COIM President and all of upper management. It is constantly reinforced with all employees through daily; weekly and monthly EH&S meetings and awareness training.</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>11/15/17</p>	<p>The Company follows several EMS templates including: Responsible Care; ISO 9001, 14001 and 18001. COIM follows a customized EMS that includes extensive procedures; employee training; auditing of EMS and its applications including goals; implementation; corrective actions and improvement plans.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>11/15/17</p>	<p>The Company presents and reviews with all employees on an annual basis the current environmental incidents, their corrective actions, and any regulatory interface in an annual report to employees.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>11/15/17</p>	<p>COIM utilizes vendors and suppliers that attempt to follow and maintain a sustainable footprint while still effectively supplying the necessary products to sustain both the environment and the business.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>11/15/17</p>	<p>All vendors and suppliers are evaluated and approved for service or products by both the Purchasing and EH&S Departments. The site provides training and auditing to support the Contractor and Vendor EH&S Qualification program.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>1/14/16</p>	<p>Member of Mantua Grove community advisory panel.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>1/14/16</p>	<p>EHS policy is posted on the site safety bulletin board and available to all employees on the "X" drive under EHS information for employees. Policy is signed by the Coim USA president.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>1/14/16</p>	<p>Follow responsible care management system. site EHS policy, comprehensive EHS procedures, employee EHS training program, annual EHS goals and objective in EHS improvement plan, etc.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>1/14/16</p>	<p>Contractor EHS qualification program.</p>

Climate Leaders.	3/4/08	they are a member on EPA's CO2 reduction list
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	3/4/08

10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	3/24/16	COIM USA is a member of the Mantua Grove Community Advisory Panel (CAP), which has been in existence for over twenty years. The panel is based in West Deptford Township, New Jersey and is comprised of a mixture of corporate representatives, neighbors and community leaders. The corporate representatives on the panel are from the Colonial Pipeline, COIM USA, Johnson Matthey, LS Power, Solvay Specialty Polymers, Sunoco, and Wheelabrator facilities that are located within the local area. The Panel meets eight times per year at the West Deptford Public Library with each meeting focused on a different theme. Panel members suggest the themes for the meeting and a speaker is invited to make a presentation on the topic. The themes for the meeting must be community focused. Half the meetings are focused on company in-depth presentations or site facility visits. At each meeting, the plant representatives (usually the plant manager) report on past events at their facility along with future plans.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	4/29/15	Coim USA is member of the Mantua Grove Community Advisory Panel (CAP), which has been in existence for over twenty years. The panel is based in West Deptford Township, New Jersey and is comprised of a mixture of corporate representatives, neighbors and community leaders. The corporate representatives on the panel are from the Colonial Pipeline, COIM, Johnson Matthey, LS Power, Solvay Specialty Polymers, SUNOCO and Wheelabrator facilities that are located within the local area. The Panel meets eight times per year at the West Deptford Free Public Library with each meeting focused on a different theme. Panel members suggest the themes for the meetings and a speaker is invited to make a presentation on the topic. The themes for the meeting must be community focused. Half the meetings are focused on company in-depth presentations or site facility visits. At each meeting, the plant representatives (usually the plant manager) report on past events at their facility along with future plans.

21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	8/20/12	Elk Township continues to maintain the nature trail established by the township environmental commission and the clean fill dirt program.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	8/20/12	Elk Township installed solar paneling next to its municipal building which produces 6kw of power; which amounts to approximately 1/3 of the amount of electricity that is needed to operate the Borough's Municipal Building.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	5/12/08	Elk township has a newly established environmental commission, that since inception has created a nature trail on unused township property, established a tree ordinance, and implemented a clean fill dirt program.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	5/12/08	Elk Twp has implemented a recycling rewards program through a contract with "Recycle bank". Each resident's recyclable material is calculated individually, and based on how much they recycle, they are given coupons to local businesses. Since this programs' inception, recycling in Elk township residents has increased dramatically.

ELRAY MFG CO

Site ID: ELRAY MFG CO
7993 17 LIBERTY ST,
GLASSBORO, NJ 08028

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	12/8/15	Facility completed a low energy light replacement project in March 2015 totalling \$9,000. Low energy fluorescent lighting in use.

ENGINEERED ARRESTING SYSTEMS CORP

Site ID: ENGINEERED ARRESTING SYSTEMS CORP
217632 2239 HIGH HILL RD,
LOGAN TWP, NJ 08085

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	4/26/13	The facility instituted a program to replace metal halide light fixtures with high efficiency fluorescent lights which have been installed throughout the facility. Motion sensed on/off light switches have been installed in offices and meeting rooms. New lighting changes observed during the inspection. Only high efficiency fluorescent lights are purchased.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	4/26/13	Facility has an Environmental Policy executed by management onsite and employees are informed of the policy which is also posted and available to the public. Environmental Policy ISO 14001:2004 is 35 pages and signed by CEO & President, VP, & CFO. I have seen the policy and verified it has been signed by management.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	4/26/13	Facility has an Environmental Management System in place and has been ISO 14001 certified since December 2010. Facility has the management system onsite which includes an Environmental Policy and all the supporting documents required by the ISO 14001:2004 Standard.
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	4/26/13	The facility switched from a standard 8-hour a day, five days a week work schedule to four ten hour days. This reduced the commuting trips of employees which reduced vehicle emissions.
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	4/26/13	Facility conducted a Greenhouse Gas calculation in 2009 using a network online calculator and determined the business was generating the equivalent of 9,580 tons of CO2 annually. Approximately 45% of the emissions were a result of transporting inventoried finished product to various warehouses prior to shipment for installation. Facility revised this practice and now distributes finished product from a singular, centrally located warehouse resulting in a significant reduction in transportation related emissions. Program used is Carbonfootprint.com/calculator.

EXXONMOBIL OIL CORP PAULSBORO LUBE PLANT

Site ID: EXXONMOBIL OIL CORP PAULSBORO LUBE PLANT
14544 1001 BILLINGSPOURD RD,
PAULSBORO, NJ 080661031

Stewardship Activities	Date Acknowledged	Comments
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	8/30/16	Standards of Environmental Care Phase 3: Energy Efficiency and GHG Reduction. Includes every 5 years Steam Distribution System Survey, repairs and upgrades, Compressed Air System Survey, repairs and upgrades
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	8/30/16	Gear oil reblend and reuse, pallet recycling program, general plastic, paper, and cardboard recycling program
13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.	8/30/16	Slop oil recaptured as chain saw oil or reblended to appropriate product family, Used Oil recycling is done by the Blend improvement team.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	8/30/16	Standards of Environmental Care: SOEC Phase 1 (Spill Prevention) includes hose and valve leak inspection program, sump and separator inspections, etc. SOEC phase 2 (Energy Management /GHG Reduction) is described in #18 SOEC Phase (Waste Minimization) includes data gathering on 14 waste stream categories, implementing best practices for eliminating, minimizing, reuse, or recycling of waste. Lube pursuing UL Zero Net Waste Certification.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	8/30/16	"Learn and Earn" program with local school district. Participation in the Women's Interest Network (WIN), called Introduce a Girl to Engineering. March to April- 40 volunteers from PBO and PTC go to 14 middle schools in the area to talk to over 550 girls about science, technology, engineering and math (STEM) degrees. Topics focus on teamwork, creativity, and problem solving. There were 3 activities held last year: 1) Puzzle games; 2) Tool design scenarios where there is some kind of natural disasters and you have to save the critters, and 3) Create lip gloss-learn about viscosity and melting point of products.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	8/30/16	Corporate Environmental Policy and the Lubricants & Specialties Environmental Policy

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/30/16</p>	<p>The Operations Integrity Management Systems (OIMS) meets ISO-14001 EMS requirements. The site id was formally audited and certified ISO-14001.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>8/30/16</p>	<p>Exxon Mobile Corp. publishes the annual Corporate Citizenship Report which is available on the company website. The Environmental Performance of the Paulsboro Lube Plant is included in these reports.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>8/30/16</p>	<p>GHG applicability template and annual Environmental Performance Indicator (EPI) calculations based on acceptable methods (e.g., EPA factors)</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>7/1/13</p>	<p>Facility is currently using more natural pest management methods (instead of traditional pesticides and hazardous chemicals/poisons) in order to manage the bird population on their outdoor production areas (tank farm, loading rack, etc). Facility states the bird population (especially pigeons) must be controlled in order to minimize any effects of the birds' waste droppings. Specifically, non-lethal live-traps are baited with food to catch the birds, which are then transferred to TriState Bird Rescue.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>7/1/13</p>	<p>Replaced traditional lighting w/ more energy-efficient LED lighting in the production areas (not in the offices).</p>

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	6/15/18	The farmer mechanically cuts grass and weeds.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/15/18	Rain water is used to irrigate the field.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	6/15/18	Empty pesticide containers are recycled.

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>7/16/18</p>	<p>Process of recycling the mush which contains a small amount of lead that's applied to metal coils in the sintering process. The mush overflow from the application process is recycled & reused in the application process by cutting up the slivers from the cut edges of bearings, then blending, & reintroducing it to the mush batch. GGB eliminated its use of Toluene a few years ago. Toluene was replaced with ISOPAR E, which has since been replaced with Glycol Ethers. GGB evaluates product usage in order to reduce use of Hazardous or high VOC products by replacing them with more environmentally friendly products when business practices allow.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/16/18</p>	<p>Environmental Policy signed by Responsible Official and Plant Manager. Environmental Policy is clearly posted and employees are made aware of the policy.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>7/16/18</p>	<p>Facility utilizes an Environmental Management System, ISO current rating ISO14001:2015. EMS evaluated annually.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>5/11/15</p>	<p>GGB eliminated it's use of Toluene. Toluene was replaced with ISOPAR E which has since been replaced with Glycol Ethers. GGB has begun recycling the mush which contains a small amount of lead that's applied to metal coils in the sintering process. The mush overflow from the application process is reused in the application process.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/11/15</p>	<p>Facility recycles and reuses water from the on-site wastewater treatment plant. Some treated water is discharged to West Deptford POTW.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>5/11/15</p>	<p>Verified the facility has an Environmental Policy signed by the Plant Manager. Environmental Policy is clearly posted and employees are made aware of the policy.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>5/11/15</p>	<p>Facility utilizes an Environmental Management System, ISO 14001:2004. EMS evaluated annually. Current EMS expires the end of 2015.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>9/13/13</p>	<p>GGB has eliminated it's use of toluene at the facility.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>9/13/13</p>	<p>Facility reuses treated water from the onsite Wastewater Treatment Plant. Some treated water is discharged to POTW.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/13/13</p>	<p>The facility has an Environmental Policy signed by Idelio Lopes, Plant Manager. Policy is posted and employees are made aware of the facility's Environmental Policy.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/13/13</p>	<p>Facility utilizes an Environmental Management System - ISO 14001:2004. EMS evaluated annually.</p>

GLASSBORO BORO DPW WWTP

Site ID: GLASSBORO BORO DPW WWTP
59086 1 S MAIN ST,
GLASSBORO, NJ 080282592

Stewardship Activities	Date Acknowledged	Comments
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	10/12/17	Any leaves collected are either composted onsite for the public or taken to farmers and orchards nearby.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	10/12/17	Changed out light bulbs in building to more energy efficient bulbs.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	10/12/17	Glassboro has a program where community members pick up trash throughout town and mow abandoned properties in order to earn community service hours.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	10/12/17	Glassboro Boro has a Green Team and achieved bronze certification through hosting of several events involving the public. They host volunteer clean ups twice a year, etc.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	10/12/17	Glassboro has solar panels at public works, Owens Park, the water treatment facility, the senior center and the fire department.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	9/9/14	All grass clippings collected in town are taken to Smith Orchards for reuse

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>9/9/14</p>	<p>Besides Green team, also hires outside company to come into school system for environmental education programs for entire school system. In 2013, hired the Grand Fallons, out of Brooklyn N.Y.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>9/9/14</p>	<p>Energy reduction use with installation of more efficient T-8 bulbs</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>9/9/14</p>	<p>Solar panels at two locations</p>

GLOUCESTER CNTY COLLEGE FIRE TRAINING ACADEMY

 39376 SERVICES
 1200 DELSEA DR, AKA RT 47
 CLAYTON, NJ 08312

Stewardship Activities	Date Acknowledged	Comments
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/25/16	The boro installed solar panels for traffic lighting.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	5/25/16	The boro has a roadside tire pickup program where they take tires found and in house used tires to GCIA for shredding. They also took fallen trees from June 23rd storm to be recycled.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/25/16</p>	<p>The buildings have energy sensors and energy efficient lighting installed at administration buildings.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>9/24/13</p>	<p>Solar panels for traffic lighting</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>9/24/13</p>	<p>Roadside Tire pickups as well as in-house tires--saved and then coordinated with Gloucester County Improvement Authority for tire shredding/recycling</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/24/13</p>	<p>Installation of energy sensors and new energy efficient lighting at administration buildings</p>

GLoucester CNTY PITMAN GOLF COURSE

Site ID: GLOUCESTER CNTY PITMAN GOLF COURSE
55880 501 PITMAN RD,
MANTUA TWP, NJ 08080

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/28/15	1. Wash water is recycled after use on mowers and golf carts. 2. Treated wastewater is reused to water golf course - an estimated 9 million gallons of water was saved last year.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/18/13	Wash water recycling for mowers and golf carts and wastewater reuse for irrigation of golf course.

GLoucester CNTY UTIL AUTH STP

Site ID: GLOUCESTER CNTY UTIL AUTH STP
15661 2 PARADISE RD,
WEST DEPTFORD TWP, NJ 08066

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	8/7/18	Over the last 4 years, FAC has reduced their loading on the Delaware river by 45%. Constructive cooperation with local municipalities to cut excessive Infiltration and Inflow has reduced plant hydraulic loadings as much as 10% or more. New flow control gate valves permit more accurate hydraulic load distribution to the 4 redesigned final clarifiers, enhancing their efficiency for a cleaner effluent. Pitman Golf Club-RWBR Gloucester County owns a public golf course in Pitman NJ. In order to conserve public water supplies and reduce operational costs, the GCUA constructed a micro-filtration treatment plant adjacent to the course which "mines" wastewater from a local gravity sewer main. GCUA then treat it to near drinking water standards, and supply up to 100,000gal/day to the course to irrigate the grounds and fairways, again preserving public water supplies. In addition, the GCUA is a permitted, approved reuse water source for Public Access, Restricted Access-Land Application, Restricted Access- Construction and Maintenance, and Restricted Access-Industrial Systems designations per NJDEP RWBR regulations. These additional reuse applications reduce dependency on public water supplies for numerous facilities and businesses.

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/7/18</p>	<p>The Activated Sludge process receives new, more efficient variable blowers and feedback loop modulated valve controls to reduce wasted aeration horsepower. Fine bubble air diffusion increases oxygen transfer to the biological process to further cut horsepower requirements. New flow control gate valves permit more accurate hydraulic load distribution to the 4 redesigned final clarifiers, enhancing their efficiency for a cleaner effluent. The redesigned final clarifiers are more efficient and significantly easier to control over the previous design. This leads to reduced power demands in supporting pumping systems and less operator error and fatigue. The FAC's primary clarifiers have been completely rebuilt, using the latest influent flow inertia dissipating features to enhance the treatment capacity of these units. Stainless steel construction extends the lifespan of the equipment to 50 years or more. The increased efficiency of the process is reflected in lower energy costs in downstream processes. The methane gas produced by Anaerobic Digestion will supply fuel to two 600KW generators creating approximately 1Mw of power and provide the necessary heat for the digestion process as well. This dramatically reduces GCUA's environmental impact enough to exit the Title V permit and revert to a minor facility designation. The power generated by the CHP units will be used to run most plant processes during extreme weather events and enable the GCUA to operate in "Island" mode using "black start" capability. Using their present on-site natural gas-powered aeration blower, in conjunction with these generators should allow full "off grid" operation of our facility. This ability for GCUA to run OFF-GRID is essential to the success of their neighboring power plant West Deptford Energy, which depends on GCUA's effluent for cooling and steam generation water through a Reclaimed Water for Beneficial Reuse, or "RWBR" program. WDE uses up to 10MGD of GCUA effluent to generate up to 745 megawatts of power.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>8/7/18</p>	<p>The Gloucester county owns a public golf course in Pitman NJ, Pitman Golf Club- RWBR. In order to conserve public water supplies and reduce operational costs, the GCUA constructed a micro-filtration treatment plant adjacent to the course which "mines" wastewater from a local gravity sewer main. GCUA then treats it to near drinking water standards, and supply's up to 100,000gal/day to the course to irrigate the grounds and fairways, again preserving public water supplies.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>8/7/18</p>	<p>The GCUA has a program of educational outreach to schools, colleges, clubs, and professional organizations to educate all those holding an interest in the process of wastewater treatment. They have developed materials and presentations specific to the needs and interests of each group. They have presented a number of times at professional development seminars as well as on-site visits and tours. NJWEA has made several visits during annual wastewater education classes preparing for license examinations. GCUA's investment in new technology has caused them to be a "go-to" location for facilities planning future expansion and renovations to become familiar with changes in process design. Lastly, the GCUA hosts 3 Rowan College student interns annually in several roles pertaining to management, engineering, and laboratory sciences.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>8/7/18</p>	<p>By implementing process changes, equipment upgrades and efficiency improvements, FAC expects to eliminate over 8000 tons of CO annually from their carbon footprint. Transitioning from conventional Incineration to Anaerobic Digestion with Combined Heat and Power is expected to cut over 8000 tons of carbon from the GCUA footprint annually. Fossil fuel consumption will be drastically reduced. High horsepower electric motors, used in the incineration process, will be idled. Energy costs, once a major expenditure for the GCUA, will be dramatically lowered. A Local Government Energy Audit, performed by CDM Smith Engineering through a BPU grant verified these figures.</p>

<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>8/7/18</p>	<p>The GCUA has a program of educational outreach to schools, colleges, clubs, and professional organizations to educate all those holding an interest in the process of wastewater treatment. They have developed materials and presentations specific to the needs and interests of each group. They have presented a number of times at professional development seminars as well as on-site visits and tours. NJWEA has made several visits during annual wastewater education classes preparing for license examinations. GCUA's investment in new technology has caused them to be a "go-to" location for facilities planning future expansion and renovations to become familiar with changes in process design. <p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>1/24/19</p>	<p>Xylem implemented a solvent recycling program in 2014 which reduces the amount of virgin solvent that must be purchased and the amount of overall hazardous waste generated at the facility. Xylem replaced solvent-based parts washers with models that use non-hazardous, aqueous cleaning solutions in 2017.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>1/24/19</p>	<p>Xylem installed LED lighting fixtures throughout the facility in 2018. Building 22 was also equipped with motion-sensor lighting.</p>

GORRELL BROTHERS FARM

Site ID: GORRELL BROTHERS FARM
 128069 952 HARDING HWY,
 FRANKLIN TWP, NJ 08344

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	3/28/18	To reduce hazardous materials the farmer cuts grass and weeds mechanically. The fields are monitored for pests. Cover crops are used to protect the soil and reduce fertilizer use.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	3/28/18	To save water, the farm has a drip irrigation system.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	3/28/18	Nursery plastic and containers are recycled.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	3/28/18	To save energy, the business has high efficiency LED(s) and fluorescents lighting. The business also uses a high efficiency heater and air conditioner.

20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	7/1/16	The facility continues to use the 50Kw solar panel array and solar heating system installed for the bar screen building in SFY 2010.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	8/21/15	The facility installed at 50Kw solar panel array and solar heating system for the bar screen building in SFY 2010.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	8/14/14	The facility installed at 50Kw solar panel array and solar heating system for the bar screen building in SFY 2010.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	8/12/13	The facility installed at 50Kw solar panel array and solar heating system for the bar screen building in SFY 2010.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	8/24/12	The facility installed a 50 Kw solar panel array and solar heating system for bar screen building in SFY 2010.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	7/1/11	The facility has installed a 50 Kw solar panel array. The facility has also installed a solar heating system for its bar screen building. This work was completed during State fiscal year 2010.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	7/26/10	The facility has installed a 50 Kw solar panel array. The facility has also installed a solar heating system for its bar screen building. This work was completed during State fiscal year 2010.

15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/21/17	The business has a drip irrigation system to reduce the amount of water used for irrigation.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	7/21/17	The farmer reduces the amount of hazardous materials used by mowing the grass and weeding. In addition, the farmer also recycles all pesticide empty containers, as well.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	7/21/17	The business also has solar panels, lighting T12, LED and fluorescent light.

HILL CREEK FARMS

Site ID: HILL CREEK FARMS

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	10/19/17	To reduce hazardous material, the business uses IPM such as scout's insect, bacteria -fungi attacks and monitoring in the field to apply pesticides. Grass and weeds are also cut mechanically.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	10/19/17	The farmer has 24 acres with drip irrigation system to save water.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	10/19/17	To save energy, in the business LED(s), T5, T8 high efficiency lighting and high efficiency energy star appliances are used.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	10/19/17	On the farmer's house, the farmer uses solar panels and is planning to have solar panels installed on the business in the coming year.

HOME DEPOT INC #929

Site ID: HOME DEPOT INC #929
59988 1370 HURFFVILLE RD,
DEPTFORD TWP, NJ 08096

Stewardship Activities	Date Acknowledged	Comments
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	6/30/10	The facility accepts fluorescent light bulbs from its customers which they then appropriately manage as a Universal Waste.

HOSPITALITY CREEK CAMPGROUND

Site ID: HOSPITALITY CREEK CAMPGROUND

 BRIDGEPORT, NJ 08014

Stewardship Activities	Date Acknowledged	Comments
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/4/16</p>	<p>Facility has a recycling program for cardboard, plastic, and metals which is not required by the township. Facility also recycles food waste: ingredient products or finished bakery products that do not meet quality control or fall on the floor are collected and then picked by a local Hog Farm to be used as food for livestock. There was a large quantity of bakery products collected for the Hog Farm during the inspection.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>2/4/16</p>	<p>Facility has a written Environmental Management Policy signed by the Plant Manager which is posted and employees are made aware of.</p>

J&M FERRUCCI

Site ID: J&M FERRUCCI
441913 1595 PINEY HOLLOW RD ,
FRANKLIN TWP, NJ 08344

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/15/14	The business has 25 acres in a drip irrigation system to save water.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	4/15/14	The farmer recycles the pesticides empty containers with Helena and the State program.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	4/15/14	The farmer uses high efficiency lighting T8, ands high efficiency heater and air conditioner.

JOHNSON MATTHEY INC @ MID ATLANTIC IND PK

Site ID: JOHNSON MATTHEY INC @ MID ATLANTIC IND PK
14637 1991 2003 NOLTE DR,
WEST DEPTFORD TWP, NJ 080661727

Stewardship Activities	Date Acknowledged	Comments
------------------------	-------------------	----------

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>11/29/18</p>	<p>The site has removed the Building 1 Scrubber unit, the original emission control equipment for the site. The site's Thermal Oxidizer and Building 2 Scrubber emission control equipment is sufficient for capturing and treating the entirety of the site's emissions, thus the Building 1 Scrubber unit was no longer necessary. This unit required a lot of attention due to its age, requiring preventative maintenance measures that dealt with hazardous chemicals (sodium hydroxide). The entire unit has been removed from the site, and these activities will no longer be needed.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/29/18</p>	<p>The site has purchased and started to use micro energy meters for various equipment that traditionally had large energy loads. The information received back from these meters was acted upon, including shutting down equipment that was a large energy drain when idling. The site has seen significant decreases in energy usage based on these activities.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>11/29/18</p>	<p>The site's major source of recycling is empty containers and pallets. They conduct 2-3 pick-ups per week with local recycling firm Patrick Kelly Drums that includes full tractor trailers of empty drums and containers, as well as wooden pallets.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>11/29/18</p>	<p>The site participates in a Community Action Panel that encompasses JM employees, other area company representatives, and is open to all neighbors in the township. Topics discussed include environmental performance, safety performance, major site projects that may impact the community, awards and recognition that the site has received, and job openings.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/29/18</p>	<p>The site has an EHS Policy signed by the company CEO, Robert McLeod. In addition to regulatory compliance, this policy specifically states "the design, manufacture and supply of products must be undertaken with effective product stewardship and sustainable business management." This policy is posted in the security building, which is the entrance to the entire facility.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>11/29/18</p>	<p>The site is certified to ISO14001:2015 standards. The most recent surveillance audit, which recommended continued certification, was on November 27, 2018. To achieve this certification, the site Environmental Management System Manual was reviewed and audited.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>11/29/18</p>	<p>The site is certified to ISO14001:2015 standards. The most recent surveillance audit, which recommended continued certification, was on November 27, 2018. To achieve this certification, the site Environmental Management System Manual was reviewed and audited. Johnson Matthey publishes a Corporate Sustainability Report every year. This report is available for the public online.</p>

<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>11/29/18</p>	<p>The site's electricity portfolio is made up of approximately 20% solar energy (approximately 325,000 kWh per month), supplied by a solar farm located less than 1 mile from the site.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>11/29/18</p>	<p>The site utilizes the Browz software to vet all vendors and contractors who will perform work at the Johnson Matthey West Deptford – Health site. Once vetted and approved by the Contractor Management representative, the contractors undergo site orientation training that details the site environmental policies amongst other topics including safety. Vendors and contractor work is audited through the site's Permit to Work program.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/1/17</p>	<p>Johnson Matthey Inc. has been ISO 14001 certified since 2010. ISO 14001 is an international standard for Environmental Management Systems. The ISO 14001 standard is based on the typical ISO Plan-Do-Check-Act cycle. An organization must comply with the various clauses of the ISO 14001 standard to gain certification for their Environmental Management System (EMS).</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>11/29/10</p>	<p>Johnson Matthey is constantly reviewing processes & procedures to reduce hazardous material usage or toxicity. In 2008, PHARMA modified its cleaning process to reduce reactor cleaning time, raw material usage, waste disposal & emissions.. In 2008, it took four (4) days to clean a reactor using over 36,000 gallons of methanol & 350,000 gallons of water annually. By 2009, the reactor cleaning was reduced to two (2) days & Johnson Matthey realized a 89% reduction in cleaning solutions. This produced savings from raw material (methanol) purchase & waste disposal. Each site has a chemical development lab where chemists continually work on process optimization to include chemical substitutions/reductions.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>11/29/10</p>	<p>CCR has installed waterless urinals in the men's bathrooms & locker rooms throughout their site. PHARMA has reduced its water usage from reactor cleaning by 300,000 gallons per year.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/29/10</p>	<p>In 2007, PHARMA had an engineering evaluation conducted to optimize operation of the RTO/acid absorber system a/k/a regenerative thermal oxidizer with an air stripper. The evaluation concluded that increasing the thermal efficiency from 89% to 92%, reducing air flow from 41,400 scfm to 32,000 scfm, reducing the operating temperature from 1,628 degrees F to 1,500 degrees F and reducing the recirculating water flow from 1,616 gpm to 800 gpm would reduce greenhouse gas (CO2) emissions by 3,045 ton/year and natural gas consumption by approximately 50 MMcf/year, as well as generating significant savings in electrical energy, thus making this an environmentally friendly project. The project was finalized in 2010.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>11/29/10</p>	<p>Waste Exchange Program: CCR & PHARMA work to conserve materials wherever possible. Johnson Matthey sells &/or sends used solvents to other off-site industries for them to use as a raw material directly in their processes. This eliminates these streams from waste disposal & saves the off-site industries from buying new raw materials. In 2010, Johnson Matthey sent over 17,000 gallons of methylene chloride, 5,100 gallons of methanol & 4,000 gallons of acetic acid to other industries. At CCR, 90% of the waste generated is reused in the process to continually reclaim any platinum group metals (PGM). At PHARMA, several processes are utilizing the used mother liquors as a starting material for a 2nd cropping of product.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>11/29/10</p>	<p>In 2009, CCR changed out the existing lighting with energy efficient lighting & motion sensors.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>11/29/10</p>	<p>Johnson Matthey promotes environmental excellence within its organization. Several teams & programs have been formed to help facilitate employee suggestions for improvement or sustainability. CCR has a "Green Team" which is responsible for developing & implementing strategies to reduce utility consumption & seek new opportunities for material recycling. They also have the SAVE (Suggestions Add Value & Enhancement) program which is designed to motivate employees to achieve quality & environmental objectives, make continual improvements to the site management system & create an environment to promote innovation & awareness of quality & technological awareness throughout the organization. PHARMA has a "Sustainability Committee" which reviews suggestions submitted by employees & implements any projects that are approved by the committee.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>11/29/10</p>	<p>Johnson Matthey has been participating in the Mantua Grove Community Advisory Panel. Management from both CCR & PHARMA attend the monthly meeting.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/29/10</p>	<p>Both CCR & PHARMA are ISO14001 certified. Part of the certification is an Environmental Policy signed by senior leadership. A company wide policy statement from the CEO can be viewed at http://www.matthey.com/sustainability/pdfs/EHS%20Policy.pdf</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>11/29/10</p>	<p>Both CCR & PHARMA are ISO14001 certified. CCR has ongoing "Green Team Meetings" & PHARMA has a "Sustainability Committee". The entire facility shares responsibility for environmental sustainability. The goal & responsibility of the "Green Team" is to develop & implement strategies to reduce energy consumption and to seek new opportunities for material recycling. The goal & responsibility of the "Sustainability Committee" is similar.</p>

<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>11/29/10</p>	<p>This is a requirement for an Environmental Management System (EMS). CCR & PHARMA report their performances all the way up to the parent company. There is a sustainability website where such reports can be viewed. It is http://www.matthey.com/Sustainability2010/index.html</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/6/08</p>	<p>1,235,000 gallons per year of deionized water reused in plant processes.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/6/08</p>	<p>Facility has reduced energy consumption by modifying air flow to thermal oxidizer thereby increasing heat recovery. Installation of hot plate timers in laboratories, motion sensor switches at various locations, and pump switches to operate equipment only when needed.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/6/08</p>	<p>Facility sends glycol water solution off site for processing and reuse. Facility receives hazardous wastes from various sources and precious metals are reclaimed from the wastes.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/6/08</p>	<p>The metals division is ISO 14,001 certified. The facility has ongoing "Green Team Meetings" . The facility "Shares a Responsibility for Environmental Sustainability". The goal and responsibility of the Green Team is to is to develop and implement strategies to reduce energy consumption and to seek new opportunities for material recycling.</p>

JPC GROUP INC

Site ID: JPC GROUP INC
 99032 228 BLACKWOOD BARNSBORO RD, AKA RT 603
 WASHINGTON TWP, NJ 08012

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/11/18	Approximately 10 low-flow toilet fixtures installed in bathrooms.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	4/11/18	Gradually changing light fixtures to LED lighting.

KEYSTONE INDUSTRIES

Site ID: KEYSTONE INDUSTRIES
 14639 480 DEMOCRAT RD,
 GIBBSTOWN, NJ 080270070

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/22/08	Company eliminated the use of mercury and mercury-containing materials. Also reduced process water consumption by 40,000 pounds annually.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/22/08	Company installed low flush toilets. Also, see Item # 14.

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/22/08</p>	<p>Company installed frequency-controlling devices on cooling tower electric motors in order to reduce electricity usage.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/22/08</p>	<p>Installation of compact florescent lights, lighting fixtures are controlled by motion sensors and entire facility was revamped using electronic lighting ballast in order to reduce energy consumption.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>4/22/08</p>	<p>Company participates in Gloucester and Salem Counties Executive Council. Bi-monthly meetings are conducted to discuss best business practices and presentations prepared for expansion.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/22/08</p>	
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>4/22/08</p>	<p>Outside audit, annual internal audit.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>4/22/08</p>	<p>A web link is available to access the company's Responsible Care Website. The link is http://reporting.responsiblecare-us.com/reports/tri_cmpny_rpt.aspx</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>4/22/08</p>	<p>Company conducts a carrier qualification survey. Additionally, suppliers are subject to a physical inspection by company officials (Responsible Care).</p>

<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>4/22/08</p>	<p>Company conducts Community Outreach to local school.</p>

KINSLEYS SLF

Site ID: KINSLEYS SLF
161334 2025 DELSEA DR, AKA RT 47
WASHINGTON TWP, NJ 08032

Stewardship Activities	Date Acknowledged	Comments
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>4/23/15</p>	<p>Executed a lease with PSEG for the installation of an 11.18 megawatt dc solar facility which was brought online in December 2014.</p>

LISCIOS ITALIAN BAKERY

Site ID: LISCIOS ITALIAN BAKERY
16027 600 ELLIS ST,
GLASSBORO, NJ 08028

Stewardship Activities	Date Acknowledged	Comments
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/14/17</p>	<p>LED lighting was installed in various locations throughout the plant where they replaced existing traditional lighting.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/14/17</p>	<p>This facility is a commercial bakery primarily makes rolls and bread etc. the Waste/scrap food material is sent to a Pennsylvania farm for recycling.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>6/14/17</p>	<p>Liscio's is a relatively new occupant of this older building (~1 yr ago). During the inspection it was observed that efforts were made to landscape the outdoor property to enhance the site's appearance in the community, for example, the planting of shrubs/flower beds/ mulching etc.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/22/16</p>	<p>As part of Liscio's Bakery's new upgrades, they installed low flow water faucets, low flush toilets and hand dryers in their restrooms. No data is available to show a decrease in water consumption, due to the installations being completed before operations began at the site. Liscio's installed 20 low flow faucets and 23 low flow toilets.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/22/16</p>	<p>Liscio's Bakery actively seeks to reuse and repair cardboard boxes for deliveries. They have also installed hand drying units in their restrooms to reduce the consumption of paper towels. Liscio's ships off-specification dough to American Crumb Company (Levittown, PA) to be used as animal feed.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/22/16</p>	<p>In October 2014, Liscio's Bakery purchased the building located at 600 Ellis Street in Glassboro, NJ. Shortly after the acquisition, Liscio's upgraded the entire lighting system to high efficiency LED lighting with automatic on/off censored switches. A total of approximately 150 LED lights were installed. Liscio's Bakery also installed smaller high energy efficient doors in their loading dock area. These doors are roughly half the size of the original loading dock doors, which decreases the amount of energy consumed to heat and cool the building. Ten of these doors were installed.</p>

LOGAN GENERATING CO LOGAN GENERATING PLANT

Site ID: LOGAN GENERATING CO LOGAN GENERATING PLANT

21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	5/6/08	An active participant in the Delaware Estuary Project Phase 2 of the wetland project started in 2005. This project was conducted in cooperation with Partnership for the Delaware Estuary (PDE) and the US Fish and Wildlife Service (USFWS) as a part of the wetlands reclamation projects located on Logan generating property. The following milestones were completed. - Grubbing and discoing of approximately four acres of land - Planting of wetlands related (Indian, Bluesteu, Shelter) grasses -completion of pre-emergent pest management control activities -removal of dead trees and restalking of existing trees from the original planting of 425 trees associated with phase 1
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	5/6/08	Actively participates in the Arbor Day celebration at the Logan Township Elementary School and the Center Square Elementary School planting Butter Fly Bushes and Dogwood and White Birch trees, respectively.

LOGAN TWP MUNICIPAL BUILDING

Site ID: LOGAN TWP MUNICIPAL BUILDING
 153946 125 MAIN ST,
 BRIDGEPORT, NJ 08014

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	4/26/13	Logan Township upgraded all of its lighting in the municipal building to the new (T-5) high efficiency, low wattage lighting.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	4/26/13	Logan Township has installed solar panels on Municipal ground which produce enough energy to operate the entire municipal building.

LUCAS GREENHOUSES

Site ID: LUCAS GREENHOUSES
 128826 214 WHIG LANE RD,
 ELK TWP, NJ 08028

Stewardship Activities	Date Acknowledged	Comments
ENERGY STAR.	8/4/15	This business uses energy star appliances.
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	8/4/15	Integrated pest management, or IPM, practices are utilized, reducing the overall need for chemical insecticide and herbicide input. This is done through the use of beneficial insects to control aphids. Additionally, weed barriers are used to prevent weeds from growing,
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	8/4/15	20 acres of basket production plants are watered through drip irrigation, reducing overall water necessary to properly irrigate the crop. Water used for irrigation is then reused after it is decontaminated with an ozone product.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	8/4/15	Empty pesticide containers are recycled with the county and with Helena recycling program. Plant pot containers are recycled and reused, reducing waste.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	8/4/15	LED lighting used in buildings to conserve overall energy.

MANTUA TWP DPW

Site ID: MANTUA TWP DPW
 149976 401 MAIN ST,

MAUGERI FARMS

Site ID: MAUGERI FARMS
 53967 OLDMANS CREEK RD,
 WOOLWICH TWP, NJ 080850000

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	10/19/17	To reduce hazardous material use, the business use an IPM to control the pests in the field, cuts grass and weeds mechanically and rotates the crops.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	10/19/17	250 acres have a drip irrigation system to save water.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	10/19/17	The farm has high efficiency LED(s) lighting in the packinghouse, cold storage and in the labor housing, as well as a high efficiency heater in the packinghouse.

MOODS FARM MARKET

Site ID: MOODS FARM MARKET
 41907 901 BRIDGETON PK,
 MULLICA HILL, NJ 08062

Stewardship Activities	Date Acknowledged	Comments
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>7/19/17</p>	<p>To save water, more than 40 acres have drip irrigation system. To reduce hazardous materials the farmer cuts grass and weeds mechanically.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>7/19/17</p>	<p>To reduce hazardous materials the farmer cuts grass and weeds mechanically.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>7/19/17</p>	<p>The business has high efficiency cold storage and LED lighting to save energy.</p>

NATIONAL PARK BORO

Site ID: NATIONAL PARK BORO
 37607 7 GROVE AVE,
 NATIONAL PARK, NJ 08063

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	10/11/17	The Township has all new water meters on homes which communicate with a computer program and tells the Township if there is an excessive use of water coming from a resident's home. They have rain barrels available to the public as well.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	10/11/17	The Green Committee passed a Township wide "no -idling" ordinance. The Township pairs with the AOH to organize a volunteer clean-up day along the Delaware River Beach.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	10/11/17	The Township has a rain garden at its Borough Hall, as well as a children's garden. The elementary school next door to the garden maintains and uses them for education to the kids in pre-k through 6th grade.

NEWFIELD NURSERY

Site ID: NEWFIELD NURSERY
 153771 1584 CATAWBA AVE,
 NEWFIELD, NJ 08344

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/30/18	To reduce hazardous materials trice holds is put in the containers reducing weed growth by 50%. Plastic containers and the pesticide empty containers are recycled. Weeds and grass are cut mechanically.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	4/30/18	The business uses LED(s), Fluorescent lighting and skylight.

NICHOLS ORCHARDS

Site ID: NICHOLS ORCHARDS
464654 628 ROYAL AVE,
FRANKLINVILLE, NJ 08322

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/30/17	To reduce hazardous material, this business follows an IPM program to apply pesticides, cuts grass and weeds mechanically and recycles the pesticide empty containers.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	7/30/17	The farmer uses natural sun light and fluorescent lighting to save energy.

NJ AMERICAN WATER CO PURELAND WTP

Site ID: NJ AMERICAN WATER CO PURELAND WTP
37563 HIGH HILL RD,
BRIDGEPORT, NJ 08014

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	6/26/09	The Environmental Policy was adopted May 30, 2008 and can be found on the American Water Works Company, Inc website at the following address: http://www.amwater.com/files/Environmental_Policy_2008-05-30.pdf

NJ ROWAN UNIVERSITY

Site ID:
14548

Stewardship Activities	Date Acknowledged	Comments
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	4/24/17	The university's stream cleaning is not only part of their "Clean and Green" program but it has been expanded to include the volunteer service hours for all clubs on campus, as well.
ENERGY STAR.	7/29/14	
WasteWise.	7/29/14	
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	7/29/14	High Efficiency Upgrades: Central Heat Plant upgraded to high-efficiency boilers, chilled water production has been centralized, and a new high-efficiency Cogen Turbine system with Heat Recovery is in operation. CFL Exchange Program: Rowan implemented a CFL Exchange Program in the fall of 2010 for students living in campus housing that provided a one-for-one exchange of compact fluorescent bulbs for incandescent bulbs. The benefit was a reduction in electric use associated with the change which also translates into a reduction in greenhouse gas emissions from power plants. Windows/insulations
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	7/29/14	Reuse Policy: Rowan works with local schools and organizations to reuse furniture and equipment no longer needed by the university.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	7/29/14	Rowan owns 25 electric vehicles for use around campus
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	7/29/14	Rowan buildings - Tech Park in Camden - Gold certified. Med School in Camden - Silver certified

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>7/29/14</p>	<p>Are in the planning stages of a major campus wide Stormwater Management Plan. The Entire Redesign project will take 20 years. They will add more permeable surfaces, additional rain gardens in place of some paved areas, and make optimal use of open space on campus.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>7/29/14</p>	<p>Many courses taught at Rowan include elements involving sustainability and climate change. Current activities are being cataloged by the Presidents Council for Sustainability</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>7/29/14</p>	<p>Rowan organizes and sponsors the Clean and Green volunteer program which is responsible for an off campus cleanup in and around Glassboro yearly</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>7/29/14</p>	
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>7/29/14</p>	<p>Housekeeping custodial personnel are required to purchase all environmentally friendly cleaning products. The Compass group (onsite food service provider), is required contractually to purchase all recyclable materials.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>7/29/14</p>	<p>Rowan buildings - Tech Park in Camden - Gold certified. Med School in Camden - Silver certified</p>

<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>7/29/14</p>	<p>Rowan purchases 25% of it's electricity from wind powered sources as part of the voluntary Renewable Energy Certificate (REC) purchasing program. Along with other commercial and institutional REC purchases, part of the REC purchase comes directly from the Jersey-Atlantic Wind Farm, the only wind farm in NJ and the first coastal wind farm in the US. Rowan's purchase is noteworthy because they were the first institution to make a wind energy purchase from the Jersey-Atlantic Wind Farm and helped set the standard and provided a model for others to support locally generated wind electricity which advances clean energy development in NJ. Rowan's REC policy contributes directly to the creation and generation of emission-free renewable energy for the power grid in NJ. Solar Project: Two photovoltaic systems have been installed on campus.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>7/29/14</p>	<p>The College has performed greenhouse gas emission calculations regarding the onsite cogen plant. Have started a 2 yr implementation goal of 30% reduction in emissions.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>7/29/14</p>	<p>Rowan uses the SJ tech park to mentor to business start up companies, specifically advising on renewable materials use. The municipality also receives \$100,000.00 / yr from the college for Comprehensive Planning.</p>
<p>ENERGY STAR.</p>	<p>8/23/11</p>	<p>Rowan has an Energy Star purchasing policy.</p>
<p>WasteWise.</p>	<p>8/23/11</p>	<p>Recyclemania through EPA Wastewise Program. Rowan placed 3rd nationally in 2006 and was recognized in 2007 as recipient of the EPA Environmental Quality Award.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/23/11</p>	<p>High Efficiency Upgrades: Central Heat Plant upgraded to high-efficiency boilers, chilled water production has been centralized, and a new high-efficiency Cogen Turbine system with Heat Recovery is in operation. CFL Exchange Program: Rowan implemented a CFL Exchange Program in the fall of 2010 for students living in campus housing that provided a one-for-one exchange of compact fluorescent bulbs for incandescent bulbs. The benefit was a reduction in electric use associated with the change which also translates into a reduction in greenhouse gas emissions from power plants.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>8/23/11</p>	<p>Reuse Policy: Rowan works with local schools and organizations to reuse furniture and equipment no longer needed by the university.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/23/11</p>	<p>Electric Vehicle Purchase Program: the Facilities Department purchased three electric vehicles in 2011 for maintenance use on campus and is planning to purchase two or three more in the next fiscal year. The electric vehicles will replace gasoline powered vehicles so there is a direct reduction in greenhouse gas associated with the switch.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/23/11</p>	<p>Green Planning: Rowan has established a comprehensive set of guiding principles as part of the Campus Master Planning for Green Design. Solar Project: solar panels installed on campus.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>8/23/11</p>	<p>Runoff Reduction: Rowan installed three rain gardens on campus in conjunction with faculty and students to manage storm water runoff and support native plant species. The rain gardens are designed to collect storm water and allow it to infiltrate the ground. The design employs native plants and grading plans to optimize the effectiveness of the runoff gardens. In addition, a fourth storm water management project is currently in final design for one of the parking lots. This project is a bio-filtration system which will use native plants in a design that collects storm water runoff coming from a paved student parking lot and diverts it from the storm sewers. Reforestation Project: Rowan has planted numerous trees on campus over the past few years and has a campus wide program of re-establishing native, drought-tolerant species as part of a reforestation project.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>8/23/11</p>	<p>Many courses taught at Rowan include elements involving sustainability and climate change. Current activities are being cataloged by the Presidents Council for Sustainability.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>8/23/11</p>	<p>Rowan conducts various environmental focused public events such as symposiums, conferences, and campaigns. Rowan also launched a comprehensive "Green" website and utilizes radio, newspapers, and TV, to reach NJ residents & businesses. Rowan's "Clean & Green Program" sponsors two campus clean-up and landscape enhancement events each year that focuses on student involvement but also includes faculty and staff. Teams are sent across campus to pick up litter and trash while other groups work on projects to enhance the landscape, such as planting plants and trees. Rowan implemented The Student Community Garden Program last year where students were offered the option to reside in a living-learning community on campus that focused on environmental stewardship. Students in the program have begun development of a community garden to produce fresh produce on campus. They are also working on improvements to the recycling program in the residence halls. The project is in it's initial stage with the garden being recently constructed and planted this spring in 2011.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>8/23/11</p>	<p>Energy Star and WasteWise.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>8/23/11</p>	<p>Rowan has adopted an Energy Star Purchasing Policy effective as of September 2007. All products purchased by Rowan will bear the Federal Environmental Protection Agency's Energy Star label in all areas for which ratings exist.</p>

<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>8/23/11</p>	<p>LEED Program: The South Jersey Tech Park has LEED Certification. LEED Certification is standard for new construction on campus. Rowan Boulevard is participating in the pilot program "LEED Neighborhood Development".</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>8/23/11</p>	<p>REC Program: Rowan purchases 25% of it's electricity from wind powered sources as part of the voluntary Renewable Energy Certificate (REC) purchasing program. Along with other commercial and institutional REC purchases, part of the REC purchase comes directly from the Jersey-Atlantic Wind Farm, the only wind farm in NJ and the first coastal wind farm in the US. Rowan's purchase is noteworthy because they were the first institution to make a wind energy purchase from the Jersey-Atlantic Wind Farm and helped set the standard and provided a model for others to support locally generated wind electricity which advances clean energy development in NJ. Rowan's REC policy contributes directly to the creation and generation of emission-free renewable energy for the power grid in NJ. Solar Project: Two photovoltaic systems have been installed on campus.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>8/23/11</p>	<p>Rowan lead in the establishment of the NJ Small Wind Working Group & the NJ Anemometer Loan Program which provides free wind assessments to interested NJ farms, businesses, and residents, and also provides free (or low cost) energy analysis to farms needing this for US/NJDA funding. Rowan established the state's most active website resource and telephone hotline to assist NJ farmers, residences, and small businesses, interested in information on smart use of their natural resources and energy. The College of Engineering is a recognized leader in environmental and clean energy related research and regularly holds symposia open to the public.</p>
<p>ENERGY STAR.</p>	<p>5/30/08</p>	<p>Rowan has an Energy Star Purchasing Policy.</p>
<p>WasteWise.</p>	<p>5/30/08</p>	<p>Recyclemania through EPA Wastewise Program. Placed 3rd nationally in 2006 and was recognized in 2007 as recipient of the EPA Environmental Quality Award.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/30/08</p>	<p>Central Heat Plant upgraded to high-efficiency boilers. Chilled Water Production has been centralized. Cogeneration Facility has been upgraded and in the process of commissioning & startup.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/30/08</p>	<p>Rowan works with local schools and organizations to reuse furniture and equipment no longer needed by the university.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/30/08</p>	<p>Rowan has established a comprehensive set of guiding principles as part of the Campus Master Planning for Green Design. Solar panels installed.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>5/30/08</p>	<p>Rowan is in the process this summer of 2008 of creating open green space from the demolition of its original Science Building - Bosshart Hall. Rowan adopted an aggressive campus-wide landscaping plan and has planted numerous trees across the campus and re-established native, drought tolerant species. The University Master Planning approach assures all activities on the campus display rigorous standards in environmental responsibility.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/30/08</p>	<p>Many courses taught at Rowan include elements involving sustainability and climate change. Current activities are being cataloged by the Presidents Council for Sustainability.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/30/08</p>	<p>Rowan conducts various public events such as symposiums, conferences, and campaigns. Rowan also launched a comprehensive "Green" website and utilizes radio, newspapers, and TV, to reach NJ residents & businesses.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>5/30/08</p>	
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>5/30/08</p>	<p>Rowan has adopted an Energy Star Purchasing Policy effective September of 2007. All products purchased by Rowan will bear the Federal Environmental Protection Agency's Energy Star label in all areas for which ratings exist.</p>

<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>5/30/08</p>	<p>The South Jersey Tech Park is nearing completion of LEED Certification. LEED Certification is standard for new construction on campus. Rowan Boulevard is participating in the pilot program "LEED Neighborhood Development".</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/30/08</p>	<p>Rowan purchased 25% of it's electricity from wind powered sources in 2007 as part of the voluntary Renewable Energy Certificate (REC) purchasing program. Along with other commercial and institutional REC purchases, part of the REC purchase comes directly from the Jersey-Atlantic Wind Farm, the only wind farm in NJ and the first coastal wind farm in the US. Rowan's purchase is noteworthy because they were the first institution to make a wind energy purchase from the Jersey-Atlantic Wind Farm and helped set the standard and provided a model for others to support locally generated wind electricity which advances clean energy development in NJ. Rowan's REC policy contributes directly to the creation and generation of emission-free renewable energy for the power grid in NJ. Two photovoltaic systems have been installed.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>5/30/08</p>	<p>Rowan lead in the establishment of the NJ Small Wind Working Group & the NJ Anemometer Loan Program which provides free wind assessments to interested NJ farms, businesses and residents and provides free (or low cost) energy analyses to farms needing this for US/NJDA funding. Rowan established the state's most active website resource and telephone hotline to assist NJ farmers, residences, and small businesses interested in information on smart use of their natural resources and energy. The College of Engineering is a recognized leader in environmental and clean energy related research and regularly holds symposia open to the public.</p>

NUSTAR LOGISTICS

Site ID: NUSTAR LOGISTICS
15892 7 N DELAWARE ST,
GREENWICH TWP, NJ 080661031

Stewardship Activities	Date Acknowledged	Comments
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>7/19/18</p>	<p>NuStar Logistics installed twelve LED exterior lighting fixtures between March and April of 2018. These fixtures are used to provide light to the loading rack, the hazardous waste pad and other outdoor areas. Specifics regarding the installation or other project details are available upon request to their corporate office.</p>

PANDROL USA @ PURELAND IND COMPLEX

Site ID: PANDROL USA @ PURELAND IND COMPLEX
7947 501 SHARPTOWN RD,
BRIDGEPORT, NJ 080140367

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	10/28/16	Motion sensor light switches in lunchroom and lavatories.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	10/28/16	
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	10/28/16	ISO 14001:2004

PAULSBORO BORO ADMIN BUILDING

PAULSBORO BORO, NJ 08066

Stewardship Activities	Date Acknowledged	Comments
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	10/10/17	The Township organizes volunteer roadside/ditch cleanups with the neighborhood watch and the Girl Scouts. Last year they picked up 300 lbs of trash.

PAULSBORO REFINING CO

Site ID: PAULSBORO REFINING CO
 14376 800 JENKINS BLVD, 800 BILLINGSPO RT FORMER
 GREENWICH TWP, NJ 08027

Stewardship Activities	Date Acknowledged	Comments
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>7/7/18</p>	<p>A water reuse program is implemented that returns treated effluent from the on-site wastewater treatment plant to the refinery for reuse applications included in the facility NJPDES discharge-to-surface water permit. Typical reuse applications include miscellaneous service water and as a partial makeup source for the refinery fire water and utility water systems. For 2017, water reuse was about 48,000,000 gallons.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/7/18</p>	<p>2015 - Hydraulic Variable Volume Clearance Pocket (HVVC) added to one of two compressors in refinery downstream process unit. Power consumption lowered by as much as 1.5 megawatts/day during periods of lower charge rates to the process unit.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>7/7/18</p>	<p>Paulsboro Refining Company LLC pursues ways to minimize the generation of hazardous and non-hazardous waste to levels that are economically and technically practicable while maintaining compliance with all federal and state waste regulations. The facility Waste Minimization Plan identifies several methods currently implemented at the facility to actively reduce the volume of waste sent offsite for disposal: Recovered Hydrocarbon - hydrocarbon is systematically recovered from laboratory samples, API Separator skimmed oil, vacuum truck movements (process unit and piping maintenance work), flare knockout pots and crude unit desalters and subsequently returned to the refining process as refined petroleum products. Oily Sludge - oily materials recovered from sources throughout the facility are recycled at the refinery through the Delayed Coker Unit. This refining process recovers hydrocarbon from the oily material as petroleum products and coke thereby eliminating offsite disposal of these potential waste streams. Metal Reclamation - spent catalysts containing precious metal (platinum) and base metals (cobalt, nickel, molybdenum) are outhauled to commercial metal reclaimers for metal recovery. Recyclables - a single-stream recycling program effectively collects paper, plastic and aluminum cans from municipal trash. The recyclables are subsequently transported to an off-site commercial facility for further separation. Other - materials are source-segregated and recycled at off-site facilities, including: clean concrete, brick; road pavement; scrap metal; consumer electronics; waste lamps; waste batteries.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>7/7/18</p>	<p>Paulsboro Refining Company has an ongoing program to update outdoor lighting to more efficient LED units. Automatic lighting was installed in the TBA warehouse building.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>7/7/18</p>	<p>Paulsboro Refining Company LLC sponsors outreach activities and participates in Community Advisory Panels (CAP) that typically involve a cross-section of local stakeholders, such as fence line neighbors, emergency responders, educators, health care professionals, senior citizens, neighborhood association representatives and public officials with an interest in refinery operations and environmental issues. CAP' provide community members with an opportunity to discuss issues of mutual interest with refinery management and technical personnel in regularly-scheduled meetings; CAP members then bring meeting information back to their respective community groups. By supporting this dialogue, CAPs serve to build relationships and credibility between the refinery and surrounding neighbors. Paulsboro Refining Company LLC also establishes community relationships by sponsoring programs based on employee volunteerism, philanthropy and environmental stewardship. These outreach efforts typically include young people, schools, arts and civic programs as well as providing social services for neighbors in need.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/7/18</p>	<p>PBF Energy and its operating subsidiaries are committed to the protection of health, safety and the environment. This commitment is to our stakeholders, including our employees, contractors and the people of the communities in which we operate. Each PBF Energy employee has a personal and vital responsibility to contribute to safe work performance and ensure environmentally sound operations. Our goal is zero injuries, illnesses and incidents. PBF will comply with all Health, Safety and Environmental laws and regulations. We will strive to continuously improve our Health, Safety and Environmental performance.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>7/7/18</p>	<p>Paulsboro Refining Company LLC has an established program in which internal environmental audits are conducted at each PBF Energy refinery. While these audits are led by a contracted consultant, guest auditors from other PBF Energy refineries are included on the audit team. PBF Energy guest auditors and audited refinery personnel are able to share best management practices and provide potential solutions to facility improvement and environmental compliance. In addition to the Paulsboro Refining Company LLC (New Jersey), PBF Energy refineries included in the internal audits are: Delaware City Refining Company LLC (Delaware); Toledo Refining Company LLC (Ohio); Chalmet Refining Company LLC (Louisiana) and Torrence Refining Company LLC (California).</p>

 13975 2107 HIGH HILL RD,
 LOGAN TWP, NJ 080859300

Stewardship Activities	Date Acknowledged	Comments
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/10/16</p>	<p>All toilets throughout the plant have been replaced with low-flow toilets. to reduce water usage.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/10/16</p>	<p>Facility replaced 3 older electric compressors with 2 new high-efficiency Atlas Copco compressors in December 2014.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/10/16</p>	<p>The facility replaced all high VOC solvents used at the site with Aqueous Green cleaning solutions that have no-VOCs or very low VOCs at/or below 1.02%. The MSDS sheets for the cleaning solutions states it does not contain photochemically reactive solvents. The solution the facility uses is- one enclosed parts washer and one open-top tank parts washer (ArmaKleen).</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/10/16</p>	<p>All lighting throughout the plant was replaced with high-efficiency lighting in 2006 with the exception of the shop area. Recently a Light Study was completed to replace lighting in the shop, when this project is completed the facility will contact the DEP to update the stewardship review.</p>

12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	2/10/15	Motion sensors in municipal bldgs for lighting. Energy efficient heating/lighting for municipal building. Part of "Smart Start"
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	2/10/15	Environmental Commission established. Works on Oldmans Creek education/awareness /stewardship
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	10/14/08	1) converted the public works garage and ambulance bulding to natural gas from propane and heating oil. 2) started a 4 day work week for energy saving purposes to the heating and air conditioning in the municipal building.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	10/14/08	extended recycling education with elementary school students to residents by hand delivering buckets and information.

------------------------	-------------------	----------

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/3/18</p>	<p>Upon request of the local electric company the facility shuts down some operations to conserve energy during periods of high demand.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/3/18</p>	<p>Motion sensor light switches in warehouse and office, replace mercury lamps with fluorescent.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/3/18</p>	<p>Environmental Policy is signed by management and posted in conference room and online.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/3/18</p>	<p>ISO 14001 Certification</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>8/3/18</p>	<p>Included as part of Corporate Social Responsibility Report and can be found online.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/30/12</p>	<p>Participates in EnerNoc DemandSmart program by shutting down equipment during peak demand periods.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>7/30/12</p>	<p>Installing T8 fluorescent tubes in warehouse. Use of motion sensor light switches. Thermostats are locked to prevent employees from changing settings.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/30/12</p>	<p>yes</p>

12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	10/2/17	Installed timers on lighting for parks, sports complexes and the High School sports fields. Lights are timed for specific events and then turn off when the event is over.

WECOM INC

Site ID: WECOM INC
7989 20 WARRICK AVE,
GLASSBORO, NJ 08028

Stewardship Activities	Date Acknowledged	Comments
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	7/20/16	Facility recycles all metals including stainless, aluminum, copper, brass and yellow metals. They also recycle packaging material and pallets/skids.

WENONAH, NJ 08090

Stewardship Activities	Date Acknowledged	Comments
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	10/4/17	The Environmental Commission installed a rain garden at the library in 2012. The Shade Tree Commission plants shade trees every spring.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	10/4/17	The Wenonah Elementary school hosts annual field trips to the Mantua Creek for 5th & 6th graders to perform onsite water testing and learn about water quality. The Environmental Commission also hosts an annual litter clean up at the Tall Pines Nature Preserve.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	1/28/15	Special Stream and Lake shoreline/bank protection. Coordination with DEP for special logs acquisition and installation by Boro to prevent further erosion along stream and lake
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	1/28/15	Environmental Commission does outreach with Boro residents and School system, through constructed Rain Garden, Tree Inventory, Stream Clean-up and Stream Bank Restoration

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	1/6/16	The facility has eliminated the use of volatile organic compound (VOC) containing solvents in the facility parts washer. Facility is currently are using a biodegradable solution with zero VOC content and no longer generate this hazardous waste stream. Inspected the parts washer which is owned by the facility - ChemFree. The parts washer uses an aqueous solution. Safety Kleen routinely services the parts washer.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	1/6/16	Low Flow Toilets installed in bathrooms.

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>1/6/16</p>	<p>Created a wildlife management area on the facility. In that area, a garden was also constructed</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>1/16/15</p>	<p>The facility has eliminated the use of volatile organic compound (VOC) containing solvents in the facility parts washer. 10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	10/17/14	Environmental Commission established offering "environmental activities" including free kayak tours to become knowledgeable of township waterways.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	10/17/14	Solar panels for all electrical needs for township buildings.

113 PASSAIC AVENUE URBAN RENEWAL

Site ID: 113 PASSAIC AVENUE URBAN RENEWAL
 14882 113 PASSAIC AVE,
 KEARNY, NJ 07032

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/28/09	The Company in 2008 to help conserve water, replaced a very old chiller with 2 cooling towers. The water used in the cooling towers is recirculated and recycled so there is no longer any waste of city water at the production operation at the facility. Prior to the change from the chiller to the two cooling towers, the Company used roughly 3,254,548 gallons of water between April 2007 to April of 2008 with a monthly average of 271,212 gallons. After the change from the chiller to the two cooling towers, the Company used roughly 2,410,056 gallons of water between April 2008 to April of 2009 with a monthly average of 200,838 gallons. Company calculated a savings of 844,492 Gal. of city water usage since the Company changed from using a chiller to using two water cooling towers.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/28/09	The Company in 2008 to help conserve energy replaced a very old chiller with 2 cooling towers. The cooling towers are more efficient and therefore conserve and use less energy. Prior to the change from the chiller to the two cooling towers, the Company used roughly 4,831,501 kWh. between April 2007 to April of 2008 with a monthly average of 652,625 kWh. After the change from the chiller to the two cooling towers, the Company used roughly 4,385,447 kWh. between April 2008 to April of 2009 with a monthly average of 365,465 kWh. Company calculated an energy savings of 446,054 kWh. since the Company changed from using a chiller to using two water cooling towers.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	5/28/09	The Company reuses at least 90% of its waste product. The Company is part of a Wastewise Program where they recycle their preblend products (resin powders). The powders are collected as waste from the plant operations and weighed. The resin powders are then sold off as scrap to one of two Companies who can use the downgraded waste material from Spartech's production lines in products that these two Companies produce at their site. The two Companies that Spartec Polycome (Franklin Burlington Plastics) sends their waste resin powder to are: American Trading of Livingston NJ and Arnold Mark Co. also in NJ. The amount of plastic material recycled by Spartech to either American Trading or Arnold Mark Co. was 1,730,290 Lbs. Company did not know how much powder resin material was recycled in 2008 because this information was not tracked by the Company.

<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>12/15/08</p>	<p>2005 LEED Certified</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>12/15/08</p>	<p>All carbon calculations are based on WRI methodology for Group 2 emissions.</p>

AL WILSON CHEMICAL CO

Site ID: AL WILSON CHEMICAL CO
7195 1050 HARRISON AVE,
KEARNY, NJ 070320207

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/12/09	A.L. Wilson is a manufacturer of stain remover chemicals for fabrics. A.L. Wilson has worked on developing & reformulating spot removers to meet future California VOC guidelines (no greater than 3% VOC). Presently, A.L. Wilson is implementing the "Go Sustainable" program by developing new products containing solvents and surfactants derived from sustainable raw materials such as soy esters, sugar esters and fatty acids. The first new product in stores is a general spot remover designed to be used in coordination with Hydrocarbon dry-cleaning solvent. The biodegradable product is non-combustible and California V.O.C. and Prop-65 compliant. A.L. Wilson's hope is that it will displace less environmentally attractive alternatives. The product is also within reach of the USDA guidelines for designating bio-based products for federal procurement of laundry products (46% for Pretreatment/Spot Removers and 34% for General Purpose Laundry Products). A.L. Wilson's plan is to use the chemistry established in order to further "green" its product line.

AT&T CORP

Site ID: AT&T CORP
91651 15 ENTERPRISE AVE,
SECAUCUS, NJ 07094

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	5/13/13	Policy may be found at: http://www.att.com/Common/about_us/files/csr_2012/ehs_policy.pdf
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	5/13/13	Compliance Data Management: Implements compliance activities, such as centralized permitting/registration of tanks and air emission sources, DOT compliance and OSHA recordkeeping. EH&S Information Systems: Develops the Compliance Data Management System (CDMS) to manage environmental activities, including, but not limited to, tank, air, incident management and hazardous waste and safety activities, including, but not limited to, lockout/tagout, ergonomics, and injury/incident reporting. Strategic Compliance Partners: Works with business units (via EH&S Business Unit Coordinators) on systemic opportunities for EH&S improvement.
5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.	5/13/13	Annual Sustainability Report that includes environmental sustainability may be found at: http://www.att.com/gen/corporate-citizenship?pid=8506

20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	5/13/13	The solar system on AT&T's Secaucus, N.J. site generates 1 million kWh per year.
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	5/13/13	Analysis may be found at: http://www.att.com/Common/about_us/files/csr_2012/greenhouse_gas_emissions.pdf
8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?	5/13/13	Requirements may be found at: http://www.att.com/Common/about_us/files/csr_2012/engaging_our_supply_chain.pdf
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	5/6/08	http://www.att.com/gen/landing-pages?pid=7735
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	5/6/08

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	12/4/12	The facility installed solar panels on all of its buildings.

CAREPOINT HEALTH

Site ID: CAREPOINT HEALTH
14884 176 PALISADE AVE,
JERSEY CITY, NJ 07306

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	5/7/15	As part of the upgrading of the lighting systems, Christ Hospital has removed T-12 fluorescent lamps and installed more energy efficient T8 fluorescent lamps at several floors in the building. The project began two (2) years ago and is continuing.

CLEAN EARTH OF NORTH JERSEY INC

Site ID: CLEAN EARTH OF NORTH JERSEY INC
 123771 101 115 JACOBUS AVE,
 KEARNY TOWN, NJ 07032

Stewardship Activities	Date Acknowledged	Comments
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/6/11	CENJ has purchased and are using two (2) golf carts that run on batteries. The carts replaced old gasoline powered vehicles that were used on facility grounds for operational purposes.

COMMAND WEB OFFSET CO INC

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	8/21/14	Before making any applications County Wide Exterminating Co. inspects the contracted customer's facility for ways to reduce pest entry/access into the facility such as installing door sweeps and sealing cracks and other entry points into the structure for pests.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	8/21/14	Plastic pesticide containers such as empty rodenticide containers are returned to retail suppliers for recycling. And any blank backsided paper is reused in the office.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	8/21/14	They held presentations about how to reduce pesticides to the local school staffs.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	8/21/14	County Wide Exterminating Co. purchases paper forms from a recycled paper company.

SmartWay Transport Partnership.	4/19/16	
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/19/16	Implementation of new GE Evolution Series locomotives onsite, which helps reduce diesel emissions.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	4/19/16	This CSX facility participates in a waste to energy program where their waste oils are sent to Covanta for use in their processing.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	4/19/16	Employees are given Spill Response Procedure tip cards to keep in their wallets.
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	4/19/16	
SmartWay Transport Partnership.	4/16/14	Smartway Transport Partnership with EPA
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/16/14	CSX has developed a more efficient locomotive called the GE Evolution Series which reduces the amount of diesel by approximately 12,600 gals per year per locomotive. These technology based locomotives are at the Ridgefield site. http://corporate-social-responsibility.csx.com/index.cfm/environment/locomotives-advanced-technology/
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	4/16/14	Facility has issued Spill Response Procedures to every employee on a business card so it is easily accessible.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	4/16/14	CSX's environmental policy can be found at the following link: http://corporate-social-responsibility.csx.com/index.cfm/environment/environmental-policy/

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>4/16/14</p>	<p>EMS information can be found at the following link: http://corporate-social-responsibility.csx.com/index.cfm/environment/environmental-management/</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>4/16/14</p>	
<p>SmartWay Transport Partnership.</p>	<p>4/17/13</p>	<p>CSX is a SmartWay Transport Partner.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>4/17/13</p>	<p>All staff were given Spill Response Procedures as a business card that shall be kept with them at all times to help mitigate impact from any spills at fixed facilities.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>4/17/13</p>	<p>Northern CSX terminal staff participated in an Earth Day event on May 11, 2013. Staff planted trees in Newark.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/17/13</p>	<p>CSX's environmental policy statement can be found at the following link: http://corporate-social-responsibility.csx.com/environment/guidelines.php</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>4/17/13</p>	<p>CSX employes an Environmental Management System. http://corporate-social-responsibility.csx.com/environment/leadership.php</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>8/28/12</p>	<p>Waste Minimization effort on pot vessel wash (D001/D002/D007) hazardous waste elimination: Elementis Specialties (ES) has implemented a pilot-study approximately 4-months ago in May 2012 to study the separation of the water portion of the pot wash waste. The rest of the solvent material is scheduled to go out to Safety-Kleen for reclamation of the solvent portion (xylene, mineral spirits, etc.). Pipes are re-directed to prevent the solvent from entering the wastewater generated on-site. According to Ms. Tsap, last year in 2011, ES disposed of 53,258 gallons (444,172 lbs.) of hazardous waste solvent water mixture from the pot wash cleaning operation. Currently in 2012, approximately 40,000 gallons of hazardous waste and 10,000 gallons of non-hazardous waste were disposed of from the pot washing process. The reduction clearly demonstrates that ES has been minimizing on the amount of hazardous waste being disposed of from the site. This reduction effort has eliminated the pot wash waste completely from their hazardous waste status and the solvent portion is being managed on-site as a hazardous secondary Material (HSM) under 40 CFR 261.2(a) 2(ii) with appropriate HSM labels. The EPA form-8700 was filled out and signed on 8/1/12 (see attachment A with labels). The facility will begin managing HSM as of 8/27/12 pending EPA approval. In the pilot-study, the resulting wastewater has been tested every time it is extracted from the solvent pot wash waste from 5/2/12 through 8/27/12 with no flashpoint and pH level at 6/6.7 (Attachment B). These test trials have been completed to demonstrate that the wastewater will be non-hazardous when it goes out of the facility. The facility will then reduce and minimize on their hazardous waste by a significant amount that will probably bring them down from an LQG to an SQG generator of hazardous waste in the near future.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/28/12</p>	<p>The facility was able to demonstrate that their hazardous waste management and reduction efforts are guided by an Environmental Policy.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>10/27/09</p>	<p>Elementis has a Health Safety Environmental Policy posted online and in its Annual Corporate Report. Below is link to the online policy. http://www.elementis-specialties.com/esweb/esweb.nsf/pages/hse?opendocument&loc=top</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>10/27/09</p>	<p>Elementis publishes an annual report online. The link to the 2008 Report is attached. Please note that the environmental portion starts on page 15 as part of the "Corporate Social Responsibility Report". http://www.elementis.com/investors/reports.html</p>

18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	3/26/14	Facility has a "soft start" program onsite where machinery has variable speeds to ensure efficiency while operating.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	3/26/14	Entire site's lighting has been upgrade with energy efficient bulbs.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/8/13	Asphalt plant has implemented "soft start" program. This allows no surge of power in the start up of all equipment, allowing the machinery to run at variable speeds and provide a substantial energy reduction.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	5/8/13	Facility has contracted with Fine Line Electric to conduct an energy audit for the lighting at the plant. It is estimated that the facility will have an energy reduction of 7.41 kW.

NORTH JERSEY EXTERMINATING CO INC

Site ID: NORTH JERSEY EXTERMINATING CO INC
 95794 729 32ND ST,
 UNION CITY, NJ 07087

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>8/21/14</p>	<p>They reached out to local schools and aheld presentations about how to reduce pesticide usage to the local school staffs.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>8/21/14</p>	<p>Plastic pesticide containers such as empty rodenticide containers are returned to retail suppliers for recycling. And any blank backsided paper is reused in the office.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>8/21/14</p>	<p>They reached out to local schools on how to reduce pesticide usage by having presentations for the school staff.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>8/21/14</p>	<p>North Jersey Exterminating Co. purchases paper forms from a recycled paper company.</p>

OCCIDENTAL CHEMICAL CORP

Site ID: OCCIDENTAL CHEMICAL CORP
14880 651 TONNELLE AVE,
JERSEY CITY, NJ 07307

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	6/19/08	All Occidental Chemical sites must operate under the guidelines of the Environmental Policy of the corporation.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	6/19/08	The HES management system is tailored to incorporate elements of the American Chemistry Council Responsible Care initiative. This includes verification by independent auditors, tracking performance, and extending best practices to business partners.
5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.	6/19/08	Yes, corporate report includes all sites and is found at: http://www.oxy.com/SiteCollectionDocuments/hes_annual_reports/2007_hes_sr.pdf
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	6/19/08	Part of annual envt. report Greenhouse Gas Protocol by the World Business Council for Sustainable Development and the World Resources Institute is used to estimate GHG emissions from all its worldwide facilities. The facility reports in its Annual Emission Statement CO2 emissions using AP-42.

OWENS CORNING KEARNY PLANT

Site ID: OWENS CORNING KEARNY PLANT
14193 1249 NEWARK TPKE,
KEARNY, NJ 07032

Stewardship Activities	Date Acknowledged	Comments
------------------------	-------------------	----------

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>7/7/17</p>	<p>In 2014, Owens Corning decided to discontinue (as a Company) producing Cutback Asphalt at their Kearny Facility; therefore, Mineral Spirits, which are considered hazardous waste, are no longer used as a product in the Asphalt at Owens Corning. Previously, approximately 40,000 gallons of mineral spirits were used a year in the asphalt product produced at the facility.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>7/7/17</p>	<p>On the roofing side of the facility, the Company has installed a new water cooling system . Water in the cooling system is in an enclosed loop system, resulting in no discharge of water into the city sewer system. Owens Corning is one of the few roofing facilities that has this type of water cooling system. This cooling system saves roughly about 1 million gallons of water a year.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/7/17</p>	<p>From 2013-2014, the company installed a new boiler which burns natural gas. This boiler replaced an old oil fired boiler that operated on # 6 fuel oil. The company also installed new preheaters (3 & 5) that operate on natural gas. These replaced preheaters 1, 2 & 3 that operated on fuel oil. New natural gas heaters were also installed on the asphalt tanks. These replaced old fuel oil operating heaters. Almost all fuel oil usage has been removed from site except for the emergency generator that operates on Ultra Low Sulfur Diesel Oil. The new thermal oxidizer installed at the facility in 2014/2015 has a heat recovery steam generator associated with it. The thermal oxidizer produces steam and the waste steam from the oxidizer is used to operate the heat recovery system. Over the past 3 years, the roofing side of the facility installed VFD drives on the cooling water pump, the MSA and MSL pumps and main production line.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>7/7/17</p>	<p>Starting in late 2016, 200-275 gallon plastic totes supplied by Earth Minded are being sent back to the manufacturer to be re-used. To date, 20 totes have been sent back and re-used.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>7/7/17</p>	<p>Since 2013, Owens Corning has been switching all T-8 fluorescent light bulbs to more efficient LED Lightbulbs. Roughly 90% of the lights at Owens Corning have been switched over to LED Lights.</p>

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>7/7/17</p>	<p>Owens Corning is involved in an "animal enrichment project". This program uses scrap parts from the facility as animal homes in local zoos. Owens Corning Kearny Plant's scrap parts specially become homes for animals at the Turtle Back Zoo in West Orange, NJ.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/7/17</p>	<p>Owens Corning does have an Environmental Policy called: "The Environmental Health, Safety Quality Policy" The Policy covers the following topics: 1) Safety and Health 2) Environmental Protection and Sustainability 3) Product Stewardship Several of the items covered under the policy are: reporting and addressing environmental incidents; reducing air emissions; recycling, reusing, and recovering process water and waste; preventing groundwater pollution; improving energy efficiency and reducing our greenhouse gas emissions; reducing water usage intensity; documented procedures to address significant aspects of goods and services used including the communication of relevant procedures and requirements to suppliers and contractors; development and implementation procedures, including work instructions to maintain proper calibration of control and monitoring instruments; maintenance of process documentation to review the environmental aspects of newly acquired goods, chemicals, equipment, and raw materials; development of training matrix and requirements for course types and appropriate stakeholders; and emergency response procedures.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>7/7/17</p>	<p>Owens Corning does have a EMS (Environmental Management System) that the Corporate Office uses to manage their many Companies. The EMS does not have any "certifications." Owens Corning Kearny Facility also uses "Lotus Notes" and an "Excel Dashboard" to demonstrate compliance with the EMS System that their Corporate Office uses to manage the Company. The Lotus Notes and Excel Dashboard send e-mail reminders out daily, weekly, monthly to the employees at the site indicating what permit requirements need to be looked at (as far as record keeping requirements), what reports need to be submitted that month, what safety classes need to be taken, what tests need to be conducted, or any certifications that need to be completed by employees. The EMS is structured into Sections A through E and each section lists the requirements the companies must meet to be in compliance with that section and strict guidelines that need to be followed in order to maintain compliance with those sections.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>7/7/17</p>	<p>The Annual Environmental Report can be found at the company's website under the "Environment" tab.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>7/7/17</p>	<p>Owens Corning maintains a 440-kilowatt photovoltaic array. The array is located on 2 out of the 3 roofs of the plant. Solar arrays provide 522,000 kilowatt-hours of electricity a year. The solar array offsets roughly 14 million lbs of CO2 over the life of the agreement between Owens Corning and Sun Edison (Solar Array Manufacturer).</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>7/7/17</p>	<p>Owens Corning as a Company is conducting Carbon Foot Print Analysis on all their sites and reporting the information for: Greenhouse Gases (GHG) Emissions, Fine Particulate Matter (PM2.5) Emissions, Toxic Air Emissions (TAE), Waste-to-Landfill, and Water. Results can be found on the company's website.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/11/15</p>	<p>Starting in 2013, Owens Corning is switching all their T-8 Fluorescent Light Bulbs with more efficient LED Lightbulbs. Roughly 75% of the lights at Owens Corning have been switched over to LED Lights. LED Lights have a 50,000 hour (12-20 yrs) plus life span and an average lumen per watt output of 90-130. LED's produce better quality light more efficiently than any other lighting product. LED's can duplicate any light, are environmentally safe, and reduce energy cost over all other lighting.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/11/15</p>	<p>Owens Corning does have an Environmental Policy called: The "Environmental Health Safety And Product Stewardship Policy". The Policy covers the following topics: Safety and Health - (Providing safe working conditions & promoting the health and well-being of OwensCorning Employees). Environmental Protection and Sustainability - (Conserving resources, preventing waste, reducing greenhouse gases, and protecting the environment and our local communities. Continual improvement in our EHS performance and pollution-prevention efforts.) Product Stewardship - (Providing products that are safe and environmentally sound to make, use, and dispose of; and that perform as claimed. Providing useful information on the performance and safe use of our products). Policy can be found under this current website: http://sustainability.owenscorning.com/approach/environmental-health-safety-and-product-stewardship-policy/ Policy signed by: Mike Thaman - Chairman and Chief Executive Officer for Owens Corning Frank O'Brien-Bernini - Vice President and Chief Sustainability Officer</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/11/15</p>	<p>Owens Corning does have a EMS (Environmental Management System) that the Corporate Office uses to manage their many Companies. The EMS does not have any "certifications." Owens Corning Kearny Facility also uses "Lotus Notes" and an "Excel Dashboard" to demonstrate compliance with the EMS System that their Corporate Office uses to manage the Company. The Lotus Notes and Excel Dashboard send e-mail reminders out daily, weekly, monthly to the employees at the site indicating what permit requirements need to be looked at (as far as record keeping requirements), what reports need to be submitted that month, what safety classes need to be taken, what tests need to be conducted, or any certifications that need to be completed by employees. The EMS is structured into Sections A through E and each section lists the requirements the Companies must meet to be in compliance with that section and strict guidelines that need to be followed in order to maintain compliance with those sections.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>8/11/15</p>	<p>The Annual Environmental Report can be located under the following website: http://sustainability.owenscorning.com Current Report is for 2014.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>8/11/15</p>	<p>In 2009, Owens Corning partnered with Sun Edison to develop the 440-kilowatt photovoltaic array (solar panel array - which is located on 2 out of the 3 roofs of Roofing Side of the Plant) - which will provide an estimated 522,000 kilowatt-hours of electricity yearly. The solar installation is expected to offset nearly 14 million pounds of carbon dioxide over the life of the agreement between Sun Edison and Owens Corning.</p>

<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>8/11/15</p>	<p>Owens Corning as a Company is conducting Carbon Foot Print Anyalysis on all their sites and reporting the information for: Primary Energy, Greenhouse Gases (GHG), Fine Particulate Matter (PM2.5), Toxic Air Emissions (TAE), Waste-to-Landfill & Water in their Annual Environmental/Sustainability Report. Calculations can be found under the following website: http://sustainability.owenscorning.com/environmental/footprint/</p>
<p>SmartWay Transport Parnership.</p>	<p>4/16/13</p>	<p>http://www.epa.gov/smartway/partnerlists/partner-list.htm</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/16/13</p>	<p>Environmental, Health, Safety and Product Stewardship Policy can be found at the following link: http://sustainability.owenscorning.com/contents/environment-safety/Environmental-Stewardship/</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>4/16/13</p>	<p>More information on the company's goals can be found at the following link: http://sustainability.owenscorning.com/contents/environment-safety/Our-Environmental-Footprint/</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>4/16/13</p>	<p>Annual Environmental Report can be viewed under http://sustainability.owenscorning.com/</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>4/16/13</p>	
<p>SmartWay Transport Parnership.</p>	<p>5/4/11</p>	<p>Owens Corning on a corporate level is involved with Smartway Transport Partnership.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>5/4/11</p>	<p>The Hot Oil Heater Burner (Emission Unit 10) and the Hot Oil Heater (Emission Unit 84) - used to us a hot oil called Thermal SP which contained Benzene. The hot oil because it contained Benzene needed to be disposed as a Hazardous Waste. In February of 2008, Owens Corning stop using Thermal SP as the oil used in their Hot Oil Heater Burner and their Hot Oil Heater and instead started using Powertherm. Powertherm does not contain Benzene nor any Hazardous Material thus the Company is preventing 6,000 lbs. of used oil/yr. to be caused to be sent out as Hazardous Waste.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/4/11</p>	<p>In 2009, Owens Corning started to use their waste sand and granules from their operations from their Roofing Plant as Parting Agent to help make their roofing shingles which helps reduce the amount of sand and granule truck deliveries needed to be delivered to the facility. Starting recently, any waste sand or granules that can not be re-used to make their roofing shingles now is sent to a 3rd Party Company to be used in one of their operations.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/4/11</p>	<p>The Company switched all the light bulbs in their facility to high efficiency T-8 light bulbs.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>5/4/11</p>	<p>The Company does have an Environmental Policy that states: Owens Corning is committed to the principles of environmental sustainability, product stewardship and to the safety and health of our employees. To ensure a continuing commitment to these principles, Owens Corning is dedicated to: Safety and Health Environmental Protection and Sustainability Product Stewardship The Environmental Policy can be found under: http://sustainability.owenscorning.com/contents/environment-safety/Environmental,-Health,-Safety-and-Product-Stewardship-Policy---Global/</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>5/4/11</p>	<p>The Company does have an Environmental Management System (EMS) - but no certifications</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>5/4/11</p>	<p>Annual Environmental Report can be viewed under http://sustainability.owenscorning.com/ Just click on "create your own report" to select the various sustainability elements to view. Owens Corning is committed to producing an annual sustainability report. This year's report covers the period from January 1 to December 31, 2010. Our previous report covered the year ending December 31, 2009. Each report is issued mid-year and can be found at www.sustainability.owenscorning.com.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>5/4/11</p>	<p>Owens Corning on a corporate level is involved with Smartway Transport Partnership.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/4/11</p>	<p>In 2009, The Company installed Solar Panels on the roof of one of their buildings. To Date, the Company has logged in 791,000 kW of energy provided by the Solar Panels.</p>
<p>SmartWay Transport Partnership.</p>	<p>8/20/09</p>	<p>http://www.owenscorning.com/sustainability/stewardship/supplychain.asp</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/20/09</p>	<p>All lights in the plant have been switched to efficient bulbs.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/20/09</p>	<p>Owen's corporate, environmental and product stewardship policy can be found at the following link: http://www.owenscorning.com/sustainability/stewardship/philosophy.asp</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/20/09</p>	<p>Owens tracks 7 components for accessing its environmental footprint, more information can be found at: http://sustainability.owenscorning.com/content/operations/Env-Footprint-Goals-Summary.aspx Owens tracks these indicators utilizing the Global Reporting Initiative (GRI -G3), more information can be viewed at: http://sustainability.owenscorning.com/content/global-reporting.aspx</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>8/20/09</p>	<p>The 2008 sustainability report can be found at the following link: http://sustainability.owenscorning.com/content/documents/OwensCorning_Sustainability_08.pdf</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>8/20/09</p>	
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>8/20/09</p>	<p>Since the last inspection, the plant has installed solar panels on the roofing buildings.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/10/08</p>	<p>Switched all bulbs in the plant to high efficiency T-8 bulbs.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/10/08</p>	<p>http://www.owenscorning.com/sustainability/commitment/</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/10/08</p>	<p>Environmental Footprint tracking for reducing greenhouse gas emissions, water use and waste to landfill. http://www.owenscorning.com/sustainability/stewardship/goals.asp</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>9/10/08</p>	<p>Owens Corning's Sustainability Report for 2007: http://www.owenscorning.com/sustainability/docs/07_Sustainability_Web.pdf</p>

PARAMOUNT EXTERMINATING CO

Site ID: PARAMOUNT EXTERMINATING CO
 92484 729 32ND ST,
 UNION CITY, NJ 07087

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	8/21/14	Before making any applications Paramount Exterminating Co. inspects the contracted customer's facility for ways to reduce pest entry/access into the facility such as installing door sweeps and sealing cracks and other entry points into the structure for pests.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	8/21/14	Plastic pesticide containers such as empty rodenticide containers are returned to retail suppliers for recycling.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	8/21/14	They reached out to local schools and advertised Integrated Pest Management by passing out a flyer. They also held presentations about how to reduce pesticides to the local school staffs.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	8/21/14	Paramount Exterminating Co. purchases paper forms from a recycled paper company. And any blank backside paper is reused in the office.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/30/08</p>	<p>Site is a LEED registered building.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>4/30/08</p>	<p>Site is a LEED registered building.</p>

Diesel Retrofit Program.	1/30/08	PATH has installed idle reduction motors on all of their diesel track vehicles (locomotives, etc.) to reduce the amounts of pollution giving off by the machinery.
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	1/30/08	
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	1/30/08	Just prior to conducting this RCRA inspection, PATH began this process by sending all PATH employees a survey to indicate their commuting practices, and list alternatives that they might consider on how to get to work.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	1/30/08	Company has purchased, and is using a material called Ozzy Juice, which is a concentrate, that is diluted with water, and then uses microbes to break down oil, and other materials. This material is non-hazardous, and has been designated an AQMD Certified Clean Air Solvent.

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>8/2/13</p>	<p>Site has switched from using an antifreeze product with ethylene glycol to propylene glycol.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>8/2/13</p>	<p>This site has worked with the Hackensack Riverkeeper to install an Osprey nest platform at the facility. Multiple barricades are erected to minimize disturbance around the nest platform during fledgling season. PSEG has partnered with the Hackensack Riverkeeper to install other Osprey nest platforms along the Hackensack River.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/2/13</p>	<p>http://www.pseg.com/info/index.jsp</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/2/13</p>	<p>This site uses Environmental Management Information System which is a web based comprehensive system that integrates the management of compliance actions, regulatory reporting and oversight of environmental programs.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>8/2/13</p>	<p>See link below. http://www.pseg.com/info/environment/sustainability/2013/sustainability_report/HTML/index.html</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>8/2/13</p>	<p>This site is part of a corporate wide calculation of CO2 emissions using the GHG Protocol Corporate Accounting and Reporting Standard developed by the World Resources Institute and the World Business Council for Sustainable Development.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>10/22/10</p>	<p>The site has implemented a change in antifreeze product in an effort to reduce hazardous materials on site. The site has switched from antifreeze containing ethylene glycol to propylene glycol.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>10/22/10</p>	<p>In 2010, PSEG rolled out multifunction network printers, capable of duplex printing and scanning paper document to electronic format for distribution to multiple users. To this end, PSEG has almost completely decommissioned individual desktop printers, greatly reducing the demand for power consumption copy toner and cut sheet paper usage (30% post consumer content) company wide. Also, PSEG is presently conducting a pilot program at PSEG's Nuclear facility to convert organic matter into organic fertilizer compost.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>10/22/10</p>	<p>The site has worked with the Hackensack Riverkeeper to install an Osprey nest platform at the facility. Seasonal operator work arounds are implemented and multiple barricades are erected to minimize disturbance around the nest platform during fledgling season. PSEG has partnered with the Hackensack Riverkeeper to install other Osprey nest platforms along the Hackensack River.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>10/22/10</p>	<p>PSEG has contracted with several non-profit agencies to perform community outreach to ascertain whether residential customers in selected urban communities are eligible for energy efficiency enhancements to their homes. Similar programs are also underway with multifamily dwellings, commercial customers as well as area hospitals in the state of New Jersey.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>10/22/10</p>	<p>The site is driven by the corporate vision of being a recognized leader for people providing safe, reliable economic and green energy. To that effect PSEG follows a corporate wide Environmental Health and Safety Program. The program contains 14 elements which have been based on the International Organization for Standardization's specifications for Environmental Management Systems (ISO 14001). Annual certification by the site and the President of the fleet ensure proper implementation of the program. To view the Environmental Health and Safety Policy see page 39 of PSE&G Sustainability Report http://ipaperus.ipaperus.com/PSEG/SustainabilityReport/</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>10/22/10</p>	<p>The site has completed Phase I of implementation of the Environmental Management Information System (EMIS). The system is a web based comprehensive system that integrates the management of compliance actions, regulatory reporting, and oversight of environmental programs.</p>

<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>10/22/10</p>	<p>A corporate wide Sustainability Report is published which focuses on PSEG's strong commitment to social, economic and environmental responsibility. http://ipaperus.ipaperus.com/PSEG/SustainabilityReport/</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>10/22/10</p>	<p>PSEG purchases office supplies and cut sheet recycled paper from Guy Brown Office Products. The paper is "Boise Aspen 30" that is 30% post consumer waste content. This paper product is part of the Sustainability Forest Initiative and is Certified Fiber Sourcing. Also, Guy Brown flags all office supplies on their ordering website that contain recycled content with a green logo for PSEG employees to consciously order recycled content. Also, on an annual basis, PSEG request reporting documentation from the furniture supplier, what percent of the furniture products we have ordered are of recycled content.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>10/22/10</p>	<p>The site is part of a corporate wide calculation of CO2 emissions using the GHG Protocol Corporate Accounting and Reporting Standard developed by the World Resources Institute and the World Business Council for Sustainable Development. In addition, PSEG obtained third party assurance that PSEG developed its GHG emission inventory for calendar year 2009 in substantial conformance to the aforementioned methodology.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>10/22/10</p>	<p>PSEG has incorporated contractual language in contracts that all suppliers must comply with all local, state and federal environmental laws and regulations. Also, suppliers are subject to an environmental, health & safety by certified PSEG environmental auditors. PSEG always retains the right to stop doing business with any supplier that PSEG believes is non-compliant with our required contractual environmental provisions.</p>

Best Workplaces for Commuters.	1/30/09	
WasteWise.	1/30/09	
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	1/30/09	Verizon's energy conservation program promotes the responsible and cost-effective use of energy. Verizon is reducing energy use by improving the energy efficiency of Verizon buildings through innovative technology such as hypalon roofing, and researching and using alternative energy sources such as clean-burning fuel cells or micro turbines for our central offices. In 2007 alone, energy conservation efforts eliminated more than 75,000 metric tons of CO2 emissions.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	1/30/09	Verizon has a comprehensive waste reduction and recycling program that focuses on minimizing waste, utilizing quality products made with recycled material, and recycling marketable materials.
22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	1/30/09	Verizon Wireless collects used cellular phones to resell, refurbish or recycle under its HopeLine? program. Verizon Wireless' retail stores are also participating in the Rechargeable Battery Recycling Corporation (RBRC) Charge Up to Recycle! program.

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>1/30/09</p>	<p>http://www22.verizon.com/pages/environment/environment_policy.html Verizon companies shall conduct business in an environmentally responsible manner and provide employees with a safe and healthy workplace. All employees, as well as others who conduct business on behalf of a Verizon company, shall comply with all applicable Company programs and Federal, State and Local laws and requirements relating to protection of the environment or human safety and health. Verizon companies shall implement and maintain systems and programs with appropriate governance to meet this policy.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>1/30/09</p>	<p>The Environmental Policy is set forth by the CEO of Verizon, and is supported by the senior leadership team. We implement a comprehensive environment and safety management system that governs corporate activity which may impact the environment and includes monthly reporting to a senior level corporate governance body. We also have periodic reporting to the management audit committee of the board of directors. Periodically, independent audit firms evaluate our management systems and offer recommendations for improvement.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>1/30/09</p>	<p>The facility has an annual environmental report. http://70.32.120.177/images/vz_uploads/verizon_cr_report_2007.pdf</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>1/30/09</p>	
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>1/30/09</p>	<p>Commuter Services Program Verizon's Commuter Services Program was created to help reduce GHG emissions. The program assists employees in finding commuting alternatives to get to work. Verizon has been recognized by the U.S. Environmental Protection Agency (EPA) and Department of Transportation (DOT) as one of the "best workplaces for commuters". The Best Workplaces for Commuters program recognizes employers that are leaders in offering superior commuter benefits. Audio, video and web conferencing can foster collaboration among workers and students in various locations. Along with secure e-mail and instant messaging, these solutions dramatically reduce the need for travel.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>1/30/09</p>	<p>Recycled content purchasing -- In 2007, Verizon spent over \$3 million on recycled content office supplies.</p>

22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	2/20/08	In agreement with the Municipality of Kearny, the facility uses both a water truck and a street sweeper to clean Bergen Avenue where it is located. I have personally observed this several times. I was informed that the facility also maintains the storm sewer system on this road.

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>8/31/16</p>	<p>Tropicana partnered with a company based in Arizona called Steel City lumber and promised that they can have Tropicana's carrier boards as long as they pick them up. Steel City lumber sent a flat truck with a tarp to pick up this very heavy load of 720 boards with dimensions of 48 X 52. They used to store their pallets in their automated ware house. Tropicana recycled the compressed wood carrier boards and reduced any cost associated with getting rid of them. The Jersey City Sustainability Team not only prides itself in making Hudson County a cleaner place to live, but also a better place to live. The team works with many charities and nonprofit organizations such as ACBC (Aluminum Cans for Burn Children) and has made donations using the aluminum cans collected on site. Tropicana collected 110 used cell phones for veterans and 70 used eye glasses for those less fortunate and donated them to Piscataway Wellness Clinic. Tropicana also received an award for partnering with Hudson County Transportation Management Association to help reduce the number of vehicles on the road. Since the program's inception in the fall of 2014, the site has saved over 62M miles of driving which equates to approximately 3, 650 gallons of gas and over 71M pounds of carbon dioxide emission reduction.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>8/31/16</p>	<p>Using their internal resources PepsiCo Recycle Rally, Tropicana reached out to Horace Mann Elementary School in Bayonne, NJ and partnered with their Cleaner/Greener Day in June 2015. They had trivia games and paper tossing games keeping the theme of recycling and educating the children on the importance of recycling. Finally, as part of their 2015 EAW (employee appreciation week), the Sustainability Team introduced its newest charitable initiative called the 3Cs program. The 3Cs stands for Coats, Clothes, and Aluminum cans. The cans were donated to their ACBC charity, and the gently used coats and clothing were donated to Women Rising and the Salvation Army. The site also got involved with the Halloween costumes for Jersey Cares who supports children in shelters and who are less fortunate. Their future initiative is to provide a location on site to operate all recycling and waste stream processes called OSS (One Stop Shop). Tropicana is always seeking ways to reduce, reuse, and recycle.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/31/16</p>	<p>The site operates under the PepsiCo GEHSMS program. Global Environment, Health, and Safety Management System is has a company-wide approach.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>8/31/16</p>	<p>PepsiCo has recently implemented a smart spending program which puts guidelines around how employees travel to/from and for work. The goal was to find more environmental friendly and cost efficient methods of travel. Examples include updating the sites video conferencing equipment, limiting the number of days associated with business trips, and promoting a car pooling program.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>8/31/16</p>	<p>Tropicana purchases 100% of their paper products from certified tree managed farms.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/9/08</p>	<p>Upgraded boiler burner to high efficiency burner which resulted in 10% fuel and 10% reduction in NOx.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/9/08</p>	<p>Better management of water usage which resulted in 4% decrease.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/9/08</p>	<p>Reduced energy costs for natural gas by approximately 60%. Reduced electric costs by 25%.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/9/08</p>	<p>Coordinated program to recycle batteries, plastics, metal, oil pallets, lighting, and furniture.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/9/08</p>	<p>Went to light weight trailers that resulted in the ability to haul heavier loads. Total reduction of approximately 5% loads/day.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/9/08</p>	<p>Jersey City Lighting upgrade - high efficiency fluorescent bulbs.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/9/08</p>	<p>Quaker Tropicana Gatorade (QTG) Health, Safety, and Environment (HSE) Programs, Values, Beliefs, Vision</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>6/9/08</p>	<p>100% of paper products supplied for PepsiCo come from certified tree managed farms. Also, the annual report is printed on paper certified by the "Smart Wood Program of the Rain Forest Alliance." The paper was manufactured using self-generated "Green Power," saving approximately 227 M-KWH of power.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/14/13</p>	<p>Since the last inspection, the facility has installed a brand new cooling system including a new cooling tower, which is energy efficient.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/9/10</p>	<p>As part of a program with Con Edison, all lighting in the facility was replaced with effiecient T-8 light bulbs.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/10/09</p>	<p>Facility has replaced all light fixtures to efficient T-8 lights throughout the entire facility. In coopertion with a Con-Ed sustainability program.</p>

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	9/28/17	The hazardous waste reduction item consists of their Lead Reduction Program where lead has been minimized by the company reformulating their inks. The reduction of hazardous waste has by 75 %; the site only has 25% of lead inks on site. Their goal is to be ink lead free in their ink formulations and reaching the 100% mark.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/28/17	Bathroom renovations for water efficient flushing to save on water consumption.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	9/28/17	Corp has a continuous goal to improve this program.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	9/28/17	75% reduction in waste.

<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>9/28/17</p>	
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/28/17</p>	<p>HVAC renovations through NJ SmartStart buildings</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>9/28/17</p>	
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/28/17</p>	<p>The company has an Environmental policy that governs how they manage hazardous material on site and how they prevent pollution to the environmental.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/28/17</p>	<p>ISO 14001 - revised 2016 sterilization of medical devices</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>9/28/17</p>	
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>9/28/17</p>	

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/18/13</p>	<p>3M Medical has been initiating efforts to manufacture new products that are lead free. This has reduced the amounts of waste lead generated at the plant.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/18/13</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sus Bathroom renovation in 2008</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/18/13</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sus Corporate goal to improve Energy Efficiency by 2015</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/18/13</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sus 20% reduction of waste</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>6/18/13</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sus</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/18/13</p>	<p>HVAC renovations through NJ SmartStart Buildings - 2009</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>6/18/13</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sus</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/18/13</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sus</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/18/13</p>	<p>ISO 14001 - revised 1-12-2012 sterilization of medical devices</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>6/18/13</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sus</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>6/18/13</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sus</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/1/11</p>	<p>3M Medical has been initiating efforts to manufacture new products that are lead free. This has reduced the amounts of waste lead generated at the plant.</p>

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/1/11</p>	<p>Bathrooms were upgraded with toilets that use less water (from 3 gal./flush to 1.6 gal./flush).</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/1/11</p>	<p>Upgrades and new process systems have reduced energy use from 32 watts to 28 watts. Corporate wide goals are to improve Energy Efficiency 25% by 2015 from 2005 base year.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/1/11</p>	<p>3M Medical has reduced the material disposed by 20%. http://solutions.3m.com/wps/portal/3M/en_US/3M-Sustainability/Global/Environment/ManagingWaste/</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>6/1/11</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sustainability/Global/ProductInnovation/LifeCycleMgmt/</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/1/11</p>	<p>Renovations were done in 2009 to HVAC system and Chiller to a more energy efficient system. The project was done through NJ SmartStart Buildings.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>6/1/11</p>	<p>3M Medical conducted an environmental seminar with community leaders on 3/22/11 discussing the 3M plants recycling efforts. 3M has also had corporate wide efforts. http://solutions.3m.com/wps/portal/3M/en_US/3M-Sustainability/Global/Stakeholders/Giving/</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/1/11</p>	<p>3M has a corporate wide policy. http://solutions.3m.com/wps/portal/3M/en_US/3M-Sustainability/Global/VisionHistory/About/</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/1/11</p>	<p>ISO14001</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>6/1/11</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sustainability/Global/Environment/ClimateChange/</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>6/1/11</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/3M-Sustainability/Global/Stakeholders/Suppliers/</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>9/8/09</p>	<p>see comment entered in stewardship report dated 3/3/2008</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>9/8/09</p>	<p>see comment entered in stewardship report dated 3/3/2008</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>9/8/09</p>	<p>see comment entered in stewardship report dated 3/3/2008</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>9/8/09</p>	<p>see comment entered in stewardship report dated 3/3/2008</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>9/8/09</p>	<p>see comment entered in stewardship report dated 3/3/2008</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/8/09</p>	
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/8/09</p>	<p>ISO 14001</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>9/8/09</p>	<p>see comment entered in stewardship report dated 3/3/2008</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>9/8/09</p>	<p>see comment entered in stewardship report dated 3/3/2008</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>3/3/08</p>	<p>Site is currently reviewing new products to reduce hazardous materials.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/3/08</p>	<p>Bath rooms have been upgraded to reduce water usage. Toilets now use 1.6 gallons instead of 3.0 gallons per flush.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/3/08</p>	<p>New systems have reduced energy use by 55%.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/3/08</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/global/sustainability/management/reducing-waste/</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>3/3/08</p>	<p>http://solutions.3m.com/wps/portal/3M/en_US/global/sustainability/policies-standards/life-cycle-management/</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/3/08</p>	<p>Corporate targets for site are to reduce VOC emissions, improve energy efficiency, and reduce waste.</p>

4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	3/3/08	ISO 14001
5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.	3/3/08	Via web http://solutions.3m.com/wps/portal/3M/en_US/global/sustainability/management/environment/
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	3/3/08	http://solutions.3m.com/wps/portal/3M/en_US/global/sustainability/management/climate-change-energy/

AM BEST CO

Site ID: AM BEST CO

OLDWICK, NJ 08850

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	2/28/08	Approximately 40% of the facility's treated wastewater is recycled back to the office complex for non-potable use.
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	2/28/08	AM Best promotes car pooling in conjunction with HART Commuter Information Services. http://www.hart-tma.com/employer_participating.aspx

AMERICAN BAPTIST CHURCHES OF NJ CAMP & CONFERENCE CENTER

 CLINTON TWP, NJ 08530

Stewardship Activities	Date Acknowledged	Comments
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	5/1/13	Facility maintains 34 acres of land that it owns across the street from the camp in accordance with an approved Woodland Management Plan. Invasive species are controlled in this area as part of the approved plan. Hiking trails that are open to the public when camp is not in session have also been established in this area. The facility has an aggressive tree planting program on the camp grounds.

AQUA NJ INC

Site ID: AQUA NJ INC
 14968 25 CLUB HOUSE DR, & RT 523
 WHITEHOUSE STATION, NJ 088890247

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/14/13	All wastewater generated from the sewage treatment plant is used to irrigate the Stanton Ridge golf course.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/14/13	The facility utilizes a solar powered aerator in the surface impoundment.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	2/21/08	All wastewater generated from the sewage treatment plant is used to irrigate the Stanton Ridge golf course.

Site ID: AQUA NJ INC
 19310 MAIN ST,
 CALIFON BORO, NJ 08865

Stewardship Activities	Date Acknowledged	Comments
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	2/25/08	Aqua NJ reports that they have changed from incandescent light bulbs to all fluorescent light bulbs at their offices.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	2/25/08	Aqua NJ reports that they have an active "Conservation Program" & a "Speakers Bureau".

ASBURY GRAPHITE MILLS INC

Site ID: ASBURY GRAPHITE MILLS INC
 6796 156 ASBURY W PORTAL RD,
 BETHLEHEM TWP, NJ 08827

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/8/08	Formulas/constituents of chemical cleaners utilized throughout facility have been replaced with more environmentally friendly counter parts.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/8/08	More efficient compressors purchased approximately two years ago which reduced energy usage 10% over the last two years.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	4/8/08	Office paper shredded and used as packaging material eliminating the purchase of packaging peanuts and other packaging materials.

BEMIS CO INC

Site ID: BEMIS CO INC
14571 54 RT 12,
FLEMINGTON, NJ 08822

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	8/6/08	Bemis recently installed state-of-the art closed loop systems for anti-freeze and inks used in its production thereby dramatically decreasing the number of accidental spills.

BRASS CASTLE ESTATES WWTP

Site ID: BRASS CASTLE ESTATES WWTP
18599 RT 579 & COOKS CROSS RD, STEVENS LN & FINN RD
UNION, NJ 08867

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	3/12/08	The facility uses treatment system effluent for filtrate backwash instead of potable water.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	3/12/08	The facility converted its automatic UV filtration unit to manual. The automatic unit required an actuated pneumatic compressor to drive the pistons. The compressor is no longer needed.

BROWNS HUNTERDON MACK

Site ID: BROWNS HUNTERDON MACK

BLOOMSBURY, NJ 08804

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	12/16/08	Company, prior to September 2008, utilized a parts washing station that used petroleum distillates as the cleaning agent. This unit was serviced on a monthly basis, and the resultant "waste parts washing solution" was manifested offsite as a characteristic (D001/D018/D039/D040) hazardous waste. In September 2008, company eliminated this parts washing station, and replaced it with a parts washing station that uses a biodegradeable degreasing solution, and water based corrosion inhibitor. This material now, no longer needs to be sent offsite as a hazardous waste.

CALIFON BORO

Site ID: CALIFON BORO
129100 39 ACADEMY ST,
CALIFON, NJ 07830

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	6/10/14	Califon recently completed an energy audit of the municipal building and has completed an energy efficient heating and cooling upgrade and an energy efficient lighting upgrade.
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	6/10/14	Califon offers employees a four day work week during the Summer.

CUSTOM ALLOY CORP @ TAYLOR WHARTON SQUARE

Site ID: CUSTOM ALLOY CORP @ TAYLOR WHARTON SQUARE
6734 3 WASHINGTON AVE,
HIGH BRIDGE, NJ 08829

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/10/17	In January 2015, Custom Alloy Corp. (CAC) converted from using a hazardous material as a cleaner for its spray guns to a non-hazardous material. Methyl Ethyl Ketone (MEK) was previously used. CAC now uses Polychem Acrastrip 800. Polychem Acrastrip 800 is reportedly not regulated as a hazardous material.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	7/10/17	CAC utilizes an oil "spinner" allowing it to re-use the oil in its on-site machinery. Absent the oil spinner, the oil would need to be properly disposed off-site.

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/14/13	Delaware Valley Nursery utilizes Rutgers Ag IPM to reduce the use of pesticide products.

EASTERN CONCRETE MATERIALS INC GLEN GARDNER

Site ID: EASTERN CONCRETE MATERIALS INC GLEN GARDNER
 15850 1 RAILROAD AVE,
 GLEN GARDNER, NJ 08826

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/16/08	-dust suppression system uses runoff water/water previously used on-site for dust control which has been redirected to a retention pond on-site rather than continuously using fresh water
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	4/16/08	-scrap steel or manganese/alloy steel from old machinery on-site is sent back to manufacturer for recycling

ENERGY KINETICS INC

Site ID: ENERGY KINETICS INC
 22656 49 MOLASSES HILL RD, 20 KING RD
 CLINTON TWP, NJ 08833

Stewardship Activities	Date Acknowledged	Comments
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/22/14	The facility continues using solar energy in manufacturing
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	5/22/14	The facility continues to reuse pallets and packaging material. Recycle cardboard.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/22/14</p>	<p>The expansion of the corporate facility included green building features, energy efficient upgrades to lighting and natural lighting designs, HVAC systems with high efficiency motors, heat recovery ventilators, programmable thermostats, and insulation and weatherization efforts.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>5/22/14</p>	<p>The facility has a written environmental policy dated 7-27-11 signed by the President of the company. It explains company's environmental goals and policies.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>5/22/14</p>	<p>The facility continues having Energy Star Product Certification for Energy Kinetics System 2000 which is a highly efficient and innovative integrated heat and hot water system designed to reduce energy consumption.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>5/22/14</p>	<p>The facility continues its involvement with Hunterdon County car pooling.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/22/14</p>	<p>The facility continues using solar energy in manufacturing which provides conservation of fossil fuel resources. It lowers green house gas emissions, reduces heat and hot water costs.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>5/22/14</p>	<p>The facility continues to provide training to vendors.</p>
<p>ENERGY STAR Product Certification</p>	<p>1/10/11</p>	<p>Energy Star Product Certification for Energy Kinetics System 2000 which is a highly efficient and innovative integrated heat and hot water system designed to reduce energy consumption.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>1/10/11</p>	<p>See entry dated 2/28/08</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>1/10/11</p>	<p>Reuse pallets and packaging material.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>1/10/11</p>	<p>Recent expansion of the corporate facility included the following green building design features, energy efficient upgrades to lighting including motion sensors and natural lighting designs, HVAC systems with high efficiency motors, heat recovery ventilators, programmable thermostats, and insulation and weatherization efforts.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>1/10/11</p>	
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>1/10/11</p>	<p>See entry dated 2/28/08</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>1/10/11</p>	<p>See entry dated 2/28/08</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>1/10/11</p>	<p>See entry dated 2/28/08</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/4/10</p>	<p>See entry dated 2/28/08</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/4/10</p>	<p>Reuse pallets and packaging material.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>2/4/10</p>	<p>See entry dated 2/28/08</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>2/4/10</p>	<p>See entry dated 2/28/08</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>2/4/10</p>	<p>See entry dated 2/28/08</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>2/4/10</p>	<p>See entry dated 2/28/08</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/28/08</p>	<p>Use solar energy in manufacturing</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/28/08</p>	<p>Reuse pallets and packaging material. Recycle cardboard.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>2/28/08</p>	<p>Energy Kinetics "Excellence in Home Heating" describes the general policy</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>2/28/08</p>	<p>Involved with Hunterdon County car pooling.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>2/28/08</p>	<p>Solar: Solar energy from sunlight is used to manufacture System 2000 which provides conservation of fossil fuel resources and slashes heat and hot water costs. It lowers green house gas emissions, reduces the manufacturing carbon footprint and packages it in a way that can benefit every home or business. A typical home will reduce greenhouse gas emissions by >4 tons/year. Energy Kinetics is in partnership with The Solar Center and New Jersey's Clean Energy Program as the first system to be installed in New Jersey under a new "SREC-Only Pilot Program". The program enables Energy Kinetics to earn tradable Solar Renewable Energy Certificates (SRECs) from the electrical production from the solar panels.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>2/28/08</p>	<p>Provide training to vendors</p>

FLEMINGTON BORO DPW

Site ID: FLEMINGTON BORO DPW
58790 38 PARK AVE,
FLEMINGTON, NJ 08822

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/9/15	1. Flemington Borough has enacted an ordinance for outdoor water use. The sole purpose of the ordinance is to conserve water. This is achieved by: a. Enforce alternate day watering b. Preferred time of day watering to maximize the affectivity of watering c. The use of smart irrigation systems on all new irrigation systems. 2. Flemington Borough offers rain barrels for roof runoff to residents to help conserve water.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/9/15	Flemington Borough Water Department has installed VFD's frequency drives on all seven water supply wells. Process improvement and Energy reduction is achieved by: a. The reduction of electric costs b. The reduction of wear on pumps c. More process options in the operation of wells
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	6/9/15	Flemington Borough offers rain barrels for roof runoff to residents to help conserve water.

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	8/23/13	No pesticides are used on the school grounds or in the garden at Francis Desmare School. Green cleaning products utilized throughout the district.

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>8/23/13</p>	<p>Copper Hill School is serviced by a Cycle-Let Wastewater system that recycles effluent to the toilets.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/23/13</p>	<p>The district is implementing a new energy management system that involves improving energy efficiency of lighting, heating and boilers throughout the district.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>8/23/13</p>	<p>At Francis Desmare School, organic waste from the onsite garden and coffee grounds from the school are composted.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>8/23/13</p>	<p>Vegetables from an on site garden are served in the school cafeteria. The district has established a Green Committee with the following mission: The mission of the Flemington-Raritan Regional School District's Green Committee is to research, recommend, implement, and promote sensible, effective, and economical practices and procedures that sustain the conservation and preservation of the district's environmental resources and to educate the school community of the committee's purpose, efforts, and progress.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>8/23/13</p>	<p>The district utilizes environmentally friendly cleaning products. Bid specs for cleaning products require that they meet "green" standards set by the district.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/11/09</p>	<p>The district has replaced bulbs and ballasts in virtually all classrooms and offices throughout the district with more energy-efficient lighting fixtures. The district also installed light sensors in specific locations to help control and limit energy consumption. In addition, parking lot lights are on timers, which help to prevent excess energy usage before and after regular school hours.</p>

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>8/11/09</p>	<p>The district has established a Green Committee with the following mission: The mission of the Flemington-Raritan Regional School District's Green Committee is to research, recommend, implement, and promote sensible, effective, and economical practices and procedures that sustain the conservation and preservation of the district's environmental resources and to educate the school community of the committee's purpose, efforts, and progress.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>8/11/09</p>	<p>The district utilizes environmentally friendly cleaning products. Bid specs for cleaning products require that they meet "green" standards set by the district.</p>

FLEMINGTON RARITAN RGNL SD COPPER HILL SCHOOL

Site ID: FLEMINGTON RARITAN RGNL SD COPPER HILL SCHOOL
 38204 100 EVERITTS RD, & RT 31/202 N
 RARITAN TWP, NJ 08822

15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/2/13	Washwater is reclaimed and used as make-up water for the adhesive formula. The process saves ~ 30,000 gallons per month in water.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	7/2/13	The facility has completed a line consolidation and replaced the cyclone system with a Mist-Clone system that collectively reduced natural gas usage by ~20%.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	7/2/13	Env. Policy: http://www.gp.com/aboutus/sustainability/resources/ehs-policy/
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/29/09	Washwater is reclaimed and used as make-up water for the adhesive formula. The process saves ~ 30,000 gallons per month in water.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	7/29/09	The policy is available at the following link: http://www.gp.com/aboutus/sustainability/srr/environment/policy.html

GROWMARK FS CORP

Site ID: GROWMARK FS CORP
 13834 60 LEHIGH AVE,
 BLOOMSBURY, NJ 08804

Stewardship Activities	Date Acknowledged	Comments
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/17/13</p>	<p>Delivery to agricultural producers of fertilizers and pesticides in bulk quantities eliminates significant quantities of product packaging and the need for subsequent disposal and/or recycling.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/17/13</p>	<p>1. Consolidate deliveries by truck as much as allowed by need for time-sensitive deliveries to agricultural producers; 2. Maximize truck loads for delivery to multiple producers/customers; 3. Emphasis is placed on fleet maintenance; and 4. Consolidate similar field treatments where possible; Employ nurse truck to reduce trips on public roads between home-base supply and customer application sites.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/17/13</p>	<p>High efficiency lighting systems have been installed in the facility together with motion sensors to conserve electrical energy.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>6/17/13</p>	<p>Consult with Delaware River Greenway Partnership regarding turf management, providing seed for native grass species and site preparation (weed control).</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>6/17/13</p>	<p>1. Hosts Grower education meetings with 160 to 170 farmers in attendance, promoting proper use of pesticides and fertilizers. 2. Has spoken to area FFA Chapters and 4-H Clubs.</p>

HAMPTON BORO

Site ID: HAMPTON BORO
 55599 99 MAIN ST, & WELLS ST
 HAMPTON, NJ 08827

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/21/13	The Borough has adopted a pesticide-free weed control program that includes the use of soap, vinegar and weed whacking in lieu of pesticides.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/21/13	The Borough is utilizing solar powered speed control devices on local roads.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	5/21/13	The Borough implemented a riparian buffer project along the Musconetcong River at Valley Road Park.

HIDDEN ACRES NURSERY

Site ID: HIDDEN ACRES NURSERY
178117 516 LOCUST RD,
READINGTON TWP, NJ 08822

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	6/5/13	Use of less pesticides in cultivation and weed control. Reduction in the amount of fertilizer needed by: a) Crop rotation to improve the level of soil fertility. b) Application of wood chips (as compost) on farmland; cover cropping with rye-grass over the winter season and ploughing it into the soil to improve soil fertility level.

HIONIS GREENHOUSES INC

Site ID: HIONIS GREENHOUSES INC
143034 4 CODDINGTON RD,
WHITEHOUSE STATION, NJ 08889

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/4/13	Operates a drip irrigation system and also applies recycled water on crops to reduce the amount of water use in the greenhouses.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/4/13	This greenhouse establishment uses locally grown seedlings in its crop production, and so there is no long distance travel for its needs. As a result of this there is a reduction in transportation energy use.
22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	6/4/13	Places black tarpaulin cover over soil to reduce soil erosion, thereby improving the environment.

HUNTERDON CNTY

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	6/9/08	boiler chemicals were removed and replaced with other items that are environmentally friendly
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	6/9/08	-company recycles batteries & also utilizes an waste oil recycler who recycles the used oil off site
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	6/9/08	company initiated a four day work week to reduce employee commutes
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	6/9/08	company sends ink toner cartirdges back to vendor for reuse
8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?	6/9/08	company policy requires this practice

HUNTERDON MEDICAL CENTER CORP

Stewardship Activities	Date Acknowledged	Comments
Hospitals for a Healthy Environment.	2/29/08	active member with many programs past, present and future.
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	2/29/08	Actively eliminating most sources for mercury and reclaiming minimal xylene and other solvents normally lost through the sewage system.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	2/29/08	installed a new chiller system and new water tower
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	2/29/08	They replaced all old light ballasts and installed silver screen reflectors. Also new chillers and water tower.
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	2/29/08	
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	2/29/08	Part of NJ Transportaton "HART" program for trip reduction.

LAMBERTVILLE CITY HALL

Site ID: LAMBERTVILLE CITY HALL
46975 18 YORK ST,
LAMBERTVILLE, NJ 08530

Stewardship Activities	Date Acknowledged	Comments
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	4/19/16	Lambertville has implemented a curb side food recycling program (the Third Can program). The City promotes freecycling and upcycling through "Operation Sparkle Program".
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	4/19/16	Lambertville has completed one Rain Garden near Cavallo Park and an additional Rain Garden is pending.
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	4/19/16	http://www.lambertvillenj.org/Greenhouse-Inventory

LAMBERTVILLE CITY MUA

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	12/23/13	Potassium permanganate and concentrated hydrogen peroxide (used for sludge conditioning and odor control) were replaced with a magnesium oxide (milk of magnesia) solution.

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>12/23/13</p>	<p>Facility recycles plant effluent for plant wash-down and for a water source for the geothermal system.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>12/23/13</p>	<p>Facility has switched to Variable Frequency Drive Pumps and blowers which eliminate electrical surges and improve efficiency through optimal motor control. Replaced existing site lighting with LED lights to reduce energy use.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>12/23/13</p>	<p>Regular tours/presentations given to community groups on wastewater treatment and water quality</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>12/23/13</p>	<p>The office building is heated and cooled via a geothermal system.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>5/22/08</p>	<p>Potassium permanganate and concentrated hydrogen peroxide used for sludge conditioning and odor control were replaced with magnesium oxide (milk of magnesia) solution.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/22/08</p>	<p>Facility has switched to Variable Frequency Drive pumps and blowers which eliminate electrical surges and improve efficiency through optimal motor control.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/22/08</p>	<p>Optimized treatment at the facility has resulted in the generation of less sludge. As a result, the facility, which hauls its own sludge, is making 35% less trips for sludge disposal. 1 of the 5 vehicles in the fleet is a hybrid.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/22/08</p>	<p>Regular tours/presentations given to community groups on wastewater treatment and water quality.</p>

18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	7/23/13	The site has recently completed an energy efficient lighting upgrade for the exterior of the facility.

MEL CHEMICALS INC

Site ID: MEL CHEMICALS INC
6723 500 BARBERTOWN POINT BREEZE RD,
KINGWOOD TWP, NJ 08822

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	1/21/16	The site has an Environmental policy that governs their activities.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	1/21/16	Mel Chemical has an EMS to track their goals.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	8/6/08	In calendar year 2008, the facility arranged for the recycling of computer and electronic components. These items are not accepted by the Hunterdon County Solid Waste Authority. The facility provided a disposal receipt from the recycling contractor.

MELICKS TOWN FARM

Site ID: MELICKS TOWN FARM
 128853 19 KING ST,
 TEWKSBURY TWP, NJ 08858

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/13/13	The farm participates in the Rutgers IPM Program, which reduces the amount of pesticides used on the farm. The site also performs crop rotation to increase soil fertility reducing the need to fertilize.
22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	5/13/13	This site uses no till planting to help conserve and improve soils and water usage on the farm.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	5/13/13	This farm, which also runs a farm stand, only uses recycled plastic bags in it's retail operation, This farm also uses a recycled plastic mulch in certain areas of the farm (use of recycled materials)

MICEK FARM

Site ID: MICEK FARM
482979 229 SERGEANTSVILLE RD,
RARITAN TWP, NJ 08822

3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	6/20/13	Minalex Corporation has an environmental policy (EP 1.0) that conducts its operations in compliance with applicable laws, regulations and standards concerning environmental protection and provides a mechanism for self-monitoring to ensure compliance and continual improvement.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	6/20/13	Minalex Corporation utilizes an EMS that provides a mechanism for self-monitoring to ensure compliance with env. regulations and continual improvement.

MOUNTAIN TOP ORCHARD

Site ID: MOUNTAIN TOP ORCHARD
482971 112 MOUNTAIN TOP RD,
LEBANON TWP, NJ 08826

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/13/13	This farm uses a trickle irrigation method, directly to the soil, instead of a sprinkle type irrigation as a means of water conservation.

Climate Leaders.	5/21/13	http://www.epa.gov/climateleaders/partners/partners/americanwater.html
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/21/13	The facility has replaced the chlorine disinfection system with UV light.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/21/13	The facility uses treated wastewater for foam suppression rather than using ground water from an onsite well.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/21/13	As a result of a recent plant upgrade, the treatment plant utilizes several Variable Frequency Drive (VFD) pumps which are ~ 30 % more efficient than non VFD pumps.

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>5/21/13</p>	<p>Env. Enhancement Project with NJ Audubon http://www.njaudubon.org/SectionConservation/StewardshipProgram/StewardshipBlog/tabid/2006/entryid/64/New-Jersey-American-Water-Partners-with-NJ-Audubon-and-USFWS-to-Improve-Wildlife-Habitat-in-New-Jersey.aspx</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/21/13</p>	<p>New Jersey American Water Company voluntarily took over the Pottersville STP, which was in Receivership, in a cooperative agreement with BPU and NJDEP. The plant was severely dilapidated prior to a recent upgrade that has resulted in a significant improvement in water quality.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/21/13</p>	<p>The facility published White Papers on various environmental topics for their Stakeholders amwater.com/corporate-responsibility/Environmental-Sustainability/Environmental-Stewardship-and-Innovation/environmental-communications \</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>5/21/13</p>	<p>http://amwater.com/corporate-responsibility/Environmental-Sustainability/Environmental-Policy-and-Performance/commitment-to-the-environment.html</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>5/21/13</p>	
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>5/21/13</p>	<p>American Water has set a corporate goal to lower its greenhouse gas emissions per the volume of water it produces by 16% from 2007 levels by the year 2017. http://amwater.com/corporate-responsibility/environmental-sustainability/climate-change-and-energy-management/greenhouse-gas-emissions.html</p>
<p>Climate Leaders.</p>	<p>4/4/11</p>	<p>http://www.epa.gov/climateleaders/partners/partners/americanwater.html</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>4/4/11</p>	<p>The facility has replaced the chlorine disinfection system with UV light.</p>

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>4/4/11</p>	<p>The facility uses treated wastewater for foam suppression rather than using ground water from an onsite well.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/4/11</p>	<p>As a result of a recent plant upgrade, the treatment plant utilizes several Variable Frequency Drive (VFD) pumps which are ~ 30 % more efficient than non VFD pumps.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. WaterSense.	4/1/16	NJWSA participates in the US EPA WaterSense partnership program which promotes water conservation (https://www3.epa.gov/watersense/)
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/1/16	NJWSA actively recycles and disposes of chemicals off site at a county facility. Waste oil is disposed of properly. CFL light bulbs are taken to a facility for disposal.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/1/16	Our site does not irrigate any areas, and only hand waters plants around the building and in our butterfly garden. We are currently investigating the use of faucet aerators and shower head aerators. The facility participates in a Money back for Installing Rain Barrels and Rain Gardens.

<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/1/16</p>	<p>We are moving towards a hybrid vehicle fleet by purchasing hybrid vehicles as vehicles need to be replaced</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/1/16</p>	<p>NJWSA is switching incandecent light bulbs to CFL and LED</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>4/1/16</p>	<p>Our site in Clinton is certified under the River-Friendly Business program, and through this program has completed several projects, including the installation of a butterfly garden, reduced mow zones, meadow grass plantings, and bird boxes. Additional projects are often being identified and slated for implementation</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>4/1/16</p>	<p>Through our River-Friendly program, we provide employee education, including presentations on environmental topics (water conservation, rain gardens, rain barrels, aquatic invasive species, etc.) at our annual winter training for all Authority employees. The facility participates in the River Friendly Resident Program.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>4/1/16</p>	<p>As part of the Watershed Division's mission, we are engaged in several community initiatives, including rain barrel programs (educational workshops and rebates), rain garden rebate program (includes educational workshops and technical support), and community riparian buffer improvements, to list a few. We have also installed several demonstration rain gardens in support of these programs. http://www.raritanbasin.org/rain_garden.html http://www.raritanbasin.org/rain_barrel.html The facility partners in the Stop Aquatic Hitchhikers Program.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>4/1/16</p>	
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>4/1/16</p>	<p>We manage the River-Friendly Certification Programs, where we provide support to businesses, golf courses, and schools to be stewards of our watersheds – these programs focus on 4 categories: water quality management, water conservation, wildlife habitat enhancement and education and outreach. We have 21 facilities in the program as of March 2016. http://www.raritanbasin.org/riverfriendly.html</p>

NJ WATER SUPPLY AUTH SPRUCE RUN RESERVOIR INTAKE PUMP

19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	1/29/13	Approximately five percent of the Authority fleet are hybrid vehicles.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	1/29/13	The authority has transformed lawns into natural areas with native plantings buffering the the Spruce Run reservoir and has been designated a River-Friendly Business. http://www.raritanbasin.org/Projects/riverfriendly/business.html

NUTRIEN AG SOLUTIONS INC

Site ID: NUTRIEN AG SOLUTIONS INC
 24983 127 PERRYVILLE RD, AKA RT 635 & JUTLAND
 PITTSTOWN, NJ 08867

Stewardship Activities	Date Acknowledged	Comments
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	6/13/13	Delivery to agricultural producers of fertilizers and pesticides in bulk quantities eliminates significant quantities of product packaging and the need for subsequent disposal or recycling of individual containers.
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	6/13/13	Product delivery schedules are adjusted to accommodate delivery to multiple customers in fewer trips.
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	6/13/13	Equipment, lighting fixtures and lamps are replaced with more energy-efficient equipment and lighting.
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	6/13/13	Signed by manager.
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	6/13/13	Does yearly evaluation via monthly Inspection Notebook.

NY LIFE INSURANCE CO

15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	8/9/10	All bathrooms were retrofitted in 2008/2009 with water-saving devices.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	8/9/10	All incandescent light bulbs have been replaced with CFL units and the lights have been placed on automatic on/off systems which turn off when no one is present.
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	8/9/10	2009 Gold Award winner in the NJDOT "NJ Smart Workplaces" program which acknowledges employers that provide commuter benefits to help employees address limited or expensive parking, reduce traffic congestion, improve employee recruiting and retention, and minimize the environmental impacts associated with drive-alone commuting.

OAK GROVE PLANTATION

Site ID: OAK GROVE PLANTATION
 128850 266 OAK GROVE RD,
 FRANKLIN TWP, NJ 08867

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/14/13	This site participates in the Rutgers Ag Integrated Pest Management (IPM) Program which is designed to reduce the amount of pesticide products used at this farm.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	5/14/13	This farm has some solar energy production, a small solar panel field.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	1/10/13	Received " River-Friendly Farm" designation by the North Jersey Resource Conservation & Development. Program addresses water quality concerns within the Raritan River Basin. The program seeks to promote environmentally friendly farming practices through the recognition of farmers that, through good management, help to protect water resources within the watershed. http://www.northjerseyrcd.org/rff/program-details/
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	1/10/13	In 2009, the farm installed solar power units which, when in use, generate enough electric power to operate the entire facility.

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/28/08</p>	<p>facility has installed low-flow toilets</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/28/08</p>	<p>energy saving thermostats have been installed in the facility's buildings</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>2/28/08</p>	<p>facility teaches a Nature & Ecology program to its students</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>2/28/08</p>	<p>the facility tends to purchase office supplies from companies that use recyclable materials in their finished products</p>

RARITAN TWP MUA STP

Site ID: RARITAN TWP MUA STP
12869 367 OLD YORK RD,
RARITAN TWP, NJ 08822

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	5/7/14	Facility has installed LED outside lighting and indoor motion detecting light switches.

ROLLING HILLS NURSING CARE CENTER

Site ID: ROLLING HILLS NURSING CARE CENTER
37990 16 CRATETOWN RD, & RT 31
CLINTON TWP, NJ 08801

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	3/26/08	Water flow restrictors used in baths and showers. Water efficient laundry equipment installed in 2003.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	3/26/08	Facility is in the process of planning and constructing a waste water treatment plant that will discharge "clean" water to ground-water. It will replace 4 conventional septic disposal systems.

TEWKSBURY TWP

Site ID: TEWKSBURY TWP
126590 169 OLD TURNPIKE RD,
TEWKSBURY TWP, NJ 07830

Stewardship Activities	Date Acknowledged	Comments
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	6/3/09	187 large shade trees, evergreens and a variety of shrubs were planted at four local parks in Tewksbury Township to celebrate Arbor Day 2009. http://www.nj.gov/dep/newsrel/2009/09_0007.htm

THE SALVATION ARMY CAMP TECUMSEH

Site ID: THE SALVATION ARMY CAMP TECUMSEH
37700 445 MECHLINS CORNER RD, AKA RT 625
ALEXANDRIA TWP, NJ 08867

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	9/11/12	Facility employs non-chemical methods of pest control when possible, reducing the overall amount of pesticides used on the site.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/11/12	Low flow toilets employed throughout the camp reducing water usage by ~9,000 gallons per month.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/11/12</p>	<p>Caretaker house and Leadership house were built with R 30 Insulation, energy efficient lighting/windows, high efficiency water heaters and low flow water fixtures.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>9/11/12</p>	<p>The on-site lodge has solar panels that power the hot water for the building.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>9/15/11</p>	<p>The facility has installed 48 low flow toilets resulting in an up to 10,000 gallon per month reduction in ground water diverted and discharged via the on site sewage treatment plant.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>9/15/11</p>	<p>The on-site lodge has solar panels that power the hot water for the building.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>9/3/08</p>	<p>The on-site lodge has solar panels that power the hot water for the building.</p>

TRADITION FARMS INC

Site ID: TRADITION FARMS INC
482981 465 RT 614,
UNION TWP, NJ 08802

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/14/13	This site uses Rutgers Ag IPM Program designed to use less pesticide products.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/14/13	The farm reduces water use by utilizing drip irrigation directly to the soil rather than a sprinkle or spray irrigation.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	5/14/13	This farm has a River Friendly certification. The farm employs various best management practices to reduce nonpoint source pollution of the waterways.

TRIAD TOOL & DIE CO

Site ID: TRIAD TOOL & DIE CO
412821 9 COMMERCE ST,
READINGTON TWP, NJ 08876

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	6/18/18	1) The facility installed a 380 KW Roof Mount Solar Panel System 2.5 years ago. According to the Vice President of Operation & Program, the solar panels save 50% of the facility's electric bill all year round (winter months a little better than summer). 2) There is an additional 120 KW Ground Mount Solar Panel System installation in process, which will be completed in about 4 to 6 weeks.

UNIONVILLE VINEYARDS

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	6/5/13	Reduction in the use of pesticides by manual weeding. Farmer minimizes pesticide sprays which allow ripening of grapes and improves sunlight, wind and air penetration into the vines. In addition, the farmer uses organic products such as Stylet to reduce mildew on grapes.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	6/5/13	Composting of grape vines to improve soil fertility and thereby reduce the amount of fertilizer use.

VALLEY CREST FARM

Site ID: VALLEY CREST FARM
387985 14 ALLERTON RD,
CLINTON TWP, NJ 088333209

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/23/12	All vegetables and berries grown on site are pesticide-free and the orchard utilizes Integrated Pest Management in conjunction with Rutgers Cooperative Extension.

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>7/23/12</p>	<p>The wood from fallen trees is processed in an on site mill and wood shop and is used make or repair sheds, barns and furniture used on the farm.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/23/12</p>	<p>One of the two passenger vehicles owned by the farm is a hybrid vehicle.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>7/23/12</p>	<p>The facility has preserved 138 acres through green acres (with a forest management plan) and maintains hiking trails that are open to the public.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>7/23/12</p>	<p>The facility conducts tours for students and community groups highlighting sustainable agriculture.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>7/23/12</p>	<p>The facility has two roof mounted solar arrays.</p>

VILLAGE SQUARE

18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	12/13/12	Facility recently purchased 3 electric molding machines which are more energy efficient at higher compression tonnage ratings.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	12/13/12	Reuse of plastic byproducts: Runners and scrap plastic saved and shipped out for processing in reused gaylords. First heat plastics ground up and reused into process.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	12/13/12	All lighting has been replaced to T5 lighting under State Grant
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	12/13/12	Norston in an associate member of Climate Savers Computing Initiative http://www.climatesaverscomputing.org/ As participants in the Climate Savers Computing Initiative, computer and component manufacturers commit to producing products that meet specified power-efficiency targets, and corporate participants commit to purchasing power-efficient computing products.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	12/13/12	Facility has an ongoing community outreach program in Trenton for disadvantaged youth in which every Arbour day the facility supplies trees to the organization for planting.

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>12/13/12</p>	<p>As stated on website http://www.nordson.com/en-us/about-nordson/Pages/EnvironmentalAwareness.aspx Environmental policy We at Nordson are committed to being a clean and quiet neighbor, to reducing our carbon footprint and to continually improving our environmental performance. We will meet or exceed all applicable international, federal, state and local environmental regulations, monitor how our operations impact the environment and strive for continuous improvements. We will also research and invest in new technologies that enhance our efficiency and environmental performance in a manner that is feasible and practical for our business. In addition, we will educate, train and motivate employees to conduct business activities in an environmentally responsible manner not only in the workplace, but also at home.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>12/13/12</p>	<p>Facility uses SunRay's onsite complex solar array energy for use in the facility.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>12/13/12</p>	<p>Facility audits vendors in their supply chain for environmental compliance. Facility is also audited for environmental compliance.</p>

A&M FARM & GARDEN CENTER

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>2/24/15</p>	<p>All pot/ tank washings as well as excess fragrances are collected in a container for the facility's potpourri/ discounted materials program that is in effect for off-spec material unable to be reworked or blended into another product line. If the material itself is off spec or manufactured incorrectly but is pleasant smelling as a "stand-alone product"; it will be offered to surplus dealer at a low cost. Many surplus dealers who purchase from them (or regular customers looking for a low price point fragrance) use these materials in their low cost production lines. All other unmarketable materials are blended together and filtered. This non-descript smelling "potpourri" is then addend as a no-cost line item to low cost industrial deodorants. This greatly reduces the cost of a given product line to the customers which purchase heavy industrial deodorants and decreases the quantity of hazardous waste they generate.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/24/15</p>	<p>Fragrances that are mixed incorrectly, or waste fragrances generated from cleaning out the pots and mixers are reused to create a potpourri product.</p>

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/20/14	Benton Graphics continues to operate with the elimination of naphthalene from their manufacturing process as well as an 80% reuse of acetone.
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/13/13	Benton Graphic has eliminated acetone and naphthalene from the production cleaning process and replaced the hazardous materials with botanical water based based degreaser. Also production oils were replaced with higher flashpoint oil to reduce the potential for explosions in the Process production room. http://www.benefect.com/CA_benefect/CAN_products_cleaners_atomic.php

Stewardship Activities	Date Acknowledged	Comments
Green Chemistry.	7/1/09	
ENERGY STAR.	7/1/09	
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/1/09	Principles of Green Chemistry (substitution with less hazardous materials) have been adopted by BMS for inclusion in R&D activities. Developed and deployed green chemistry scorecard. Implemented green chemistry evaluations of in-licensed products. Hazardous waste off-site treatment/ disposal reduced by 67% from 2001 to 2008. http://www.bms.com/sustainability/goals_key_indicators/Pages/2010_goals.aspx

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>7/1/09</p>	<p>NJDEP permitted reclaimed water system in 2003 for reuse. One of first and few approved in NJ. Reclaimed water supplied to HVAC system Cumulative Total ~ 14 MG, 60 MGy at build-out. Cooling Coil Condensate Recovery ~ 2 MG in 2008</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/1/09</p>	<p>Energy reduction opportunities are actively evaluated and pursued. The company's Information Technology team found that removing screen savers from all employees' computers in the U.S. saves about 1.9 million kilowatts of energy and \$266,000 annually. BMS Hopewell added a new research facility without a net increase in energy consumption.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>7/1/09</p>	<p>BMS Hopewell actively seeks opportunities where its wastes may be beneficially reused/recycled for both Hazardous and non-hazardous wastes (recycled). It is standard practice to recycling printer cartridges, solvents, batteries, electronic equipment and computers, which are currently not required to be recycled by state regulations.</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>7/1/09</p>	<p>Our product life cycle (PLC) reviews of products continue to produce EHS and economic benefits at our operations around the world. http://www.bms.com/sustainability/environmental_performance/Pages/product_stewardship.aspx#plc</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/1/09</p>	<p>Green Meetings: BMS is reducing air and land travel with a focus on decreasing the number of meetings to those that are essential, and conducting those via video or teleconference whenever possible. http://www.bms.com/sustainability/environmental_performance/Pages/transportation_impacts.aspx</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>7/1/09</p>	<p>Green design is reviewed during new construction and/or modification on a case by case basis. Examples include solar panels at the Child Development Center and relamping with low mercury fluorescents. Office light switches have occupancy sensors so that the lights automatically turn off when the office is unoccupied.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>7/1/09</p>	<p>BMS is a a founding partner and major supporter of the Lawrence Hopewell Trail (LHT) (a 20-plus mile multi-purpose bicycle and pedestrian path linking Hopewell and Lawrence Townships) and in 2008 awarded \$200,000 for the project.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>7/1/09</p>	<p>Corporate Outreach through information, pamphlets, etc. Led by Public Affairs. The Hopewell facility developed brochures to help raise awareness about stormwater management and local threatened and endangered species. Examples: Aug. 4, 2008 -- Funded by BMS's Community of Learners Program, the Stony Brook- Millstone Watershed Association in Hopewell, New Jersey offers summer day camp scholarships to city kids. http://www.bms.com/news/features/2008/Pages/watershed_connects_trenton_youth.aspx</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/1/09</p>	<p>BMS corporate EHS policy communicates BMS commitment to conduct its business in a safe and environmentally responsible manner.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>7/1/09</p>	<p>BMS environment, health and safety management system (EMS) provides the structure for implementing proactive sustainable business practices. Its purpose is to ensure compliance with internal and external requirements, drive continuous improvement, and support the company's strategy to be a next-generation bio-pharmaceutical leader. The EMS encompasses the following elements: Policy, principles and strategy; Accountability, organization, roles and responsibilities; Risk management; Compliance management; Metrics and key performance indicators; Resources planning; Auditing and monitoring; Training and communications</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>7/1/09</p>	<p>BMS participates in Global Reporting Initiative. http://www.bms.com/sustainability/environmental_performance/Pages/compliance_and_remediation.aspx</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>7/1/09</p>	
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>7/1/09</p>	<p>BMS offers a Commuter Assistance Center that provides useful information on biking to work, traffic, public transit and links to other resources. Bike racks were provided for the regular bicycle commuters. BMS participates in a local public/private partnership, the Hopewell Valley Traffic Management Coalition, which seeks to balance quality-of-life issues with the demands of reasonable growth. We are working to minimize and reduce traffic flow by surveying existing patterns and offering flexible work hours to employees, as well as encouraging car and van pools and the use of mass transit and park-and-ride facilities.</p>

<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>7/1/09</p>	<p>Purchases of recycled materials where appropriate including copier paper. Unable to quantify.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>7/1/09</p>	<p>Solar Panels at Child Development Center. Planned 1MW Solar project for 2009-2010.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>7/1/09</p>	<p>Greenhouse gas emissions are calculated using appropriate EPA factors and include on-site combustion equipment & purchased electricity.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>7/1/09</p>	<p>BMS works with suppliers - including third-party manufacturers and contractors - to achieve the highest level of quality, expertise, experience and fit with our operating culture. We encourage our major suppliers to align their environmental management systems with the requirements of ISO 14001. We also encourage key suppliers to establish goals that support our 2010 Sustainability Goals. BMS periodically monitor supplier performance through a range of tools, including questionnaires, surveys, reference checks, publicly available information and site visits.</p>

Site ID: BRISTOL MYERS SQUIBB CO
15826 RT 206 & PROVINCE LINE RD,
LAWRENCE TWP, NJ 08540

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>11/10/14</p>	<p>1. BMS replaced the petroleum-based hydraulic fluid in over 90% of its elevators with a vegetable-based fluid. 2. BMS replaced 2500 lbs. of Halon (used for fire suppression of electronics) with a compound that does not release chlorine, fluorine, and bromine upon use. Additionally, BMS sold the Halon to a supplier for recycling and reuse, instead of being incinerated.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>11/10/14</p>	<p>Bristol-Myers Squibb constructed sump pump recirculation systems in two buildings on its site. The water collected in these sump pumps was redirected from an onsite pond to the cooling towers in the facility's Central Utilities Building. The recirculated water minimizes the amount of potable water required by the cooling towers. These systems, which were placed online in September 2014, recirculated 0.6347 MG of reclaimed water to the cooling towers in the 4th calendar quarter of 2014. Due to the initial success of the program, BMS has received approval from NJDEP to increase the amount of water which can be recirculated by these systems.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>11/10/14</p>	<p>BMS constructed a "turtle beach" along the shore of the lake at the facility. The turtles that reside in the lake can easily enter and exit the lake and lay their eggs in this constructed beach. In addition, a sign describes the types of turtles commonly found in the lake.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>11/10/14</p>	<p>BMS is a member of, and provides financing for, "Sustainable Lawrence", a non-profit environmental organization. http://www.sustainablelawrence.org/</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/10/14</p>	<p>http://www.bms.com/sustainability/governance_and_management/Pages/environment_health_and_safety_policy.aspx</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>11/10/14</p>	<p>http://www.bms.com/sustainability/environmental_performance/Pages/compliance_and_remediation.aspx</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>11/10/14</p>	<p>1. Bristol-Myers Squibb may conduct a Quality or EHS evaluation of a contractor or supplier. 2. Bristol-Myers Squibb, in conjunction with other major pharmaceutical companies, has signed on to the Green Suppliers Network (GSN), a collaborative venture between industry and the U.S. Environmental Protection Agency. GSN works with all levels of the manufacturing supply chain to achieve environmental and economic benefits. (https://www.greensuppliers.gov/gsn/home.gsn)</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>11/10/14</p>	<p>BMS has installed low flow showerheads and faucets and various meters on its water system throughout the campus as part of a leak detection system to reduce water usage and eliminate waste.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>11/10/14</p>	<p>"Bristol-Myers Squibb reports greenhouse gas emissions in the form of carbon dioxide (CO2) equivalents. This includes direct CO2 from fuels used and other greenhouse gases from our operations, indirect CO2 from purchased electricity, on-site waste treatment, and other sources such as fermentation. We calculate greenhouse gas emissions from fuel use using emissions factors from eGRID: Emissions and Generated Resource Integrated Database U.S. EPA office for atmospheric programs."</p>

<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>11/10/14</p>	<p>1. Bristol-Myers Squibb may conduct a Quality or EHS evaluation of a contractor or supplier. 2. Bristol-Myers Squibb, in conjunction with other major pharmaceutical companies, has signed on to the Green Suppliers Network (GSN), a collaborative venture between industry and the U.S. Environmental Protection Agency. GSN works with all levels of the manufacturing supply chain to achieve environmental and economic benefits. (https://www.greensuppliers.gov/gsn/home.gsn)</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>11/10/14</p>	<p>BMS employees offer environmental compliance mentoring at NJBIA/CCNJ meetings and has prepared an educational brochure for distribution.</p>
<p>Performance Track.</p>	<p>10/27/09</p>	<p>USEPA Performance Track (charter member)</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>10/27/09</p>	<p>BMS has installed low flow showerheads and faucets and various meters on its water system throughout the campus as part of a leak detection system to reduce water usage and eliminate waste.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>10/27/09</p>	<p>1. BMS donated \$1M to help purchase ~400 acres of Carson Woods, allowing it to remain open space in its natural state. 2. BMS is a certified program in the Wildlife Habitat Council. Approximately 130 acres of the 280 acre property are included in habitat enhancement projects, including: installation and monitoring of 55 bluebird boxes; managing invasive species & planting native vegetation. (http://www.wildlifehc.org/registry_certifiedsites/cert_sites_detail2.cfm?LinkAdvID=99828)</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>10/27/09</p>	<p>BMS is a member of, and provides financing for, "Sustainable Lawrence", a non-profit environmental organization. http://www.sustainablelawrence.org/</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>10/27/09</p>	<p>http://www.bms.com/sustainability/governance_and_management/Pages/environment_health_and_safety_policy.aspx</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>10/27/09</p>	<p>http://www.bms.com/sustainability/environmental_performance/Pages/compliance_and_remediation.aspx</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>10/27/09</p>	

<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>10/27/09</p>	<p>1. Bristol-Myers Squibb may conduct a Quality or EHS evaluation of a contractor or supplier. 2. Bristol-Myers Squibb, in conjunction with other major pharmaceutical companies, has signed on to the Green Suppliers Network (GSN), a collaborative venture between industry and the U.S. Environmental Protection Agency. GSN works with all levels of the manufacturing supply chain to achieve environmental and economic benefits. (https://www.greensuppliers.gov/gsn/home.gsn)</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>10/27/09</p>	<p>"Bristol-Myers Squibb reports greenhouse gas emissions in the form of carbon dioxide (CO2) equivalents. This includes direct CO2 from fuels used and other greenhouse gases from our operations, indirect CO2 from purchased electricity, on-site waste treatment, and other sources such as fermentation. We calculate greenhouse gas emissions from fuel use using emissions factors from eGRID: Emissions and Generated Resource Integrated Database U.S. EPA office for atmospheric programs."</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>10/27/09</p>	<p>1. Bristol-Myers Squibb may conduct a Quality or EHS evaluation of a contractor or supplier. 2. Bristol-Myers Squibb, in conjunction with other major pharmaceutical companies, has signed on to the Green Suppliers Network (GSN), a collaborative venture between industry and the U.S. Environmental Protection Agency. GSN works with all levels of the manufacturing supply chain to achieve environmental and economic benefits. (https://www.greensuppliers.gov/gsn/home.gsn)</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? PRINCETON TWP, NJ 085435297

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>7/24/08</p>	<p>Company has switched from using Ethoxylated Alcohols to using more aquatic friendly products.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>7/24/08</p>	<p>Company reuses non-hazardous waste, and when possible tries to resell any used products.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>7/24/08</p>	<p>For presentations, instead of printing out copies, they load the presentation on jump drives to share the information.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/24/08</p>	<p>Company has all policies, rules, management, responsible care available online.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>7/24/08</p>	<p>Facility uses Responsible Care and publishes a booklet every year.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>7/24/08</p>	<p>Facility publishes an annual performance report. http://www.churchdwright.com/company/2007SustainabilityReport.pdf</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>7/24/08</p>	<p>Encourage teleconferences, phone conferences, and have a carpooling program in use.</p>

CONGOLEUM CORP AMERICAN BILTRITE INC PLANT #2

Site ID: CONGOLEUM CORP AMERICAN BILTRITE INC PLANT #2
 15828 1945 E STATE ST,
 HAMILTON, NJ 08690

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	11/16/12	Facility now recycles approx. 90% of its water. Prior water usage was 197,000 gallons/day & present water usage is now 9,300 gallons/day.

CRAFT CLEANERS

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	1/12/10	Craft Cleaners replaced their PCE dry cleaning equipment with Solvair cleaning equipment which uses a biodegradable cleaning liquid and CO2 to clean garments. Information concerning the machine and the process can be found at www.greenclothingcare.com .
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	1/12/10	The biodegradable cleaning liquid and CO2 used in the cleaning process are purified and reused.

18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/30/16	Facility installed energy efficient light fixtures with automatic on/off features.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	6/30/16	The facility invoked a "green meeting" procedure. All handouts are distributed electronically to decrease paper usage.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/30/16	This permittee has replaced some vehicles in the fleet with hybrid vehicles.
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	6/30/16	The facility implemented a policy of having webinars for Advisory Committee Meetings in order to decrease interstate driving.
9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.	6/30/16	The facility mentors NJPDES permittees. It provides advice to help them develop and implement their Pollutant Minimization Plan.

EDUCATIONAL TESTING SERVICE

3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	11/13/14	
5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.	11/13/14	Annual Environmental Report for 2013 was submitted during inspection.
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	11/13/14	The principal Green House Gas (GHG) due to operations at Elementis locations are carbon dioxide, with a negligible quantity of nitrous oxide. GHG emissions have been converted into carbon dioxide equivalent ('CO2e') using official data provided by DEFRA. GHG emissions are reported for all 20 manufacturing sites including principal offices and laboratories. A number of much smaller sales offices have been excluded because the level of CO2e emissions were deemed to be too immaterial. Elementis is providing two intensity ratios. Tonnes CO2e per tonne of production and tonnes CO2e per kWh of energy consumed. Both will provide in future years an indication of energy efficiency improvements including cleaner fuels consumed. These ratios are subject to variations due to changes in the mix of products manufactured, volumes and energy efficiency improvements.

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	8/4/08	Facility is using less hazardous substances. Since the purchase of Ivanhoe they have had to increase their inventory. They have been able to combine the materials they use for both companies into one product for that specific process instead of multiple products. Ex: ETU-22 rubber encapsulated accelator is being used effectively by both companies; 550 Green Color Masterbatch, is the standard green pigment for both companies.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	8/4/08	The facility is making less, small trips with their trucks. Instead they are waiting for the truck to be close to full, before they make any deliveries or pick-ups.

HOPEWELL TWP MUNICIPAL BUILDING

18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	7/20/15	As part of the Brandon Farms Pump Station upgrade, Hopewell replaced the 3 motors with variable frequency drive pumps. This will result in a net savings of electricity.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	7/20/15	Township has a field of solar panels in front of municipal building. Solar panels supplement energy for the public works building. During 2014, approx. 50,000 KW of energy was produced by the solar panels. From Jan.-October of 2015, approx. 47,000 KW of energy has been produced.

15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/15/11	waterless urinals are used in the men's lavatory
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	6/15/11	environmentally friendly cleaning products are purchased; recycled paper is purchased
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	6/15/11	The facility has built two solar array farms that provide approximately 70% of the sites electricity needs and produce 4.1 MW of power. These have been online since October 2010.

SmartWay Transport Partnership.	10/11/16	Smartway Transport Partnership- Smartway logo qualified Region 2
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	10/11/16	Idling reports on each tractor. from 2015 to 2016 showed that they had a 7.5% decrease in truck idling.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	10/11/16	Fleet was upgrades to 70+% of the 62 tractors. They are 3 years or newer and now get 6.5-7 MPG vs the older models that got 5.5-6 MPG.
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	10/11/16	Smartway Transport Partnership
SmartWay Transport Partnership.	9/19/12	Smartway Transport Partnership - Smartway logo qualified Region 2 http://www.epa.gov/smartway/partnerlists/partner-list.htm
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	9/19/12	Smartway Transport Partnership

MIRY RUN COUNTRY CLUB

15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/23/14	Course utilizes bent grasses on all greens. Bent grasses are fast growing and thus reduce water use.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/23/14	Approximately 10 acres of the course are dedicated low mow areas that are mowed no more than once per month, this reduces the course's fuel and energy usage and thus reduces CO2 emissions.

MUNICH REINSURANCE AMERICA INC

Site ID: MUNICH REINSURANCE AMERICA INC
500812 555 686 COLLEGE RD E,
PRINCETON, NJ 08543

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	11/17/17	The facility uses LEED high performance cleaning, Integrated Pest Management, has upgraded almost all lighting to LED or low mercury lamps, upgraded refrigerators and cooling plants to units that use more environmentally friendly refrigerants, and other operational changes like prohibiting smoking on campus in a consistent and continued effort to reduce or eliminate hazardous materials on site. The facility's USGBC-LEED accepted Hazardous Materials Reduction Policies are available upon request.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	11/17/17	The facility has upgraded to high efficiency showerheads, low flow commodes, waterless urinals, touchless faucets, ice makers that use nugget ice to reduce water usage, most kitchen fixtures are also high efficiency (including the dishwasher), and modified the landscaping system by upgrading controls and using reduced water use sprinkler heads. The result of these changes has reduced water usage by over 40% since the baseline was established in 2007. The facility's USGBC-LEED accepted water policy is available upon request.

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/17/17</p>	<p>The facility has made significant improvements which reduced their energy usage (kWh's) on campus by over 50% and reduced their CO2 emissions per person by over 58% since the baseline was established in 2007. The improvements include: Variable Frequency Drives (VFDs) installed on electric motors powering the air handling units, switched to laptop computers and flat screens, installed motion sensor controlled plug strips and then upgraded the construction standard on site to follow ASHRAE 90.1-2013, Section 8 (at least 50% of the electric receptacles are on a timer that automatically turns receptacles off at programmed times, occupant sensors turn off receptacles within 20 minutes of all occupants leaving a room or area), reduction in lighting energy usage from 86 - 114 watts per fixture to 32 watts, initial and continued upgrading of Building Automated Systems that use a complex HVAC sequence program to maximize efficiency and energy savings, centrally automated IP based lighting controls, Plaza I and II chillers were replaced with higher efficiency chillers using more environmentally friendly R-134A refrigerant and HVAC efficiency upgrades including high efficiency cooling towers and VFD motors, exit signs were replaced with new LED style fixtures, electrical transformers were replaced with high efficiency transformers, changing exterior lighting to LED fixtures that comply with Dark Sky initiatives, and electrical heating units were replaced with natural gas heating units.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>11/17/17</p>	<p>The site has made numerous changes to reduce material usage and disposal, including automatic double sided printing and copying, and increased use of longer life LED fixtures. The touchless sink and flush valve devices contain a turbine in line with the water flow that constantly recharges the batteries that power them resulting in batteries that last over 7 years. The company has increased recycling activities from 28% of total materials in 2007 to 91% of materials in 2017. This information was confirmed by independent waste audits verifying the accuracy. Recycled materials include: plastics, comingles, paper/cardboard, carpet, construction materials, furniture, batteries, refrigerant, cooking oils, fluorescent lamps, landscaping and other organic materials.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/17/17</p>	<p>The facility changed their fleet and security vehicles to hybrids, provides 14 electric car charging stations, provides bike racks, a stocked bicycle repair station, and showers and lockers to promote bicycle use.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>11/17/17</p>	<p>The facility constructed a 2.3+ Mw Solar Farm that has generated 12,900,696 kWh since coming online in 2012. They collect all rainwater in the parking lots and direct it to a mile long groundwater recharge chamber, which converted three acres of asphalt to function as a permeable surface. The Solar Farm has absorption and reflection properties that offset the "Heat Island" effect and has below canopy lighting that supports the Dark Sky initiative.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>11/17/17</p>	<p>The facility converted most plants to native, non-invasive varieties, a solar canopy system that collects all rainwater to its mile long groundwater recharge chambers to prevent contamination from the parking lot thereby converting the three acre lot to a permeable surface.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>11/17/17</p>	<p>The facility had adopted several programs to reduce the site's environmental impact and to promote environmental excellence. These programs include the Institute for Business and Home Safety (IBHS) "Fortified Home" program, Indoor Environmental Quality programs, Employee Resource Groups that promotes environmental sustainability, provides an on-site wellness center, fitness center, and promotes nutritional eating, contracting independent testing firms to perform regular air, water, and food quality testing, provides 14 electric car charging stations, bike racks with a stocked bike repair station and full amenity showers and lockers to promote bicycle use.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>11/17/17</p>	<p>In 2017, the facility met with their local township officials responsible for sustainability to offer assistance for their submittal for Sustainable Jersey certification consideration. The township had already submitted the certification so no assistance was necessary but the facility committed to helping the township with a Sustainability Fair slated for 2018. Additionally, the facility is holding a recycling forum at this site in November 2017 and hosting township officials so employees that are local residents can be better educated on the environmental programs offered by the township.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/17/17</p>	<p>The facility operates under a Corporate Responsibility policy signed off by the Chairman of the Board that dictate's their dedication to environmental and social responsibility. Their 175 page environmental policy can be referenced on the internet.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>11/17/17</p>	<p>The facility has an Environmental Policy - please see item 3 for details. The facility operates under a two-tiered Environmental Management system. In the global tier, the facility uses an environmental management system where all global environmental data is recorded as part of the companies submittals for review for continued inclusion in the Dow Jones Sustainability Index (and other related indices). Independent environmental auditors review all of the global information to determine carbon footprint and verify carbon neutrality. Results are reviewed annually with any increases or reductions requiring a formal review by the company's global corporate responsibility group. On the local tier, the facility uses a program based on the USGBC LEED scorecard to continually revisit performance and help identify areas to target for further reduction.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>11/17/17</p>	<p>The facility submits a detailed annual environmental report as part of the requirements for the company's continued inclusion in the Dow Jones Sustainability Index. These reports are independently audited and contain all information for each facility location, including this location. Part of the global reporting involves the progress on annual targets of reduction, areas where performance was not satisfactory, and either the explanation or remediation plan for getting the numbers either on target or back within the satisfactory range. Reports are reviewed annually by the facility's global corporate responsibility team and publishes its objectives, results, milestones, and other key information regarding sustainability and responsibility annually on its public corporate responsibility website portal.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>11/17/17</p>	<p>The facility actively participates in the EPA Voluntary Energy Star program and benchmarks data for all four buildings on campus through the a portfolio manager website since 2007, and also contracts with an independent environmental firm to verify its program remains continuously in compliance with NJDEP rules and regulations.</p>

<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>11/17/17</p>	<p>The facility supports employee trip reduction and reduced carbon emissions related to commuting by carpooling, telecommuting, working from home, and compressed work weeks.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>11/17/17</p>	<p>The facility has a complete environmental purchasing plan that has been audited by the USGBC and deemed compliant for the requirements associated and/or has received credits towards certification for their highest certified building (LEED Platinum). The facility's USGBC-LEED accepted environmental purchasing policy is available upon request.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>11/17/17</p>	<p>All construction and renovation projects at the site must comply with USGBC LEED requirements. The facility has three USGBC LEED certifications. One platinum certification for the interior renovation of Plaza III, one gold certification for Plaza II and one Gold certification for Plaza I. The facility has also incorporated WELL Building Standard features including improvements in all seven Wellness Concept areas.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>11/17/17</p>	<p>The facility owns a 2.3 Mw solar canopy system over its parking lot installed in 2012.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>11/17/17</p>	<p>As part of the facility's detailed environmental report for review and continued inclusion in the Dow Jones Sustainability Index, there are strict guidelines for the reporting of greenhouse gas production. These reports contain all the required information in auditable form for each global location including this facility. The facilities' global corporate responsibility team converts the absolute numbers (kWh, tons, etc.) to CO2 using the GHG Protocol - Corporate Standard. These emission factors are reviewed by independent environmental auditors to ensure compliance. The GHG/CO2 report for this facility includes all utilities, all waste and recycling information, by type and weight, all travel and vehicle information, all paper usage by weight and diesel usage by gallon purchased.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>11/17/17</p>	<p>The facility requires all companies they do business with (both selling products to and purchasing goods or services from) must comply with the sustainability and socially responsible policies published by the United Nations. In addition, purchases must meet LEED requirements for sourcing and environmental footprint. Supply chain vendors include waste hauling, recycling, housekeeping supplies, furniture vendors and more. Each vendor must show proof, either through audit or other means, of compliance with environmental standards.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>11/17/17</p>	<p>The facility encourages and supports employee participation at national speaking engagements and events concerning energy efficiency and/or climate change. In 2016 and 2017, facility employees presided over multiple education sessions. Contacts are available for speaking events and do not receive monetary compensation for their participation.</p>

NJDM&VA USPFO WAREHOUSE

Site ID: NJDM&VA USPFO WAREHOUSE
15875 131 EGGERT CROSSING RD,
LAWRENCEVILLE, NJ 08648

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	9/22/08	Facility has installed solar panels (roof mounted photovoltaic array) on two of their buildings to reduce air emissions.

PENNINGTON GAS SERVICE STATION

Site ID: PENNINGTON GAS SERVICE STATION
6395 226 RT 31 @ PENNINGTON CIR ,
HOPEWELL TWP, NJ 08534

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/28/08	Site no longer conducts automobile repair operations, thereby eliminating production of associated wastes such as used oil, lubricants, etc.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	5/28/08	Owner-K.C. Oil has policy in place that is maintained at main office. Indicated they will provide copy to site and instruct employees accordingly.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	5/28/08	The facility utilizes Energy saving, low voltage computer, Recycled paper products, and Energy saving bulbs in canopy & other light fixtures.

PRINCETON UNIVERSITY MOFFETT

Stewardship Activities	Date Acknowledged	Comments
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/11/15</p>	<p>Princeton University supplies all undergraduate, graduate, and faculty with a reusable water bottle or mug to use on site with the free filtered water filling stations. The water bottle filling stations provide filtered water from local sources, the carbon based filters are changed out every 6 months. The university fells having these refillable bottles saves both money and natural resources</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>2/11/15</p>	<p>Princeton University has a sustainable Building systems that they are incorporating into new and existing buildings, such as adding geothermal heating and cooling systems and installing temperature sensors to monitor and control mechanical, heating and cooling systems, to reduce energy and greenhouse emissions. The University has begun building new dormitories to have "green" roofs, the chemistry building which is now under construction will include sensors for control of dimmable lighting systems and high efficiency laboratory fume hoods which will minimize energy loss.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>2/11/15</p>	<p>Princeton University has a cogeneration plant, and a solar energy collector field which has a total of 16,528 photovoltaic panels, and is located on 27 acres south of the campus.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>2/11/15</p>	<p>Princeton University has a campus energy group that is working toward reducing campus greenhouse gas emissions. The University is on track to reduce CO2 emissions to 1990 levels (95,000 metric tons) by 2020. The university has accomplished this through investments in energy upgrades, renewable energy resources, and a cogeneration energy plant. More information is on the webpage under sustainable energy. http://sustain.princeton.edu/progress/energy</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>3/26/08</p>	<p>The EHS supported an effort to change over to an alternate solvent purification system that minimizes on haz waste generation, decreases the amount of solvents purchased by the Chemistry Dept., does not require the use of water or power (energy) and is safe for all workers and students. According to a cost-effective analysis reviewed on site, the efficiency of the new system generates significant utility cost savings for electricity, water and sewer in addition to reduction in haz waste generated on site. The reduction in chemical waste generated by using the new column purification system as opposed to the traditional thermal distillation system is reported to be approximately 30 gallons per year for six solvent lines (see the comment section in the waste minimization chls tfor the details of the system, which has proven that Princeton University Occupational Health is operating at a higher standard/level than normally required by RCRA haz waste regulations. Based on the information gathered and reviewed during this inspection, the Department has decided to issue Princeton University Occupational Health (E-Quad area) a stewardship credit for a job well done regarding their efforts on the reduction of chemical usage and hazardous waste minimization.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/26/08</p>

PSEG FOSSIL MERCER GENERATING STATION

Site ID: PSEG FOSSIL MERCER GENERATING STATION
 15887 2512 LAMBERTON RD,
 HAMILTON, NJ 08691

Stewardship Activities	Date Acknowledged	Comments
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>9/14/16</p>	<p>Beneficial reuse of storm water (B.E.T. = Back End Technology). Facility captures storm water which is pumped to a holding tank and used for facility operations, reducing river water intake.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>9/14/16</p>	<p>Materials typically disposed of is recycled and used by industry and fly ash is used in their concrete industry and ash pond clay used at the landfills.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>9/14/16</p>	<p>Member of Friends of the MARSH- a cooperative stewardship program of the Delaware River.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>9/14/16</p>	<p>Public education of local school, government and international groups through tours of power plant operations, including state of the art environmental technologies and systems which are shown and explained in action.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/14/16</p>	<p>https://www.pseg.com/info/environment/health.jsp</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/14/16</p>	<p>Environmental Management Information System (E.M.I.S.) used for plant operations</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/15/13</p>	<p>Beneficial Reuse of Storm Water (B.E.T. = Back-End-Technologies) Facility captures site storm water runoff pumps to a holding tank and uses it in the facility operations reducing the amount of river water intake needs.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/15/13</p>	<p>recycle materials for use in industry - flyash for concrete industry and ash pond clays for landfill uses.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>2/15/13</p>	<p>Member of Friends of The MARSH a cooperative stewardship program of the Delaware River.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>2/15/13</p>	<p>Public Education - Schools, Government and International group tours of power plant operations, their state of the art environmental technologies and systems are explained and shown in action.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>2/15/13</p>	

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>2/15/13</p>	<p>Environmental Management Systems (E.M.A. systems for plant operations.).</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>9/21/12</p>	<p>Nitrogen scrubber reuse nitrogen in manufacturing process.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/21/12</p>	<p>Recent more efficient bulb replacement throughout the facility and use of motion sensors. Use and implementation of employee observation intervention reporting which is a peer on peer program designed to remind peers of proper energy use and environmentalism when not observed by a peer. HVAC replacement to more energy efficient units recently completed</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/21/12</p>	<p>Environmental policy in place and can be found at http://www.slb.com/hse/hse_policy.aspx</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/21/12</p>	<p>A Health Safety and Environmental Management system is in place and can be found at http://www.slb.com/hse/hse_mngt_sys.aspx</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>9/21/12</p>	<p>Chemical request procedure which evaluates the necessity of certain materials. Need of Chemicals are evaluated by HSE manager. Supplier prequalification questionnaires are utilized for a vendor to secure contract. Questionnaire has green component for using and purchasing products onsite.</p>

SHISEIDO AMERICA INC

Site ID: SHISEIDO AMERICA INC
 6660 366 PRINCETON HIGHTSTOWN RD, AKA RT 571
 EAST WINDSOR, NJ 08512

Stewardship Activities	Date Acknowledged	Comments
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>12/20/10</p>	<p>Shiseido has developed environmentally friendly packaging that uses recycled materials as a source for polyethylene and polypropylene. Recycled materials are sandwiched between virgin plastic resolving safety considerations that traditionally made it difficult to use recycled plastic in cosmetic packaging. Also, to reduce packaging volume, Shiseido has developed thinner containers, refill products and folding containers.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>12/20/10</p>	<p>Lighting retrofit - Shiseido has completed the following lighting upgrades: 1) 53,000 sq. ft. expansion to their warehouse with high-efficiency equipment and 77 T-5 high efficiency fluorescent lights 2) Retrofitted the existing warehouse with 124 high-efficiency T-5 fluorescent lights, 3) Replaced office and manufacturing lighting with 965 T-8 fluorescent lights, 4) Upgraded parking lot and building perimeter lighting to energy-efficient technology. Lighting upgrades are expected to reduce facility load by 200,303 kWh/yr. High Efficiency Boilers - Shiseido upgraded the 1954 facility boiler with two state-of-the-art 9 million Btu/hr high-efficiency boilers. The new boilers improved the facility's heating efficiency from 40% to 85%.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>12/20/10</p>	<p>1.748 kW of on-site solar energy capacity is operational on 233,910 s.f. of the property.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>4/29/08</p>	<p>In April 2007, Shiseido contracted PowerLight of Trenton, NJ to install a 698.7kW roof-mounted photovoltaic array. The energy output from this array provides 25% of the total electric needs for the facility, which includes warehouse, research and development, and corporate operations. The Solar project costs totaled \$4.4 million, of which Shiseido provided \$2.11 million and NJCEP paid \$2.29 million. The energy efficiency measures total \$850,000. In addition to the Solar project, Shiseido also completed the following upgrades: - 53,000 square-foot expansion to the warehouse with high-efficiency equipment and 77 T-5 high efficiency fluorescent lights. - Replaced office and manufacturing lighting with 124 high-efficiency T-5 fluorescent lights. - Upgraded parking lot and building perimeter lighting to energy efficient technology. - are upgrading the 1954 facility boiler with two state-of-the-art 9 million Btu/hr high efficiency boilers.</p>

SIEMENS DEMAG DELAVAL TURBOMACHINERY INC

HAMILTON, NJ 08638

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	3/22/13	During December 2011, the facility installed solar panels on the roof of their building. These panes provide 724kw that supply 25% of electric and save 25k annually in energy costs to Siemens.

STARR TRANSIT CO INC

Site ID: STARR TRANSIT CO INC
6533 2531 E STATE ST EXT,
HAMILTON, NJ 086193388

Stewardship Activities	Date Acknowledged	Comments
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	10/10/14	Facility has a lease program with Firestone for a tire recycling program. All used tires are picked up and recycled. Refrigerant for the AC system in the buses is removed, cleaned, filtered and then returned to the buses. This reduces the need the for new refrigerant.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	10/10/14	Infrared heating units in the maintenance shop. These units heat the object or person directly rather than heating the air around the object or person. This reduces the energy used in heating the air that could potentially be lost.

STONY BROOK RGNL SEWER AUTH RIVER ROAD STP

Site ID: STONY BROOK RGNL SEWER AUTH RIVER ROAD STP
15822 290 RIVER RD,
PRINCETON TWP, NJ 08540

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	10/24/12	In house reuse of process wastewater effluent for wash down and cleaning; effluent reuse.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	10/24/12	Variable frequency drives VFD for return pumps and pump stations new energy efficient motors installed in the modified aeration system. Pneumatic drive valves have been installed on the filter back washes which increases efficiency and reduces the amount of time and people hours involved in the backwash process. Facility is in the process of replacing lighting fixtures with low watt efficiency lighting in the filter room.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	10/24/12	Stony Brook has implemented a new process in which the water from newly transferred sludge is decanted from the sludge holding tanks to the headworks of both the Pennington and Hopewell Plants respectively. This process saves on hauling costs and energy use for disposal of the extra water. Costs for disposal have been cut in half.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	10/24/12	Maintenance Department uses Red Wagons with Rack bodies for grease transport. Use of bicycles for facility operations. The facility is not using fuels to run vehicles.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	10/24/12	Green initiatives include placing Low Watt LED lighting in the filter room and outside with a program to install more LED lighting throughout the facility.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	10/24/12	SBRSA purchased milkweed seeds for monarch butterflies proliferation http://www.monarchwatch.org . Planted 16 ornamental pear trees, installed bird houses,. SBRSA is designated a river friendly organization and award winner from the Stony Brook Millstone Watershed Association http://www.thewatershed.org/watershed_home.php

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>10/24/12</p>	<p>SBRSA operates in summer mode of increased plant operation efficiency. The facility is allowed to relax effluent quality in the winter months and chooses not to relax effluent quality and operates at peak efficiency summer mode all year long.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>10/24/12</p>	<p>The tours for environmental classes Princeton University, Rider, Rutgers University, Boy Scouts, local high schools, and local water groups and Associations show how facility receives and treats wastewater. SBRSA shows these organizations what it takes to properly operate and maintain a sewerage treatment facility.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>10/24/12</p>	<p>Stony Brook Regional Sewerage Authority adopted Resolution 2009-27 on October 26, 2009. The resolution authorizes the adoption of Mission, Vision and Value Statements for SBRSA. The Mission SBRSA will maintain public health and protect the ecosystem by effectively treating and disposing of wastewater and its byproducts in an environmentally and fiscally responsible manner, for their participating members and municipalities. The Vision SBRSA will operate its facilities at the highest possible level, striving to exceed all regulatory requirements. SBRSA will minimize its carbon foot print through energy use optimization SBRSA will live in in harmony with its neighbors, minimizing offsite odor and noise. SBRSA will seek to provide a model of excellence through continual operational improvements; mission and values will be clearly communicated in their interaction with our employee, regulatory agencies and local community. Values Respect for the quality of the streams and air into which they discharge. Scientific excellence in data collection, production, and interpretation. Equal opportunity in employment. Ethical management of staff, Finances. and operations.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>10/24/12</p>	<p>Facility employs a comprehensive Environmental Management and monitoring System that oversees and tracks compliance with the environmental rules as well the operations, maintenance, and monitoring of the various treatment systems.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>10/24/12</p>	<p>Other Facilities, Agencies and Organizations tour SBRSA, including NJDEP, Hamilton Township STP Employees, and Wastewater Operator Classes. The operations and maintenance of the facility serve as a proper example of O&M as it positively impacts on effluent water quality, solid waste handling and incineration of biosolids.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/8/12</p>	<p>In house reuse of process wastewater effluent for wash down and cleaning; effluent reuse.</p>

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/8/12</p>	<p>Variable frequency drives VFD for return pumps and pump stations new energy efficient motors installed in the modified aeration system. Neumatic drive valves have been installed on the filter back washes which increases efficiency and reduces the amount of time and people hours involved in the backwash process. Facility is in the process of replacing lighting fixtures with low watt efficiency lighting in the filter room.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/8/12</p>	<p>Stony Brook has implemented a new process in which the water from newly transferred sludge is decanted from the sludge holding tanks to the headworks of both the Pennington and Hopewell Plants respectively. This process saves on hauling costs and energy use for disposal of the extra water. Costs for disposal have been cut in half.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/8/12</p>	<p>Maintenance Department uses Red Wagons with Rack bodies for grease transport. Use of bicycles for facility operations. The facility is not using fuels to run vehicles.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>3/8/12</p>	<p>SBRSA purchased milkweed seeds for monarch butterflies proliferation http://www.monarchwatch.org. Planted 16 ornamental pear trees, installed bird houses,. SBRSA is designated a river friendly organization and award winner from the Stony Brook Millstone Watershed Association http://www.thewatershed.org/watershed_home.php</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>3/8/12</p>	<p>SBRSA operates in summer mode of increased plant operation efficiency. The facility is allowed to relax effluent quality in the winter months and chooses not to relax effluent quality and operates at peak efficiency summer mode all year long.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/8/12</p>	<p>The tours for environmental classes Princeton University, Rider, Rutgers University, Boy Scouts, local high schools, and local water groups and Associations show how facility receives and treats wastewater. SBRSA shows these organizations what it takes to properly operate and maintain a sewerage treatment facility.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/8/12</p>	<p>Stony Brook Regional Sewerage Authority adopted Resolution 2009-27 on October 26, 2009. The resolution authorizes the adoption of Mission, Vision and Value Statements for SBRSA. The Mission SBRSA will maintain public health and protect the ecosystem by effectively treating and disposing of wastewater and its byproducts in an environmentally and fiscally responsible manner, for their participating members and municipalities. <p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>2/9/10</p>	<p>Other Facilities, Agencies and Organizations tour SBRSA, including NJDEP, Hamilton Township STP Employees, and Wastewater Operator Classes. The operations and maintenance of the facility serve as a proper example of O&M as it positively impact on effluent water quality, solid waste handling and incineration of biosolids.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>2/20/08</p>	<p>Switch over from chlorine gas to hypochlorite. Use of chlorine gas represent a significant health risk if there is leak.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/20/08</p>	<p>In house reuse of process wastewater effluent for wash down and cleaning; effluent reuse.</p>

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/20/08</p>	<p>Variable frequency drives VFD for return pumps and pump stations</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/20/08</p>	<p>maintenance Department uses Red Wagons with Rack bodies for grease transport. Use of bicycles for facility operations. The facility is not using fuels to run vehicles.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>2/20/08</p>	<p>SBRSA purchased milkweed seeds for monarch butterflies proliferation http://www.monarchwatch.org. Planted 16 ornamental pear trees, installed bird houses,. SBRSA is designated a river friendly organization and award winner from the Stony Brook Millstone Watershed Association http://www.thewatershed.org/watershed_home.php</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>2/20/08</p>	<p>SBRSA operates in summer mode of increased plant operation efficiency. The facility is allowed to relax effluent quality in the winter months and chooses not to relax effluent quality and operates as peak efficiency summer mode all year long.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? Stewardship Activities	Date Acknowledged	Comments
------------------------	-------------------	----------

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>5/10/18</p>	<p>Integrated Pest Management Plan for fruits, vegetables and grapes for the winery. Farm is USDA organic.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/10/18</p>	<p>All industrial process wastewater from the cider and wine processing is managed through a Comprehensive Nutrient Management Plan approved by the Natural Resource Conservation Service. Wastewater from the process is used to irrigate crop areas on the site. Drip irrigation used to reduce water usage/loss. Soil moisture monitoring on the irrigation wells to reduce usage of the well water if higher moisture outside. Onsite weather station linked to Cornell University is used for crop management as well as irrigation data to reduce water usage.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/10/18</p>	<p>Irrigation pumps are Variable Frequency Drive (VFD) pumps which are more energy efficient. Alter revolutions so not a continuous flow, revolutions are based on need, less waste.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/10/18</p>	<p>Process wastewater from winery used to irrigate crops and not sent to the septic tank for solids buildup/removal.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>5/10/18</p>	<p>5 acres of unplanted, natural habitat kept Terhune Orchards is part of the Farmland Preservation program. This is a long term commitment to open space and their farm can never be turned into development.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/10/18</p>	<p>1. Habitat for Humanity comes 1/week to collect all excess produce that is hard to market, Terhune Orchards acts as a farm supplier. 2. Onsite weather station linked to Cornell University which is used for crop management data and irrigation usage. 3. Terhune Orchards partners with experts such as Natural Resource Conservation and Soil Conservation District to preserve and build our soils. They use methods such as crop rotation and cover crops to help maintain and augment our soils. 4. Farm to table partnership with 13 Princeton schools and restaurants.</p>

<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/10/18</p>	<p>27kw solar panels on one of the barns and 33kw solar panels on top of the new winery.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>1/30/15</p>	<p>Wastewater is used to irrigate crop areas on the site.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>1/30/15</p>	<p>Less waste to septic system</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>10/22/14</p>	<p>This business uses Integrated Pest Management (IPM) techniques in a program developed with Rutgers University. Alternatives to pesticides are sought first, reducing the total amount of pesticide applied.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>10/22/14</p>	<p>The farmer has 120 acres in a drip irrigation system, conserving the total amount of water necessary to sufficiently irrigate the crop. A high pressure water system is used in the packinghouse for cleaning.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>10/22/14</p>	<p>The business has been more paperless for several years, reducing waste.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>10/22/14</p>	<p>The site has an agrichemical management building designed to collect pesticide spills, preventing potential contamination. He has used fluorescents and high efficiency lighting for more than 3-4 years, conserving energy .</p>

 15880 2231 E STATE ST,
 HAMILTON, NJ 08619

Stewardship Activities	Date Acknowledged	Comments
SmartWay Transport Partnership.	5/31/11	ACTIVITY #23) USEPA VOLUNTARY PROGRAMS: MEMBER OF U.S. EPA SMARTWAY PROGRAM: ACCEPTABLE. Trane Corp., as a division of Ingersoll Rand Co. Ltd. is a member of the U.S. EPA SmartWay program, which represents a voluntary commitment between the shipper (Ingersoll Rand) and their SmartWay Transport Carriers to improve air quality and reduce fuel consumption. Carriers are required to report their SmartWay membership status and FLEET (Freight Logistics Environmental and Energy Tracking) score (an EPA measure of logistics efficiency), and commit to improve their environmental scores over a period of three years. SmartWay shipper strategies include No-Idling policies at loading docks, & evaluating and modifying business practices at distribution centers and warehouses, including optimal shipping mode logistics (truck, rail, air) to attain fewer shipments, fewer vehicles used, reduced fuel consumption, and reduced emissions of greenhouse gases. Appointment scheduling can also be provided to carriers at congested facilities to facilitate faster loading/unloading: This also reduces greenhouse gas emissions and reduces the subsequent fuel consumption from unnecessary truck idling. http://www.epa.gov/smartway/transport/partner-list/index.htm#
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	5/31/11	ACTIVITY #3) ENVIRONMENTAL POLICY: http://security.ingersollrand.com/About%20Us/Pages/OurEnvironment.aspx
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	5/31/11	ACTIVITY #4) ENVIRONMENTAL MANAGEMENT SYSTEM: Site is operated using an Environmental Management System (EMS): An internal web-based data collection and performance monitoring system called "IREHS.," which generates monthly "scorecards" on company-wide and sector progress on key EHS metrics as per company's 2009 Sustainability Report p.24: ACCEPTABLE. http://company.ingersollrand.com/sustainability/SustainabilityReports/Documents/IR_2009SR%20r07k%20(2).pdf
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	5/31/11	DESCRIPTION BELOW.

VINCH RECYCLING INC

Site ID: VINCH RECYCLING INC
14620 1607 N OLDEN AVE,

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/2/16	Company has switched out Hazardous Air Pollutants (HAPs) for their solvents. Now using Non HAPs.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	5/2/16	All inks are reused and saved to aid in tinting. Also the wash solvent used to wash down the machines, operation components and additional parts that used a particular color for the job is saved and reused to create a color or tint. No wasting of wash solvent.

18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	11/19/09	The school has instituted the energy conservation measure of dimming hallway lights during after-school activities.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	11/19/09	The school's Environmental club has organized tree planting and trail beautification events. Planted a perennial garden in the school courtyard.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	11/19/09	Participation in Princeton Water Watch canal cleanup, also Clean Streets Program resulting in the removal of over 500 lbs of refuse from the streets and waterways. Environmental presentations to middle school students regarding such topics as recycling, conserving energy and protect the natural resources of the earth.

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/26/12	In August 2011, changed solvent degreaser from hazardous to non-hazardous. Eliminated 1200 pounds per year of hazardous waste.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/26/12	Changed out pump seal to eliminate water quenching and water use/ discharge to local publically owned treatment works (POTW).

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/26/12</p>	<p>Installed heat recovery unit at the distillation units about 5 years ago. (one time credit for this unit) TBA still bottoms are returned to heat up the feed to the acetone still resulting in steam/energy savings. Saved approximately 4,000 lb./hr. steam input (40% lower steam use).</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>7/26/12</p>	<p>Replaced equipment packing on agitators, pumps, etc. with mechanical seals throughout the plant. Voluntary leak detection and repair program (LDAR). Fugitive emissions reductions from 6000-8000ppm to 100-200 ppm on flanges, valves, pumps a due to seal changes. Solvent TBA/acetone distillation recovery system Off spec viscosity or grit product are blended back into product. Drums are reconditioned.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/26/12</p>	<p>in February 2011 installed pressure- swing adsorption unit (PSA) to generate nitrogen from air. reduced the number of trucks transporting liquid nitrogen from Pennsylvania to Parlin from 25 per month to 5 per month. Installed railcar unloading facility for nitric acid. Instead of receiving nitric acid truck 3 times per week nitric rail cars received 3 times per month.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>7/26/12</p>	<p>Ashland is an active member of the Sayreville Community Advisory Panel (CAP), which works closely with community members on environmental, health, safety, and security issues. Ashland is an active member of the Raritan Introduction of Minorities to Engineering (RIME) program. tours are given to students, promote/ sponsor environmental education programs, scholarships, Science Fairs etc.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/26/12</p>	<p>http://www.ashland.com/Ashland/Static/Documents/Investor%20and%20Corp/RC14001%20Certificate.pdf http://www.ashland.com/Ashland/Static/Documents/Investor%20and%20Corp/ISO%2014001%202004.pdf http://www.ashland.com/Ashland/Static/Documents/Investor%20and%20Corp/RC_Policy.pdf</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>7/26/12</p>	<p>The Ashland Responsible Care Management System (RCMS) includes management practices that are based on the best practices of leading private sector companies; initiatives developed through the Global Environmental Management Initiative, International Standards Organization and other bodies; and requirements of national regulatory authorities. Ashland's RCMS has been externally registered to the internationally recognized RC14001 standard/is 140001 standards and is being implemented throughout the organization. http://www.ashland.com/commitments/responsible-care</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>7/26/12</p>	<p>EHS dashboard and responsibility index information supplied to sustainability indicators and published annually. Annual environmental reporting noted in the annual sustainability report. http://ashland.com/Ashland/Static/Documents/Investor%20and%20Corp/PC-11300_Sustainability.pdf</p>

<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>7/26/12</p>	<p>Ashland is currently part of the carbon disclosure project greenhouse since 2006 http://www.ashland.com/commitments/planet/Carbon-Disclosure-Project</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/2/12</p>	<p>In 10/26/11 Bayshore launched an internal effort towards "zero waste" generation from their administration offices. To that end Bayshore has implemented a program whereby all food waste goes into the the food waste receptacle in the kitchen. The collected food waste from lunches is processed and used for dog food.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/2/12</p>	<p>The main building complex at Bayshore was constructed with re-used concrete forms and steel beams from a dismantled structure. Bayshore was also affected by Hurricane Sandy. therefore the first floor offices that received flood damage were reconstructed and renovated with reused and recycled building materials where possible.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/2/12</p>	<p>Bayshore has voluntarily participated over the past year and a half in the DEP's Diesel Risk Reduction Program. In August of 2011, Bayshore verified the installation of device retrofits for a Catepillar 345 Excavator and a Komatsu PC400 Excavator. Bayshore worked with Bob Marcolina aand Melinda Dower of the Diesel Risk Reduction Program to make arrangements for retrofit installations, along with Foley Inc., a DEP certified installer.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/2/12</p>	<p>Bayshore reports the following: Bayshore has been working with Woodbridge Twp. and actively participated on many boards such as Appointed Member Sustainable Woodbridge Twp. and benefactor/ contributor to Greenable Woodbridge Museum; Appointed Member of Woodbridge Twp. Mayor's Advocacy Commission for Education and Green Energy Board; Appointed Member of Woodbridge TWP Brownfield Development Area (BDA) Steering Committee; Trustee participation on the Woodbridge Economic Development Corporation; Board of Directors participation on the Woodbridge Metro & Edison Chambers Commerce. Bayshore regularly gives tours of their facility 2 - 3 per month to demonstrate recycling activities. In 2002 Bayshore built a classroom within its offices that can accommodate 50 - 75 students. During 2012 Bayshore offered a total of 61 presentations on recycling, sustainability, and renewable energy to schools, community groups, government officials and other businesses. Prominent local, regional and national audiences include: Rutgers University Graduate Program Class in sustainability; Senior officials of "Sustainable Jersey" Program on Recycling and sustainable business operations; New Jersey chapter of the American Waiter Resources Association talk entitled "The Case for Regional Dredge Material Process and Beneficial Reuse"; National Conference of the Construction Materials Recycling Association to address a national audience on the topic of "Effective Communications with Environmental Regulators"; Presentation at DEP Waste Wise Symposium on recycling sustainability and getting to zero waste. Note there are approx. 8 others not listed here pertaining to various presentations by Bayshore..</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>5/2/12</p>	<p>Bayshore still has 6 employees who regularly car pool. Bayshore also has a number of employees who work on a condensed schedule 4 days as opposed to 5 days in order to reduce commuting trips to the facility. Bayshore has begun to experiment in a "work from home policy" with one employee.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>5/2/12</p>	<p>Bayshore continues to purchase 100% recycled paper products and printer cartridges with recycled content. Bayshore has also decided to "electrify" its operations where possible and economically feasible. Bayshore had purchased replacement crushers for the Class B material processing that were electrified and has recently purchased new equipment for a Class A recycling sort line was electrified. (The Class A has not begun its operations to date.)</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/2/12</p>	<p>The rooftop solar panel array at Bayshore remains in place. This 9,365 solar panel array was installed in 2008 on a 113,000 square foot roof. It provides approximately 679 Kilowatts of electric power which supplies about 40% of the energy needed to run their Low Temperature Thermal Desorption Facility.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>12/1/08</p>	<p>The main building on site was constructed with re-used concrete forms and steel beams from a dismantled structure.</p>

10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	12/1/08	Bayshore provides a classroom and training resources to local schools aimed at recycling and other environmental topics. Training on recycling occurred in Nov. 2008 and takes place roughly 10 times per year. Bayshore welcomes schools to consider class trips to its facility.
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	12/1/08	5 to 6 employees car pool and 3-4 employees participate in a condensed workweek program (from 5 to 4 days).
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	12/1/08	Preference for environmentally sensitive products is reflected in supplies of various items on site such as paper products and printer cartridges.

BRISTOL MYERS SQUIBB INC

Site ID: BRISTOL MYERS SQUIBB INC
5540 1 SQUIBB DR,
NEW BRUNSWICK, NJ 089011588

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	6/26/18	No longer using pilot plants onsite which has reduced the hazardous waste streams.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/26/18	Treated groundwater from recovery wells are used for some of the cooling towers onsite as beneficial reuse.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/26/18	Energy team onsite recovers the condensate used for the co-gen unit and returns the heated water to the system instead of wasting it. Since it is already heated, they reduce the need for energy consumption to heat. Also installed automated heating and cooling monitors for real-time controls on temperature fluctuations to reduce energy use.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/26/18</p>	<p>Installed automated heating and cooling monitors for real-time controls on temperature fluctuations to reduce energy use.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>6/26/18</p>	<p>Co-gen system uses natural gas and ultra-low sulfur fuel to form steam and electricity for site use. In addition, the BMS New Brunswick facility utilizes a BMS green chemistry like initiative to evaluate a less hazardous research scheme. A research scientist is required to initiate the established green chemistry protocols to rate the safety, evaluate the environmental footprint and seek alternatives for chemical usage for the development of products and batch scale production.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/26/18</p>	<p>Environmental Corporate Policy can be found online.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/26/18</p>	<p>Environmental meetings, environmental progress controls compliance/project database can be found online. Environmental Health and Safety construction and operations meeting are held to ensure proper activity.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>6/26/18</p>	<p>Annual BMS report includes specifics environmental issues related to all facilities including the New Brunswick Facility. BSM has their sustainability report that contains Env. Performance information within the report that qualifies for recognition as an Annual Environmental Report. Sustainability report and environmental performance report can be found online.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>6/26/18</p>	<p>BMS promotes carpooling to all employees and provides links to carpooling site through the county. Also notify commuters of current traffic conditions around or near the New Brunswick Facility.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>6/26/18</p>	<p>Facility and corporate-wide comprehensive Greenhouse gas emission calculations have been performed.</p>

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>4/23/12</p>	<p>Co-gen system uses natural gas and ultra-low sulfur fuel to form steam and electricity for site use. In addition, the BMS New Brunswick facility utilizes a BMS green chemistry like initiative to evaluate a less hazardous research scheme. A research scientist is required to initiate the established green chemistry protocols to rate the safety, evaluate the environmental footprint and seek alternatives for chemical usage for the development of products and batch scale production.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/23/12</p>	<p>Environmental Corporate Policy http://www.bms.com/sustainability/governance_and_management/Pages/environment_health_and_safety_policy.aspx</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>4/23/12</p>	<p>http://www.bms.com/sustainability/Pages/home.aspx Environmental meetings, environmental progress controls compliance/project database. Environmental Health and Safety construction and operations meeting are held to ensure proper activity.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>4/23/12</p>	<p>Annual BMS report includes specifics environmental issues related to all facilities including the New Brunswick Facility. BSM has their sustainability report that contains Env. Performance information within the report that qualifies for recognition as an Annual Env. Report. Sustainability report link: http://www.bms.com/sustainability/Pages/home.aspx Env. Performance Link: http://www.bms.com/sustainability/environmental_performance/Pages/compliance_and_remediation.aspx</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>4/23/12</p>	<p>BMS has an internal facility specific commuter center website to promote and advocate carpooling and notify commuters of current traffic conditions around or near the New Brunswick Facility</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>4/23/12</p>	<p>Facility and corporate-wide comprehensive Greenhouse gas emission calculations have been performed for the last five years.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>1/4/11</p>	<p>Co-gen system uses natural gas and ultra-low sulfur fuel to form steam and electricity for site use. In addition, the BMS New Brunswick facility utilizes a BMS green chemistry like initiative to evaluate a less hazardous research scheme. A research scientist is required to initiate the established green chemistry protocols to rate the safety, evaluate the environmental footprint and seek alternatives for chemical usage for the development of products and batch scale production.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>1/4/11</p>	<p>Environmental Corporate Policy http://www.bms.com/sustainability/governance_and_management/Pages/environment_health_and_safety_policy.aspx</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>1/4/11</p>	<p>http://www.bms.com/sustainability/goals_key_indicators/Pages/about_this_report.aspx Environmental meetings, environmental progress controls compliance/project database. Environmental Health and Safety construction and operations meeting are held to ensure proper activity.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>1/4/11</p>	<p>Annual BMS report includes specifics environmental issues related to all facilities including the New Brunswick Facility. BSM has their sustainability report that contains Env. Performance information within the report that qualifies for recognition as an Annual Env. Report. Performance Link: http://www.bms.com/sustainability/environmental_performance/Pages/compliance_and_remediation.aspx</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>1/4/11</p>	<p>BMS has an internal facility specific commuter center website to promote and advocate carpooling and notify commuters of current traffic conditions around or near the New Brunswick Facility</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>1/4/11</p>	<p>Facility and corporate-wide comprehensive Greenhouse gas emission calculations have been performed for the last five years.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>3/5/08</p>	<p>Co-gen system uses natural gas and ultra-low sulfur fuel to form steam and electricity for site use.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/5/08</p>	<p>Environmental Corporate Policy http://www.bms.com/ehs/sideba/data/policy.html</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/5/08</p>	<p>http://www.bms.com/static/ehs/perfor/data/enviro.html Environmental meetings, environmental progress controls compliance/project database. Environmental Health and Safety construction and operations meeting are held to ensure proper activity.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>3/5/08</p>	<p>Facility and corporate-wide comprehensive Greenhouse gas emission calculations have been performed for the last three years.</p>

<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>3/5/08</p>	<p>BMS signed agreement as a green supplier and buyer http://www.greensuppliers.gov/gsn/home.gsn</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>8/20/13</p>	<p>Facility is reselling the spent Methanol to third party who requires dilute Methanol in their operation. Before facility used to send spent Methanol to Haz Waste collector.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/20/13</p>	<p>All lighting is being replaced with LED Lights.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/20/13</p>	<p>Facility does have a combined Environmental and Safety policy.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/20/13</p>	<p>Facility has a computerized program to track Environmental Progress throughout the organization.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>3/8/11</p>	<p>This facility continues to implement measures to reduce the use of hazardous materials. Oxford still recycles their lead solution and no longer uses hydrochloric acid after a quality control and ultrasonic cleaning run.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/8/11</p>	<p>On this date Oxford Superconducting Technology submitted information via e-mail regarding new lighting fixtures for their facility. Mr. Anthony Sambucini, the Facility Manager, provided the information on the replacement of 110 750w Metal Halide bulbs with new Westinghouse fixtures rated at 468w. The submittal also included Savings Calculations and an Environmental Impact Study.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/8/11</p>	<p>This facility continues to operate under the guidance of an Environmental Policy.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>3/27/09</p>	<p>1 - Facility no longer uses hydro-chloric acid after a quality control and ultra-sonic cleaning check. 2 - Developed stage coating: meaning the superconductor wire goes through a soder bath that contains lead (D008). The lead soln now goes for recycling for reuse at Alpha Fry in PA. Both of the tactics above have minimized their hazardous waste generation on site. Any questions on the details of the recycling, pls contact the representative at the company.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/27/09</p>	<p>Facility has an environmental policy that govern their environmental pillar goals.</p>

BUCKEYE PORT READING TERMINAL

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	1/18/13	Sodium Hydroxide is sold to a paper for paper production. Viable product not disposed as a hazardous material Spent H2SO4 is reconstituted at Dupont, Deepwater NJ in which the Acid is cooked vaporized and reconstituted into acid. Spend acid is not disposed of as a hazardous materail.
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	1/18/13	165,000 gallon/day of internal treated/striped sour water from the desulfurization gasoline production is used in the wet gas scrubber of the cat cracking refinery operation. 165,000 gallon/day of potable water is not used in the wet scrubber.
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	1/18/13	Vapor recovery gases captured during retail gasoline dispensing are recovered by gasoline delivery tanker trucks. The captured gas is brought back to the refinery by the tanker trucks and the recovered vapor is collected and condensed into gasoline. The vapor recovered condensed gas is delivered for retail gas dispensation along with the refined gasoline. Although minimal in comparison to the refined gasoline production the vapor recovery condensated gasoline does not need to be manufactured or discharged into the atmosphere.
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	1/18/13	Used solid silca cat fines from the cracking unit are are shipped offsite to a facility in Maryland and mixed with concrete. 525,000 #/month Molten sulfur from the Desulfurization gasoline production is sold to various vendors for agriculture use. Urefined oil slurry is sold and blended in other oils, no disposal. Motor and lube oil from pumps is recycled to vendor, no disposal.
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	1/18/13	Conditioned starlings (Sturnus Vulgaris) are still managed by a fright program which currently consist of a truck with mounted speakers emitting Jungle Noises. This intergrated pest management program eliminates the use of pesticides and poisons which can be released into the environment. The facility has an employoyee intitated site house keeping committee, which has recently evaluated and implemented more trash cans for use throughout the site to eliminated extraneous litter and trash disposition throughout the facility. More committee intitatives to be evaluated. Facility utilizes a fleet of bicycles and several Kubota vehciles for site personnel to travel around on site, these methodolgies of site transportation does not use fuel for vehicles.
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	1/18/13	Hess Refinery Sponsors Annual Woodbridge Township Residential River Cleanups and buys Shovels, Gloves, Water and other miscellaneous supplies for the volunteers. Hess Refinery is a member of the Raritan River Roundtable which is a stakeholder group made up of businesses, industries, organizations, and utilities concerned with environmental stewardship, impact and issues within the watershed. Meet periodically.

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>1/18/13</p>	<p>Policy on the website http://hess.com/sustainability/environment/policies.aspx Social Responsibility policy signed June 2010 noted http://hess.com/sustainability/environment/Corporate%20Social%20Responsibility%20Policy.pdf</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>1/18/13</p>	<p>Performance enhancement tools tracked on the website information; obtained through collected data http://www.hesscorporation.com/ehs/chartingtool/performancechartingtool.htm</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>1/18/13</p>	<p>A summary of Hess compliance performance is included in the annual Sustainability Report. http://www.hesscorporation.com/downloads/reports/EHS/US/2011/default.pdf</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>1/18/13</p>	<p>The 2007 guidance document explains how Hess generates acceptable Green House Grass (GHG) protocol/methodology emission calculations which can be viewed at http://hess.com/sustainability/environment/HessGHGProtocol.pdf Current greenhouse gas emissions data is contained in Hess's 2010 Sustainability Report on pg 32 to 34, see http://hess.com/reports/sustainability/US/2010/default.pdf</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>2/22/11</p>	<p>Sodium Hydroxide is sold to a paper for paper production. Viable product not disposed as a hazardous material Spent H2SO4 is reconstituted at Dupont, Deepwater NJ in which the Acid is cooked vaporized and reconstituted into acid. Spend acid is not disposed of as a hazardous materail.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/22/11</p>	<p>165,000 gallon/day of internal treated/striped sour water from the desulfurization gasoline production is used in the wet gas scrubber of the cat cracking refinery operation. 165,000 gallon/day of potable water is not used in the wet scrubber.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/22/11</p>	<p>Vapor recovery gases captured during retail gasoline dispensing are recovered by gasoline delivery tanker trucks. The captured gas is brought back to the refinery by the tanker trucks and the recovered vapor is collected and condensed into gasoline. The vapor recovered condensed gas is delivered for retail gas dispensation along with the refined gasoline. Although minimal in comparison to the refined gasoline production the vapor recovery condensated gasoline does not need to be manufactured or discharged into the atmosphere.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/22/11</p>	<p>Used solid silca cat fines from the cracking unit are are shipped offsite to a facility in Maryland and mixed with concrete. 525,000 #/month Molten sulfur from the Desulfurization gasoline production is sold to various vendors for agriculture use. Urefined oil slurry is sold and blended in other oils, no disposal. Motor and lube oil from pumps is recycled to vendor, no disposal.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>2/22/11</p>	<p>Conditioned starlings (Sturnus Vulgaris) are still managed by a fright program which currently consist of a truck with mounted speakers emitting Jungle Noises. This intergrated pest management program eliminates the use of pesticides and poisons which can be released into the environment. The facility has an employoyee intitiated site house keeping committee, which has recently evaluated and implemented more trash cans for use throughout the site to eliminated extraneous litter and trash disposition throughout the facility. More committee intitatives to be evaluated. Facility utilizes a fleet of bicycles and several Kubota vehicles for site personnel to travel around on site, these methodolgies of site transportation does not use fuel for vehicles.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>2/22/11</p>	<p>Hess Refinery Sponsors Annual Woodbridge Township Residential River Cleanups and buys Shovels, Gloves, Water and other miscellaneous supplies for the volunteers. Hess Refinery is a member of the Raritan River Roundtable which is a stakeholder group made up of businesses, industries, organizations, and utilities concerned with environmental stewardship, impact and issues within the watershed. Meet periodically.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>2/22/11</p>	<p>Policy on the website http://hess.com/sustainability/environment/policies.aspx Social Responsibility policy signed June 2010 noted http://hess.com/sustainability/environment/Corporate%20Social%20Responsibility%20Policy.pdf</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>2/22/11</p>	<p>Performance enhancement tools tracked on the website information; obtained through collected data http://www.hesscorporation.com/ehs/chartingtool/performancechartingtool.htm</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>2/22/11</p>	<p>A summary of Hess compliance performance is included in the annual Sustainability Report. http://hess.com/reports/sustainability/US/2009/default.pdf</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>2/22/11</p>	<p>The 2007 guidance document explains how Hess generates acceptable Green House Grass (GHG) protocol/methodology emission calculations which can be viewed at http://hess.com/sustainability/environment/HessGHGProtocol.pdf Current greenhouse gas emissions data is contained in Hess's 2009 Sustainability Report on pg 32 to 34, see http://hess.com/reports/sustainability/US/2009/default.pdf</p>

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>3/4/08</p>	<p>Facility has implemented a program to rid the refinery property of roosting migrating starlings (" Sturnus vulgaris.") The fright program consists of conditioning the roosting starlings with laser beams lighting, air horns, and recordings while simultaneous flying around trained hawks and owls. The thousands of starlings are coaxed or frightened away from roosting and are not harmed. The environmental health exposure, water quality impacts from stormwater runoff, and corrosivity of metals piping associated with large quantities of concentrated feces is alleviated without harm to the starling flocks. This integrated pest management program eliminates the use of poisons which can be release to the environment. Plant personnel use bicycles during the warmer month to travel throughout the facility.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/4/08</p>	<p>Policy noted on the Website http://www.hess.com/ehs/policies/ehspolicy.pdf</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>3/4/08</p>	<p>Facility has an annual environmental report submitted to corporate headquarters. The site reports are available at http://www.hess.com/ehs/annual_reports.htm</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>3/4/08</p>	<p>Greenhouse gas calculations are performed and reported on the website http://www.hess.com/downloads/reports/EHS/US/2007/HessGHGProtocol.pdf.</p>

BUILDING B @ PROSPECT AVENUE INDUSTRIAL PARK

Site ID: BUILDING B @ PROSPECT AVENUE INDUSTRIAL PARK
27379 600 PROSPECT AVE, BLDG B
PISCATAWAY TWP, NJ 08854

Stewardship Activities	Date Acknowledged	Comments
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>9/30/13</p>	<p>Facility uses propane to power jitneys.</p>

CANFIELD TECHNOLOGIES INC

Site ID: CANFIELD TECHNOLOGIES INC
5265 1 S CROSSMAN RD,
SAYREVILLE, NJ 08872

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	3/5/08	Canfield Technologies has reduced disposal of lead containing scrap from their melting kettles from 1.5% to 0.96% by weight, by modifying their kettle operating procedures.

CANON USA INC

Site ID: CANON USA INC
167430 100 JAMESBURG RD,
SOUTH BRUNSWICK TWP, NJ 08831

Stewardship Activities	Date Acknowledged	Comments
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	1/20/09	ISO 14001:2004 Certificate P96/08114EM.3

CAPITAL PRINTING CORP

MIDDLESEX BORO, NJ 08846

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/30/08	The fugi machines used for the press processing activities on site has been converted over to a thermal system, which no longer requires the usage of a fugi-chemical provided by the manufacturer of the machine that generated D002 haz waste. The machine is considered outdated according to reprs and the machine is no longer in use at this time. Therefore, for the elimination of the D002 haz waste, stewardship credit is warranted at this time for Capital Printing's efforts to operate above and beyond the RCRA regulations as a minimization effort to reduce haz waste material/chemicals and waste from their process. Also see waste min for additional details not included in this comment section.

CARTERET TRUCK RACK

Site ID: CARTERET TRUCK RACK
14360 760 766 ROOSEVELT AVE,
CARTERET, NJ 07008

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	1/1/07	Replaced all light bulbs with energy efficient bulbs and put all the lighting system on timers.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	1/1/07	The portable Ground Water Remediation system operates with Solar Panels.

CHANEL INC

Site ID: CHANEL INC

PISCATAWAY TWP, NJ 08854

Stewardship Activities	Date Acknowledged	Comments
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	5/8/12	Substantial upgrade to distribution center and the physical warehousing. upgraded and more efficient automated management system through storage, processing, distribution, and energy output.
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	5/8/12	Chanel USA has implemented an Eco Design Tool which analyses and reduces material packaging and material management to obtain a sustainable eco friendlier and marketable end product.
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	3/5/08	The facility recycles ethanol.
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	3/5/08	Process cooling with once-thru city water was replaced with a chill water loop.
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	3/5/08	The facility is in a toner exchange program. They also recycle cardboard, drums, and polystyrene.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/5/08</p>	<p>The facility has a new building automation/energy management system. The building had a heat exchanger/heat recovery equipment lighting retrofit.</p>

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/13/08</p>	<p>Per The Facility Mgr. John Eshelman, a new roof was constructed in 2006 with clear panels installed so that on clear sunny days the lights inside the processing building do not have to be on. Mr. Eshelman also indicated that the processing building has approx. 60 lights each suing 1,000 watts that are not used on sunny days.</p>

COLGATE PALMOLIVE CO

Site ID: COLGATE PALMOLIVE CO
14828 909 RIVER RD,
PISCATAWAY TWP, NJ 088551343

Stewardship Activities	Date Acknowledged	Comments
Design for the Environment.	5/7/12	Cleaning products have received the USEPA Designed for the Environment Certification, see Colgate Palmolive, http://www.epa.gov/dfe/ Categories that use the EPA's Design for the Environment logo includes all purpose cleaners, degreasers, dish soap, window glass cleaner, all pupose cleaner, automatic dishwasher, dish soap, tube tile cleaners, floor cleaners, and hand soaps CP is committed to the U.S. EPA's Safer Detergent Stewardship Initiative (SDSI) and to the use of safer surfactants in our products without compromising their superior cleaning performance.
ENERGY STAR.	5/7/12	CP is a U.S. EPA's Energy Star program partner company. CP was awarded a 2011 and 2012 Energy Star Partner of the Year Award for strategically and comprehensively managing their energy use. http://yosemite.epa.gov/opa/admpress.nsf/0/D9CE35C18F05A83485257870004C59E1 http://www.energystar.gov/index.cfm?fuseaction=pt_awards.showAwardDetails&esa_id=4145
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/7/12	CP is very aware of the impact of waste on the environment and is constantly looking for ways to reduce and reuse waste. The Company's waste management objectives are, first, to eliminate waste entirely; then to reduce and reuse waste; then to recycle waste; and finally to safely dispose of the remainder. http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/RespectForOurPlanet/ReducingEnvironmentalImpacts/Waste.cvsp CP has worked to reduce hazardous waste. This information is reported in our environmental key performance indicator chart. http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/KeyPerformanceIndicators.cvsp#KPI_Planet The Facility has implemented an Integrated Pest Management (IPM) Plan and a Landscape and Irrigation Policy, which include a focus on reducing the hazards, toxicity, and environmental impact associated with the hazardous materials utilized in these processes.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/7/12	CP established water use efficiency and reduced water use per ton of production by over 40% from 2002 to 2009. http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/RespectForOurPlanet/ReducingEnvironmentalImpacts/WaterUseEfficiency.cvsp The Facility installed a state-of-the-art irrigation system that uses satellite data and local microclimate and topographic data to determine watering needs. Compared to a 2006 - 2008 average, a 60% reduction (5.7 MM gallons annually) in potable water use was achieved in 2009. The enhanced landscaping strategy (increasing naturally adaptive meadows) also reduced use by 33% of fossils fuels and turf treatments, and led to the amendment of the local property maintenance ordinance, extending the impact beyond the site?s property. Additional water stewardship steps included the Facility exceeds standard water efficiency plumbing requirements by having installed low-flow toilets, and faucet aerators in restrooms and laboratory sinks.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/7/12	As a way to encourage energy efficiency throughout the Company, CP established a Global Energy Reduction Team in 2003, comprising internal energy and environmental experts. The team works virtually via the intranet to create various energy-reduction procedures, materials and tools. Specifically, this team leads the energy initiative by identifying and communicating new ideas and best practices for energy-saving opportunities, and by supporting on-site energy surveys. http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/RespectForOurPlanet/ReducingEnvironmentalImpacts/EnergyEfficiency.cvsp The Facility seeks continuous improvements in processes and operations relating to energy efficiency and has executed several projects to reduce energy use, including a steam pressure reduction, a temperature set-point change, HVAC shutdown during unoccupied time, new make-up air system, site-wide lighting upgrade, a new flat plate Hx for the chilled water system, and a substation consolidation.

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/7/12</p>	<p>The Facility has established practices to recycle, reduce, and/or reuse various materials found on-site, including recycling wood pallets, and printer toner cartridges. The Facility works with Terracycle to outsmart waste that is normally not recyclable by helping to provide a second life for Colgate toothbrushes, toothpaste tubes and their packaging materials by converting waste materials into fun and unique products. http://terracycle.net/brigades/colgate-oral-care-brigade.html?locale=en-US</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>5/7/12</p>	<p>Since 2007, Colgate has participated in the U.S.-based Consumer Specialty Products Association (CSPA) Product Care program. Product Care is a stewardship program in which companies voluntarily develop management principles for each of seven areas in a product's life cycle, from development in a research facility through product use and disposal. http://www.productcare.com/process.html CP is committed to the U.S. EPA's Design for the Environment and Safer Detergent Stewardship Initiative (SDSI) and has a long-standing review process where the use of new surfactants in products is reviewed to ensure the environmental profile of new materials are equal to or better than the materials which are currently in use. http://www.epa.gov/dfe/pubs/projects/formulat/sdsi.htm CP produces annual reports prepared using the Global Reporting Initiative Key Performance Indicator reporting on Product Responsibility regarding the health and safety across the lifecycle of products. http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/GlobalReportingInitiative.cvsp</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/7/12</p>	<p>The Facility has replaced several of the on-site fleet of vehicles with energy efficient green hybrid vehicles, which achieve better mileage and reduced emissions compared to the previous vehicles. The Facility has established a no-idling policy that is supported by several no-idling signs posted throughout the site. CP has established efforts to reduce travel, both over land and in the air, through the support of internet-based meetings, phone, video, and/or tele-conferencing and minimization of travel between facilities, whenever feasible.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/7/12</p>	<p>In alignment with achieving LEED EB O&M Gold Certification, green building design considerations were considered and implemented. Some examples of the numerous energy efficiency improvements implemented for the site included energy efficient lighting, occupancy motion sensors, low/no VOC paints, low flush toilets and faucet fixtures. Any new modifications to the Facility include a review for green building design considerations.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>5/7/12</p>	<p>The Facility is a Certified Wildlife Habitat, and Advanced Bird Friendly Habitat as awarded by the National Wildlife Federation (NWF), which helps restore habitat in areas by providing food, water, cover, and a place for wildlife to raise their young, and by incorporating sustainable landscape practices. The Facility executed habitat enhancement programs including restoring approximately 13 acres to its natural state and eliminating the use of fertilizers/pesticides in these areas; bat houses, and several varieties of bird houses were installed throughout the property; native species of plants are utilized when feasible and additional trees were planted.</p>

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/7/12</p>	<p>Colgate Palmolive has received recognitions since 2008 from New Jersey Smart Workplaces (NJSW), which recognizes and honors organizations who help reduce traffic congestion and improve air quality by providing commuter benefits to employees. http://www.state.nj.us/transportation/commuter/njsw/2010awardees.shtm The Facility was the recipient from the USGBC NJ chapter of the 2011 Green Team Award, for which CP is recognized for putting together a green building and project team whose vision and practices illustrate the best in green building.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/7/12</p>	<p>The Facility has brought students from the Rutgers School Department of Landscape Architecture on-site to collaborate ideas and one student from this school will be mentored during 2011 as a summer intern to discuss and promote environmental issues in our area. The Facility is a participant of the Middlesex County Adopt-a-Road program since 2009 where volunteers can assisting in performing road clean-ups two times each year along a 1-mile stretch of River Road in Piscataway. The Facility has had an impact on the local community through the collaboration with the Piscataway Town Council to make an amendment to the property ordinances, which was successfully amended in December 2010. The Piscataway Township Board approved an amendment to the Property Maintenance ordinance to allow for sites like ours to develop Sustainable landscaping practices as a part of an overall approach to Sustainable Operations under our LEED-EBOM project. Our program became the basis for this amendment, and we were intimately involved in driving this change to its ultimate approval for Piscataway.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>5/7/12</p>	<p>Principles guiding Colgate's worldwide Environmental, Occupational Health and Safety (EOHS) program are part of Colgate's Global EOHS Policy Statement, which applies to all Colgate facilities. This policy reinforces CP's commitment to maintaining healthy and safe working conditions in our facilities and keeping our business operations environmentally sound. http://www.colgate.com/Colgate/US/Corp_v2/LivingOurValues/Sustainability/RespectForOurPlanet/EOHSPolicy.pdf</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>5/7/12</p>	<p>CP's EOHS Policy Statement sets out the expectation that Colgate people are expected to incorporate environmental, health and safety considerations into their daily activities. The Facility has established an Environmental Management Plan (EMP) which is intended to be a "living" document that details and/or anticipates potential issues, mitigation strategies and monitoring requirements (if applicable). http://www.colgate.com/Colgate/US/Corp_v2/LivingOurValues/Sustainability/RespectForOurPlanet/EOHSPolicy.pdf</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>5/7/12</p>	<p>CP's long-term sustainability strategy is focused on three areas: People, Performance and Planet. Key performance indicators (KPI) are quantifiable measurements that reflect the critical success factors of Colgate. CP has clearly defined goals that are reflected in these key performance indicators. CP publishes a report, which includes the Planet environmental indicators. http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/KeyPerformanceIndicators.cvsp</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>5/7/12</p>	<p>http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/RespectForOurPlanet/SustainableCleaningInitiatives.cvsp</p>

<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>5/7/12</p>	<p>CP has established a WorkSmart program, a voluntary program in which employees can Telecommute for a certain number of days per week, and has offered flexible work hours to employees who qualify, in order to help reduce traffic congestion and maintain/improve employee health and well being. The Facility achieved at least a 15% participation (determined for LEED certification) in alternative means to arrive at work, which includes shuttle bus service from Mass Transit to the site, involvement with the local Transportation Management Association, subsidies for Mass Transit users, bike racks and showers for cyclists, runners and walkers, and brochures and information to encourage carpooling. The Facility has established a partnership with Keep Middlesex Moving, Inc. (KMM), whose mission is to improve mobility, reduce traffic congestion, and improve air quality. KMM has crafted a KMM-Colgate Commuter Website, a unique portal for Colgate employees to more easily seek and request car pools, van pools, alternate commuting strategies and an adaptable commuter tool to have local traffic information sent to you via electronic media. http://www.kmm.org/kmm_colgate.php</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>5/7/12</p>	<p>CP publishes the EOHs Policy for the entire company, which includes purchasing policies. http://www.colgate.com/Colgate/US/Corp/LivingOurValues/Sustainability/RespectForOurPlanet/EOHSPolicy.pdf In support of CP's commitment to "Living our Values for Sustainability", the Facility has implemented a Sustainable Purchasing Policy. This policy describes the process and expectations for the procurement of sustainable materials for the operation and maintenance of the Facility. While it is desirable to implement sustainable purchasing expectations for all purchases made for the Facility the nucleus of this policy focuses on three critical Indirect Purchasing areas: Ongoing Consumables, Durable Goods, and Facility Alterations and Additions. The Facility also works with its vendors to provide environmentally responsible options and products.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>5/7/12</p>	<p>The Facility has received the USGBC LEED Gold Certification for existing buildings, operations, and maintenance (LEED EB O&M).</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>5/7/12</p>	<p>CP has reported publicly on our energy use, carbon dioxide emissions, and climate change efforts to the Carbon Disclosure Project (CDP) since 2004. The CDP is a global initiative supported by institutional investors to promote corporate response to climate change through annual surveys of major companies worldwide. CDP recognized Colgate in its 2008 and 2009 Carbon Disclosure Leadership Index. Colgate also participates in the Carbon Disclosure Project Corporate Supply Chain Program. Involvement in this program is part of the company's efforts to manage the risks and opportunities related to our suppliers' impacts on the environment. Reducing environmental impact and the corporation's public position on climate change can be, respectively viewed at: http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/KeyPerformanceIndicators.cvsp http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/RespectForOurPlanet/ReducingEnvironmentalImpacts/ClimateChange.cvsp</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>5/7/12</p>	<p>CP is an annual participant in the Carbon Disclosure Project Corporate Supply Chain Program and investor request and supply chain projects. Involvement in this program is part of the company's efforts to manage the risks and opportunities related to our suppliers' impacts on the environment. The Facility reviews, assesses, and works with vendors and suppliers to ensure evaluate their alignment with business practices and beliefs, and to manage the risks and/or liabilities through various approaches, including reference checks, periodic site visits and audits.</p>

CONOVER NURSERIES INC

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	1/15/15	Farmer uses mechanical and physical pest control.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	1/15/15	The farmer uses natural light to save energy.

16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	11/28/12	The Cranbury Township Department of Public works has adopted a material conservation program in which more mechanical aeration is utilized, which in turn reduces the frequency and rate of fertilizer application to approximately once every three years.

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>11/28/12</p>	<p>Cranbury Township has obtained a grant and implemented the Cranbury Wildlife Habitat Incentive known as the Cranbury Preserve. The preserve continues to be maintained and is planted with native grasses and allowed to grow. The preserve is enjoyed by the residents of Cranbury Township. The Grant obtained was in concert with the Department of Agriculture, please refer to www.nrcs.usda.gov for program details.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>11/28/12</p>	<p>Cranbury Township Department of Public Works provides gloves and trash bags for local community cleanups. Publics works collects the trash and properly disposes the trash.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/3/11</p>	<p>The Cranbury Township Department of Public works has adopted a material conservation program in which more mechanical aeration is utilized, which in turn reduces the frequency and rate of fertilizer application to approximately once every three years.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>3/3/11</p>	<p>Cranbury Township has obtained a grant and implemented the Cranbury Wildlife Habitat Incentive known as the Cranbury Preserve. <p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>3/30/15</p>	<p>Grouping printing projects together by color, materials and product line to reduce the amount of hazardous waste generated by reducing the number of equipment cleanings due to changes in color family and materials used in different printing batches. Provided print-out of runs grouped together by product line and color.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/30/15</p>	<p>Reduced the amount of corrugate filler and number of cases for shipping product by redesigning the dimensions of the cases to require less corrugate filler since April 2013.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/30/15</p>	<p>sky lights & numerous windows to utilize more natural lighting 6 bulbs changed to LED lights have motion sensors water saving toilets & faucets installed.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/30/15</p>	<p>Objectives listed in Environmental Policy signed by Gerad Autajon, CEO & Chairman of Autajon Group are as follows: -To continually control and reduce the quantity of waste -To leverage our improvements in managing environmental impacts to reduce costs - To encourage continuous improvement and pollution prevention -To comply with all applicable regulations relating we are subject to -To comply with the non-regulatory requirements related to the environment -To prevent incidents and reduce environmental impacts (raw materials, gaseous and liquid effluents) -To reduce our consumption of water and energy (electricity, compressed air, etc.) - To increase the use of clean energies -To develop a dialogue with stakeholders (customers, insurance companies, public, etc.) We will focus in particular on printing activities (consumption of inks and varnish), waste management, and usage of solvents. I am counting on each employee to implement this policy with responsibility and commitment so that Autajon Group becomes an industry reference.</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/30/15</p>	<p>ISO14001 & ISO9001 Certifications Environmental Aspect Assessments are conducted regularly and Environmental Goals are reviewed quarterly.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>3/30/15</p>	<p>The heat generated from the printing machines is recirculated back into the building to reduce the amount of energy needed to heat building in winter months. The heat is vented during summer months to reduce amount of energy needed to cool the building.</p>

12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	11/25/09	The Edison Animal Shelter Green/Sustainable Renovation project included improvements such as Energy Star rated heating and cooling systems, energy efficient light fixtures, triple pane windows, water conserving plumbing fixtures, insulated egress doors, exterior weatherization etc.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	11/25/09	10 kW roof-mounted photo-voltaic solar energy system installed at township animal shelter.

EE CRUZ CO INC

Site ID: EE CRUZ CO INC
40080 165 RYAN ST,
SOUTH PLAINFIELD, NJ 07080

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	6/26/08	EE Cruz is reducing the hazardous material and hazardous waste on site by getting rid of their solvent based partswasher. The site was contacted on 7/24/08 and Mr. Byelick (Supervisor) confirmed that they have proceeded with getting rid of this partswasher. Based on this information, the Department has decided to issue a stewardship recognition to the above facility for their efforts in minimizing on haz waste material.

ENGLERT METALS CORP

Site ID: ENGLERT METALS CORP
14823 1200 AMBOY AVE,
PERTH AMBOY, NJ 08862

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	5/20/13	On April 5, 2013, Englert, Inc installed 611 photovoltaic panels on 16,000 square feet of standing seam roof panels that are capable of producing an average of 384 kilowatt hours of electricity per day. The system is expected to generate nearly 186,000 kilowatt hours annually. The system will be providing electricity to power their rollforming equipment. Any excess energy not used by the company to power Englert operations will be sold back to the local power company.

EPIC INDUSTRIES INC

Site ID: EPIC INDUSTRIES INC
27805 1007 JERSEY AVE,
NEW BRUNSWICK, NJ 08901

Stewardship Activities	Date Acknowledged	Comments
Design for the Environment.	4/15/11	The Green Essential line of cleaning products have received the USEPA Designed for the Environment Certification, see Epic Industries, Green Essentials http://www.epa.gov/dfe/
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	4/15/11	Epic Industries has a concentrated cleaning products line and, as a result, has been able to conserve materials by reducing the amount of packaging required for these products.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	4/15/11	Epic Industries Swell foaming luxury hand soap is Green Seal Certified, which is an independent nonprofit organization dedicated to providing and verifying green products, http://www.green Seal.org/
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	4/15/11	

EQUISTAR CHEMICALS

Site ID: EQUISTAR CHEMICALS
14860 340 MEADOW RD,
EDISON, NJ 08817

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	10/3/11	http://www.lyondellbasell.com/NR/rdonlyres/EAA93476-2A46-423A-B06B-F529377A88AC/0/HSEPolicyENG02_2010.pdf
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	10/3/11	An onsite environmental management system is implemented throughout the environmental multimedia programs. The facility is ISO 14001 certified and a participant in Responsible Care.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	1/31/08	Participation in the American Chemistry Council "Responsible Care?" initiative. see attached website: http://www.grace.com/About/EHS/ResponsibleCare.aspx

ETSCH FAMILY FARM

Site ID: ETSCH FAMILY FARM
128102 110 HOFFMAN RD,
MONROE TWP, NJ 08831

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/26/15	All watering of crops is conducted via hand application. No wasting of water.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/26/15	All pond aerators operate via windmill. Aerators are needed to prevent algae growth and the blockage of the pumps at the intake.

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/26/15</p>	<p>All waste hay is respread throughout the farm. Tree trims remain onsite to establish rabbit habitats.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>5/26/15</p>	<p>Tree trims used to establish rabbit habitats and aid in the success of the populations.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/26/15</p>	<p>The farm is 98% No Till, meaning reduced carbon emissions from carbon sequestration in the soil.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/26/15</p>	<p>Wind energy used to power the pond aerators.</p>

Site ID: **ETSCH FAMILY FARM**
602121 **556 BUCKELEW AVE,**
MONROE TWP, NJ 08831

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/27/17</p>	<p>To reduce hazardous materials, the business has an IPM program, cut weeds and grass mechanically, and uses soil conservation practices.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/27/17</p>	<p>To reduce energy, the farmer uses LED lighting. T5 bulbs were installed in the shops.</p>
---	----------------	--

EVONIK DEGUSSA CORP

Site ID: EVONIK DEGUSSA CORP
 14853 1 TURNER PL, 2 TURNER PL FORMER
 PISCATAWAY TWP, NJ 08855

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	9/24/08	Haz material reduction includes: 1 - Evoniks disposed of all of their hydroflouric acid chemicals and replaced it with nitric acid, which has minimized on chemical burn injuries in the labs and is a less toxic chemical. 2 - Facility removed all chromic acid cleaners used to clean glassware and lab equipment. The acid cleaner was replaced with a biodegrader cleaner that is environmentally "Green" and safe. 3 - Labs are to follow the environmental policy and order less chemicals used in all of the labs, therefore less haz waste is generated. Less manufacturing scaling is current practiced which reduces on their haz waste generation as well.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/24/08	Reducing water consumption is part of their work routine during manufacturing. Evoniks works with less water during their batch operation. Facility can provide documentation as proof that their water bill has been significantly reduced by 70 %.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	9/24/08	Energy reduction is practiced on a weekly basis (Fridays) where all lights, air conditioning units and boilers are shut down. This has significantly reduced energy consumption. The program has proven to be a good effort in energy cost reduction and effectiveness.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	9/24/08	Evonik Degussa has an environmental policy stating that protection of their staff's health and the environment is a priority in terms of what chemicals are purchased on site and what they use in their manufacturing process. The policy incorporates good waste handling and disposal practices and procedures. A copy of the policy can be issued by the H&SE dept.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	9/24/08	Environmentally safe products are purchased as per their environmental policy.

FARMER ALS MARKET & GREENHOUSES

Site ID: FARMER ALS MARKET & GREENHOUSES
 173875 387 BUCKELEW AVE, AKA RT 522
 MONROE TWP, NJ 08831

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	11/21/14	The farmer uses several integrated pest management (IPM) techniques to reduce the amount of chemical pesticide applied. This includes monitoring pests in the field in order to control infestations without applying any pesticides and controlling weeds mechanically.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	11/21/14	The farmer utilizes a drip irrigation system over several acres, conserving the amount of water needed to irrigate the crop.

FIRMENICH INC

Site ID: FIRMENICH INC
 5329 250 PLAINSBORO RD, 200 250 PLAINSBORO RD
 PLAINSBORO, NJ 08536

Stewardship Activities	Date Acknowledged	Comments
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	9/27/12	All waste streams at Firmenich are analyzed for the opportunity to recycle, reuse or reclaim. One operation at the facility is generating approximately 10 to 20 55 gallons drums of isopropyl alcohol (IPA) per month. Historically the material was shipped off site for disposal. Firmenich began shipping the material to another Firmenich facility in the Corporation where it is combined with another IPA stream, making an isopropyl acetate supplement in feed stock. Ultimately the material is shipped for reclamation. The reclaimed material resulted in the elimination of a waste stream. In addition Firmenich has reclassified an ethanol waste from a waste to usable additive for gasoline. The material reclassification of ethanol from a waste to product serves to conserve the energy usage and resources involved in growing the corn and manufacturing more ethanol.

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>9/27/12</p>	<p>The Green Team is a Firmenich Inc. employee environmental action committee; Recent actions in 2009 and in 2010 resulted in the employee initiated action of encouraging employees to reuse coffee cups from home instead of using disposable cups for coffee. The Firmenich Green Team have also brought in a Flavia beverage system which uses 40% less energy than other similar type systems because of the one cup dispensing system and the Flavia beverage distributor recycles the one cup dispensary containers for future use. thus saving disposal cost and resources to manufacture other containers. In addition the Firmenich Green Team has initiated an internal site procedure to have all copy machines set to a two sided copies default for routine printing thus saving photocopying resources of paper, ink, and energy.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/27/12</p>	<p>Firmenich has a global policy, signed august 2004 and a local site specific policy, revised annually</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/27/12</p>	<p>Facility is ISO 14001 certified effective 6/2008 until present.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>9/27/12</p>	<p>The Environmental Report is part of the annual sustainability report located at http://www.firmenich.com/SustainabilityReport2012/fb.html</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>9/27/12</p>	<p>Firmenich installed 3000 photovoltaic solar panels providing 12% of the power used at the Princeton/ Plainsboro Plant. The solar power produced is calculated to save more than 900 metric tons of carbon dioxide emissions annually. The solar array was fully operational June 30, 2010.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>9/27/12</p>	<p>Direct and indirect carbon dioxide CO2 emissions, as well as other emissions, such as Nox, SOx, and VOC emission calculations are reported against production output.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>12/1/10</p>	<p>All waste streams at Firmenich are analyzed for the opportunity to recycle, reuse or reclaim. One operation at the facility is generating approximately 10 to 20 55 gallons drums of isopropyl alcohol (IPA) per month. Historically the material was shipped off site for disposal. Firmenich began shipping the material to another Firmenich facility in the Corporation where it is combined with another IPA stream, making an isopropyl acetate supplement in feed stock. Ultimately the material is shipped for reclamation. The reclaimed material resulted in the elimination of a waste stream. In addition Firmenich has reclassified an ethanol waste from a waste to usable additive for gasoline. The material reclassification of ethanol from a waste to product serves to conserve the energy usage and resources involved in growing the corn and manufacturing more ethanol.</p>

<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>12/1/10</p>	<p>The Green Team is a Firmenich Inc. employee environmental action committee; Recent actions in 2009 and in 2010 resulted in the employee initiated action of encouraging employees to reuse coffee cups from home instead of using disposable cups for coffee. The Firmenich Green Team have also brought in a Flavia beverage system which uses 40% less energy than other similar type systems because of the one cup dispensing system and the Flavia beverage distributor recycles the one cup dispensary containers for future use. thus saving disposal cost and resources to manufacture other containers. In addition the Firmenich Green Team has initiated an internal site procedure to have all copy machines set to a two sided copies default for routine printing thus saving photocopying resources of paper, ink, and energy.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>12/1/10</p>	<p>Firmenich has a global policy, signed august 2004 and a local site specific policy, revised annually</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>12/1/10</p>	<p>Facility is ISO 14001 certified effective 6/2008 until 6/2011.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>12/1/10</p>	<p>The Environmental Report is part of the annual sustainability report located at http://www.firmenich.com/tools/sustainability/index.html</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>12/1/10</p>	<p>Firmenich installed 3000 photovoltaic solar panels providing 12% of the power used at the Princeton/ Plainsboro Plant. The solar power produced is calculated to save more than 900 metric tons of carbon dioxide emissions annually. The solar array was fully operational June 30, 2010.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>12/1/10</p>	<p>Direct and indirect carbon dioxide CO2 emissions, as well as other emissions, such as Nox, SOx, and VOC emission calculations are reported against production output.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/6/08</p>	<p>Firmenich has a global policy, signed August 2004, and a local site specific Environmental policy, last revised 9/28/08.</p>

4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	11/6/08	Facility is ISO14001 certified effective 6/2008 until 6/2011.
5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.	11/6/08	The Environmental Report is located at www.firmenich.com under the annual sustainability report (currently the 2008 Sustainability Report.)
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	11/6/08	Direct and indirect Carbon dioxide CO2 emissions, as well as other emissions, such as NOx, SOx, and VOC emission calculations are reported against production output.

FOLEY INC

Site ID: FOLEY INC
14819 855 CENTENNIAL AVE,
PISCATAWAY TWP, NJ 088551555

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/30/08	Facility has switched to non-haz baking soda based parts cleaning units throughout the facility.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	4/30/08	Facility has changed out all HID lamps throughout the facility to low mercury florescent bulbs.

FOND DU LAC

Site ID: FOND DU LAC
 435218 401 MILL RD,
 EDISON, NJ 08837

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	4/25/13	Facility has a written Environmental, Health and Safety Policy that was prepared October 2012 and signed by company's president.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	4/25/13	Facility is ISO 14001 certified (#US00012818), ISO 18001 certified (#US00012823) and R2 certified (#US00012822).

EDISON, NJ 07072

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	10/28/16	
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	10/28/16	There was a review of the Certificate of Registration on Environmental Management System.
5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.	10/28/16	Facility publishes an annual Sustainability Report on the website.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	2/27/09	ISO 14000 certified http://www.fujifilmusa.com/shared/bin/Fujifilm_c2c_2006b.pdf

GE ENERGY PARLIN ENERGY CENTER

Site ID: GE ENERGY PARLIN ENERGY CENTER
14549 790 WASHINGTON RD,
PARLIN, NJ 08859

Stewardship Activities	Date Acknowledged	Comments
------------------------	-------------------	----------

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/21/17</p>	<p>EFS Parlin's Water Demineralization System previously used a process employing sulfuric acid and sodium hydroxide to produce high-quality water for steam production. In 2008, that process was replaced by a Reverse Osmosis (RO) system that eliminates sulfuric acid usage and reduces the sodium hydroxide usage to "a small quantity." Spent or unused sulfuric acid and sodium hydroxide constitute hazardous materials and the elimination and reduction of their usage significantly contribute to the reduction of hazardous materials generated, stored and shipped from the facility. Two 6,000 gallons storage tanks have been removed from service.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/21/17</p>	<p>EFS Parlin's change to the Reverse Osmosis (RO) system for Water Demineralization (as discussed in ACTIVITY #14 above) has also resulted in a significant reduction in water usage. According to facility, recycling of backwash from the RO system for reuse as cooling tower makeup water results in a reduction of raw water usage of 50 gal/minute, which can reduce usage by up to 39,000 gal/day depending on hours of operation of the combustion turbines ** ** EFS Parlin is a peaking electric power combined cycle cogeneration facility: Thus, the hours of operation vary greatly depending upon consumer demand and usage with consequent operation of the plant only during periods of great power usage through it's connection to the PJM (PA/NJ/MD) Interconnect Power Grid.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/21/17</p>	<p>EFS Parlin's energy conservation program promotes the responsible and cost-effective use of energy. EFS Parlin is reducing energy use by improving the energy efficiency of EFS Parlin's buildings through advanced solid-state lighting technology. One facet of EFS Parlin's energy conservation program involves systematically replacing all compact fluorescent light (CFL) bulbs in the office and control room with more energy efficient light-emitting diode (LED) light bulbs. The LED light bulbs that have been selected for use in the energy conservation program are manufactured by ETI Solid State Lighting, Inc. and are registered and approved to use the LED Lighting Facts Label. The LED Lighting Facts program was launched by the U.S. Department of Energy in 2008 to promote the accurate and consistent reporting of LED product performance claims. Manufacturers that list their products with LED Lighting Facts voluntarily pledge to report their products' performance results. The LED light bulbs use 20 to 30% less power than the existing compact fluorescent bulbs. In addition, the LED light bulbs are environmentally friendly and compliant with the European Union directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment also known as Restriction of Hazardous Substances Directive, because the bulbs do not contain lead or mercury. The project to replace the CFLs with LED lightbulbs commenced in 2015, and out of a total of 500 light bulbs 230 have been replaced.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>6/21/17</p>	<p>Facility-wide comprehensive Greenhouse gas emission calculations have been performed using US EPA ECMP Client Tool.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>9/11/15</p>	<p>EXISTACTIVITY #14) HAZARDOUS MATERIALS REDUCTION: EFS Parlin's Water Demineralization System, used to produce high-quality water for steam production, was changed in 2008 from a process employing sulfuric acid and sodium hydroxide to a Reverse Osmosis (RO) system that eliminates sulfuric acid usage & reduces the sodium hydroxide usage to "a small quantity." Although quantitative data is not provided, and facility's completed Environmental Stewardship Checklist submittal initially overstated that the use of sodium hydroxide was "eliminated," * significant reduction in sodium hydroxide usage in the RO water demineralization system and elimination of sulfuric acid usage in the process contribute significantly to the reduction of hazardous materials both used at facility & delivered to and stored at facility (the two 6,000 gal. storage tanks have been removed from service). * Comment continues with the statement indicated above: i.e., "a small quantity of sodium hydroxide is used in the RO system and is stored in totes.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>9/11/15</p>	<p>ACTIVITY #15) WATER USE REDUCTION: EFS Parlin's change to the Reverse Osmosis (RO) system for Water Demineralization (as discussed in ACTIVITY #14 above) has also resulted in a significant reduction in water usage. According to facility, recycling of backwash from the RO system for reuse as cooling tower makeup water results in a reduction of raw water usage of 50 gal/minute, which can reduce usage by up to 39,000 gal/day depending on hours of operation of the combustion turbines ** ** EFS Parlin is a peaking electric power combined cycle cogeneration facility: Thus, the hours of operation vary greatly depending upon consumer demand and usage with consequent operation of the plant only during periods of great power usage through it's connection to the PJM (PA/NJ/MD) Interconnect Power Grid.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/11/15</p>	<p>EFS Parlin's energy conservation program promotes the responsible and cost-effective use of energy. EFS Parlin is reducing energy use by improving the energy efficiency of EFS Parlin's buildings through advanced solid-state lighting technology. One facet of EFS Parlin's energy conservation program involves systematically replacing all compact fluorescent light (CFL) bulbs in the office and control room with more energy efficient light-emitting diode (LED) light bulbs. The LED light bulbs that have been selected for use in the energy conservation program are manufactured by ETI Solid State Lighting, Inc. and are registered and approved to use the LED Lighting Facts Label. The LED Lighting Facts program was launched by the U.S. Department of Energy (DOE) in 2008 to promote the accurate and consistent reporting of LED product performance claims. Manufacturers that list their products with LED Lighting Facts voluntarily pledge to report their products' performance results. The LED light bulbs will use 20 to 30% less power than the existing compact fluorescent bulbs. In addition, the LED light bulbs are environmentally friendly and compliant with the Restriction of the use of certain Hazardous Substances (RoHS) because the bulbs do not contain lead or mercury. See the attachments for a vendor data sheet and a copy of the verified performance information from the LED Lighting Facts program. The project to replace the CFLs in the office and control room with LED light bulbs commenced in 2015 with an anticipated completion date of late 2017. A total of 166 light fixtures consisting of a total almost 500 light bulbs are included in this initiative. Considerable progress has already been made, as in the first half of 2015, over 120 light bulbs were replaced with the more energy efficient LED light bulbs. Another 38 bulbs have been ordered and will be replaced by the end of the year.</p>

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>9/30/11</p>	<p>ACTIVITY #14) HAZARDOUS MATERIALS REDUCTION: EFS Parlin's Water Demineralization System, used to produce high-quality water for steam production, was changed in 2008 from a process employing sulfuric acid and sodium hydroxide to a Reverse Osmosis (RO) system that eliminates sulfuric acid usage & reduces the sodium hydroxide usage to "a small quantity." Although quantitative data is not provided, and facility's completed Environmental Stewardship Checklist submittal initially overstated that the use of sodium hydroxide was "eliminated," * significant reduction in sodium hydroxide usage in the RO water demineralization system and elimination of sulfuric acid usage in the process contribute significantly to the reduction of hazardous materials both used at facility & delivered to and stored at facility (the two 6,000 gal. storage tanks have been removed from service). * Comment continues with the statement indicated above: i.e., "a small quantity of sodium hydroxide is used in the RO system and is stored in totes.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>9/30/11</p>	<p>ACTIVITY #15) WATER USE REDUCTION: EFS Parlin's change to the Reverse Osmosis (RO) system for Water Demineralization (as discussed in ACTIVITY #14 above) has also resulted in a significant reduction in water usage. According to facility, recycling of backwash from the RO system for reuse as cooling tower makeup water results in a reduction of raw water usage of 50 gal/minute, which can reduce usage by up to 39,000 gal/day depending on hours of operation of the combustion turbines ** ** EFS Parlin is a peaking electric power combined cycle cogeneration facility: Thus, the hours of operation vary greatly depending upon consumer demand and usage with consequent operation of the plant only during periods of great power usage through it's connection to the PJM (PA/NJ/MD) Interconnect Power Grid.</p>

GE HEALTHCARE BIOSCIENCES CORP

Site ID: GE HEALTHCARE BIOSCIENCES CORP
 5415 260 800 CENTENNIAL AVE,
 PISCATAWAY TWP, NJ 08854

Stewardship Activities	Date Acknowledged	Comments
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	1/30/08	<p>Facility performs a household hazardous waste day every 6 months and so far has performed three events for their employees to discard hazardous waste properly at this facility. An outside hazardous waste contractor is enlisted to perform the event (i.e. sorting, overpacking and transportation & disposal).</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	1/30/08	<p>Out reach programs to school are being conducted and a river cleanup program is under way with the NJ Water Watch group.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	1/30/08	<p>The site has a policy in place.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	1/30/08	<p>The environmental program is organized in categories: air, water, waste, transportation, plus a general environmental category. The environmental program gets audited every two years by a corporate representative and every year a self audit is generated. The self audit consists of four quarterly internal reviews.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	1/30/08	<p>Fluorescent light bulbs are replaced with low mercury containing bulbs; company purchases paper that contains 40% recycled cellulose in it, rather than 100% new materials. Also company uses cleaning materials that are listed as low environmental impact.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	1/30/08	<p>Vendors are audited by GE Healthcare for being environmentally sound.</p>

GIAMARESE FARM

Site ID: GIAMARESE FARM
128095 173 FRESH PONDS RD,
EAST BRUNSWICK TWP, NJ 08816

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/25/14	Utilizes Integrated Pest Management in cooperation with the Rutgers Cooperative Extension. Based on number & types of pests collected Rutgers will inform farmer whether pesticides are needed. IPM reduces the amount of pesticides applied.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	7/25/14	Farm allows non-profit groups to come pick after farm is done harvesting. 200-300 lbs of fresh fruits & vegetables are donated to the local food bank which would otherwise have been wasted. Farm received from the NJ Agricultural Society the Neil Robinson Farmers Against Hunger Award on 2/5/14.

GRAPHIC PACKAGING INTERNATIONAL INC

Site ID: GRAPHIC PACKAGING INTERNATIONAL INC
21925 4100 NEW BRUNSWICK AVE,
PISCATAWAY TWP, NJ 08854

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	3/24/10	To reduce the amount of alcohol used at the Graphic Packaging International Inc facility, an environmentally friendly cleaner called Pulita 3000 to used to clean UV ink from the rollers.

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/24/10</p>	<p>In the production area, water saving fixtures were installed in the bathrooms. Water is only consumed when motion activated by the user.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/24/10</p>	<p>High efficiency lighting and motion sensors provide longer lamp life. As a result, bulbs do not need to be changed as frequently which reduces demands on natural resources and disposal issues.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/24/10</p>	<p>All lighting was replaced in the production, warehouse, and office areas with high efficiency lighting and motion sensors. This provides a savings of 172,336 kw/year which is the equivalent of planting 50 acres of trees (CO2), 24 cars removed from our roads, and 15,667 gallons of gasoline saved.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>3/24/10</p>	<p>The company sponsored a temporary recycling program where employees could bring in oil or latex paint, fluorescent bulbs, or batteries that needed to be disposed. This prevents the materials from being disposed of improperly into the landfill and provides proper recycling options. The goal is to extend good environmental habits from the place of work to the community.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/24/10</p>	<p>Graphic Packaging International Environmental Management System enables the company to monitor, verify, and improve environmental performance and efficient operations. On an annual basis, a report is generated from the EMS that evaluates the companies environmental performance.</p>

SAYREVILLE, NJ 08872

Stewardship Activities	Date Acknowledged	Comments
------------------------	-------------------	----------

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>9/25/14</p>	<p>Vegetable based inks are used to eliminate the release of volatile organic compounds</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>9/25/14</p>	<p>Facility uses low-flow toilets and motion sensor faucets. Water use is minimized by the use of closed loop cooling systems.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>9/25/14</p>	<p>Electrical consumption has been reduced through the use of highly efficient variable drive motors. Natural gas consumption has been reduced through the use of computer controlled air dampers and the processing gases are reused for heating buildings Propane powered equipment replaced with batteries.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>9/25/14</p>	<p>Facility sends spent and used product to a company called New Life Chemical in South Carolina as opposed to putting it in the landfill or other disposal. This company reuses the product to their benefit. Pallets recycled at CTM, Triangle, and Petro Pallet Unused or unsold soap is recycled and shipped out to Clean the World. Visit www.cleanttheworld.org for more info. Facility engages in a process known as "pigging" which involves blowing down production lines to washout excess product into holding tanks once the batch production is completed. Tank washwater is reintroduced and reused into product lines. BOD/COD pollutants are reduced when the process water is discharge into the sanitary sewer. Plastic container molds are designed with thinner walls that reduce the amount of material required in the molding process. Plastic bottles and recyclable packaging materials are reused.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/25/14</p>	<p>Facility has converted to CFLs equipped with motion sensors where applicable.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/25/14</p>	<p>Policy provided to NJDEP.</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/25/14</p>	<p>Comprehensive compliance system which assists in keeping track of work done. This system recently added stormwater related work submittals</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>9/25/14</p>	<p>Suppliers of plastic bags feature bags that require 25% less plastic than conventional bags, while utilizing 14% natural mineral additive.</p>

Stewardship Activities	Date Acknowledged	Comments
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>8/29/14</p>	<p>Chemtura has eliminated #4 and #6 fuel oil from their site/production process.</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>8/29/14</p>	<p>Product Risk Management Chemtura conducts a lifecycle analysis of existing products to evaluate potential risk areas throughout the products' life cycles. Elements evaluated include raw materials, manufacturing, transportation, customer end use and disposal. New products are evaluated by stage-gated reviews, using environmental, health and safety (EHS) criteria. Additionally, before changes in existing product formulations are made, a detailed evaluation is made of the proposed change. A critical component of all of these processes is the Material Safety Data Sheet, which lists product hazard information. http://www.chemtura.com/corporate/v/index.jsp?vgnextoid=32b597b9cc85c010VgnVCM10000052d7010aRCRD&vgnextchannel=32b597b9cc85c010VgnVCM10000052d7010aRCRD&vgnnextfmt=default</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>8/29/14</p>	<p>Woodbridge Community Advisement Program; sponsor, participant, and advisor for community health and safety, regarding fire, safety and emergency response.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/29/14</p>	<p>"CHEMTURA CORPORATION considers ensuring the safety and health of the public, our employees, contractors and customers and the protection of the environment now and for future generations to be our core values. We are committed to meeting all applicable laws, regulations, permits and internal standards throughout the world. Our goal is zero accidents and incidents, and zero harm to the environment." http://www.chemtura.com/deployedfiles/Corporate/Document%20Downloads/corporate/PDF/Chemtura_RC_Policy_English.pdf</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/29/14</p>	<p>The Chemtura Responsible Care Management System (RCMS) includes some 100 management practices that are based on the best practices of leading private sector companies; initiatives developed through the Global Environmental Management Initiative, International Standards Organization and other bodies; and requirements of national regulatory authorities. Chemtura's RCMS has been externally registered to the internationally recognized RC14001 standard and is being implemented globally. http://www.chemtura.com/deployedfiles/Corporate/Document%20Downloads/corporate/PDF/Middlebury_RC_14001_Certification.pdf http://www.chemtura.com/deployedfiles/Corporate/Document%20Downloads/corporate/PDF/Middlebury_ISO_14001_Certification.pdf http://www.chemtura.com/deployedfiles/Corporate/Document%20Downloads/corporate/PDF/Chemtura_RC_Policy_English.pdf</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>9/22/10</p>	<p>Product Risk Management Chemtura conducts a lifecycle analysis of existing products to evaluate potential risk areas throughout the products' life cycles. Elements evaluated include raw materials, manufacturing, transportation, customer end use and disposal. New products are evaluated by stage-gated reviews, using environmental, health and safety (EHS) criteria. Additionally, before changes in existing product formulations are made, a detailed evaluation is made of the proposed change. A critical component of all of these processes is the Material Safety Data Sheet, which lists product hazard information. http://www.chemtura.com/corporate/v/index.jsp?vgnextoid=32b597b9cc85c010VgnVCM10000052d7010aRCRD&vgnextchannel=32b597b9cc85c010VgnVCM10000052d7010aRCRD&vgnnextfmt=default</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>9/22/10</p>	<p>Woodbridge Community Advisement Program; sponsor, participant, and advisor for community health and safety, regarding fire, safety and emergency response. Sponsor and Coordinator of local student waterway clean up of Pumpkin Patch Brook in Woodbridge Township which occurred on October 11, 2010.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/22/10</p>	<p>CHEMTURA CORPORATION considers ensuring the safety and health of the public, our employees, contractors and customers and the protection of the environment now and for future generations to be our core values. We are committed to meeting all applicable laws, regulations, permits and internal standards throughout the world. Our goal is zero accidents and incidents, and zero harm to the environment. http://www.chemtura.com/deployedfiles/Corporate/Document%20Downloads/corporate/PDF/Chemtura_RC_Policy_English.pdf</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/22/10</p>	<p>The Chemtura Responsible Care Management System (RCMS) includes some 100 management practices that are based on the best practices of leading private sector companies; initiatives developed through the Global Environmental Management Initiative, International Standards Organization and other bodies; and requirements of national regulatory authorities. Site ID: **HB FULLER CONSTRUCTION PRODUCTS INC**
6005 **59 BRUNSWICK AVE,**
EDISON, NJ 088172082

Stewardship Activities	Date Acknowledged	Comments
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>11/15/10</p>	<p>Facility manufactures concrete products and grout product such DSP520 which utilized a consistent fly ash as a recycled product. Other manufactured product have also received LEED certification see website reference below. http://www.tecspecialty.com/assets/files/english/Leed_Chart_R609.pdf</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>11/15/10</p>	<p>The Specialty Construction Brands, is a wholly owned subsidiary of HB fuller. The manufacturing site was recently renovated and eliminated all mercury incandescent lights and replaced all lights with "T5" lighting. See for information on T5 fluorescent lighting http://www.lrc.rpi.edu/programs/nlpip/lightingAnswers/lat5/pc1a.asp. Natural gas boilers were removed and replaced with high efficiency space heaters.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>11/15/10</p>	<p>Facility had a low lying area which collected ponded rainwater. Facility converted area into a rain garden utilizing plants suited for such drainage.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/15/10</p>	<p>see website http://phx.corporate-ir.net/phoenix.zhtml?c=203756&p=irol-ehs</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>10/22/09</p>	<p>Facility manufactures concrete products and grout product such DSP520 which utilized a consistent fly ash as a recycled product. Other manufactured product have also received LEED certification see website reference below. http://www.tecspecialty.com/assets/files/english/Leed%20Chart_R609.pdf</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? 5196 150 DOCKS CORNER RD,
DAYTON, NJ 088100000

Stewardship Activities	Date Acknowledged	Comments
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	7/24/17	IFF has received a zero landfill certification.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	7/24/17	IFF has an environmental policy in place which can be found onsite.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	7/24/17	IFF has an ISO 14001 certificate.
5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.	7/24/17	The annual environmental report can be found online.
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	7/24/17	IFF, as a company, has an employee trip reduction program.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	7/24/17	IFF, as a company, has a sustainable purchasing policy.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	7/24/17	IFF has heat recovery steam generation, and they purchase 10% renewable energy from the power company.

<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>7/24/17</p>	<p>CO2 reduction over 8 years can be observed below. From 01-Jan-2010 To 18-Jul-2017 Corporate Time Period Total CO2 Emission 2010 15043.7658 2011 15010.07 2012 14757.613 2013 15482.2629 2014 16548.7073 2015 15981.304 2016 14739.0955 2017 3718.8136</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>8/4/16</p>	<p>The company is committed to a 20% water use reduction by 2020 of 2010 output.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/4/16</p>	<p>The facility has upgraded steam traps and computer control of building automation system to shut off systems when areas are not occupied.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/4/16</p>	<p>The facility has a signed Environmental Policy.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/4/16</p>	<p>The facility has a computerized tracking system.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>8/4/16</p>	<p>The facility produces an annual environmental report. The report for 2015 was reviewed.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>8/4/16</p>	<p>The facility purchases 10% of its energy from renewable sources and is researching the installation of photo-voltaic panels.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>8/4/16</p>	<p>The facility produces an annual carbon footprint analysis for CO2, NOx and methane. The company is committed to a 20% reduction by 2020 of 2010 output. Analysis from 2015 was reviewed</p>

JOHN HOLM & SON INC @ LONGSTREET TERMINAL

Site ID: JOHN HOLM & SON INC @ LONGSTREET TERMINAL
50670 2 LONGSTREET RD,
MONROE TWP, NJ 08520

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/4/14	Facility collects rainwater to assist in the washdown of tanks.

JOHNS MANVILLE INTERNATIONAL INC ZESTON PLANT

Site ID: JOHNS MANVILLE INTERNATIONAL INC ZESTON PLANT
5852 1000 LIDDLE AVE,
EDISON, NJ 08837

Stewardship Activities	Date Acknowledged	Comments
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	3/28/17	Air compressor motor replaced with Variable Frequency Drive (VFD) motor. All motors are replaced with higher efficiency type motor and/or VFD. Roof replacement redone with Johns Manville roofing material and 1 1/2 inch iso boards painted with a white high reflective coat. This paint saves on energy cost associated with heating and cooling. the facility is moving towards ISO 14001, by having the production areas switched to LED lighting and 5 electric forklifts.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	3/28/17	Johns Manville has an agreement with the manufacturer to take pallets back so there is no waste or disposal of wooden pallets. Also the facility regrinds all the "grindup skeletons" from production and reuses to reduce amount of raw materials needed.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/28/17</p>	<p>Production areas switched to LED lighting w/ occupancy sensors and have 5 Electric forklifts.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/28/17</p>	<p>Corporate Policy is available for review</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/28/17</p>	<p>Have environmental management system to document inspections, corrective actions, preventative maintenance activities etc.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>10/12/12</p>	<p>Air compressor motor replaced with Variable Frequency Drive (VFD) motor. All motors are replaced with higher efficiency type motor and/or VFD. Last years roof replacement redone with Johns Manville roofing material and 1 1/2 inch iso board painted with a white high reflective. Saves on energy cost associated with heating and cooling.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>10/12/12</p>	<p>Johns Manville has an agreement with the manufacturer to take pallets back so there is no waste or disposal of wooden pallets.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>10/12/12</p>	<p>Corporate Policy is available for review http://www.jm.com/corporate/hse/1561.htm Johns Manville Fundamental Priorities http://www.jm.com/corporate/1113.htm</p>

KINDER MORGAN LIQUIDS TERMINALS

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>12/3/14</p>	<p>Facility entirely eliminated Potassium ferrocyanide in its road salt production.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>12/3/14</p>	<p>The facility has reduced annual water usage by installing belt scrapers on 70% of belt conveyors to reduce the frequency of required wash downs of equip.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>12/3/14</p>	<p>Natural gas consumption has been reduced by more than 20% since the installation of a new moisture analyzer for drying salt. The analyzer allows facility to reduce natural gas consumption by drying salt properly to the correct endpoint. The analyzer signal is used to throttle back the natural gas use based on moisture level, rather than temperature.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>12/3/14</p>	<p>"wood scraps" are recycled by Van-Nick Pallet.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>12/3/14</p>	<p>In 2009 the facility made the move to upgrade the lighting in the facility to more energy efficient bulbs: existing light fixtures were replaced with T-8 lighting. To continue the previous improvements the facility has decided to replace the T-8 lighting with more efficient LED lighting. As of current LED bulbs have been installed in the loading dock area of the warehouse. The facility will continue to roll out the implementation of LED bulbs throughout the facility with a projected completion by 2015.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>12/3/14</p>	<p>The facility "adopted" Perth Amboy Public Elementary School No. 7 by educating the school and the community on the importance of recycling and human impact on the environment: June 6, 2014 "Reducing, Re-Using, Recycling" Program: Education via a team of Morton Salt employees, the Perth Amboy NJ Recycling Coordinator, the US Coast Guard, & the Perth Amboy Elementary School No. 7 Principal & Teachers. Three separate workshops for elementary school children geared towards delivering an understandable message on the importance of Reducing, Re-Using, and Recycling.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>12/3/14</p>	<p>A written, signed policy was provided to the NJDEP.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>12/3/14</p>	<p>The facility's overall management system encompasses environmental concerns.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>12/3/14</p>	<p>The parent company produces an annual report that encompasses all of their sites, including the one in New Jersey. This report prominently devotes a significant portion to the environment and comprehensively tracks impact and materials used and produced.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/17/08</p>	<p>Morton Salt participates in the NJ Clean energy program. The lighting throughout the plant was replaced with energy efficient bulbs. Moisture analyzers were installed for their salt dryers to reduce energy use.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/5/08</p>	<p>They recycle their wastes. Their recycling program embodies this. In addition to recycling all paper products, they recycle all batteries, lamps, spray cans and petroleum. They purchased a Prosoolv system in order to recycle the spray cans (See http://www.aerosolv.com/products.php?category=6). Waste petroleum products are recycled and reused.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/5/08</p>	<p>Community Assistance Program. This is an industry group which meets monthly. It includes local businesses in the sector which Kinder Morgan occupies (terminals, e.g.). They share things they are doing and discuss how they can help the local communities in any way. They sponsor activities for the local community. It focuses on business and community concerns.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/5/08</p>	
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/5/08</p>	<p>System is multifaceted and includes a waste tracking system. They have an internal compliance calendar which lists their regulatory and also their corporate environmental requirements. The plan indicates how they monitor and implement the program. It includes "Waste Tracker" which is a purchased environmental program which they use to monitor their waste program. Their system does have a corrective action program. They are also initiating a new system for their compliance calendar called Ops Environmental, which generates email reminders for deadlines. They do not have a single plan which covers all their programs, rather it is speciated.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>3/5/08</p>	<p>Posted on their website; see http://www.kindermorgan.com/about_us/sustainability/Section07_EHSProgs.cfm and http://www.kindermorgan.com/ehs/ehs_performance/</p>

KOBO PRODUCTS

CRANBURY, NJ 08512

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	11/9/16	Waste produced by the site does not go to a landfill; rather it is reused, reclaimed, recycled, or incinerated.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	11/9/16	There are motion sensors on lighting and on faucets. Machines have energy savers which shut down if left idle. The office and parking lot lighting have been converted to LEDs.

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>11/9/16</p>	<p>Cardboard is baled and recycled; usable boxes are repurposed. Pallets are refurbished and reused; if not reusable they are chipped and mulched.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/9/16</p>	<p>They have an Environmental, Health, and Safety Policy which is signed by a vice president.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>11/9/16</p>	<p>They have a carpooling program.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>11/9/16</p>	<p>Solar panels have been installed on the roof which have saved 7GWh since 2013 and reduced their carbon footprint by 70%.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>11/9/16</p>	<p>They have reduced their carbon footprint by 70% based primarily on the installation of solar panels. The data comes from Also Energy software. L'Oreal Corporation has an "A" rating from the carbon disclosure project.</p>

MIDDLESEX CNTY ROAD DEPT COMPLEX

Site ID: 5570
MIDDLESEX CNTY ROAD DEPT COMPLEX
GEORGES RD & APPLE ORCHARD LN, AKA RT 130 & APPLE ORCHARD LN
NORTH BRUNSWICK TWP, NJ 08902

Stewardship Activities	Date Acknowledged	Comments
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>12/2/09</p>	<p>Introduction of 42 hybrid vehicles in the Middlesex County fleet. Also, 7 biodiesel dump trucks</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>12/2/09</p>	<p>The agency has been recognized by the BPU for the facility they created with solar panels. The agency received funding from the BPU for this project.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>12/2/09</p>	<p>The agency has created a Shared Services Department. Employees of this new department visit smaller towns to explain the benefits and invite towns to be a part of the shared services program.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>12/2/09</p>	<p>The Middlesex County Sustainability Plan guides the purchase of environmentally friendly and energy efficient products and equipment. The Agency has started purchasing bio-diesel fuel and they has purchased six hybrid vehicles in the County fleet. Their goal is to increase the hybrids in their fleet to 10%.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>12/2/09</p>	<p>Solar panel installation at site. The agency uses bio-diesel fuel for its alternative fuel vehicles</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>12/2/09</p>	<p>The Agency has been mentoring smaller towns by sharing their services with them. Examples of what they are sharing include: The car wash bay facility, the bio-diesel fuel, the salt domes (they allow smaller towns to house their salt in their facilities), and they do street sweeping for smaller towns.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>2/29/08</p>	<p>The agency has been recognized by the BPU for the facility they created with solar panels. The agency received funding from the BPU for this project.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>2/29/08</p>	<p>The agency has created a Shared Services Department. The new department actually has employees that goes out to smaller towns inviting them to be a part of the shared services and explaining the benefits of doing this.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>2/29/08</p>	<p>The Agency has started purchasing bio-diesel fuel and they has purchased six hybrid vehicles in the County fleet. Their goal is to increase the hybrids in their fleet to 10%.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>2/29/08</p>	<p>The agency has done this by using bio-diesel fuel.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>2/29/08</p>	<p>The Agency has been mentoring other smaller towns by sharing their services with them. Examples of what they are sharing include: The car wash bay facility, the bio-diesel fuel, the salt domes (they allow smaller towns to house their salt in their facilities), and they do street sweeping for smaller towns.</p>

MIDDLESEX CNTY TAMARACK GOLF COURSE

Site ID: MIDDLESEX CNTY TAMARACK GOLF COURSE
 6034 97 HARDENBURG LN,
 EAST BRUNSWICK TWP, NJ 08903

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/21/14	Course utilizes bent grasses on all greens. Bent grasses are fast growing and thus reduce water use. Both irrigation pumps for the storage ponds are variable speed pumps.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/21/14	Course has 5 fields considered as low mow/ low maintenance fields that only require to be mowed once per month which reduces the amount of fuel used and resulting CO2 emissions.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/21/14	All carts, except the industrial maintenance carts (approximately 3-4 carts), are electric.

 39545 53 EDGEBORO RD,
 EAST BRUNSWICK TWP, NJ 08816

Stewardship Activities	Date Acknowledged	Comments
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	4/9/08	The MCUA has a requirement in the permit to maintain a wildlife habitat area. However, the MCUA has enhanced the area by installing bird houses and boxes for mallard ducks. These activities were not necessarily a requirement of the permit.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	4/9/08	The MCUA is only required to capture the methane gas. The methane gas is not only captured but sent to a plant in Sayerville where the gas is converted into energy.

5280 2571 MAIN ST EXT,
SAYREVILLE, NJ 088720086

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/13/08	Effluent is used for cooling water and plant process water.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/13/08	MCUA has a cogeneration plant which uses landfill gas to generate electricity. The cogeneration plant provides enough electricity to supply the entire wastewater plant.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	6/13/08	MCUA gives tours of the plant to schools. Coop students work in the lab.

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	9/5/12	all lighting has been upgraded to energy efficient lighting in conjunction with PSE&G program entitled NJ SmartStart Buildings This comprehensive initiative provides financial incentives for high efficiency lighting and lighting controls, heating and cooling equipment, water heating, motors, variable frequency drives, refrigeration covers and controls and a number of other measures, including a custom path for new technologies. http://www.njcleanenergy.com/BIZ

MULTI PLASTICS EXTRUSIONS INC

Stewardship Activities	Date Acknowledged	Comments
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/25/14</p>	<p>Facility installed 8 Variable Frequency Drives in 2013 converting the entire extrusion line to VFDs. These VFDs reduce the speeds on the motors and reduces energy use/cost. Multi-Plastics is participating in a load shedding program/agreement with Energy Curtailment Specialists. This program requires the plant to shut down for certain hours in the year to shed their energy load. The program balances supply and demand and ensures stability of the electric grid during specific periods of the day during peak months throughout the summer. The facility re-circulates the air in the plant throughout the winter to reduce the amount of natural gas used to heat the plant.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>4/25/14</p>	<p>The facility grinds and reprocesses all scrap plastics in the repelletizer and is put back into the extrusion process. This process is done internally and 88% of all plastic scrap is recycled back into their product. The remaining scrap that is rendered unusable by their product is then sent to a plastic recycler for reuse. Multi-Plastics, Inc. recycles all cardboard cores as well as wooden pallets. Their cardboard core vendor takes all cores used by the facility back to their plant to be recycled. Approximately 30,000 lbs. of cardboard cores are recycled per month. The facility also reuses cardboard cores (about 7,000) from larger customers as well as reuses the cores from the Multi-Plastic distribution plant. Used cores from the multi-plastics plant are being recycled (approx. 15,000 cores). The wooden skids are returned to Multi-Plastics from the distribution plant and reused by the Woodbridge facility (approx. 3,000 skids reused annually). In 2013 the facility recycled 1.436 million lbs. of plastic scrap from their larger customers. The used, post industrial plastic scrap is recycled at a rate of 15% into one of the facility's larger customer's product.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/25/14</p>	<p>Multi-Plastics Extrusions installed high efficiency lighting with motion sensors that use 1/2 the energy of the previous fixtures, these were installed in warehouse and area PS3. Project is approx. 55% complete with plans of replaces all the fixtures in the facility.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>4/25/14</p>	<p>Currently 180,000 lbs./month or about 11% of the facility's total plastic film sales have been a biodegradable film. This product degrades in soil/ landfill at a faster rate than standard plastic film.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/25/14</p>	<p>Environmental, Health and Safety Policy on site signed by the current Operation manager. Each employee must sign a copy for maintenance in their personnel file.</p>

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>1/5/11</p>	<p>Manufacturing equipment has been upgraded to include several variable frequency drives. Also, participation in the Load Shedding Program with Energy Curtailment Services has allowed the facility to contribute in a program that balances supply and demand and ensures stability of the electric grid during specific periods of the day during peak months throughout the summer.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>1/5/11</p>	<p>Multi-Plastics Extrusions installed high efficiency lighting with motion sensors that use 1/2 the energy of the previous fixtures. The facility re-circulates the air in the plant throughout the winter to reduce the amount of natural gas used to heat the plant.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>1/5/11</p>	<p>Environmental, Health and Safety Policy on site signed by the current Operation manager. Each employee must sign a copy for maintenance in their personnel file.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>1/27/09</p>	<p>Environmental, Health and Safety Policy on site signed by the current Operation manager. Each employee must sign a copy for maintenance in their personnel file.</p>

EDISON, NJ 08817

Stewardship Activities	Date Acknowledged	Comments
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/31/09</p>	<p>Hesstech has reduced energy use by consolidating offices, keeping warehouse temperatures below 65 degrees during cooler months and using floormats to reduce heat loss from dock plate doors.</p>

<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>7/31/09</p>	<p>Hesstech has improved transportation efficiency by planning and coordinating pickup and deliveries to ensure multiple deliveries enroute, when possible, and trucks are not empty when traveling to or from a destination.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>7/31/09</p>	<p>Hesstech has sponsored student tours of their facility to learn about recycling and conservation, as well as, Eagle scout projects. Hesstech also provided a Electronics Recycling exhibit to Monroe Township for their Enviro-Mobile.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/31/09</p>	
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>7/31/09</p>	<p>Hesstech employees an environmental management system which includes key management components, specifically, env. policy, planning, implementation and operation, checking and corrective action via annual audits and weekly management review</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>7/31/09</p>	<p>Hesstech has switched to buying only environmentally friendly cleaning products such as Simple Green, which is used as the primary cleaner for the office area and warehouse floors.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>7/31/09</p>	<p>Hesstech utilizes downstream markets located in the US and Canada only and requires markets to supply services in an environmentally sound practice. Hesstech does not allow any downstream market to send unprocessed electronics to overseas markets. Hesstech requires downstreams markets to supply informaton regarding where materials are sent after processing at their facilities to ensure no unprocessed material is sent overseas and to ensure materials are properly recycled.</p>

NEXEO SOLUTIONS

Site ID: NEXEO SOLUTIONS
6134 350 ROOSEVELT AVE,

16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	4/10/17	A program from Rutgers Dining Services Department. In order to eliminate the waste from take -out drinks from the dining halls, all disposable cups have been eliminated. Only re-usable bottles will now be filled at all Rutgers dining halls. This eliminates both the energy, materials and costs with making disposable cups and lids, but also eliminates the thousands of containers a day that would otherwise end up in the waste stream.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/10/17	A Bike-Sharing program for the New Brunswick campuses and the surrounding area. Rutgers University, together with North Jersey Transportation Planning Authority (NJTPA), New Jersey Department of Transportation (NJDOT) and other regional partners, is in the process of implementing a public regional bike share program serving the University community, New Brunswick, Highland Park, Piscataway and the Edison and New Brunswick train stations. This program is an expansion of an already existing Rutgers only bike share program, that will now allow for anyone in the area of the Rutgers New Brunswick and Piscataway campuses to utilize it.

NJ RUTGERS UNIVERSITY COOK DOUGLAS CAMPUS

Site ID: NJ RUTGERS UNIVERSITY COOK DOUGLAS CAMPUS
 14322 DUDLEY RD & NICHOL AVE, BLDG 3328
 NEW BRUNSWICK, NJ 08903

21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	5/19/16	The Rutgers Sustainable Raritan River Initiative (SRRI), partnered by the Rutgers School of Environmental and Biological Sciences (new name for former Cook College starting in 2006: SEE "Cook History Project: Home page" in ATT. LIST) and the Bloustein School of Planning and Public Policy, was initiated in 2009. The SRRI developed a summary action plan in December 2009, including five areas of action: Balanced Redevelopment, Public Access, Remediation, Stewardship, and Water Quality (SEE "Sustainable Raritan River Initiative from November 2009 in ATT. LIST). This report was updated in May 2015 and now the SRRI Collaborative has grown to over 130 members, including environmental organizations, Raritan-based counties and municipalities, foundations and charities, businesses, and key regional, state, and federal agencies. The Stewardship Subcommittee identified (3) strategic Stewardship priority issues along the Raritan River: 1) Habitat & Biodiversity Protection; 2) Restoration, Maintenance, & Regeneration; & 3) Property Maintenance & Management of Open Space. Rutgers also holds an annual Sustainable Raritan River Conference, with the 8th Annual Conference held on June 10, 2016.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	3/15/12	Link to Environmental Policy: http://rehs.rutgers.edu/pdf_files/policy-w-siganture.pdf
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	3/15/12	Rutgers University implements a Green Purchasing Policy and Guidelines document which may be accessed at: http://purchasing.rutgers.edu/green/supply_chain_green_purchasing.html

Site ID: NJ RUTGERS UNIVERSITY ENVIRONMENTAL SERVICES
 38967 126 DAVIDSON RD, BLDG 3892
 PISCATAWAY TWP, NJ 08854

Stewardship Activities	Date Acknowledged	Comments
------------------------	-------------------	----------

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>12/11/14</p>	<p>Rutgers has implemented the following Hazardous Materials Reduction activities: 1. Microscaling - Microscaling reduces the quantities of chemicals needed in experiments and therefore reduces the quantity of hazardous waste generated. 2. Inventory Control - This method advises lab personnel to buy fewer or smaller containers of chemicals, to refuse free samples from chemical manufacturers, and to rotate their stock of chemicals to ensure older chemicals are used before the newer chemicals. 3. Substitution of Less Hazardous Chemicals - Substitution encourages personnel to substitute more environmentally friendly chemicals for traditionally used chemicals where possible. Also, Rutgers' waste minimization program associated with a Chemical Reuse/Redistribution Program at the site can be found at http://rehs.rutgers.edu/ms_env_reuse.html</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>12/11/14</p>	<p>Rutgers has an ongoing Chemical Reuse/Redistribution Program. Chemicals may be exchanged between different campuses. The annual reports also cite various materials recycled. The list of materials currently available to the Facilities, Maintenance, and Art Departments is found at http://rehs.rutgers.edu/pdf_files/chemicalsreuse_other.pdf, and the list of materials currently available to the laboratories is found at http://rehs.rutgers.edu/pdf_files/chemicalsreuse_lab.pdf. Rutgers' Chemical Reuse/Redistribution Program can be found at http://rehs.rutgers.edu/ms_env_reuse.html</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>12/11/14</p>	<p>Rutgers implemented an alternative fueled vehicle program. Two Electric Charge Point stations have been installed on Livingston campus that run on solar power generated by the solar farm and solar parking lot canopy. One is located at the yellow lot and the other is located at parking lot 105. A link to the map showing the two stations can be found at: http://www.afdc.energy.gov/locator/stations/unbranded_widget/places/65572. Rutgers also supplies bicycles for lease and use for students and employees on campus.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>12/11/14</p>	<p>Rutgers has developed a Waste Information Locator. This web-based tool provides a user with hazardous waste information based on the University Group generating the waste (e.g., Athletics) and then provides information and guidance, including pictures, on the waste category (e.g., chemical waste) the waste type (e.g., solvents). University groups covered include, Academic Laboratory Waste Management, Art Studio and Photographic Waste Management, Athletics Waste Management, Facilities, Housing and Dining Waste Management, Office/Clerical Waste Management, and Research Farms/Stations. The link to the Waste Information Locator is found at http://halfife.rutgers.edu/wif/index.php.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>12/11/14</p>	<p>Rutgers' environmental policy can be found at http://rehs.rutgers.edu/pdf_files/policy-w-signature.pdf.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>12/11/14</p>	<p>Rutgers Environmental Health and Safety (REHS) has a comprehensive management system of conducting inspections, documenting and filing results of inspections in all environmental regulatory media. The link to Rutgers' environmental management system can be found at http://rehs.rutgers.edu/rehs_ehsms.html.</p>

<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>12/11/14</p>	<p>The link to Rutgers' Green Purchasing Cooperative Program can be found at http://greenpurchasing.rutgers.edu/cooperative.html. The Rutgers' Green Purchasing Policy and Guidelines can be found at http://greenpurchasing.rutgers.edu/Images/Rutgers_Green_Purchasing_Policy.pdf.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>12/11/14</p>	<p>Rutgers (Livingston Campus) has constructed a 7-acre, 1.4 megawatt solar farm that generates 10% of the campus' electrical demand and reduces the university's carbon dioxide emissions by more than 1,200 tons per year. In addition, a 28 acre, 8.01 megawatt solar parking lot canopy project has been completed. It is expected to reduce the annual output of carbon dioxide by 6,364 tons per year. A 300' well geothermal project has been constructed at Rutgers Business School. A link describing energy use and generation at Rutgers can be found at http://climatechange.rutgers.edu/rutgers-climate-stewardship#energy-use-and-generation.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>12/11/14</p>	<p>The carbon footprint for the University is calculated each year. All implemented energy programs show analysis and a reduction in greenhouse gases and equivalents. Descriptions of various programs and projects as well as their reduction of the University's carbon footprint can be found in the following link: http://facilities.rutgers.edu/content/media-files/MKEnergyConservationppt.pdf Additional information about how Rutgers is reducing its environmental footprint can be found in the following Environmental Assessment Report: http://www.epa.gov/region2/greenteam/pdf/rutgers_epa_environmental_assessment_report_may_2014.pdf</p>
<p>Best Workplaces for Commuters.</p>	<p>5/19/08</p>	<p>The State of New Jersey issued the Rutgers University New Brunswick Campus a Best Workplace for Commuters Award on May 3, 2007.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/19/08</p>	<p>Rutgers University has had a Chemical Reuse/Redistribution Program which was started in 2002. Chemicals may be exchanged between different campuses</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/19/08</p>	<p>Rutgers implemented an Alternative Fueled Vehicle Program on April 19, 2006.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>5/19/08</p>	<p>Link to environmental policy: http://rehs.rutgers.edu/pdf_files/policy-w-siganture.pdf</p>

23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	5/19/08	
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	5/19/08	Rutgers University implements a Green Purchasing Policy and Guidelines document which may be accessed at: http://purchasing.rutgers.edu/green/supply_chain_green_purchasing.html

NJ RUTGERS UNIVERSITY LIVINGSTON CAMPUS

Site ID: NJ RUTGERS UNIVERSITY LIVINGSTON CAMPUS
15951 74 STREET 1603 ,
PISCATAWAY TWP, NJ 088548036

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	6/26/18	Rutgers implements a program of laboratory chemical hygiene which allows for elementary neutralization of certain substances, which reduces RCRA hauling costs, which also allows the recycling of chemicals and appropriate bulk containerization. All lab grants are required to follow safety and industrial hygiene protocols and guidelines. Rutgers also has an ongoing Chemical Reuse/ Redistribution Program. Chemicals may be exchanged between different campuses. More information can be found online.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/26/18	The golf course washwater system reuses the washwater, after filtered, to be reapplied to the course. This reduces the course's use of new city water through the recirculation of washwater.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/26/18	A Vegawatt cogeneration system is in place at the Busch campus dining hall. It turns waste vegetable oil into electricity and hot water. 10 KW electrical output and 40,500 BTU/h hot water output. Rutgers Dining practices promote environmental awareness. All disposable cups have been eliminated, and reusable bottles are promoted. NJ Clean Energy Direct Install Program also in place; replacement of inefficient lighting and controls project. Replacement of standard motors and transformers with high efficiency equipment on the New Brunswick and Piscataway campuses saving 2.4 million KWh per year and a reduction in emissions of 1,359 tons per year.

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/26/18</p>	<p>Rutgers has an ongoing Chemical Reuse/Redistribution Program. Chemicals may be exchanged between different campuses.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/26/18</p>	<p>The bike sharing program has been/and is currently being expanded for the New Brunswick campuses and the surrounding area. Rutgers partnered with North Jersey Transportation Planning Authority, and New Jersey Department of Transportation and are working towards a complete program serving the community. This includes New Brunswick, Highland Park, Piscataway and the Edison and New Brunswick train stations, and isn't limited to students. Rutgers also implemented an alternative fueled vehicle program and it has been in place.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/26/18</p>	<p>Newer buildings are using heat absorbing glass. A washwater recirculation system was installed at the golf course to collect all washwater from the golf carts and equipment as well as to collect any spills that occur in the fueling area. The system is hooked up to the sanitary sewer for unused water. Geothermal wells located on the Livingston campus eliminate the need for a cooling water discharge.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>6/26/18</p>	<p>Stormwater swales and BMPs grown with native vegetative species are added/maintained as needed.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>6/26/18</p>	<p>The Environmental Analysis and Communications Group is a team of researchers that assist in the development of greener communities and planning strategies at the state, regional and local levels. This is located at the Bloustein School.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>6/26/18</p>	<p>Pollution radio bit during sporting events. "Test Your Stormwater Knowledge" quizzes and DEP materials given out on Rutgers Day.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/26/18</p>	<p>Sustainability initiatives can be found online.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/26/18</p>	<p>Rutgers EH&S has a comprehensive management system of conducting inspections, documenting and filing results of inspections in all environmental regulatory media.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>6/26/18</p>	<p>Rutgers Environmental Stewards Program Annual Report can be found online.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>6/26/18</p>	<p>Mass transit usage. NJ Transit and Rutgers Human Resources have the OzonePass program. Employees can use OzonePasses to commute to and from work on any NJ Transit bus, train, or light rail system at a special discounted fare during times of higher air pollution.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>6/26/18</p>	<p>Rutgers implements a green purchasing policy and guidelines documents can be found online.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>6/26/18</p>	<p>All new buildings are to be LEED Silver Equivalent.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>6/26/18</p>	<p>The Livingston campus has constructed a 7 acre, 1.4 MW solar farm and a 40 acre, 8.04 MW fixed array of solar canopies, now generating 63% electrical demand and continuing to reduce carbon dioxide emissions by more than 1,200 tons per year. Geothermal wells in place at the Livingston campus.</p>

<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>6/26/18</p>	<p>All implemented energy programs show analysis and a reduction in greenhouse gases and equivalents.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>1/21/15</p>	<p>Rutgers implements a program of laboratory chemical hygiene which allows for elementary neutralization of certain substances, which reduces RCRA hauling costs, which also allows the recycle of chemicals and appropriate bulk containerization. All lab grants are required to follow safety and industrial hygiene protocols and guidelines. Rutgers University has an ongoing Chemical Reuse/Redistribution Program. Chemical may be exchanged between different campuses.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>1/21/15</p>	<p>The golf cart washwater system reuses the washwater, after filtered, to be reapplied to the course. This reduces the course's use of new city water through the recirculation of washwater.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>1/21/15</p>	<p>NJ Clean Energy Direct Install Program; replacement of inefficient lighting and controls project. http://www.njcleanenergy.com/commercial-industrial/programs/direct-install Replacement of a standard motors and transformers with high efficiency equipment on the New Brunswick and Piscataway campuses saving 2.4 million KWh per year and a reduction in emissions of 1,359 tons per year.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>1/21/15</p>	<p>Rutgers University has an ongoing Chemical Reuse/Redistribution Program. Chemicals may be exchanged between different campuses. The annual reports also cites various materials recycled http://facilities.rutgers.edu/pdf/Rutgers EPA Environmental Assessment - Nov 2011_1_1.pdf</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>1/21/15</p>	<p>Rutgers implemented an alternative fueled vehicle program. Rutgers supplies bicycles for lease and use for students and employees on campus.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>1/21/15</p>	<p>A wash water system was installed at the golf course to collect all wash water from the golf carts and equipment as well as collect any spills that occur in their fueling area. Pitched cement pad that collects water and filters it to provide the course with water that can be reused for course applications such as pesticide use. It is a closed loop system and any water not reused is then directed into the sanitary sewer. Geothermal system wells (300 total) located on Livingston campus leading to a zero discharge of cooling water. This eliminates the need for cooling towers or thermal units.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>1/21/15</p>	<p>Stormwater swales grown with native vegetative species.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>1/21/15</p>	<p>During all sporting events a radio bit is played to discuss a reduction in pollution. At Rutgers Day 2014 Environmental Services handed out DEP materials and conducted games such as "Test Your Knowledge" on various environmental topics.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>1/21/15</p>	<p>Environmental policy http://REHS.rutgers.edu</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>1/21/15</p>	<p>Rutgers REHS has a comprehensive management system of conducting inspections, documenting and filing results of inspections in all environmental regulatory media.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>1/21/15</p>	<p>The EPA Annual reports under the MOU serves as the annual report. http://facilities.rutgers.edu/pdf/Rutgers EPA Environmental Assessment - Nov 2011_1_1.pdf</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>1/21/15</p>	<p>Rutgers implements a green purchasing policy and guidelines document http://procure.rutgers.edu/</p>

<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>1/21/15</p>	<p>All new buildings constructed are to be LEED Equivalent.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>1/21/15</p>	<p>Rutgers installed a Solar panel canopy system in the parking lot on Livingston campus produces approximately 8,000 KW of electricity, while the Solar panels in the field on Livingston campus produce about 1,400 KW.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>1/21/15</p>	<p>All implemented energy programs show analysis and a reduction in greenhouse gases and equivalents. http://facilities.rutgers.edu/pdf/MKEnergyConservationppt.pdf</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>4/11/14</p>	<p>Rutgers implements a program of laboratory chemical hygiene which allows for elementary neutralization of certain substances, which reduces RCRA hauling costs, which also allows the recycle of chemicals and appropriate bulk containerization. All lab grants are required to follow safety and industrial hygiene protocols and guidelines. Rutgers University has an ongoing Chemical Reuse/Redistribution Program. Chemical may be exchanged between different campuses.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>4/11/14</p>	<p>The golf cart washwater system reuses the washwater, after filtered, to be reapplied to the course. This reduces the course's use of new city water through the recirculation of washwater.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/11/14</p>	<p>NJ Clean Energy Direct Install Program; replacement of inefficient lighting and controls project. http://www.njcleanenergy.com/commercial-industrial/programs/direct-install Replacement of a standard motors and transformers with high efficiency equipment on the New Brunswick and Piscataway campuses saving 2.4 million KWh per year and a reduction in emissions of 1,359 tons per year.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>4/11/14</p>	<p>Rutgers University has an ongoing Chemical Reuse/Redistribution Program. Chemicals may be exchanged between different campuses. The annual reports also cites various materials recycled http://facilities.rutgers.edu/pdf/Rutgers%20EPA%20Environmental%20Assessment%20-%20Nov%202011_1_1.pdf</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/11/14</p>	<p>Rutgers implemented an alternative fueled vehicle program. Rutgers supplies bicycles for lease and use for students and employees on campus.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/11/14</p>	<p>A washwater system was installed at the golf course to collect all wash water from the golf carts and equipment as well as collect any spills that occur in their fueling area. Pitched cement pad that collects water and filters it to provide the course with water that can be reused for course applications such as pesticide use. It is a closed loop system and any water not reused is then directed into the sanitary sewer. Geothermal system wells (300 total) located on Livingston campus leading to a zero discharge of cooling water. This eliminates the need for cooling towers or thermal units.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>4/11/14</p>	<p>Stormwater swales grown with native vegetative species.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>4/11/14</p>	<p>During all sporting events a radio bit is played to discuss a reduction in pollution. At Rutgers Day 2014 Environmental Services handed out DEP materials and conducted games such as "Test Your Knowledge" on various environmental topics.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/11/14</p>	<p>Environmental policy http://REHS.rutgers.edu</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>4/11/14</p>	<p>Rutgers REHS has a comprehensive management system of conducting inspections, documenting and filing results of inspections in all environmental regulatory media.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>4/11/14</p>	<p>The EPA Annual reports under the MOU serves as the annual report. http://facilities.rutgers.edu/pdf/Rutgers%20EPA%20Environmental%20Assessment%20-%20Nov%202011_1_1.pdf</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>4/11/14</p>	<p>Rutgers implements a green purchasing policy and guidelines document http://procure.rutgers.edu/</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>4/11/14</p>	<p>All new buildings constructed are to be LEED Equivalent.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>4/11/14</p>	<p>Rutgers (Livingston Campus) has constructed 7-acre, 1.4 megawatt solar farm that will generate 10% of the campus' electrical demand and reduce the university's carbon dioxide emissions by more than 1,200 tons per year. In addition a 40 acres solar parking lot canopy project is currently under construction to be implemented later this year. A 300' well geothermal project has been constructed at Rutgers Business School.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>4/11/14</p>	<p>All implemented energy programs show analysis and a reduction in greenhouse gases and equivalents. http://facilities.rutgers.edu/pdf/MKEnergyConservationppt.pdf</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>6/13/12</p>	<p>Rutgers implements a program of laboratory chemical hygiene which allows for elementary neutralization of certain substances, which reduces RCRA hauling costs, which also allows the recycle of chemicals and appropriate bulk containerization. All lab grants are required to follow safety and industrial hygiene protocols and guidelines. Rutgers University has an ongoing ChemicalReuse/Redistribution Program. Chemical may be exchanged between different campuses.</p>

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/13/12</p>	<p>Dining Hall project and stadium waterless toilets installed. All building projects are to be LEED Equivalent and are to address WATER use reduction</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/13/12</p>	<p>NJ Clean Energy Direct Install Program; replacement of inefficient lighting and controls project. http://www.njcleanenergy.com/commercial-industrial/programs/direct-install Replacement of a standard motors and transformers with high efficiency equipment on the New Brunswick and Piscataway campuses saving 2.4 million KWh per year and a reduction in emmissions of 1,359 tons per year.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/13/12</p>	<p>Rutgers University has an ongoing ChemicalRuse/Redistribution Program. Chemicals may be exchanged between different campuses. The annual reports also cites various materials recycled http://facilities.rutgers.edu/pdf/Rutgers%20EPA%20Environmental%20Assessment%20-%20Nov%202011_1_1.pdf</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/13/12</p>	<p>Rutgers implemented an alternative fueled vehicle program. Rutgers has recently bought and supplies bicycles for lease and use for students and employees on campus.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/13/12</p>	<p>All new buildings constructed are to be LEED Equivalent.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>6/13/12</p>	<p>Stormwater swales grown with native vegetative species,</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>6/13/12</p>	<p>REHS has an outreach program via a website, emails, Rutgers Day, and day to day operations providing information to inquiries on various environment programs. Rutgers also provides program information to inquiring, individuals, organizations, businesses, schools, insititutes, colleges, and universities. REHS employees are active in school lecturing programs and the University also allows for internship in the REHS program.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>6/13/12</p>	<p>Environmental policy http://REHS.rutgers.edu</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/13/12</p>	<p>Rutgers REHS has a comprehensive management system of conducting inspections, documenting and filing results of inspections in all environmental regulatory media.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>6/13/12</p>	<p>The EPA Annual reports under the MOU serves as the annual report. http://facilities.rutgers.edu/pdf/Rutgers%20EPA%20Environmental%20Assessment%20-%20Nov%202011_1_1.pdf</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>6/13/12</p>	<p>Rutgers implements a green purchasing policy and guidelines document http://procure.rutgers.edu/</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>6/13/12</p>	<p>Rutgers (Livingston Campus) has constructed 7-acre, 1.4 megawatt solar farm that will generate 10% of the campus' electrical demand and reduce the university's carbon dioxide emissions by more than 1,200 tons per year. In addition a 40 acres solar parking lot canopy project is currently under construction to be impleted later this year. A 300' well geothermal project has been constructed at Rutgers Busines School.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>6/13/12</p>	<p>all implemented energy programs show analysis and a reduction in greenhouse gases and equivalents. http://facilities.rutgers.edu/pdf/MKEnergyConservationppt.pdf</p>

SAYREVILLE, NJ 08872

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	9/15/14	Environmental Policy includes: -Comply with the spirit and intent, as well as the letter, of environmental laws, regulations and standards - Incorporate environmental protection and stewardship as an integral part of the design, construction, operation & maintenance of its facilities -Encourage the wise use of energy to minimize the impact on the environment -Communicate effectively on environmental issues. - Conduct periodic self evaluations and report performance.

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/15/14</p>	<p>The Power Generator Division (PGD) Environmental Management System (EMS) is comprised of standardized processes, procedures, tools, training, databases, etc, implemented by PGD Environmental, Juno Environmental Services and all NextEra Energy Facilities. The purpose of implementing the EMS is to manage environmental risks to ensure full compliance and minimize consequences from events. Important areas of focus in the PGD EMS 1. People - expectations, competencies and training 2. Culture of Environmental Excellence 3. Leadership and Accountability 4. Standardized Processes and Procedures 5. Task Management (activities, task timing alerts, reporting , expiration alerts, renewal alerts, etc.. all have associated procedure linked to task for proper execution) 6. Environmental Risk Management (a tool to track an at risk problem and the steps taken to reduce or completely eliminate a risk) 7. Event Response (tracking of near misses, deviations, reportable, non-reportable and any upstream indicator that can predict a future failure of a process) 8. Change Management (tracking of all changes made to the plant with internal / external vetting sessions, procedure update, drawing updates, environmental impact study to ensure compliance) 9. Community Relations 10. Operations and Maintenance (reliable and flawless execution of plant startup / shutdown for efficient operation - preventive maintenance, reliability checks of systems and backups to ensure they perform as intended) 11. Document and Record Management (hard copy, electronic and specialized software for internal tracking and record keeping) 12. Emergency Preparedness and Response (Spills Drills, Emergency Procedures, Training) 13. Communication 14. Continuous Improvement (Evaluation of processes and procedures and looking for improvements and efficiency gains) The Company has implemented an Environmental Assurance Program to assure compliance with all environmental laws and regulations and the fulfillment of its environmental commitment.</p>
--	----------------	--

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>10/23/13</p>	<p>The Power Generator Division (PGD) Environmental Management System (EMS) is comprised of standardized processes, procedures, tools, training, databases, etc, implemented by PGD Environmental, Juno Environmental Services and all NextEra Energy Facilities. Document and Record Management (hard copy, electronic and specialized software for internal tracking and record keeping) 12. Emergency Preparedness and Response (Spills Drills, Emergency Procedures, Training) 13. Communication 14. Continuous Improvement (Evaluation of processes and procedures and looking for improvements and efficiency gains) Commitment to the Environment It has been, and will continue to be, the intent of the Company to conduct its business in an environmentally responsible manner. Accordingly, the Company undertakes to: * Comply with the spirit and intent, as well as the letter, of environmental laws, regulation and standards. * Incorporate environmental protection and stewardship as an integral part of the design, construction, operation and maintenance of its facilities. * Encourage the wise use of energy to minimize the impact on the environment. * Communicate effectively on environmental issues. * Conduct periodic self-evaluations and report performance. The Company has implemented an Environmental Assurance Program to assure compliance with all environmental laws and regulations and the fulfillment of its environmental commitment.</p>
--	---------------	--

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>10/26/11</p>	<p>The PGD Environmental Management System (EMS) is comprised of standardized processes, procedures, tools, training, databases, etc, implemented by PGD Environmental, Juno Environmental Services and all NextEra Energy Facilities. The purpose of implementing the EMS is to manage environmental risks to ensure full compliance and minimize consequences from events. Important areas of focus in the PGD EMS 1. People - expectations, competencies and training 2. Culture of Environmental Excellence 3. Leadership and Accountability 4. Standardized Processes and Procedures 5. Task Management (activities, task timing alerts, reporting , expiration alerts, renewal alerts, etc.. all have associated procedure linked to task for proper execution) 6. Environmental Risk Management (a tool to track an at risk problems and the steps taken to reduce or completely eliminate a risk) 7. Event Response (tracking of near misses, deviations, reportable, non-reportable and any upstream indicator that can predict a future failure of a process) 8. Change Management (tracking of all changes made to the plant with internal / external vetting sessions, procedure update, drawing updates, environmental impact study to ensure compliance) 9. Community Relations 10. Operations and Maintenance (reliable and flawless execution of plant startup / shutdown for efficient operation - preventive maintenance, reliability checks of systems and backups to ensure they perform as intended) 11. Document and Record Management (hard copy, electronic and specialized software for internal tracking and record keeping) 12. Emergency Preparedness and Response (Spills Drills, Emergency Procedures, Training) 13. Communication 14. Continuous Improvement (Evaluation of processes and procedures and looking for improvements and efficiency gains) Commitment to the Environment It has been, and will continue to be, the intent of the Company to conduct its business in an environmentally responsible manner. Accordingly, the Company undertakes to: * Comply with the spirit and intent, as well as the letter, of environmental laws, regulation and standards. * Incorporate environmental protection and stewardship as an integral part of the design, construction, operation and maintenance of its facilities. * Encourage the wise use of energy to minimize the impact on the environment. * Communicate effectively on environmental issues. * Conduct periodic self-evaluations and report performance. The Company has implemented an Environmental Assurance Program to assure compliance with all environmental laws and regulations and the fulfillment of its environmental commitment.</p>

PACKAGE KARE INC

Site ID: PACKAGE KARE INC
5649 301 SMALLEY AVE,
MIDDLESEX, NJ 08846

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	3/12/15	<p>Package Kare old process for passivating vessels once involved the use of products such as nitric acid. However, Package Kare has now switched to a Citric Acid to accomplish the same function which is much friendlier to the environment. (CitriSurf Products). Package Kare process equipment utilizes an "Solvent Recovery System"; (Vacuum Distillation) that process solvents and materials used in manufacturing now can be recaptured, returned and reused by their customers following some minimal cleanup stages.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	3/12/15	<p>Previously most of Package Kare's process equipment was cooled using city waters and sewers. In August of 2014 the facility switched most of there cooling to chiller based recycled coolant. Package Kare installed a new 55 Ton Aqua Snap Carrier Chiller. The net effect was to reduce Package Kare's water consumption and therefore sewer usage by an average of 41,000 gallons per month.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	3/12/15	<p>All of Package Kare's Commercial Scale Process Equipment utilizes VFD Motors. All newly developed equipment is designed using VFD motors and high efficiency pumps. A recently replaced process chiller was purchased with High efficient spiral pumps that have 4 stages each. Rather than having 4 motors the chiller has only 2 that have 4 stages each. This system is computer controlled to pull in additional stages as demand increases rather than run additional motors. Old reciprocating compressors are being replaced with more efficient screw type compressors that again use computer controlled technology to increase performance and demand increase. Package Kare also removed all old Metal Halide light fixtures and replaced them with high efficiency fluorescent lighting.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	3/12/15	<p>Package Kare process equipment utilizes an "Solvent Recovery System"; (Vacuum Distillation) that process solvents and materials used in manufacturing now can be recaptured, returned and reused by their customers following some minimal cleanup stages.</p>

PARAVISTA INC

Site ID: PARAVISTA INC
164362 1055 CENTENNIAL AVE,
PISCATAWAY TWP, NJ 08854

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	1/15/14	Paravista installed a solvent recovery system in 2011 reducing significant amounts of hazardous waste generated on site. Facility went from a Small Quantity Generator of Hazardous waste to a Conditionally Exempt Small Quantity Generator.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	1/15/14	Paravista has purchased wind renewable energy certificates to offset a portion of their electricity usage from Community Energy. The commitment will allow 1,860 MWh National Wind Renewable Energy to enter into the national electricity grid from January 1, 2013 to December 31, 2015. The estimated annual environmental benefit is equivalent to the carbon sequestered by 1,076 acres of trees or by removing 273 passenger vehicles from the road.
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	1/15/14	Paravista hired Ecometrica which completed a greenhouse gas emission assessment that qualifies the total greenhouse gases produced directly and indirectly from a business and organization's activities.

PERTH AMBOY CITY BD OF ED PERTH AMBOY HIGH SCHOOL

Site ID: PERTH AMBOY CITY BD OF ED PERTH AMBOY HIGH SCHOOL
5501 EAGLE AVE & FRANCIS ST,
PERTH AMBOY, NJ 08861

Stewardship Activities	Date Acknowledged	Comments
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	11/25/09	Willow Pond Restoration Project

Site ID: PNJ1
 14848 101 POSSUMTOWN RD,
 PISCATAWAY TWP, NJ 08854

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/5/12	As of 7/17/12 facility has implemented irrigation sensors for water conservation; a series of sensors analyze water content in the soil and irrigate according to programmed settings; the system utilizes noncontact cooling water blowdown and rainwater for irrigation on an as needed basis. City water is no longer used for irrigation.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	9/5/12	All motors Variable Frequency Drive (VFD); motion sensor lights; currently every other light is on; waterless urinals;
11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.	9/5/12	LEED GOLD Certificate Award
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	9/5/12	2.1 MW solar panels in use
8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?	9/5/12	All contractors must use green certified supplies and paints within the facility.

PREVOST

Site ID: PREVOST
386387 201 SOUTH AVE,
SOUTH PLAINFIELD, NJ 07080

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	12/10/13	Prevost had solar panels installed and has started using solar generated power 12/6/2013.

PRINCETON PLASMA PHYSICS LAB @ JAMES FORESTAL CAMPUS

Site ID: PRINCETON PLASMA PHYSICS LAB @ JAMES FORESTAL
15769 CAMPUS
FORRESTAL RD,
PLAINSBORO, NJ 08540

Stewardship Activities	Date Acknowledged	Comments
ENERGY STAR.	1/14/13	ENERGY STAR Partner
WasteWise.	1/14/13	EPA WasteWise Partner
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	1/14/13	PPPL Policies P-014 "Waste Minimization" and P-082 "Environmentally Preferable Purchasing" establish the policies to reduce the use of hazardous materials and the resulting generation of hazardous waste. PPPL's ES&H Manual outlines the procedures used to reduce the use of hazardous materials at the Laboratory. All chemical acquisitions require review and approval by PPPL's Safety Division to minimize the purchase of hazardous chemicals and to identify alternative products that are less toxic and less hazardous. PPPL has successfully adopted biobased hydraulic oils and machining oils in its operations. We have also transitioned to propylene glycol and biobased hydraulic oils in certain heavy & mobile equipment.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	1/14/13	PPPL has implemented a number of water efficiency and water conservation projects including the replacement of old water-cooled air compressors, replacement of outdated air conditioning systems, installation of low-flow bathroom fixtures, piping repair/insulation and steam trap replacement, and improved operations of the central steam and chilled water plant. PPPL now uses approximately 75% less water than it did in 2000 - a savings of over 45 million gallons annually.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	1/14/13	PPPL has focused significant energy and resources on reducing its non-experimental energy use. PPPL has reduced its non-experimental energy intensity by approximately 55% since 2004 and reduced its energy-related GHG footprint by over 10,000 metric tons of CO2 per year in just the past four years. PPPL uses less than half the energy per square foot of building space than we did in 2004. PPPL also participates in a demand response program to reduce electrical use during periods of peak demand.

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>1/14/13</p>	<p>PPPL has well-established processes for the disposition of excess equipment and property assets that include internal re-utilization, transfer to other Federal or state agencies, donation to schools and non-profit organizations and public sale of excess assets. Only after these avenues are exhausted is an asset disposed. Wherever possible assets are recycled or sold as scrap rather than disposing of them in a landfill. All electronic waste is recycled through UNICOR. Waste from PPPL's cafeteria, restrooms, and break areas is diverted to a commercial composting facility rather than the normal solid waste stream. Over the past five years, PPPL has diverted or recycled an average of 56% of its solid waste and 88% of its construction & demolition waste. PPPL is an active member of DOE's Material Exchange that enables the transfer of excess materials and chemicals to other DOE facilities in order to divert them from the waste stream.</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>1/14/13</p>	<p>PPPL conducts life cycle assessments as part of established work planning processes. The chemical review process conducted for all chemical purchases includes evaluation of safety issues and waste management requirements in evaluating the use of new chemicals at the Laboratory. PPPL's National Environmental Policy Act (NEPA) Review and Work Planning processes include reviews by the environmental staff to identify life cycle management issues so changes can be often made during work planning to reduce or eliminate environmental impacts. PPPL evaluated a number of building products and materials, including lighting and carpeting, as part of its "green building" efforts and identified products to reduce or eliminate waste generation and energy use during the product lifecycle. In addition, we focus on products that include biobased, recycled content, and rapidly renewable materials and components. As a Federal Electronics Challenge Partner, PPPL manages its electronic assets throughout their lifecycle focusing on purchasing EPEAT and ENERGYSTAR certified electronics, efficiently managing electronic assets in-use, reutilization and resale of used electronics, and recycling all electronic assets at the end of their useful life.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>1/14/13</p>	<p>PPPL has transitioned the majority of its vehicle fleet to alternative fuels, including emergency vehicles such as our fire engine and ambulance. PPPL has on-site refueling infrastructure for CNG, B20 and E85 refueling. In 2012 approximately 48% of PPPL's non-emergency fleet fuel use was alternative fuels. In 2012, all of PPPL's emergency use vehicles began using bio-based fuels. Alternative vehicle fuel usage, trip consolidation and other fleet management measures resulted in a 67% reduction in petroleum fuel use and a 13-fold increase in alternative fuel use from FY2005 to 2012.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>1/14/13</p>	<p>PPPL's ongoing facility maintenance program has adopted numerous "green building" practices, including the use of recycled content carpeting (and recycling of used carpeting), ultra-low VOC paints and adhesives, high-efficiency lighting and task lighting, Cradle-to-Cradle? certified office furniture, and automated building control systems. PPPL installed a high-efficiency exterior siding system on an older building to improve energy performance and has installed nearly 60,000 square feet of ENERGY STAR? R-30 cool roofing at our campus. PPPL is pursuing innovative ways to increase the use of day-lighting and task lighting to reduce energy use and is implementing a phased project to upgrade energy metering systems in numerous buildings to enable better energy management.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>1/14/13</p>	<p>PPPL's Beneficial Landscaping Program has implemented improvements to our campus to control soil erosion, reduce chemical use, reduce grass mowing, restore habitat and support the introduction of native, drought tolerant and deer resistant landscaping. In the past five years, PPPL has installed three rain gardens and restored over 2,100 linear feet of swales to control stormwater runoff and reduce erosion. Over two acres of gravel parking/storage areas were removed and re-planted with trees, shrubs and grasses. This effort also reduced the use for herbicides used for weed control in these areas. PPPL eliminated the regular mowing of 3.5 acres of the campus by replacing non-native turf grasses with a blend of slower growing drought tolerant meadow grasses and wildflowers thus reducing the amount of fertilizer and herbicides used to maintain lawn areas on our campus. Finally, approximately 30 spruce trees from a nearby township property were saved from destruction by transplanting them to the PPPL prior to the construction of athletic fields at their former location.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>1/14/13</p>	<p>Task Lighting Initiative: PPPL instituted a program to reduce energy consumption through the expanded use of day-lighting and task lighting. PPPL's environmental management program agreed to purchase task lights for employees who agree to turn off overhead lighting in their work areas during normal work hours. This program is estimated to save approximately 6,000 KWH of electricity annually. Additional behavioral changes are being considered for implementation. "Green Machine" Awards: Annually as part of PPPL's Earth Day Celebration, Green Machine awards are given to employees who have demonstrated a commitment to the environment in their work through energy efficiency, water conservation, recycling, environmentally preferred purchasing and other sustainable environmental practices. Sulfur Hexafluoride (SF6) Management: During a comprehensive greenhouse gas inventory conducted in 2009-2010, PPPL determined that fugitive SF6 releases accounted for nearly 75% of total GHG emissions. Most high-voltage electrical equipment in use today uses SF6 as an insulating gas. PPPL implemented a number of operational improvements and system retrofits to its high-voltage experimental support infrastructure. PPPL's comprehensive system evaluations, enhanced maintenance measures and system retrofits resulted in a 88% reduction in fugitive SF6 releases, contributing to a 69% decrease in PPPL's total GHG emissions between 2008 and 2012, eliminating nearly 34,000 metric ton CO2 equivalents of annual GHG emissions. DOE Energy Efficient Buildings Hub (EEB Hub): While energy efficiency research is not part of PPPL's primary plasma science mission. PPPL part of an interagency center focused on improving energy efficiency in existing average-size commercial buildings. The program goal is to transform the commercial building retrofit processes and demonstrate operational energy savings of 50% in a scalable, repeatable and cost effective manner while preserving workplace quality The EEB Hub is located at the Philadelphia Navy Yard and includes 11 academic institutions, six global industry partners, and regional economic development agencies and over 60 charter partners represent governments, industry, education, workforce development, finance and philanthropic organizations from the 10-county Philadelphia region. PPPL celebrates America Recycles Day (Nov. 15th of each year) through an employee outreach program that includes presentations, posters sessions and information geared to assist the employee improve recycling efforts both at PPPL and at home. PPPL is a NJ WasteWise Partner.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>1/14/13</p>	<p>PPPL partnered with Notre Dame High School and Ewing Middle School as part of its ENERGY STAR outreach activities. Our guidance includes extensive guidance on energy efficiency, rain gardens and other sustainable environmental practices. PPPL is a member of the New Jersey Technology Council and regularly hosts meetings and symposia for the council including information on its sustainability program. PPPL provide occasional briefings to the Plainsboro Township Environmental Advisory Committee to share the status of environmental programs and listen to local concerns. In addition, PPPL provides copies of applicable environmental reports to Plainsboro Township and Middlesex County officials and local public libraries</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>1/14/13</p>	<p>PPPL Policy P-002 "Environmental Stewardship" PPPL's Environmental Stewardship Policy outlines PPPL's approach to full compliance with all applicable regulations for the protection of public health, restoring and enhancing environmental quality and sound environmental stewardship. PPPL incorporates Federal and DOE environmental stewardship goals in the daily conduct of its business and has embraced pollution prevention practices.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>1/14/13</p>	<p>PPPL's Environmental Management System was registered to ISO14001:2004 on February 7, 2012 by UL-DQS. Certificate of Registration Number: 10008966 UM. The most recent annual EMS surveillance was completed on November 16, 2012.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>1/14/13</p>	<p>An Annual Site Environmental Report (ASER) has been published since 1983. The ASER summarizes our environmental compliance status and includes all environmental monitoring and environmental surveillance data. Since 2010 PPPL has published an annual Site Sustainability Plan outlining its progress and plans to meet Federal sustainability goals. These reports, as well as PPPL's Environmental Stewardship Policy are available to the public at: http://www.pppl.gov/about/sustainable-pppl</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>1/14/13</p>	<p>EPA WasteWise Partner since 2007 ENERGY STAR? Partner since 2008 Federal Electronics Challenge Member since 2009</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>1/14/13</p>	<p>As part of Princeton University, PPPL participates in the University's Transportation Demand Management program and the Greater Mercer Transportation Management Association's carpooling and trip reduction programs. Participation is monitored and evaluated through the Office of Human Resources. Princeton University also provided local shuttle bus services that link PPPL to the main university campus and regional mass transit hubs.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>1/14/13</p>	<p>PPPL Policy P-082 "Environmentally Preferable Purchasing" PPPL's environmentally preferred purchasing (EPP) policy defines our program to purchase environmentally preferred products and services consistent with price, performance and availability concerns. It identifies recycled-content, bio-based, low toxicity, and other types of environmentally preferred products. EPP requirements are incorporated into subcontract and specifications, as appropriate. PPPL has had an EPP policy for over ten years. PPPL reports annually on its EPP performance in a wide variety of categories. These reports are publically accessible on the U.S. DOE web site and are summarized in our Annual Site Environmental Report. In 2012, PPPL received Gold level award in DOE's GreenBuy awards program.</p>
<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>1/14/13</p>	<p>LEED - Existing Building Operations & Maintenance (LEED-EBOM) The Lyman Spitzer Building (LSB), PPPL's largest office building was certified as a LEED-Gold building in April 2011. LSB represents approximately 16% of PPPL's total building footprint. LSB also earned the ENERGY STAR? label in 2008 and was recertified in 2011 with a score of 82, ranking it among the top 20% of comparable building in the United States in energy efficiency. Additional high-performance green building evaluations are conducted under an ongoing retro-commissioning program to evaluate our buildings against the Federal Guiding Principles for High Performance Sustainable Buildings and implement improvements to meet the Guiding Principles. All new building construction and major renovations will meet the Federal Guiding Principles for High Performance Sustainable Buildings.</p>

<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>1/14/13</p>	<p>PPPL is conducting a pilot test of solar powered pathway and parking area lighting. Results of the pilot test will guide installation of solar lighting fixtures at the site. In 2012 PPPL purchased 1.7 MWh of renewable energy credits (RECs) to offset a portion of its electrical energy use.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>1/14/13</p>	<p>PPPL prepared a baseline greenhouse gas (GHG) emission inventory with 2008 as the baseline year. The inventory covered Scope 1, 2 and 3 emissions. Annual inventory updates are included in PPPL's annual Site Sustainability Plan. PPPL uses the Federal Guidance for Greenhouse Gas Accounting and Inventories, published by the White House Council on Environmental Quality (CEQ). PPPL has cut its Scope 1 & 2 GHG emissions by 72% and its total GHG emissions by 69% since 2008.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>1/14/13</p>	<p>Federal procurement regulations do not allow PPPL to require that vendors participate in voluntary environmental programs or subscribe to specific environmental management practices. Instead, the Federal government influences business practices through its large purchasing power and expressed requirements or preferences for environmentally preferable products and services. PPPL has incorporated federal sustainable acquisition requirements into its standard subcontract terms and conditions. Sustainable acquisition criteria are also included in subcontract Statement of Work documents to identify specific environmentally preferable purchasing requirements (e.g., recycled content, USDA BioPreferred products, EPEAT electronics, ENERGYSTAR products, or products from the EPA Comprehensive Procurement Guide). Some specific examples are identified below. Office Supplies System Contract: Online paperless ordering system emphasizing recycled content products, remanufactured toner cartridges & cartridge recycling. Building & Janitorial Products: Recycled content carpet & flooring (and used carpet recycling), ultra-low VOC paints, Cradle-to-Cradle? certified office furniture, integrated pest management, concentrated bio-based cleaning systems/products with reduction in waste generated. PPPL has incorporated environmental products and practices into its construction and renovation subcontracts. Cafeteria: Our cafeteria subcontractor emphasizes locally-sourced foods and supports PPPL's organic/food waste composting program through the use of compostable service ware (plates, cups, containers, etc.) and the collection of compostable food waste. Landscaping: Beneficial Landscaping Plan, recycled content landscaping products, native & drought tolerant plants, reduced lawn mowing, improved erosion control, recycled content topsoil, on-site mulch reuse. Electronics: PPPL purchases only EPEAT registered desktop IT equipment and pursues ENERGY STAR? labeled equipment whenever possible. All electronic waste is recycled through UNICOR. Operations: Ethylene glycol replacement, bio-based hydraulic oils, alternative vehicle fuels (B20, CNG & E85).</p>
<p>Federal Electronics Challenge.</p>	<p>1/14/13</p>	<p>Federal Electronics Challenge Member</p>

PSE&G SEWAREN GENERATING STATION

Site ID: PSE&G SEWAREN GENERATING STATION
4895 749 751 CLIFF RD,
WOODBRIDGE TWP, NJ 07095

Stewardship Activities	Date Acknowledged	Comments
------------------------	-------------------	----------

Climate Leaders.	7/29/16	PSEG is a member of the USEPA Climate Leaders program, in which participating companies commit to reduce their impact on the global environment by completing a CORPORATE-WIDE * inventory of their greenhouse gas emissions based on a quality management system, setting aggressive reduction goals, and submitting an Annual Report of their progress toward these goals to the USEPA * Versus CATEGORY 6) CARBON FOOTPRINT ANALYSIS, which accounts for all greenhouse gas emissions SITE WISE
WasteWise.	7/29/16	PSE&G Fossil Sewaren Generating Station is currently and has been a member of the USEPA WasteWise program since 1993, being a WasteWise Hall of Fame company based among the first companies awarded that honor in 2003. * Being one of the first utilities in the program, PSEG served as a mentor to other utilities and associated industries, promoting the WasteWise waste prevention and recycling message. All recycling and waste prevention activities from PSEG Sewaren are "rolled up into" an annual corporate report submitted to USEPA: NOTE: Facility also submitted information about their membership in the National Partnership for Environmental Priorities (NPEP): However, this program is not listed on the NJDEP Environmental Stewardship checklist under Category 23) Federal Voluntary Programs.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	7/29/16	OUTREACH PROGRAM: 2/25/2011 SUBMITTAL (UNACKNOWLEDGED): In association with Middlesex County College, Sewaren Generating Station has "historically " hosted a technology tour of the plant, educating students on the energy technology and environmental aspects of the facility." "PSEG Sewaren continues to do community outreach with participation in the March of Dimes fund raising efforts, as well as supporting veteran's and homeless organizations. The PSEG Sewaren site is also home to a nesting pair of peregrine falcons and we've worked with Kathy Clark from NJ Department of Fish and Wildlife, to enhance the breeding/nesting locations for the falcons." In a 9/22/16 email requesting additional supporting details regarding new areas for potential qualification under Category 10) OUTREACH, Ms. Knowlson replied by 9/22/16 email: "A structure, known as an "igloo" was provided by the Ms. Clark to provide a protected location for the nesting falcons, which was originally placed on the roof of the Breaker House, located near the area of Unit 1, which has been the preferred home for the falcons for many years. With the commencement of the construction of Unit 7, the igloo was relocated to the Unit 4 side of the station, to provide a protected (and quieter) area for the falcons."
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	7/29/16	ENVIRONMENTAL POLICY includes "providing safe, reliable, economic, & green energy:" PSE&G's "Enterprise Policy 2" is an internal document providing further guidance to their Corporate Policy and incorporates this into their business planning, engineering design, and operations by establishing and maintaining their management systems that carry out their principles for environmental compliance and pollution prevention and resource conservation. Under PSE&G Enterprise Policy 2, each member of the Executive Officer Group of PSE&G is responsible for implementing this policy for their respective facilities, operations, and activities. This policy is maintained by the Vice President - Environmental Health and Safety with assistance from the General Environmental Counsel to ensure implementation across PSE&G. ENVIRONMENTAL HEALTH AND SAFETY POLICY: PSE&G's Environmental Health and Safety Policy Guide 575 is an internal document describing the core elements of management system required to implement the Environmental Policy, including (14) elements which have been based on the Internal Organization for Standardizations's specifications for Environmental Management Systems (ISO 14001). Annual certification by the site and the President of "the fleet" ensures proper implementation of the program.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	7/29/16	ENVIRONMENTAL MANAGEMENT SYSTEM. 2/25/2011 SUBMITTAL (UNACKNOWLEDGED): "PSE&G Sewaren has completed Phase I of implementation of the Environmental Management Information System (EMIS), which is a web-based comprehensive system that integrates management of compliance actions, regulatory reporting, and oversight of environmental programs." 9/22/16 EMAILED UPDATE: "The PSEG Fossil Environmental Management System (EMIS) has been fully implemented and is in use by all PSEG Fossil generating stations."

<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>7/29/16</p>	<p>ANNUAL ENVIRONMENTAL REPORT: An Annual corporate-wide Sustainability Report is published, focusing on PSE&G's strong commitment to social, economic, and environmental initiatives as a component of corporate citizenship. Report is available online only to minimize impact on material resources: In a 9/22/16 email requesting rrequesting updfated information RE: Category 4) ANNUAL ENVIRONMENTAL REPORT, Ms. Knowlson replied by 9/22/16 email: "The Sustainability Report that is on the PSEG website is the 2014 report; however, here's is a link to 2015 comments regarding sustainability by the PSEG Chairman which contains a link to the 2015 Sustainability Report ("sustainable"):</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>7/29/16</p>	

RED OAK POWER

Site ID: RED OAK POWER
 18747 832 RED OAK LN,
 SAYREVILLE, NJ 08872

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/22/08	Facility upgraded the evaporative media in inlet air plenums to reduce the evaporative cooling water flow by 33 %. This is part of the gas turbine air inlet houses process. Cost to the facility was 300 K.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	7/22/08	The Engineering Department at the facility has a Heat Rate Improvement Initiative in place which scans heat loss. This ensures heat efficiency (efficient megawatt generation) for more gas and in the past year 40 + points of heat rate improvement were found. Examples: 1.) Cycle Loss Audits - facility goes through all process loops in plant and detects leaks. 2.) Infrared scanning of switch yard and HRSG.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	7/22/08	AES Red Oak has added 2,500 trees on the property. They have installed 2 dozen bird houses and 1 deer/wildlife feeder.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	7/22/08	Facility has adopted the AES Corporate Environmental Policy as their own written statement of policy regarding environmentally-related matters. This policy commits the business to meet or exceed all applicable environmental, legal and other requirements. It also incorporates a commitment to strive for continual improvement in environmental performance.
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	7/22/08	AES Red Oak has an Environmental Management System (EMS) which provides guidance on minimizing impacts on the environment. EMS includes how to manage quality issues (corrective action), training, communication with its people and the general public. Inspector looked at the EMS Guidance Manual available on site.
8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?	7/22/08	Facility has an Operating Procedure in place which ensures the environmental status of the suppliers and sub-contractors prior to being approved for business of buying goods and services.

15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/6/08	The consultant has installed a collection system for the roof runoff. The stormwater is used for cooling water for the vacuum pump.

ROSSMOOR COMMUNITY ASSOC INC

Site ID: 45099
 ROSSMOOR COMMUNITY ASSOC INC
 2 ROSSMOOR DR,
 MONROE TWP, NJ 088310000

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/2/14	Rossmoor allowed certain areas including the greens and tee boxes to naturalize and utilize Bent Grasses which are fast growing. They also utilize turf type Tall Fescues grasses in the rough that are drought resistant. This, in turn, reduces water use by less irrigation. Variable Speed Pumps are used which increase efficiency and do not waste water. The facility also irrigates partially with storm water which collects in the irrigation ponds. Stormwater runoff is from industrial park adjacent to course as well as stormwater runoff from streets in the complex.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	4/2/14	Rossmoor has variable speed pumps on the irrigation pump, thus saving energy and water use through more efficient pumping.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	4/2/14	Rossmoor has an integrated pest management policy; the use of any pesticide, herbicide or fungicide is not used unless the target vector is detected; and then it is used sparingly until the vector is controlled. This reduces the use of any pesticide, fungicide or herbicide. In addition, all debris, trees and branches on the golf course are chipped onsite for landscaping use.

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>4/2/14</p>	<p>Rossmoor has multiple natural areas full of native grasses around the course. These areas were left untouched on the course and require little mowing.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/13/12</p>	<p>Rossmoor allowed certain areas to naturalize and utilize Bent Grasses which are fast growing which in turn reduces water use by less irrigation. Variable Speed Pumps are used which increase efficiency and do not waste water. The facility also irrigates partially with storm water which collects in the irrigation ponds.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/13/12</p>	<p>Rossmoor has installed variable speed pumps on the irrigation pump, thus saving energy and water use by more efficient pumping.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/13/12</p>	<p>Rossmoor has an integrated pest management policy ; the use of any pesticide, herbicide or fungicide is not used unless the target vector is detected; and then it is used sparingly until the vector is controlled. <p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>12/23/14</p>	<p>Sabert installed solar panels on the roof of this facility that have a power output of 1,770.0 kW.</p>

SAFETY KLEEN SYSTEMS INC

Stewardship Activities	Date Acknowledged	Comments
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/15/13</p>	<p>A new computer program for truck routing was initiated by facility in the past year, which has improved transportation efficiencies resulting in a reduction in fuel usage, reducing the facility's carbon footprint. Actual reductions have yet to be calculated as the change is new and still in process. The program allows the facility to evaluate various measurements including the total miles per driver, \$ per driver and revenue per mile, and measures the facility against its other facilities and the average. Facility also purchased two new trucks with the latest diesel emission technology.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/15/13</p>	<p>Facility has upgraded lighting throughout the facility by installing energy efficient bulbs throughout facility, motion sensors in the Warehouse to automatically turn lights off when area is unoccupied and options added to control the number of lights used in the offices.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/15/13</p>	<p>Facility has a written Environmental, Health and Safety (EHS) Policy Statement that includes six principles, including compliance with the rules, continual improvement of the EMS and waste minimization. The policy is posted at the facility and was last reviewed and recertified by facility on 10/27/10.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/15/13</p>	<p>Facility implements an EMS that is a "10-Key" program (copy maintained at site), which complies with ISO 14001.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/25/08</p>	<p>Facility has a written Environmental, Health and Safety (EHS) Policy Statement that includes six principles. See facility web link: http://www.safety-kleen.com/AboutUs/Pages/Iso14001.aspx</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>4/25/08</p>	<p>Facility implements an EMS that is a "10-Key" program (copy maintained at site), which complies with ISO 14001.</p>

15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	2/19/09	Sayreville Water Department has developed and installed a manifold device that directs sample tap water to its water recovery and recycling system. There are six sample taps that must run 24/7 in order to obtain representative hourly and daily water quality samples for testing at the water treatment plant's on site laboratory. They have also directed flow from several turbidity monitors to the same recovery and recycling system. The water from the two sources was previously directed to the sanitary sewer. Total water savings is estimated at more than 32 million gallons per year as the water is recycled back to the headworks of the potable water treatment plant for eventual distribution as drinking water. Total benefit to the environment is the savings of 32 million gallons of potable quality water that was formally sent to a sewage treatment plant.

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	11/20/17	Eliminated a chemical floor stripping process in the warehouse redevelopment. Used a physical sander in leu of volatile chemicals.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	11/20/17	All recyclable plastics are logged and recycled back into manufactured products on site.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	11/20/17	Facility has converted half of their lighting to LED and all remaining lighting is scheduled to be converted by the end of next year.

SHELL OIL PRODUCTS US

Site ID: SHELL OIL PRODUCTS US
14859 111 115 STATE ST,
SEWAREN, NJ 07077

Stewardship Activities	Date Acknowledged	Comments
Climate Leaders.	7/19/17	

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>7/19/17</p>	<p>Shell converts the Marine vapor recovery units (VRUs) from ethylene glycol seal to dry vac systems. In addition to removing the ethylene glycol from the system, the MVRUs are now used to recover ethanol vapors rather than burn them in the Marine vapor combustion units (VCUs). This eliminates the use natural gas to fuel the Marine VCUs.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>7/19/17</p>	<p>The voluntary transforming of unusable product into reusable product via the transmix processing unit (TPU).</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>7/19/17</p>	<p>Shell's and Sewaren's environmental policy is a component of the Shell Commitment and Policy on Health, Security, Safety, the Environment and Social Performance signed by the Chief Executive Officer. Public Document titled Shell Sustainability Report 2016 included the following: o "We welcomed the United Nations Paris Agreement on climate change and its entering into force on November 4, 2016. The agreement seeks to limit global warming to well below 2 °C by managing climate and environmental pressures while ensuring economic development." o "We report our greenhouse gas (GHG) emissions in line with the recommendations of the Intergovernmental Panel on Climate Change". o "Shell's Goal Zero ambition is to achieve no harm and no leaks across our operations. To accomplish this, we focus on the three areas of safety with the highest risks in our activities: personal, process and transport".</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>7/19/17</p>	<p>The Facility follows an environmental management system as a component of, and consistent with, the Company-wide Health, Security, Safety, and Environmental (HSSE) Management System. The system is in the process of update as a result of the transfer of operation from Motiva to Shell on May 1, 2017.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>7/19/17</p>	<p>Shell's annual sustainability report can be found online. The following statements are examples from the annual report. o "Our community feedback mechanism (CFM) has been used to address community concerns since 2012." o "Shell uses data from our community feedback mechanisms as a performance indicator at both the local community and global levels. Community complaints are registered in different categories to identify common issues across Shell and share knowledge on how they were resolved."... "In 2016, the profile of complaints was consistent with the previous three years, in which the largest number of complaints received related to social and environmental issues."</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>7/19/17</p>	

6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	7/19/17	Shell accounts for greenhouse gas emissions at its facilities, including the Sewaren Terminal, and reports the combined emissions in the Shell Sustainability Report.
8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?	7/19/17	Shell aims to work with contractors and suppliers that behave in an economically, environmentally and socially responsible way, as stated in our Shell General Business Principles. The Shell Supplier Principles cover what is required from our suppliers regarding business integrity, health and safety, social performance, and labour and human rights.
Methane to Markets Partnership.	7/19/17	

SILVER LINE BUILDING PRODUCTS CO

Site ID: SILVER LINE BUILDING PRODUCTS CO
14321 1 SILVERLINE DR, & RT 1 N
NORTH BRUNSWICK TWP, NJ 089026029

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	8/24/16	Received Environmental Achievement Award from Safety Kleen in 2014 for avoiding 23 metric tons of greenhouse gas emissions through recycling solvents and the same award was given in 2013 for avoiding 54 metric tons of greenhouse gas emissions.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	8/24/16	Facility's installation of reverse osmosis & UV systems as part of the water recycling system continues to reduce water usage.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	8/24/16	Solid waste reduction to landfill. 90 tons/year continues to be recycled instead of going to landfill. Insulated Glass Units- Facility continues to recycle entire unit and take to Plate Glass Recycling. Parent Company (Anderson) issued environmental award to this site for IG unit recycling program in 2012.

<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/24/16</p>	<p>bicycles are used for on-site transportation instead of vehicles</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>8/24/16</p>	<p>5/19/15 - approximately 25 employees planted 400-500 trees in the Paulins Kill Watershed. 5/11/16 - approximately 30 employees participated in a beach clean-up in Keansburg with the NY/NJ Baykeeper Assoc.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/24/16</p>	<p>The company's environmental policy includes -minimize pollution at the source -conserve natural resources through reduction, reuse and recycling of materials -promote energy conservation -develop long-lasting products that have a minimal adverse effect on the environment -continuously improve our environmental performance</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/24/16</p>	<p>EMS includes quarterly audits, teleconferences & training. Management reviews the following elements of the EMS during the internal audits: -policy and procedure revisions -non-compliance & new compliance initiatives -EMS audit results -significant aspects - environmental objectives and targets and pollution prevention plans or other environmental projects</p>
<p>ENERGY STAR.</p>	<p>12/9/13</p>	<p>Silver Line is proud to announce that the U.S. Environmental Protection Agency (EPA) recognized Andersen Corporation and its family of brands, including Silver Line, with a 2013 ENERGY STAR Partner of the Year - Sustained Excellence Award for continued leadership in protecting the environment through superior energy efficiency. This marks the second consecutive year the Andersen Corporation has received the Sustained Excellence Award. This distinction is reserved for ENERGY STAR partners who demonstrate outstanding leadership year after year. This is the fourth consecutive year the Andersen family of brands has been recognized as Partner of the Year. This award recognizes ongoing leadership across the ENERGY STAR program including energy efficient products, services, and new homes and buildings. Award winners are selected from more than 20,000 organizations that participate in the ENERGY STAR program so we are honored to be recognized. For more information about ENERGY STAR, click here, visit www.energystar.gov or call toll-free 1-888-STAR-YES (1-888-782-7937). Energy Star Award 2013 http://www.silverlinewindows.com/news/18</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>12/9/13</p>	<p>Facility installed reverse osmosis & UV systems as part of water recycling system. Previous water usage was 300 gallons/5 minute running time/line with a total of 7 lines; water usage after installation of water recycling system is only 300 gallons/shift.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>12/9/13</p>	<p>Solid waste reduction to landfill. 90 tons/year is now recycled instead of going to landfill. Insulated Glass Units- previously only glass was broken out of units and recycled. Presently, entire unit is recycled and taken to Plate Glass Recycling. Parent Company (Anderson) issued environmental award to this site for IG unit recycling program in 2012.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>12/9/13</p>	<p>bicycles are used for on-site transportation instead of vehicles</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>12/9/13</p>	<p>The facility has replaced 130 metal halide 400 watt bulbs with T-8 high output fluorescent bulbs. -prior energy usage 528,403 KW -present energy usage 305,198 KW Plan is to change 115 more bulbs during first quarter of 2013 and overall program goal is to change all the lights to T-8.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>12/9/13</p>	<p>The company's environmental policy includes -minimize pollution at the source -conserve natural resources through reduction, reuse and recycling of materials -promote energy conservation -develop long-lasting products that have a minimal adverse effect on the environment -continuously improve our environmental performance</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>12/9/13</p>	<p>EMS includes monthly & quarterly audits, teleconferences & training. Management reviews the following elements of the EMS during the internal audits: -policy and procedure revisions -non-compliance & new compliance initiatives -EMS audit results -significant aspects - environmental objectives and targets and pollution prevention plans or other environmental projects</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>12/9/13</p>	<p>Silverline was recognized by the U.S. Environmental Protection Agency (EPA) under the Andersen Corporation and its family of brands, including Silver Line, with a 2013 ENERGY STAR Partner of the Year - Sustained Excellence Award for continued leadership in protecting the environment through superior energy efficiency.</p>

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>11/30/12</p>	<p>Facility installed reverse osmosis & UV systems as part of water recycling system. Previous water usage was 300 gallons/5 minute running time/line with a total of 7 lines; water usage after installation of water recycling system is only 300 gallons/shift.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>11/30/12</p>	<p>Solid waste reduction to landfill. 90 tons/year is now recycled instead of going to landfill. Insulated Glass Units- previously only glass was broken out of units and recycled. Presently, entire unit is recycled and taken to Plate Glass Recycling. Parent Company (Anderson) issued environmental award to this site for IG unit recycling program in 2012.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/30/12</p>	<p>bicycles are used for on-site transportation instead of vehicles</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>11/30/12</p>	<p>The facility has replaced 130 metal halide 400 watt bulbs with T-8 high output fluorescent bulbs. -prior energy usage 528,403 KW -present energy usage 305,198 KW Plan is to change 115 more bulbs during first quarter of 2013 and overall program goal is to change all the lights to T-8.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>11/30/12</p>	<p>The company's environmental policy includes -minimize pollution at the source -conserve natural resources through reduction, reuse and recycling of materials -promote energy conservation -develop long-lasting products that have a minimal adverse effect on the environment -continuously improve our environmental performance</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>11/30/12</p>	<p>EMS includes monthly & quarterly audits, teleconferences & training. Management reviews the following elements of the EMS during the internal audits: -policy and procedure revisions -non-compliance & new compliance initiatives -EMS audit results -significant aspects - environmental objectives and targets and pollution prevention plans or other environmental projects</p>

<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>10/9/08</p>	<p>Facility is testing a solution free from VOC to clean the glass windows to minimise the VOC fugitive emissions. Isopropyl alcohol solution is being used to remove any traces of sealant and grease from the glass.</p>

3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	12/4/12	signed 7/9/12, implemented accordingly

ST PETERS UNIVERSITY HOSPITAL

Site ID: ST PETERS UNIVERSITY HOSPITAL
 14344 254 EASTON AVE,
 NEW BRUNSWICK, NJ 08910

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	4/14/15	In October of 2012 Saint Peter's University Hospital completed a solar system renewable energy program for the main hospital on Easton Avenue. This location features a 1 megawatt-dc (MW-dc) solar system comprised of two "carport" solar arrays on the top of a parking deck and covering an existing parking lot. The combined solar system is expected to save Saint Peter's approximately \$10 million in electricity costs over the next 25 years. The entire project consist of nearly 10,000 solar panels capable of producing more than 2.3 million kilowatt hours of electrical energy every year, and it displaces more than 78 million pounds of carbon over 20 years. The solar panel system produces a stable-priced source of electricity, which will enable the healthcare system to reduce and control its energy costs in the face of unpredictable utility rates that continue to increase.

SUBURBAN TRANSIT TRAILS CORP

Site ID: SUBURBAN TRANSIT TRAILS CORP
38803 750 SOMERSET ST,
NEW BRUNSWICK, NJ 089010000

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/1/14	Bus washwater recycling system present onsite which prevents 25% of new city water from entering system.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/1/14	Company monitors the idling of all buses through their control system. The driver cannot idle for more than 3 minutes, and no more than 15 minutes of idling during start up. The company can also monitor speed control and hard breaking to increase their fuel efficiency. Company also owns multiple lots so if buses are empty after dropping off in the city the bus doesn't have to return to the New Brunswick location, thus reducing carbon emissions. All Coach buses run on ultra low sulfur diesel, a cleaner burning fuel in comparison to regular diesel.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	5/1/14	Infrared heating units in the maintenance shop. These units heat the object or person directly rather than heating the air around the object or person. This reduces the energy used in heating the air that could potentially be lost. Energy efficient lighting has been installed throughout the building and timers are on all switches for automatic shut off if no one is in the room.
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	5/1/14	Employees of Suburban Transit ride for free on the buses to work daily if commuting from bus stop location areas.

SUEZ WATER PRINCETON MEADOWS INC

5335 31 MAPLE AVE,
PLAINSBORO, NJ 08536

Stewardship Activities	Date Acknowledged	Comments
------------------------	-------------------	----------

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>4/15/18</p>	<p>Treated effluent is distributed to the Meadows @ Middlesex Golf Course for reuse and is utilized within the plant process for spray water. In addition, the facility will be upgrading their treatment plant to meet the new reuse requirements in order to continue its reuse program at the golf course. Treated effluent is also reused in the plant for hosing tanks, pump seal water and spray water for rotary drum thickeners. Total water reuse during 2017: 132.3 MG</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/15/18</p>	<p>Influent sewage pumps, sludge transfer pumps and rotary drum thickener pumps were retrofitted with variable frequency drives for optimal energy efficiency. Motors are replaced with energy efficient motors when replaced. Outdoor lights were retrofitted with motion sensors.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>4/15/18</p>	<p>Scrap metal and fluorescent light bulbs are recycled.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/15/18</p>	<p>Indoor lights within the plant were replaced with LED lights; heat settings placed on low at night. All lighting at the pump stations were replaced with LED during 2017.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>4/15/18</p>	<p>Continuing to restore a natural habitat area by letting the field just outside of their gate grow back natural. The deer use to have their fawn in this area, wild turkey, goldfinches, flickers, red tail hawks, rabbits, groundhogs and red fox use to frequent this area. The plan is still for the area to become a nature preserve area again.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>4/15/18</p>	<p>United Water Princeton Meadows participated in Company-wide Innovations Award Program. Cold treated effluent water is reused for rotary drum spray water and polymer mixing water for rotary drum thickeners. UWPM Team developed a method to heat polymer to increase its efficiency thereby reducing volume of sludge disposal and decreasing disposal costs overall.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>4/15/18</p>	<p>The facility continues to participate with the Department of Public Works, Park Rangers and Boy Scouts in annual Stream Cleanup of Cranbury Brook removing debris from stream and local Lenape Trail. The facility set-up various Earth Day and Environmental Fair booths and was a WEF/NJWEA Stockholm Junior Water Prize Competition judge and committee member.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/15/18</p>	<p>Suez Water has an Environmental Policy, Environmental Charter and Compliance Training Sessions required to be followed and attended by all employees.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/7/17</p>	<p>Treated effluent is distributed to the Meadows @ Middlesex Golf Course for reuse and is utilized within the plant process for spray water. In addition, the facility will be upgrading their treatment plant to meet the new reuse requirements in order to continue its reuse program at the golf course. Treated effluent is also reused in the plant for hosing tanks, pump seal water and spray water for rotary drum thickeners. Total water reuse during 2016: 137.5 MG</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/7/17</p>	<p>Influent sewage pumps, sludge transfer pumps and rotary drum thickener pumps were retrofitted with variable frequency drives for optimal energy efficiency. Motors are replaced with energy efficient motors when replaced. Outdoor lights were retrofitted with motion sensors.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/7/17</p>	<p>Scrap metal and fluorescent light bulbs are recycled</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>2/7/17</p>	<p>Indoor lights within the plant were replaced with LED lights; heat settings placed on low at night. No additions for 2016</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>2/7/17</p>	<p>Continuing to restore a natural habitat area by letting the field just outside of their gate grow back natural. The deer use to have their fawn in this area, wild turkey, goldfinches, flickers, red tail hawks, rabbits, groundhogs and red fox use to frequent this area. Contractor remediated area after storms to clear the sewer pipe easement. They installed some bluebird boxes and continue to plant some butterfly weed seed and wild flower seeds each year. The plan is still for the area to become a nature preserve area again.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>2/7/17</p>	<p>United Water Princeton Meadows participated in Company-wide Innovations Award Program. Cold treated effluent water is reused for rotary drum spray water and polymer mixing water for rotary drum thickeners. UWPM Team developed a method to heat polymer to increase its efficiency thereby reducing volume of sludge disposal and decreasing disposal costs overall.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>2/7/17</p>	<p>The facility continues to participate with the Department of Public Works, Park Rangers and Boy Scouts in annual Stream Cleanup of Cranbury Brook removing debris from stream and local Lenape Trail. The facility also has a booth at Plainsboro Founders Day to teach residents about their local wastewater treatment process. The facility set-up various Earth Day and Environmental Fair booths and was a WEF/NJWEA Stockholm Junior Water Prize Competition judge and committee member.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>2/7/17</p>	<p>Suez Water has an Environmental Policy, Environmental Charter and Compliance Training Sessions required to be followed and attended by all employees.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/9/16</p>	<p>Treated effluent is distributed to the Meadows @ Middlesex Golf Course for reuse and is utilized within the plant process for spray water. In addition, the facility will be upgrading their treatment plant (after the establishment of the Raritan River TMDL) to meet the new reuse requirements in order to continue its reuse program at the golf course. Treated effluent is also reused in the plant for hosing tanks, pump seal water and spray water for rotary drum thickeners. Total water reuse during 2015: 38.87 MG</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/9/16</p>	<p>Influent sewage pumps, sludge transfer pumps and rotary drum thickener pumps were retrofitted with variable frequency drives for optimal energy efficiency. Motors are replaced with energy efficient motors when replaced. Outdoor lights were retrofitted with motion sensors.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/9/16</p>	<p>Scrap metal and fluorescent light bulbs are recycled</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/9/16</p>	<p>Indoor lights within the plant were replaced with LED lights; heat settings placed on low at night.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>3/9/16</p>	<p>Continuing to restore a natural habitat area by letting the field just outside of their gate grow back natural. The deer use to have their fawn in this area, wild turkey, goldfinches, flickers, red tail hawks, rabbits, groundhogs and red fox use to frequent this area. Contractor remediated area after storms to clear the sewer pipe easement. Installing some bluebird boxes and continue to plant some butterfly weed seed and wild flower seeds each year. The plan is still for the area to become a nature preserve again.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>3/9/16</p>	<p>United Water Princeton Meadows participated in Company-wide Innovations Award Program. Cold treated effluent water is reused for rotary drum spray water and polymer mixing water for rotary drum thickeners. UWPM Team developed a method to heat polymer to increase its efficiency thereby reducing volume of sludge disposed and decreasing disposal costs.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/9/16</p>	<p>The facility continues to participate with the Department of Public Works, Park Rangers and Boy Scouts in annual Stream Cleanup of Cranbury Brook removing debris from stream and local Lenape Trail. The facility also has a booth at Plainsboro Founders Day to teach residents about their local wastewater treatment process. The facility set-up various Earth Day and Environmental Fair booths and was a WEF/NJWEA Stockholm Junior Water Prize Competition judge and committee member.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? <p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/21/13</p>	<p>Treated effluent is distributed to the Meadows @ Middlesex Golf Course for reuse and is utilized within the plant process for spray water. In addition, the facility will be upgrading their treatment plant (after the establishment of the Raritan River TMDL) to meet the new reuse requirements in order to continue its reuse program at the golf course. Treated effluent is also reused in the plant for hosing tanks, pump seal water and spray water for rotary drum thickeners.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/21/13</p>	<p>Influent sewage pumps, sludge transfer pumps and rotary drum thickener pumps have been retrofitted with variable frequency drives for optimal energy efficiency. Motors are replaced with energy efficient motors when replaced. Outdoor lights have been retrofitted with motion sensors. Indoor lights are turned off when not in use; heat settings placed on low at night.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/21/13</p>	<p>scrap metal & fluorescent light bulbs are recycled</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>3/21/13</p>	<p>Restoring a natural habitat area by letting the field just outside of their gate grow back natural. The deer use to have their fawn in this area, wild turkey, goldfinches, flickers, red tail hawks, rabbits, groundhogs and red fox use to frequent this area. Contractor remediated area after storms to clear the sewer pipe easement. Installing some bluebird boxes and have planted some butterfly weed seed and wild flower seeds which have not come up yet. The plan is for the area to become a nature preserve again.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>3/21/13</p>	<p>United Water Princeton Meadows participated in Company-wide Innovations Award Program. Cold treated effluent water is reused for rotary drum spray water and polymer mixing water for rotary drum thickeners. UWPM Team developed a method to heat polymer to increase its efficiency thereby reducing volume of sludge disposed and decreasing disposal costs.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/21/13</p>	<p>The facility continues to participate with the Department of Public Works, Park Rangers and Boy Scouts in annual Stream Cleanup of Cranbury Brook removing debris from stream and local Lenape Trail. The facility also has a booth at Plainsboro Founders Day to teach residents about their local wastewater treatment process. The facility set-up various Earth Day and Environmental Fair booths and was a WEF/NJWEA Stockholm Junior Water Prize Competition judge and committee member as well as provided scholarship award for SJWP Winner.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/21/13</p>	<p>United Water has an Environmental Policy, Environmental Charter and Compliance Training Sessions required to be followed and attended by all employees.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/15/12</p>	<p>Treated effluent is distributed to the Meadows @ Middlesex Golf Course for reuse and is utilized within the plant process for spray water. In addition, the facility will be upgrading their treatment plant (after the establishment of the Raritan River TMDL) to meet the new reuse requirements in order to continue its reuse program at the golf course. Treated effluent is also reused in the plant for hosing tanks, pump seal water and spray water for rotary drum thickeners.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/15/12</p>	<p>Influent sewage pumps, sludge transfer pumps and rotary drum thickener pumps have been retrofitted with variable frequency drives for optimal energy efficiency. Motors are replaced with energy efficient motors when replaced. Outdoor lights have been retrofitted with motion sensors. Indoor lights are turned off when not in use; heat settings placed on low at night.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/15/12</p>	<p>Scrap metal is recycled.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>3/15/12</p>	<p>United Water Princeton Meadows participated in Company-wide Innovations Award Program. Cold treated effluent water is reused for rotary drum spray water and polymer mixing water for rotary drum thickeners. UWPM Team developed a method to heat polymer to increase its efficiency thereby reducing volume of sludge disposed and decreasing disposal costs.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/15/12</p>	<p>The facility participates with the Department of Public Works, Park Rangers and Boy Scouts in annual Stream Cleanup of Cranbury Brook removing debris from stream and local Lenape Trail. The facility also has a booth at Plainsboro Founders Day to teach residents about their local wastewater treatment process. The facility set-up various Earth Day and Environmental Fair booths and was a WEF/NJWEA Stockholm Junior Water Prize Competition judge and committee member as well as provided scholarship award for SJWP Winner.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/15/12</p>	<p>United Water has an Environmental Policy, Environmental Charter and Compliance Training Sessions required to be followed and attended by all employees.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>4/7/11</p>	<p>Treated effluent is distributed to the Meadows @ Middlesex Golf Course for reuse and is utilized within the plant process for spray water. In addition, the facility will be upgrading their treatment plant (after the establishment of the Raritan River TMDL) to meet the new reuse requirements in order to continue its reuse program at the golf course. Treated effluent is also reused in the plant for hosing tanks, pump seal water and spray water for rotary drum thickeners.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/7/11</p>	<p>Influent sewage pumps, sludge transfer pumps and rotary drum thickener pumps have been retrofitted with variable frequency drives for optimal energy efficiency. Motors are replaced with energy efficient motors when replaced. Most outdoor lights have been retrofitted with motion sensors. Indoor lights are turned off when not in use; heat settings placed on low at night.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>4/7/11</p>	<p>Scrap metal is recycled.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>4/7/11</p>	<p>United Water Princeton Meadows participated in Company-wide Innovations Award Program. 10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	3/16/17	Veolia began in 2015 as non-profit and a volunteer entity named the Veolia Community Advisory Panel (CAP), to serve as a forum for open discussion between representatives of Veolia and the citizens of the surrounding communities. The CAP meets monthly to discuss Veolia's plant operations, plans and issues of concern. It is a mechanism for the public to convey its questions, comments or concerns to Veolia and for Veolia to respond directly to the community.

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/16/17</p>	<p>Veolia has a written Environmental Policy Statement that focuses on a commitment to environmental protection and regulatory compliance, reduction/control of pollution/environmental impacts, environmental and sustainability goals and employee training.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/16/17</p>	<p>Veolia implements a Compliance Management System (CMS) that follows a 4-part approach known by its acronym, PACT, which stands for Prevention-Assessment-Corrective Action-Training. A software program is used to establish a monthly compliance calendar to ensure the scheduling and completion of all required regulatory tasks. Also, a 2-phase audit system consisting of Peer (Internal) Audits and Self Assessments is utilized to assure consistency and compliance of its facilities nationwide; and monthly training sessions are held with all employees covering compliance and safety.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>3/16/17</p>	<p>Veolia published an Annual Environmental Report that is available. At the time of this inspection, the report was available online for 2015, though the 2016 and was prepared.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>3/16/17</p>	<p>Veolia requires that its vendors subscribe to environmentally sound business practices by implementing a Third Party Facility Assessment Program that outlines the requirements for auditing and contracting with treatment, disposal and recycling third party facilities that are not owned by Veolia to manage Veolia's wastes. The program was implemented to minimize the potential current and future liability associated with the management of both hazardous and nonhazardous waste at these facilities.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/25/15</p>	<p>Veolia began in 2015 a non-profit, volunteer entity named the Veolia Community Advisory Panel (CAP), to serve as a forum for open discussion between representatives of Veolia and the citizens of the surrounding communities. The CAP meets monthly to discuss Veolia's plant operations, plans and issues of concern. It is a mechanism for the public to convey its questions, comments or concerns to Veolia and for Veolia to respond directly to the community.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/25/15</p>	<p>Veolia has a written Environmental Policy Statement that focuses on a commitment to environmental protection and regulatory compliance, reduction/control of pollution/environmental impacts, environmental and sustainability goals and employee training.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/25/15</p>	<p>Veolia implements a Compliance Management System (CMS) that follows a 4-part approach known by its acronym, PACT, which stands for Prevention-Assessment-Corrective Action-Training. A software program is used to establish a monthly compliance calendar to ensure the scheduling and completion of all required regulatory tasks; a 2-phase audit system consisting of Peer (Internal) Audits and Self Assessments is utilized to assure consistency and compliance of its facilities nationwide; and monthly training sessions are held with all employees covering compliance and safety.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>3/25/15</p>	<p>Veolia requires that its vendors subscribe to environmentally sound business practices by implementing a Third Party Facility Assessment Program that outlines the requirements for auditing and contracting with treatment, disposal and recycling third party facilities that are not owned by Veolia that manage Veolia's wastes. The program is implemented to minimize the potential current and future liability associated with the management of both hazardous and nonhazardous waste at these facilities.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>9/15/09</p>	<p>Veolia participates in the Adopt-A-Highway Program. This program has developed an anti-litter program where volunteer groups adopt a section of a state highway in their community. Veolia participates in this program by picking up litter on a part of rt 206 twice a year.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>9/15/09</p>	<p>Veolia provides information to and assists the public in understanding the environmental impact of their activities. They conduct public tours of facilities and work with communities near the facility to encourage positive dialogue and exchange of information of their activities. Veolia also supports and participates in the development of public policy and in educational initiatives that help to protect human health and improve the environment. They seek cooperation on this work with government, environmental groups, schools, universities, and other public organizations.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/15/09</p>	<p>Veolia Environmental Services operates under a proactive comprehensive written environmental policy which focuses on a commitment to safe working practices, waste reduction, recycling, economy of energy usage, public education, and employee training. This policy seeks out information on new methods for managing wastes that are received that may provide greater environmental protection than existing techniques and employ those new techniques which are both feasible and benefit the environment.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/15/09</p>	<p>The Environmental Management System that is utilized is known as P.A.C.T. This stands for Prevention-Assessment-Corrective action-Training. A software program (Dakota-Tracer) is used by Veolia to track compliance issues and the progress that relates to each issue if there are any. The software used also helps to assure compliance by creating monthly task assignments related to compliance issues. Environmental Compliance is assessed by a Self and Peer Group Assessment Program. Tracer issues are transmitted to corporate directors on a monthly basis for review. Training meetings that deal with DOT, OSHA, and RCRA are held monthly.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>9/15/09</p>	<p>The services that are purchased from vendors are under their outside assessment program which establishes a stern environmental standard for such vendors. The vendor assessment program defines the standards that are required for vendors to supply Veolia with services.</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>9/15/09</p>	<p>Veolia Env. Services provides HazMat training updates. An outside company meeting is held yearly for updated issues that affect the environment.</p>

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	1/5/11	Developed a Green Grounds Maintenance Policy that focuses, in part, on minimizing water consumption; established municipal rain gardens.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	1/5/11	Expansion of the Public Works recycling program to include the disposal of compact fluorescent light bulbs.

<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>1/5/11</p>	<p>Developed a pilot site for vehicle electrification; purchased 13 hybrid vehicles and a hybrid Police Emergency Command Vehicle.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>1/5/11</p>	<p>Encouraged green building in Township via green scorecards, green building checklists and a green design handbook. Conducted an energy efficient lighting upgrade. Replacement of standard light bulbs with energy efficient compact fluorescent lighting at municipal building and facilities.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>1/5/11</p>	<p>Created walkways and public access to local water ways; implemented municipal tree planting program.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>1/5/11</p>	<p>Woodbridge Township Mater Plan amended to include a Sustainability Master Plan Element. The township developed Green Technology Park @ Woodbridge to attract green businesses to the Township.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>1/5/11</p>	<p>Developed "Greenable Woodbridge" guide on Township web site, published "Green News" edition of Township newsletter, organized environmental public outreach programs (seminars, workshops, demonstrations). http://www.twp.woodbridge.nj.us/Green/tabid/751/Default.aspx Organizing public Rain Garden workshops. In 2010, Woodbridge Twp. opened the "Greenable Woodbridge Museum of the Future".</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>1/5/11</p>	<p>Developed policy encouraging green purchasing and support of local vendors.</p>

<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>1/5/11</p>	<p>Use biodiesel for Township vehicles; solar panels on six municipal buildings.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>11/25/09</p>	<p>Developed a Green Grounds Maintenance Policy that focuses, in part, on minimizing water consumption; established municipal rain gardens.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>11/25/09</p>	<p>Developed a pilot site for vehicle electrification; purchased 13 hybrid vehicles.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>11/25/09</p>	<p>Encouraged green building in Township via green scorecards, green building checklists and a green design handbook. Conducted an energy efficient lighting upgrade.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>11/25/09</p>	<p>Created walkways and public access to local water ways; implemented municipal tree planting program.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>11/25/09</p>	<p>Woodbridge Township Mater Plan amended to include a Sustainability Master Plan Element. The township developed Green Technology Park @ Woodbridge to attract green businesses to the Township.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>11/25/09</p>	<p>Developed "Greenable Woodbridge" guide on Township web site, published "Green News" edition of Township newsletter, organized environmental public outreach programs (seminars, workshops, demonstrations)</p>

<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>11/25/09</p>	<p>Developed policy encouraging green purchasing and support of local vendors.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>11/25/09</p>	<p>Use biodiesel for Township vehicles; solar panels on six municipal buildings.</p>

ZIEGLER CHEMICAL & MINERAL CORP @ PROSPECT AVENUE IND PK

Site ID: ZIEGLER CHEMICAL & MINERAL CORP @ PROSPECT AVENUE
5400 IND PK
600 PROSPECT AVE,
PISCATAWAY TWP, NJ 08854

Stewardship Activities	Date Acknowledged	Comments
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>9/5/12</p>	<p>All off spec or damaged material is incorporated back into production line. There is no waste of asphalt.</p>

ABERDEEN TWP MUNICIPAL COMPLEX

Site ID: ABERDEEN TWP MUNICIPAL COMPLEX
4379 1 ABERDEEN SQUARE,
ABERDEEN TWP, NJ 07747

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	6/11/13	Aberdeen Township had solar panels installed in 4/13 at the following Township properties: Municipal Building at 1 Aberdeen Square - 217.6 KW-DC Public Works Garage at 147 Lenox Road - 65 KW-DC Sewerage Pump Station at 30 Noble Place - 121 KW-DC Sewerage Pump Station at 365 Riverdale Drive - 47 KW-DC Sewerage Pump Station at 368 Greenwood Drive - 90.7 KW-DC

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	1/16/14	The farmer control weeds mechanically or by hand, eliminating the need for chemical pesticides.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	1/16/14	The farmer recycles the pesticide empty container with Helena Co.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	1/16/14	The business has high efficiency air conditioned and heathr. High efficiency T5 lighting is used in the business.

BARLOW FLOWER FARM INC

Site ID: BARLOW FLOWER FARM INC
 363530 1014 SEA GIRT AVE,
 SEA GIRT, NJ 08750

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	9/21/15	The farmer uses mechanical and manual weed controls.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/21/15	The farmer has a flood irrigation system in which water is recycled and reused. He also has a drip irrigation. system to save water.

BATTLEVIEW ORCHARDS

Site ID: BATTLEVIEW ORCHARDS
 62533 91 WEMROCK RD,
 FREEHOLD TWP, NJ 07728

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/12/18	To reduce the use of fertilizer, cover crops are used in the off seasons. To reduce pesticide use, they plow to control weeds, have stone driveways, and use IPM practices.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/12/18	They have 5 acres of drip irrigation to reduce water use.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	7/12/18	To reduce energy use, they have LED lighting in the buildings and skylights in their barn.

BAYSHORE MEDICAL CENTER

Site ID: BAYSHORE MEDICAL CENTER
4619 727 N BEERS ST,
HOLMDEL, NJ 07733

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	2/11/09	Bayshore has started a mercury reduction program, and is no longer using the blood pressure machines that contain the mercury.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	2/11/09	Facility is cleaned and maintained with Environmentally preferred and reduced risk cleaning products: BioRenewables Glass Cleaner, Clean by Peroxy, Green Solutions All Purpose Cleaner, Green Solutions Carpet Cleaner. Green Solutions Floor Finish Remover, Green Solutions Floor Seal & Finish, Green Solutions Glass Cleaner, Green Solutions Industrial Cleaner, TriBase Multi Purpose Cleaner.

BROOKDALE COMMUNITY COLLEGE

Site ID: BROOKDALE COMMUNITY COLLEGE
13650 765 NEWMAN SPRINGS RD,
LINCROFT, NJ 07738

Stewardship Activities	Date Acknowledged	Comments
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	12/20/10	Brookdale has installed 2 rain gardens to capture runoff from their parking lots and prevent it from running off into the Swimming River Reservoir. They are located at the end of parking lot 1 and next to parking lot 2. The rain gardens consists of a depressed area planted with plants that live in wet environments. They plan on installing 3 more gardens in the spring with one of them located so that there is access to the community for educational purposes. Brookdale was given a \$50,000 grant from the state to install the rain gardens.

BULLOCK FARMS

Site ID: BULLOCK FARMS
 128126 83 EMLEYS HILL RD,
 UPPER FREEHOLD TWP, NJ 08514

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	9/24/18	They perform their own scouting to determine appropriate application timing, rather than using a spray schedule. Stone drives are employed to control weeds.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/24/18	To reduce water usage, they have been switching to pivot irrigation on some of their fields.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	9/24/18	This establishment recycles their pesticide containers at the Rutgers Cream Ridge Research Farm.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	9/24/18	This farm hosts meetings for growers where they can learn more about using cultural practices to manage problems and keep updated on new pests and disease.

CARCHESIO FARMS

Site ID: CARCHESIO FARMS
 178120 565 TENNENT RD,
 MANALAPAN TWP, NJ 07726

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	11/21/14	The farmer uses a drip irrigation system, reducing total amount of water necessary to sufficiently irrigate the crop.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	11/21/14	One building utilizes natural light through a skylight, conserving energy. If this is not enough, he uses energy efficient, fluorescent lighting.

CEDAR HILL FARM & NURSERY

Site ID: CEDAR HILL FARM & NURSERY
 533111 246 RED HILL RD,
 MIDDLETOWN, NJ 07748

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	2/10/15	The farmer does not use any artificial irrigation, relying only on rain water.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	2/10/15	The farmer stated he recycles all used pesticide containers from this facility.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	2/10/15	The farmer stated he uses only natural light at this facility.

CHEESEQUAKE FARMS

Site ID: CHEESEQUAKE FARMS
 194439 191 RT 34,
 MATAWAN, NJ 07747

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	10/5/18	To reduce the use of hazardous chemicals, this establishment employs IPM practices, which include pest scouting, mechanical weed control, crop rotation, and cover crops.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	10/5/18	To conserve water, drip irrigation is used in 1.5 acres of the farm (vegetables).
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	10/5/18	They put a great amount of effort into preserving native pollinators on their land.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	10/5/18	This establishment hosts educational programs geared towards children to teach them about agriculture, pollinator preservation, and the environment.

CLAYTON FAMILY FARM

Site ID: CLAYTON FAMILY FARM
 535170 125 MONMOUTH RD,
 FREEHOLD, NJ 07728

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/24/18	To reduce hazardous materials, they practice IPM, use mechanical weed control, and have stone driveways.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/24/18	To conserve water, they have 3 acres of drip irrigation.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	7/24/18	Natural lighting is used as much as possible.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	7/24/18	To conserve materials, this farm recycles their pesticide containers and the plastic they lay down in the fields.

COLLEX COLLISION EXPERTS

Site ID: COLLEX COLLISION EXPERTS
4108 435 SHREWSBURY AVE,
SHREWSBURY, NJ 07701

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	9/16/11	Facility installed/operates a solvent recycling unit ("Uni-Ram") for the thinner used to clean spray guns. The spent thinner is collected in a 5-gal container in the paint mixing room, and when full, is put into the recycling unit located in shed-like building just outside the back of the main building. The spent thinner is recovered for reuse on site to clean the guns, minimizing the amount of waste generated and new thinner purchased.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/16/11	Facility installed/operates a recirculation/recycling unit ("ESD Waste 2 Water") for the water used to wash cars in the first two bays of the building. All wash water is collected in drains which flow to the water recycling unit located on the side of the first bay. The unit uses microbes to purify the water and the water is reused for washing cars.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	9/16/11	Solar panel installation on the roof of the facility's building was underway at the time of the inspection.

COSMETIC ESSENCE INC

Site ID: COSMETIC ESSENCE INC
35869 2182 RT 35,
HOLMDEL, NJ 07733

Stewardship Activities	Date Acknowledged	Comments
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	8/3/09	Conducting more conference calls between CEI's different offices instead of commuting to one office.

CRAFTSMEN RAILING CORP @ EARL SWIFT PROPERTY

Site ID: CRAFTSMEN RAILING CORP @ EARL SWIFT PROPERTY
4532 3 CASS ST,
KEYPORT, NJ 07735

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/11/16	Close looped water reclaim system for etching the railings. Washing is required for the powder coating to stick. The wash area is grated and recycled and reused. No drains in the facility at all, not even sanitary. Created system to contain washwater.

CREAM RIDGE WINERY

Site ID: CREAM RIDGE WINERY
63225 145 RT 539,
CREAM RIDGE, NJ 08514

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/18/16	Winery does not use any type of pesticides or fungicides, they technically are "organic" but don't have that actual name. Instead, they use the waste vinegar part of their wine that they would not add to their product and combine it with a little bit of soap to kill the weeds.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/18/16	Grapes that they use don't need additional watering, only use rainwater and humidity.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/18/16	Rotational mowing practices implemented. They only mow every other row so the whole vineyard isn't mowed at once. Allows for the beneficial organisms to remain in the higher grass areas, they move to the adjacent row when mowed. Vineyard also has hand picking, no use of machines for picking.

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/18/16</p>	<p>Collects some leaves from the municipality or local landscapers as well as manure from surrounding farms to combine with grape skins. Collect in a composting area which is then aged, and utilized throughout the vineyard. Vine clipping occurs 2/yr, a company comes into collect dumpster full of clippings, the company then shreds it and uses it for a product (Herman's). Used grape skins also, because they compost, don't end up in the septic tank and lead to an increase pump out of the system in order to function properly.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>5/18/16</p>	<p>Since the vineyard doesn't take up every inch of the property, they are using the remaining space to establish milkweed habitats for bees. This will not only create a habitat for bees, but also keep them away from the grapes.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promote environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/18/16</p>	<p>Winery uses yeast from fermentation process and adds it to their septic tank onsite. This reduces the amount of solids in the tank and leads to a decrease in pump outs.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>5/18/16</p>	<p>Involved in the Grape Acres program to encourage growers in NJ. This will keep the grape growing industry local and prevent wineries from looking out of state for grapes.</p>

DAMICO FARMS

Site ID: DAMICO FARMS
 503613 630 PROVINCE LINE RD,
 UPPER FREEHOLD TWP, NJ 08501

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	3/31/14	This establishment hand pulls weeds, reducing the total amount of herbicides used in the production of vegetable crops.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	3/31/14	This establishment has high efficiency irrigation equipment, reducing the total amount of water necessary to irrigate the crops.

EMIL A SCHROTH INC

Site ID: EMIL A SCHROTH INC
 13664 YELLOW BROOK RD & COPPER AVE,
 HOWELL, NJ 07731

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/2/18	Facility eliminated furnace operation to remove the copper from the insulation. The process would essentially melt away the insulation, leaving the bare copper. This would produce VOCs in their air emissions in the process. By eliminating this process they have reduced their potential to add pollutants to their air emissions. They also do not use chemicals to strip the insulation from the copper, they use air to blow it off. This reduces the chemical use onsite to strictly just the fluids to maintain the machinery.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/2/18	Eliminated the furnace operation which reduced the energy consumption of the facility.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	5/2/18	The facility gets the scrap insulated copper wire from wire supply client manufacturers (which is inevitable to be produced in the insulated copper wire industry) and they recover it to reduce scrap going to the landfills. They also reuse all the cardboard gay lord boxes they get from the wire manufactures so they haven't needed to purchase more boxes since they have been in business.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	5/2/18	Emil Schroth has a sustainability statement on the website.

FAIR HAVEN BORO

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/27/18	They use mechanical weed control and maintain stone drive ways to reduce the use of pesticides.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/27/18	To save water the business uses a drip irrigation system.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	7/27/18	Four Seasons has solar panels for renewable energy.

FREEHOLD RGNL HIGH SD COLTS NECK HIGH SCHOOL

Site ID: FREEHOLD RGNL HIGH SD COLTS NECK HIGH SCHOOL
 16973 59 FIVE POINTS RD , & RT 537
 COLTS NECK, NJ 07722

Stewardship Activities	Date Acknowledged	Comments
ENERGY STAR.	8/25/15	The school is equipped with energy star appliances.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	8/25/15	The school uses waterless urinals and has a grey water system that reuses water for toilet flushing.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	8/25/15	The school has undergone a LED lighting conversion. (See photos for lighting materials now used for energy conservation.) The lights operate on a 15 minute sensor, so that no motion sensed in common areas turn off after a 15 minute period of non-motion detected. Common areas equipped with motion sensors include: cafeteria, gym, and offices.
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	8/25/15	The National Honor Society and the ROTC on campus conduct Beach Clean up activities yearly.

FREEHOLD TWP MUNICIPAL BUILDING

Site ID: FREEHOLD TWP MUNICIPAL BUILDING
41045 1 MUNICIPAL PLAZA,

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>2/5/18</p>	<p>West-Ward Pharmaceuticals is committed to being conscious of the effects of their operations on the environment. As part of this mission, they intend to meet or exceed environmental compliance through employing practices to assist with pollution prevention and demonstrate continual improvement through waste minimization and resource conservation. Implementation of this policy and supporting policies through their environmental management system will align the conduct of their business operations with their programmatic mission to restore, protect and enhance the environment. Signed by the President Brian Hoffman on 9/22/15.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/9/16</p>	<p>Replaced all toilets in Buildings 200 & 400 with water saving units</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/9/16</p>	<p>recycles light bulbs, and toner cartridges.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>2/9/16</p>	<p>Replaced all T-12 lightbulbs with more energy efficient T-5 lightbulbs in the warehouse and packaging facility in 2014.</p>

<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>2/9/16</p>	<p>West-Ward Pharmaceuticals is committed to being conscious of the effects of our operations on the environment. As part of this mission, we intend to meet or exceed Environmental compliance through employing practices to assist with pollution prevention and demonstrate continual improvement through waste minimization and resource conservation. Implementation of this policy and supporting policies through our environmental management system will align the conduct of our business operations with our programmatic mission to restore, protect and enhance the environment. Signed by the President Brian Hoffman on 9/22/15.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/25/15</p>	<p>Replaced all toilets in Buildings 200 & 400 with water saving units</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/25/15</p>	<p>recycles light bulbs, and toner cartridges.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>2/25/15</p>	<p>Replaced all T-12 lightbulbs with more energy efficient T-5 lightbulbs in the warehouse and packaging facility in 2014</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/10/14</p>	<p>recycle scrap metal whenever possible, light bulbs, toner cartridges and batteries</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/10/14</p>	<p>Replaced all T-12 lightbulbs with more energy efficient T-5 & T-8 lightbulbs in all 4 buildings.</p>

HOLMDEL TWP

Site ID: 4617
 HOLMDEL TWP
 4 CRAWFORDS CORNER EVERETT RD,
 HOLMDEL, NJ 077330410

Stewardship Activities	Date Acknowledged	Comments
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>3/14/08</p>	<p>Holmdel Township adopted a green policy. They will choose environmental alternatives for projects if it is cost effective.</p>

HOLMES BROTHERS

Site ID: HOLMES BROTHERS
 535202 86 JONATHAN HOLMES RD,
 CREAM RIDGE, NJ 08514

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	10/30/18	Stone drives are used throughout the farm to control weeds. Herbicide use is further reduced by employing no-till practices in their soybean fields. Cover crops and crop rotation also contributes to reduced herbicide and fertilizer use.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	10/30/18	No irrigation system on farm
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	10/30/18	No electric lighting on farm

JERSEY SHORE UNIVERSITY MEDICAL CENTER

Site ID: JERSEY SHORE UNIVERSITY MEDICAL CENTER
 14317 1945 CORLIES AVE, AKA RT 33
 NEPTUNE TWP, NJ 07753

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	6/9/15	Jersey Shore University Medical Center in April of this year worked with Risk Management and the Pharmacy to conduct a hazardous waste assessment and deemed it appropriate to remove Colloidion from there chemical inventory. This assessment is done annually to reduce the use and availability of hazardous chemicals.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	6/9/15	Jersey Shore University Medical Center Northwest Pavilion was built approximately 3 yrs. ago and was built to Gold LEED certification standards and maintains that criteria today.
11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.	6/9/15	Jersey Shore University Medical Center Northwest Pavilion was built approximately 3 yrs. ago and was built to Gold LEED certification standards and maintains that criteria today.
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	6/9/15	Jersey Shore University Medical Center provided this inspector with documentation from Stericycle Sharps Management Service showing a significant reduction to its carbon footprint from 2014 through 6/1/2015.

KACZOR MUM FARMS

Site ID: KACZOR MUM FARMS
 194625 121 RT 539,
 UPPER FREEHOLD TWP, NJ 08501

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	1/13/14	This farm uses drip irrigation on 7 acres of the facility for water reduction.

KAUFFMAN DOUGLAS

Site ID: KAUFFMAN DOUGLAS
 363529 123 COLTS NECK RD ,
 HOWELL, NJ 07727

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/11/18	Mechanical weed-control methods are used, rather than herbicides.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/11/18	Drip irrigation is used for all of his fields.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	7/11/18	Natural light is used all over the farm rather than electrical lighting.

KUBE PAK GARDEN PLANTS CORP

Site ID: KUBE PAK GARDEN PLANTS CORP
 18190 194 ALLENTOWN RED VALLEY RD, AKA RT 526
 UPPER FREEHOLD TWP, NJ 08514

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	12/16/13	This farm uses beneficial insects to control pests and yellow stick to capture insects. To control mice the farmer uses seeds mixed with peanut. This reduces the number of pesticides applied.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	12/16/13	The farmer has approximately 20 acres in drip irrigation to save water.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	12/16/13	The business has high efficiency fluorescents and LED lighting.

MAIN ONE MARINA INC

Site ID: MAIN ONE MARINA INC
 4753 1 MAIN ST,

Stewardship Activities	Date Acknowledged	Comments
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>11/21/13</p>	<p>The marina installed a passive solar system to heat the building. The permittee painted the outside of one of the walls black and installed a glass wall in front of it. The heated air in between the two walls is then blown into the building.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>11/21/13</p>	<p>Main One Marina is a certified NJ Clean Marina and has been certified since 7/11/06.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/11/08</p>	<p>The marina installed a passive solar system to heat the building. The permittee painted the outside of one of the walls black and installed a glass wall in front of it. The heated air in between the two walls is then blown into the building.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>8/11/08</p>	<p>NJ Clean Marina - The marina received a clean marina certification on 7/11/06.</p>

MARKET PLACE CLEANERS @ MARKET PLACE 2

Site ID: MARKET PLACE CLEANERS @ MARKET PLACE 2
 15258 RT 34,
 MATAWAN, NJ 07747

Stewardship Activities	Date Acknowledged	Comments
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	1/17/08	Market Place Cleaners has replaced its Perc based dry cleaning machine with an environmentally friendly isoparaffin hydrocarbon based machine.

MATAWAN BORO WATER DEPT

Site ID: MATAWAN BORO WATER DEPT
 58838 54 MIDDLESEX RD, 1/2
 MATAWAN BORO, NJ 07747

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	12/10/18	Facility completed a plant upgrade in June 2013 which now directs backwash water back to the head of the plant. This has resulted in 2.4 million gallons being recycled to the head of the plant annually.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	12/10/18	As part of the plant upgrade completed June 2013, the facility replaced the 3 motors on their booster pumps and 2 wells with variable frequency drive pumps. This has resulted in a net savings of electricity.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	12/10/18	Energy efficient lighting in use at plant.

<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>12/10/18</p>	<p>Solar panels installed in 2018 at water plant, police station and community resulting in 80 megawatts of power/year.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>8/22/17</p>	<p>Facility completed a plant upgrade in June 2013 which now directs backwash water back to the head of the plant. This has resulted in 2.4 million gallons being recycled to the head of the plant annually.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/22/17</p>	<p>As part of the plant upgrade completed June 2013, the facility replaced the 3 motors on their booster pumps and 2 wells with variable frequency drive pumps. This has resulted in a net savings of electricity.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/22/17</p>	<p>21 light fixtures within plant have energy efficient light bulbs.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>8/13/15</p>	<p>Facility completed a plant upgrade in June 2013 which now directs backwash water back to the head of the plant. This has resulted in 2.4 million gallons being recycled to the head of the plant annually.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/13/15</p>	<p>As part of the plant upgrade completed June 2013, the facility replaced the 3 motors on their booster pumps & 2 wells with variable frequency drive pumps. This has resulted in a net savings of electricity.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/13/15</p>	<p>21 light fixtures within plant have energy efficient light bulbs.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>8/7/13</p>	<p>Facility completed plant upgrade June 2013 which now directs backwash water back to the head of the plant. This has resulted in 308,000 gallons being recycled to the head of the plant just over the past 2 months.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/7/13</p>	<p>As part of the plant upgrade completed June 2013, the facility replaced the 3 motors on their booster pumps & 2 wells with variable frequency drive pumps. <p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/7/13</p>	<p>Replaced 21 light fixtures within the water plant with energy efficient light bulbs.</p>

MONMOUTH CNTY BAYSHORE OUTFALL AUTH BELFORD PUMP STATION

Site ID: MONMOUTH CNTY BAYSHORE OUTFALL AUTH BELFORD PUMP
 37591 STATION
 200 HARBOR WAY,
 BELFORD, NJ 07718

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	1/5/11	0.54-megawatt solar panel system installed at site.

MONMOUTH CNTY FLEET SERVICES

Site ID: MONMOUTH CNTY FLEET SERVICES
 4637 250 CENTER ST , & KOZLOSKI RD
 FREEHOLD TWP, NJ 07728

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/8/11	The county is working with the Department to reuse grey water through the 2 new wash bay they are constructing at the reclamation site. This is in addition to the original wash bay constructed as a pilot program and will allow the county to reuse 5,000 gallons of grey water.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	6/8/11	The county has built a salt dome in Wall township that provides smaller towns with shared access to the salt dome facility.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/16/09	The County has a wash bay that recycles the wash water and they are under contract to build two more.

MONMOUTH CNTY RECLAMATION CENTER

Site ID: MONMOUTH CNTY RECLAMATION CENTER
 15942 6000 ASBURY AVE, & SHAFTO RD
 TINTON FALLS, NJ 07753

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/27/17	The plant is now using plant wastewater effluent for flushing/cleaning the sanitary collection system and allows a savings of 160,000 gallons per year of potable water, which was previously purchased from Gordons Corner Water Company.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/5/11	Two solar powered aerators have been installed in the effluent lagoon that have resulted in the reduction of electricity used at the plant. Other solar projects and the construction of a co-generation facility are planned.

MONMOUTH RUBBER & PLASTICS CORP

Site ID: MONMOUTH RUBBER & PLASTICS CORP
 4506 75 LONG BRANCH AVE,
 LONG BRANCH, NJ 077577155

Stewardship Activities	Date Acknowledged	Comments
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	9/26/18	After Hurricane Sandy, new, more energy efficient boilers and lighting have been installed.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	9/26/18	All cutting and extrusion scraps are reused and incorporated into various final products. The Bondaflex process has reduced the need for over one million pounds of new rubber production at the Long Branch factory due to the use of Bondaflex for gasketing applications where virgin rubber would have been used. This process prevented 43.75 million pounds of scrap rubber from entering landfills.

10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	9/26/18	Monmouth sponsors the recycling of Eye glasses for the Oceanport Lions club. They distributed collection boxes they produced in Long branch Schools.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	11/1/13	New boilers that are more energy efficient. Post Hurricane Sandy addition.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	11/1/13	All cutting and extrusion scraps are reused and incorporated into various final products. The Bondaflex process has reduced the need for over one million pounds of new rubber production per year at the Long Branch factory due to the use of Bondaflex for gasketing applications where virgin rubber would have been used. This process has prevented over 35 million pounds of scrap rubber from entering landfills.
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	11/1/13	This program is still in its organizational stages. The facility was approached by the Sicomac PTO Environmental Committee Chairperson to see if they could and would recycle used rubber erasers. The facility is currently exploring a program they can utilize at the Long Branch facility. As more detailed plans on the program are established they will send them to the Dept. There will be no cost to the schools for this program.

15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	12/23/10	The facility has replaced the campus toilets and showerheads with low flow fixtures to reduce water usage. Also, a Web-base irrigation system is used that adjusts irrigation schedules based on need instead of time of day.

<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>12/23/10</p>	<p>In 2007, Monmouth University had implemented the use of hybrid vehicles for the security force and had purchased a solar powered golf cart for the construction department.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>12/23/10</p>	<p>Energy conservation measures include lighting occupancy sensors, lighting upgrades, energy saving compact fluorescent and LED bulbs, reflective window film, reflective cooled roofs, and mechanical equipment replacements or upgrades using more energy efficient equipment.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>12/23/10</p>	<p>Monmouth University conducts a program they call "Clean Ocean Action" in which university students volunteer their time to clean beaches, lakes, and streams to help reduce pollution of the water and land in the Long Branch area.</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>12/23/10</p>	
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>12/23/10</p>	<p>In 2007, Monmouth University began to implement the use of a 454 kw solar panel energy system of which is currently the largest solar power system on any college campus in the state of New Jersey. Since 2003, Monmouth University has been receiving 5% of it's electricity from wind power through an agreement (voluntary) that guaranteed they would buy electricity from a wind power company called New Wind Energy, from Delaware, which operates four wind farms (of which one is located in Pennsylvania) named "Somerset", "Mill Run", "Mountaineer", and "Waymart".</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/6/08</p>	<p>The facility has replaced the campus toilets and showerheads with low flow fixtures to reduce water usage.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? 10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	5/14/12	NJAWC has a speakers bureau to educate school and civic groups about such topics as water treatment, water quality, watershed protection and conservation. The company also has 2 water education vans (Puddles 1 & 2) for outdoor community events. http://www.amwater.com/files/Speakers%20Bureau%20-%20NJ.pdf
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	5/14/12	Available on the company website at http://www.amwater.com/corporate-responsibility/Environmental-Sustainability/Environmental-Policy-and-Performance/commitment-to-the-environment.html
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	5/14/12	Each facility is required to use an Environmental Management Plan System in tandem with an internal audit program. http://www.amwater.com/corporate-responsibility/Environmental-Sustainability/Environmental-Policy-and-Performance/approach-to-compliance.html
5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.	5/14/12	A Biennial Corporate Responsibility Report details the company's efforts in stewardship and sustainability. The full report is available on the company website at http://www.amwater.com/files/AMER0838_CR%20Report%202010_8_23.pdf
23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	5/14/12	
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	5/14/12	NJAWC recently constructed a 150 kW solar panel field at its Yellow Brook Treatment Plant which can supply ~1/3 of the power needed to operate the treatment plant.

Natural Gas STAR Program.	8/22/08	
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	8/22/08	See answer above. Facility has changed their generator status (Large Quantity Generators to Small Quantity Generators) on several of our sites. In addition, they now substitute less or non-hazardous materials for hazardous materials whenever possible.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>8/22/08</p>	<p>Yes, facility has changed several of their building lights to "green lights." They have motion sensors for many of their lights in several buildings. One of their buildings utilizes photo voltaic technology (application of solar cells for energy by converting sunlight directly into electricity). Currently, they are in the process of implementing an "Energy Management System" whereby variable speed equipment will be utilized to reduce energy consumption, etc.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>8/22/08</p>	<p>See NJR website www.njresources.com and Corporate Annual Report for information regarding their innovative programs. NJNG has aggressively promoted the benefits of energy efficiency through Conserve to Preserve since receiving approval of an innovative new rate design which allows them to encourage and reward conservation.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>8/22/08</p>	<p>http://www.njliving.com/community/education/energy-for-education.asp "Our Energy for Education program supports learning opportunities for students of all ages. We are helping students succeed in school and beyond, starting with programs that promote literacy to providing assistance with college and career preparation. Through our participation in the nationally-recognized Read Across America program, NJNG is teaching children about the joys of reading. We are also putting books into the hands of young children to engage their imagination and creativity through the Share-A-Story program. Our Project Venture mentoring program gives students the chance to experience the business world firsthand. Employee mentors work closely with school children in urban areas to emphasize the importance of education and prepare students for challenging careers. The recently established Project Venture Scholarship is helping these students to realize their potential with financial support for their higher education. Students in urban areas benefit from other NJNG-sponsored programs that encourage school achievement such as Scholastic Aptitude Test preparation classes and college field trips. KidBiz3000 is another program that has been successful in many school districts throughout our service territory. The internet-based learning tool helps to build reading, writing and technology skills. NJNG's Libraries On-Line program supports lifelong learning by offering faster and improved access to online information and communication at public libraries. The program has provided new equipment and high-speed Internet connections to libraries in Asbury Park, Long Branch, Red Bank, Keyport and Dover. Through these, and many other initiatives, we're helping to expand educational opportunities in our communities. Education opens the door to career success and personal fulfillment that last a lifetime".</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/22/08</p>	<p>Yes. Environmental Policy can be found on http://www.njng.com.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/22/08</p>	<p>Yes, facility has an environmental management system in place and is formalizing their best business practices. They also have a quality program. However, no certification such as ISO have been obtained.</p>

23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	8/22/08	Yes, WasteWise and Natural Gas STAR Program. http://wastewise.tms.icfi.com/report/awards.htm http://www.epa.gov/gasstar
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	8/22/08	Yes, as a member of WasteWise, NJR has a goal to purchase environmentally friendly or recycled content products. They also operate a "Reuse Center" for various supplies. All of their employees can use the Reuse Center.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	8/22/08	NJR became the single largest consumer of renewable energy by purchasing 100 % of their electricity from renewable energy sources. This will eliminate 4,000 tons of CO2 emissions annually.

12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	12/4/09	Neptune Township School District has incorporated green building design concepts in the planning and development of several schools in the Neptune School District.
11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.	12/4/09	LEED Platinum design registered project - Neptune Midtown Community Elementary School. In addition, Neptune Twp. Summerfield Elementary School is a LEED certified "Gold" building.

Stewardship Activities	Date Acknowledged	Comments
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/13/19</p>	<p>The reuse of effluent within treatment plant process: such as tank washing, process sprays, foam control, etc. In addition, TOSA allows Ocean Twp. to use their wash pad and process water for washing their salt & snow trucks, dump trucks, snow plows & street sweepers. Approximately 222.2 MG of reused water was utilized during 2018.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/13/19</p>	<p>the township installed VFDs(variable frequency drives) on aerator motors for UNOX system. Old motors were constant speed. New VFD motors run based on need which results in an overall energy use reduction. Most of the motors went on-line in October 2011, but they installed VFDs on main pumps during 2015 and then installed VFD's for Return Activated Sludge pumps during 2016. In addition, the two 150 hp blowers were replaced with three 100 hp blowers. Only 1 blower is normally required to run during normal operations. Still they have 300 hp capacity if needed but normal operations reduced from 150 hp to 100 hp, resulting in an overall energy use reduction. As of 2018, all Waste Activated Sludge Pumps and Return Sludge Pumps were replaced with VFDs. In addition, TOSA is adding polymer to their secondary clarifiers which resulted in 57 less truck loads of sludge leaving the plant in 2018 than 2017 due to the increase in % solids.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/13/19</p>	<p>Approximately 9 tons of scrap metal is recycled each year. In addition, metal 150 drums were sent to Rahway Steel & Recycling 15 polymer totes were recycled back to the distributor to reuse metal for new totes.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/13/19</p>	<p>The township utilizes a golf cart for on-site transportation which uses only 5 gallons of gasoline every 2 weeks instead of 25 gallons/week as with a car or truck. TOSA is adding polymer to their secondary clarifiers which resulted in 57 less truck loads of sludge leaving the plant in 2018 than 2017 due to the increase in % solids.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>2/13/19</p>	<p>Installed LED lighting in the lab and board room in 2018.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>2/13/19</p>	<p>Tour given to Manalapan High School students.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/23/17</p>	<p>The reuse of effluent within treatment plant process: such as tank washing, process sprays, foam control, etc. In addition, TOSA allows Ocean Twp. to use their wash pad and process water for washing their salt & snow trucks, dump trucks, snow plows & street sweepers. Approximately 189.7 MG of reused water was utilized during 2016.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/23/17</p>	<p>the township installed VFDs(variable frequency drives) on aerator motors for UNOX system. Old motors were constant speed. New VFD motors run based on need which results in an overall energy use reduction. Most of the motors went on-line in October 2011, but they Installed VFDs on main pumps during 2015 and then Installed VFD's for Return Activated Sludge pumps during 2016. In addition, the two 150 hp blowers were replaced with three 100 hp blowers. Only 1 blower is normally required to run during normal operations. Still they have 300 hp capacity if needed but normal operations reduced from 150 hp to 100 hp, resulting in an overall energy use reduction.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>3/23/17</p>	<p>Approximately 9 tons of scrap metal is recycled each year. In addition, plastic drums (6-12/yr.) are given to Ocean Twp.'s Parks & Recreation Dept. for use as trash cans.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/23/17</p>	<p>The township utilizes golf carts for on-site transportation which uses only 5 gallons of gasoline every 2 weeks instead of 25 gallons/week as with a car or truck.</p>

<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/23/17</p>	<p>The facility continues to provide lectures on wastewater treatment along with tours of the plant to Brookdale College. 5 tours were given during 2016.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>2/29/16</p>	<p>Reuse of effluent within treatment plant process, such as tank washing, process sprays, foam control, etc. In addition, TOSA allows Ocean Twp. to use their wash pad and process water for washing their salt & snow trucks, dump trucks, snow plows & street sweeper. Approximately 197.1 MG of reuse water was utilized during 2015.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/29/16</p>	<p>Installed VFDs(variable frequency drives) on aerator motors for UNOX system. Old motors were constant speed. New VFD motors run based on need which results in an overall energy use reduction. These motors went on-line in October 2011. Installed VFDs on main pumps during 2015. In addition, the two 150 hp blowers were replaced with three 100 hp blowers. Only 1 blower is normally required to run during normal operations. Still have 300 hp capability if needed but normal operation reduced from 150 hp to 100 hp resulting in an overall energy use reduction.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>2/29/16</p>	<p>Approximately 9 tons of scrap metal is recycled each year. In addition, plastic drums (6-12/yr.) are given to Ocean Twp.'s Parks & Recreation Dept. for use as trash cans.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>2/29/16</p>	<p>propane golf cart is used for on-site transport.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>2/29/16</p>	<p>Facility continues to provide lectures on wastewater treatment along with tours of the plant to Brookdale College. 13 tours were given during 2015.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/18/15</p>	<p>Continued water use reduction reflected in previous reports. Reuse of effluent within treatment plant process, such as tank washing, process sprays, foam control, etc. In addition, TOSA allows Ocean Twp. to use their wash pad and process water for washing their salt & snow trucks, dump trucks, snow plows & street sweeper.</p>

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/18/15</p>	<p>Installed VFDs(variable frequency drives) on aerator motors for UNOX system. Old motors were constant speed. New VFD motors run based on need which results in an overall energy use reduction. These motors went on-line in October 2011. In addition, the two 150 hp blowers were replaced with three 100 hp blowers. Only 1 blower is normally required to run during normal operations. Still have 300 hp capability if needed but normal operation reduced from 150 hp to 100 hp resulting in an overall energy use reduction.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/18/15</p>	<p>Scrap metal is recycled. In addition, plastic drums (6-12/yr.) are given to Ocean Twp.'s Parks & Recreation Dept. for use as trash cans and to Brookdale Community College to make into rain barrels.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/18/15</p>	<p>propane golf cart is used for on-site transport</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/18/15</p>	<p>Facility continues to provide lectures on wastewater treatment along with tours of the plant to Brookdale College. 15 tours were given during 2014.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>4/9/14</p>	<p>Continued water use reduction reflected in previous reports. Reuse of effluent within treatment plant process, such as tank washing, process sprays, seal water for pumps, foam control, etc. In addition, TOSA allows Ocean Twp. to use their wash pad and process water for washing their salt & snow trucks, dump trucks, snow plows & street sweeper.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/9/14</p>	<p>Installed VFDs(variable frequency drives) on aerator motors for UNOX system. Old motors were constant speed. New VFD motors run based on need which results in an overall energy use reduction. These motors went on-line in October 2011.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>4/9/14</p>	<p>Scrap metal is recycled. In addition, plastic drums (6-12/yr.) are given to Ocean Twp.'s Parks & Recreation Dept. for use as trash cans. During 2014 some of these drums will be given to Brookdale Community College to make into rain barrels.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>4/9/14</p>	<p>purchased propane golf cart for on-site transport. pick-up truck was previously used.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>4/9/14</p>	<p>Facility continues to provide lectures on wastewater treatment along with tours of the plant to Brookdale College and Ocean Twp. High School. 27 tours were given during 2013.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/28/13</p>	<p>Continued water use reduction reflected in previous reports. Reuse of effluent within treatment plant process, such as tank washing, process sprays, seal water for pumps, foam control, etc.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>3/28/13</p>	<p>Installed VFDs(variable frequency drives) on aerator motors for UNOX system. Old motors were constant speed. New VFD motors run based on need which results in an overall energy use reduction. These motors went on-line in October 2011.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/28/13</p>	<p>Facility continues to provide lectures on wastewater treatment along with tours of the plant to Brookdale College, Monmouth University, Ocean Twp. High School and Boy Scout Troops.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/3/12</p>	<p>Continued water use reduction reflected in previous reports. Reuse of effluent within treatment plant process, such as tank washing, process sprays, seal water for pumps, foam control, etc.</p>

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/3/12</p>	<p>Installed VFDs(variable frequency drives) on aerator motors for UNOX system. Old motors were constant speed. New VFD motors run based on need which results in an overall energy use reduction. These motors went on-line in October 2011.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/3/12</p>	<p>Facility continues to provide lectures on wastewater treatment along with tours of the plant to Brookdale College, Monmouth University, Ocean Twp. High School and Boy Scout Troops.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/31/11</p>	<p>Continued water use reduction reflected in previous reports. Reuse of effluent within treatment plant process, such as tank washing, process sprays, seal water for pumps, foam control, etc.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/31/11</p>	<p>Facility continues to provide lectures on wastewater treatment along with tours of the plant to Brookdale College, Monmouth University, Ocean Twp. High School and Boy Scout Troops.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/9/10</p>	<p>Continued water use reduction reflected in previous reports. Reuse of effluent within treatment plant process, such as tank washing, process sprays, seal water for pumps, foam control, etc.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/9/10</p>	<p>Facility has provided lectures on wastewater treatment along with tours of the plant to Brookdale College, Monmouth University, Ocean Twp. High School and Boy Scout Troops.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/26/09</p>	<p>Same stewardship activities as reflected in last fiscal year's report. Reuse of effluent within treatment plant process, such as tank washing, process sprays, seal water for pumps, foam control, etc.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/19/08</p>	<p>Reuse of effluent within treatment plant process, such as tank washing, process sprays, seal water for pumps, foam control, etc.</p>

PATTERSON GREENHOUSES

Site ID: PATTERSON GREENHOUSES
 407979 636 ADELPHIA RD,
 FREEHOLD TWP, NJ 07728

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	7/11/18	To reduce hazardous materials, they scout for pests before spraying, they use stone drives to keep weeds down, and they use mechanical means in the field to control weeds rather than herbicides. They have also used beneficial insects to control pest populations.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	7/11/18	To reduce water use, they use drip irrigation.

PLEASANT RUN NURSERY

Site ID: PLEASANT RUN NURSERY
 342698 93 ELLISDALE RD,
 UPPER FREEHOLD TWP, NJ 08501

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	12/20/13	The nursery participates in an Integrated Pest Management (IPM) program with Rutgers University to control pests and reduce pesticide use. Weeds are cut mechanically, reducing the need for herbicide applications. Beneficial insects are used to control insect pest populations, reducing the need for insecticide applications.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	12/20/13	Some areas utilize a drip irrigation system, conserving the total amount of water necessary to sufficiently irrigate the crop.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	12/20/13	The business uses energy efficient, T5 fluorescent lighting.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	12/20/13	The farmer uses solar panels for the business, a renewable energy source.

ROSANO HOWELL LAND

Site ID: ROSANO HOWELL LAND
15684 360 ASBURY AVE, AKA RT 547
HOWELL, NJ 07731

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	12/5/12	signed 7/9/12, implemented accordingly

RUMSON BORO HALL COMPLEX & GARAGE

Site ID: RUMSON BORO HALL COMPLEX & GARAGE
4120 80 E RIVER RD,
RUMSON, NJ 07760

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	5/22/08	Rumson has incorporated green building practices for the new Borough Hall that will be built. They will be using energy efficient lighting, cooling and building design. They will also be using some recycled building materials. The stormwater runoff from the new building will be directed to an underground trench to reduce stormwater runoff.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	5/22/08	Rumson installed a stormwater system for the newly built parking lot at Borough Hall. The system consists of large pipes underground which will store most of the stormwater runoff from the parking lot. During heavy rains the stormwater runoff will be slowed down and overflow to a stormceptor which will remove oil and allow settling before being discharged to the river.

SANITARY COAT APRON & TOWEL SUPPLY INC

Site ID: SANITARY COAT APRON & TOWEL SUPPLY INC
4273 1100 6TH AVE,
NEPTUNE TWP, NJ 07753

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	5/6/14	changed boiler fuel from oil to natural gas, a cleaner burning fuel
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	5/6/14	switched surfactant to one that utilizes less water. approx. 200,000-300,000 gallons less/month is being used.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/6/14	all pumps within the facility are variable frequency drives (VFDs)
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	5/6/14	changed all lights in the plant to energy efficient fluorescent lighting

SHORELANDS WTP 1

HAZLET, NJ 07730

Stewardship Activities	Date Acknowledged	Comments
------------------------	-------------------	----------

<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/7/18</p>	<p>Implementation of membrane filtration technology resulted in 100% reclamation of water. Prior to this the site would discharge 15 MG/Year of backwash water to the Creek. In addition, the filtration system results in only a 20 MG loss/year of water during system flushing in comparison to 40-50 MG/year. Installation of the membrane filtration system has continued to result in a 35 MG/year total water use reduction.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/7/18</p>	<p>Every pump greater than 50hp at water plant #2 was outfitted with a variable frequency drive motor during 2013. This has resulted in approximately 15% energy use reduction each year.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/7/18</p>	<p>Iron sludge continues to be land applied instead of going to a landfill. Approx. 650 metric tons of sludge was not landfilled during 2017.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/7/18</p>	<p>All lighting at Plant #1 was changed to higher efficiency bulbs in February 2018.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/23/16</p>	<p>Implementation of membrane filtration technology resulted in 100% reclamation of water. Prior to this the site would discharge 15 MG/Year of backwash water to the Creek. In addition, the filtration system results in only a 20 MG loss/year of water during system flushing in comparison to 40-50 MG/year. Installation of the membrane filtration system has resulted in a 35 MG/year total water use reduction.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/23/16</p>	<p>Every pump greater than 50hp at water plant #2 was outfitted with a variable frequency drive motor during 2013. This has resulted in approximately 15% energy use reduction each year.</p>

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/23/16</p>	<p>Iron sludge continues to be land applied instead of going to a landfill. Approx. 250-300 metric tons of sludge is no longer being landfilled.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/23/16</p>	<p>All lighting at Plant #2 was changed to higher efficiency bulbs, from T-12 to T-8 during 2014.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/15/15</p>	<p>Implementation of membrane filtration technology resulted in 100% reclamation of water. Prior the site would discharge 15 MG/Year of backwash water to the Creek. In addition, the filtration system results in only a 20 MG loss/year of water during system flushing in comparison to 40-50 MG/year. Installation of the membrane filtration system has resulted in a 35 MG/year total water use reduction.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/15/15</p>	<p>Same activity reflected in last report. Every pump greater than 50hp at water plant #2 has been outfitted with a variable frequency drive motor. This has resulted in approximately a 15% energy use reduction.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/15/15</p>	<p>Iron sludge is land applied instead of going to a landfill. Approx. 250-300 metric tons of sludge is no longer being landfilled.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/15/15</p>	<p>All lighting at Plant #2 was changed to higher efficiency bulbs, from T-12 to T-8</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/29/14</p>	<p>Same activity reflected in previous reports. Implementation of membrane filtration technology resulted in 100% reclamation of water. Prior the site would discharge 15 MG/Year of backwash water to the Creek. In addition, the filtration system results in only a 20 MG loss/year of water during system flushing in comparison to 40-50 MG/year. Installation of the membrane filtration system has resulted in a 35 MG/year total water use reduction.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/29/14</p>	<p>Same activity reflected in last report. Every pump greater than 50hp at water plant #2 has been outfitted with a variable frequency drive motor. This has resulted in approximately a 15% energy use reduction.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>5/29/14</p>	<p>Iron sludge is land applied instead of going to a landfill. Approx. 250-300 metric tons of sludge is no longer being landfilled.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/29/14</p>	<p>All lighting at Plant #2 was changed to higher efficiency bulbs, from T-12 to T-8</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/20/13</p>	<p>Same activity reflected in previous reports. Implementation of membrane filtration technology resulted in 100% reclamation of water. Prior the site would discharge 15 MG/Year of backwash water to the Creek. In addition, the filtration system results in only a 20 MG loss/year of water during system flushing in comparison to 40-50 MG/year. Installation of the membrane filtration system has resulted in a 35 MG/year total water use reduction.</p>

<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>5/20/13</p>	<p>Every pump greater than 50hp at water plant #2 has been outfitted with a variable frequency drive motor. This has resulted in approximately a 15% energy use reduction.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/30/12</p>	<p>Same stewardship activities reflected in last year's report. Implementation of membrane filtration technology resulted in 100% reclamation of water. Prior the site would discharge 15 MG/Year of backwash water to the Creek. In addition, the filtration system results in only a 20 MG loss/year of water during system flushing in comparison to 40-50 MG/year. Installation of the membrane filtration system has resulted in a 35 MG/year total water use reduction.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/25/11</p>	<p>Same stewardship activities reflected in last year's report. Implementation of membrane filtration technology resulted in 100% reclamation of water. Prior the site would discharge 15 MG/Year of backwash water to the Creek. In addition, the filtration system results in only a 20 MG loss/year of water during system flushing in comparison to 40-50 MG/year. Installation of the membrane filtration system has resulted in a 35 MG/year total water use reduction.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/25/10</p>	<p>Same stewardship activities reflected in last year's report. Implementation of membrane filtration technology resulted in 100% reclamation of water. Prior the site would discharge 15 MG/Year of backwash water to the Creek. In addition, the filtration system results in only a 20 MG loss/year of water during system flushing in comparison to 40-50 MG/year. Installation of the membrane filtration system has resulted in a 35 MG/year total water use reduction.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>5/28/09</p>	<p>Same stewardship activities reflected in last year's report. Implementation of membrane filtration technology resulted in 100% reclamation of water. Prior the site would discharge 15 MG/Year of backwash water to the Creek. In addition, the filtration system results in only a 20 MG loss/year of water during system flushing in comparison to 40-50 MG/year. Installation of the membrane filtration system has resulted in a 35 MG/year total water use reduction.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>6/17/08</p>	<p>Implementation of ultra membrane filtration technology resulted in 100% reclamation of water. Previously, the site would discharge 15 MG/year of backwash water to the creek. In addition, the new treatment system results in only a 20 MG loss per year of water during system flushing in comparison to 40-50 MG/year. Upgrade to treatment system results in a 35 MG/year total water use reduction.</p>

SMILE CLEANERS

Site ID: SMILE CLEANERS
60364 300 RT 516,
MATAWAN, NJ 07747

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	11/9/12	Co. has converted this site location from a perc dry cleaning operation to strictly a shirt only wet cleaning establishment

SPECIALITY PLANTS OF NJ

Site ID: SPECIALITY PLANTS OF NJ
497520 123 RT 539,
UPPER FREEHOLD TWP, NJ 08501

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	1/13/14	This business uses drip irrigation system to conserve water.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	1/13/14	This farm uses fluorescent lighting T5 inside the facility to save energy

STAVOLA ASPHALT CO INC HOWELL FACILITY

Site ID: STAVOLA ASPHALT CO INC HOWELL FACILITY
 15948 104 YELLOWBROOK RD, YELLOWBROOK RD
 HOWELL, NJ 077010000

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	12/5/12	signed 7/9/12, implemented accordingly

STAVOLA ASPHALT CO INC MILLSTONE FACILITY

Site ID: STAVOLA ASPHALT CO INC MILLSTONE FACILITY
 15949 120 OLD BERGEN MILLS RD,
 MILLSTONE TWP, NJ 08535

Stewardship Activities	Date Acknowledged	Comments
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	12/4/12	signed 7/9/12, implemented accordingly

STAVOLA ASPHALT RECYCLING PLANT

Site ID: STAVOLA ASPHALT RECYCLING PLANT
4214 175 HAMILTON RD, & HAMILTON RD
TINTON FALLS, NJ 07724

Stewardship Activities	Date Acknowledged	Comments
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	12/5/12	Four milling machines have been retrofitted with diesel particulate filters.
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	12/5/12	signed 7/9/12, implemented accordingly.

ST MARYS CATHOLIC CHURCH

Site ID: ST MARYS CATHOLIC CHURCH
62485 1 PHALANX RD, & RT 34
COLTS NECK, NJ 07722

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	9/28/16	Solar farm was completed in 2012, with 155kW/182,000 kWh which accounts for approximately 90% of the church's annual consumption.

TINTON FALLS BORO

Site ID: TINTON FALLS BORO
4215 556 TINTON AVE,
TINTON FALLS, NJ 07724

Stewardship Activities	Date Acknowledged	Comments
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	7/7/14	The Community outreach program goes above and beyond the requirements of the stormwater permitting program by including energy conservation, waterway protection, litter prevention, recycling, and addressing solid and hazardous waste in outreach programs including the township newsletter.

US DEPT OF INTERIOR OHMSETT @ EARLE NAVAL WEAPONS STATION WATER FRONT

Site ID: US DEPT OF INTERIOR OHMSETT @ EARLE NAVAL WEAPONS
37639 STATION WATER FRONT
RT 36,
MIDDLETOWN TWP, NJ 07737

Stewardship Activities	Date Acknowledged	Comments
10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.	5/23/12	Students from two local high tech High Schools visit site periodically for tours. The facility tests and improves equipment and techniques to remove oil from marine environments. Its daily operations help to minimize environmental degradation from oil spills.

USDOD ARMY FORT MONMOUTH

Site ID: USDOD ARMY FORT MONMOUTH
52410 WAYSIDE AREA,
TINTON FALLS, NJ 07703

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	3/19/08	The wash bays on base are completely recycling water.

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>3/19/08</p>	<p>The base has two dormitories that are using geothermal power to heat the buildings. The actual square footage is 1,660,865 square feet. In addition, the base has a lighting program that has 19 buildings totaling 1,248,036 square feet that use energy efficient fixtures, electronic ballasts and T8 lamps. Using these fixtures have resulted in improve lighting and lower maintenance costs.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>3/19/08</p>	<p>Yes, they have worked with the local Boy Scout troop to build the Osprey nest so they could get their Eagle Badges.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/19/08</p>	<p>Yes, and was signed by the DPW, Mrs. Barbara Folk. The base will declare conformance with ISO-14000 in 2009. They also have the EMS system.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/19/08</p>	<p>The base utilizes an EMS system and has a designated contact - John McCarthy.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>3/19/08</p>	<p>Yes, federal policy provides guidance for purchase of environmentally friendly and energy efficient products.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>3/19/08</p>	<p>Any contractors/vendors that come on base get information on the base's environmental program.</p>

USDOD EARLE NAVAL WEAPONS STATION

Site ID: USDOD EARLE NAVAL WEAPONS STATION
14806 201 RT 34,
COLTS NECK, NJ 07722

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	5/22/13	<p>NWS Earle has a Consolidated Hazardous Material Reutilization and Inventory Management Program (CHRIMP) Center for 'cradle to grave' management of Hazardous Material. The CHRIMP Center is managed by the Earle Fleet Logistics Center (FLC). FLC Earle uses the Regional Hazardous Inventory Control System (RHICS), a state-of-the-art, web-enabled application designed to provide inventory management and limited environmental reporting. RHICS allows for the use of a station-owned HAZMAT inventory which facilitates re-use of hazardous materials that would otherwise be sent to the waste stream. RHICS also provides online ordering capability directly from the customer as well as total asset visibility of all inventory held RHICS in wherever it may be, from Japan to the Mediterranean. Reducing solvent use, especially in parts washers is also an EMS Objective and Target. Aqueous-based parts washers, purchased through the Navy Pollution Prevention and Qualified Recycling Programs, are being used in various industrial buildings on Station.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	5/22/13	<p>a. Recycling and Reuse. In FY-2012, NWS Earle achieved a solid waste diversion rate of 86%. This is well above the Executive Order 13514 goal of 50% by 2015. This achievement is a direct result of establishing a centralized recycling/waste collection center which allowed consolidation of container requirements, increased recycling awareness, and reduced refuse disposal costs by 30%. NWS Earle is also capturing more of the recyclable and reusable materials such as; wood, steel, asphalt, concrete, green waste, and tires generated through various daily work and renovation and demolition projects. NWS Earle has one of the highest solid waste diversion rates within the Navy. b. Hazardous Material Reuse. As described in the Question #14 response, Hazardous Material reuse is also accomplished through the FLC Earle CHRIMP Center and the supporting RHICS Program. RHICS tracks hazardous material inventories and allows the user the build and maintain an inventory, issue material from a centralized location, and receive usable excess material from ashore Hazardous Material Minimization Centers throughout the Navy.</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	5/22/13	<p>An Energy Life Cycle Assessment (LCA) and Cost Analysis is included in the January 2008 Detailed Energy Study (DES) of NWS Earle and subsequent energy studies ongoing. As a result of the study, conducted by New Jersey Natural Gas and CCI, Inc., NWS Earle selected the Utilities Energy Services Contract (UESC) "demand side management" program as the means for prioritizing the efficient use of energy at the facility. Significant energy improvements have been incorporated through equipment replacement/ rehabilitation, lighting replacement, HVAC thermostatic upgrades, and DDC controls automation.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	5/22/13	<p>Green building design and Low Impact Development (LID) initiatives were incorporated in the building design specification for the new Main Gate Security Building. LEED Gold certification was achieved for this project. Furthermore it is policy to incorporate LID into any major renovation projects or projects with a storm water management component.</p>

<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>5/22/13</p>	<p>Oyster Reef Restoration - Working with the NY/NJ Bay keeper and Rutgers University, the Station is providing a secure site to test/develop optimal methods of reestablishing oyster reefs within Raritan Bay. Feasibility studies completed in 2012 proved that water conditions will support oyster growth. The 2013 season will see the placement of the first support structures in the bay. The ultimate goal is creation of extensive natural reefs across the Hudson/Raritan Estuary. Additionally, controlled burning was used to improve and restore grassland habitat for the State listed species, grasshopper sparrow.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>5/22/13</p>	<p>1) Annually in recognition of Earth Day, environmental representatives visit the Station Child Development Center and provide educational material on environmental issues and tree planting. The outreach visit included distribution of Earth Day coloring books, stickers, magnets and whale identification wheels. 2) NWS Earle continues to support the Adopt-a Highway Program by collecting trash along the highway that borders NWS Earle. 3) Quarterly Community Receptions are held at NWS Earle to invite local community leaders and organizations onsite to discuss various activities and environmental issues affecting Earle and the adjoining community.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>5/22/13</p>	<p>NWS Earle has a written and signed environmental policy. The Station's environmental policy goes beyond compliance by committing to preventing pollution, minimizing waste, encouraging continuous process improvement, and increasing environmental awareness through communication. The policy is disseminated Station wide through EMS posters, official bulletin boards, brochures, business cards, and periodic articles submitted to the base newspaper and plan of the week. The policy is also made available to the public through the Naval Facilities Engineering Command and Commander Naval Installations Command (CNIC) websites.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>5/22/13</p>	<p>NWS Earle has a fully conforming ISO 14001 Environmental Management Policy System. An inventory of Station buildings, locations, processes, practices and activities has been conducted and documented. Environmental aspects have been identified and ranked for significance. Significant aspects and their operational controls have been identified and made available to Station departments and commands. Environmental objectives and targets have been established and their progress tracked. Annual environmental compliance and EMS audits are conducted annually. Results are reviewed with senior management at least annually. In April 2012, an audit team from Naval Facilities Engineering Command Atlantic and Mid-Atlantic conducted a 2nd Party EMS Conformance Audit. Based on the results of that audit, NWS Earle re-declared conformance with the ISO 14000 standard in August 2012 in a written memorandum to the Chief of Naval Operations (N45). Regional external environmental audits of the activity EMS will be conducted every three years to ensure continual improvement and sustainability.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>5/22/13</p>	<p>NAVFAC Telework Program. Naval Facilities Engineering Command, Public Works Earle established and has made available to employees, a telework program allowing work from home on an established schedule. The program policy, summary and rules have been communicated to affected employees. Forty-five (45) PWD Earle employees have been provided the opportunity and required equipment to work from home. Employee teleworking has been an overall success story.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>5/22/13</p>	<p>NWS Earle distributed a Green Procurement Survey to procurement agents and government credit card holders on Station. An Environmental purchasing clause is incorporated in renovation and demolition contract specifications. A Station-wide written green procurement instruction is currently in draft form. In the meantime, DOD and Navy green procurement policy is communicated to Station personnel through environmental awareness training, and base newspaper and Plan of the Week articles. Station departments and commands are required to purchase 30% recycled content office paper and follow federal guidelines for green procurement. Training on this policy provided to all purchase cardholders on Station.</p>

<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>5/22/13</p>	<p>Green building design and Low Impact Development (LID) initiatives were incorporated in the building design specification for the new Main Gate Security Building. LEED Gold certification was achieved for this project.</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>5/22/13</p>	<p>The main entrance building to the facility is using solar power. The Station is also participating in the Navy's Net Zero program, which seeks to generate 100% of the total electric use either by on station alternate generation capacity or through direct purchase. The Navy is in preliminary negotiations with Montauk Energy, which operates a 10 MW gas turbine plant at the Monmouth County Landfill. Under consideration is a plan to route that alternate energy directly to the main navy substation, which would bring fossil fuel generated power requirements to zero. Additionally a study is currently ongoing at the Earle waterfront to look at the potential for wind energy to supply the waterfront operations.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>5/22/13</p>	<p>An accounting of Greenhouse gases was completed in 2009 as part of the analysis for the EPA Mandatory Reporting of Greenhouse Gases rule.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>5/22/13</p>	<p>Use of sound business practices and procurement and use of environmentally preferable products and services are requirements built into NWS Earle renovation, demolition and service contract specifications. Procurement and acquisition personnel are directed to environmental preferable products and services when ordering through the Government Services Administration (GSA) website.</p>
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>9/4/09</p>	<p>Earle Naval Weapons Station has implemented a Consolidated Hazardous Material Reutilization and Inventory Management Program (CHRIMP) Center for "cradle to grave" management of hazardous materials utilizing the Regional Hazardous Inventory Control System. Aqueous-based parts washers are being used in various industrial buildings at Earle Naval Weapons Station resulting in reduced solvent use.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>9/4/09</p>	<p>Earle Naval Weapons Station has implemented a Consolidated Hazardous Material Reutilization and Inventory Management Program (CHRIMP) Center for "cradle to grave" management of hazardous materials utilizing the Regional Hazardous Inventory Control System. This system effectively tracks and manages inventories, issues materials from a centralized location and receives usable excess materials from Hazardous Material Minimization Centers throughout the Navy for reuse.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/4/09</p>	<p>Green Building design and Low Impact Development initiatives are incorporated in the building design specifications for the new Security Pass & ID Office.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>9/4/09</p>	<p>Earle Public Works Department participated in a environmental exposition in April 2009. In celebration of Arbor Day, pine seedlings were distributed. Earth Day celebration and Adopt -A Highway programs sponsored and supported by Earle Naval Weapon Station</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/4/09</p>	<p>Earle Naval Weapons Station has a written and signed environmental policy.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>9/4/09</p>	<p>Earle NWS has a fully conforming ISO 14001 Environmental Management System.</p>
<p>17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.</p>	<p>9/4/09</p>	<p>Naval Facilities Engineering Command, Public Works Earle established and has made available to employees a telework program allowing work from home one day during a 2-week pay period.</p>
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>9/4/09</p>	<p>Earle NWS has a Green Procurment policy.</p>

<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>9/4/09</p>	<p>Earle NWS Security Pass and ID Office, Building C-1 is a registered LEED project.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>9/4/09</p>	<p>Use of sound business practices and procurement and use of environmentally preferable products and services are requirements specified in Earle NWS renovation, demolition and service contracts.</p>

WALLSTEN FARM

Site ID: 128130
 WALLSTEN FARM
 NEW CANTON STONE TAVERN & SHARON STATION,
 UPPER FREEHOLD TWP, NJ 08501

Stewardship Activities	Date Acknowledged	Comments
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>6/13/16</p>	<p>Has 25 year lease with solar company which installed approx. 20 acres of solar panels that produce approx. 3 megawatts of power to the grid at peak capacity.</p>

115 SJ INVESTORS

Site ID: 115 SJ INVESTORS
 17930 115 S JEFFERSON RD,
 HANOVER, NJ 07981

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	3/11/16	Recent low water flow devices added to their numerous bathrooms etc. have resulted in a claimed savings of 1 million gallons/yr.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	3/11/16	LED and other energy saving lighting installed in the past years for their 45 story buildings.

36 NEWBURGH ROAD INDUSTRIAL BUILDING

Site ID: 36 NEWBURGH ROAD INDUSTRIAL BUILDING
 89551 36 NEWBURGH RD,
 WASHINGTON TWP, NJ 07840

Stewardship Activities	Date Acknowledged	Comments
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/18/15	Lights and heat are on an energy management system. A computerized control with an on / off switch covers the lights and HVAC. This was installed 7-8 years ago with a 30% reduction in power useage. In 2007 4.4 mm Kwh were used. In 2014 3.0 mm Kwh used.

<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>6/18/15</p>	<p>Reuse pc boards, recycle materials from bad units into new units. Liquid nitrogen usage has been reduced by changing out the piping, installing a V jacket piping. This has reduced the leakage.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/18/15</p>	<p>Two employees have electric vehicles and company supplies the power.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>6/18/15</p>	<p>Approximately 20 acres within the property were preserved (by the company) and have provided a walking trail for the employees.</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>6/18/15</p>	<p>Made available to customers but not posted on website. There is an environmental compliance matrix, liquid nitrogen use matrix and an electricity matrix that is used and posted on the wall in the office.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>8/27/08</p>	<p>The site has implemented a plan to reduce electrical power consumption. From data collected so far for 2008, consumption is down 4.5% from where it was in 2007. Facility specifically has implemented changes to the buildings thermostats, which are set to automatically turn down at night, as well as on the weekends. In addition the lights in the production area are set on a timer.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/27/08</p>	<p>http://www.tdi-power.com/PDF/iso/TDIenvironment.pdf In addition facility showed me an additional paper copy they had which is signed off on by senior officers.</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/27/08</p>	<p>TDI has a EMS plan in place to meet the requirements of ISO14001. Site is ISO14000 certified.</p>

 DOVER, NJ 07801

Stewardship Activities	Date Acknowledged	Comments
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	1/4/11	The Agra facility doubled its size in 2010 and implemented green building techniques to reduce the carbon foot print for the entire lab. Construction elements included: 1) sustainable flooring products - cork, bamboo and Marmoleum flooring, 2) wall paint included "No VOC" paints critical for proper laboratory operation, 3) roofing products included white EPDM material for maximum heating and cooling efficiency, 4) Anderson "Renewal" energy efficient windows, 5) Recycled indoor ceiling tiles, recycled outdoor brick, 6) landscape design plan consisting of "native only" plants, 7) green electrical switches for maximum energy efficiency and Solar Power.

ALGONQUIN GAS TRANSMISSION CO

Site ID: 15591

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/19/17	To reduce hazardous materials, weeds are cut mechanically and leaves are incorporated into the soil as a conservation practice and natural fertilizer. The farmer uses integrated pest management (IPM) to handle pests. The fields are monitored to detect pest infestation in the crops and the pesticide mixing area has a containment pad.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/19/17	To save water, 400 acres have a drip irrigation system as well as rain water from the barns are connected directed to a irrigation pond.
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	4/19/17	To save energy, the business as installed high efficiency appliances and are using LED lighting.

ANTHONY AGUDELO LANDSCAPING

14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/24/13	The applicator engages in the use of organic products such as mulch to reduce the amount of chemical pollution of the environment.
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	4/24/13	The applicator engages in the use of organic products such as mulch to reduce the amount of pesticide usage; thereby reducing the amount of chemical pollution of the environment .
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	4/24/13	The business engages in the use of organic products such as mulch to reduce the amount of pesticide usage; thereby reducing the amount of chemical pollution of the environment .
Reduced Risk for Conventional Pesticides.	4/24/13	Risk reduction is achieved by the use of PPE (personal protective equipment).

542872 160 PARK AVE, BLDG 103
FLORHAM PARK, NJ 07932

Stewardship Activities	Date Acknowledged	Comments
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/16/13	In Building 104 the sinks, toilets and urinals all have motion sensors on them to conserve water. Water Coolers have been changed over since 2009 to more efficient cooling towers. Old cooling towers used to be wooden and not very efficient. The newer cooling towers are smaller and made of metal and have Variable Frequency Drives which means that the cooling towers can operate at different speeds instead of on constant speed making them more efficient.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	9/16/13	Company installed in 2009 new air handlers which are more efficient. Company also installed new chillers in 2009 as well as heat exchangers in Building 103. In the winter time, the heat exchangers will be activated when the outside temperature drops below 45 degree F. The heat exchangers bring in cool water to be sent to the air handling systems in the labs at the site. The chillers now do not have to operate at such a high % of load because of the heat exchanger/air handling system. The old chillers used to operate at 40 to 50% of load during the winter months. Now the new chillers operate at around 7% during the winter months. The old chillers used to operate around 80% of load during the summer months and now the new chillers operate at around 50% of load. The main corridor lights in Buildings 103 and 104 as well as the office lights are on motion sensors or timers that will turn off the lights when area is not being used. In 2009, the Company went from using "wet cell batteries" to "sealed batteries," which reduced the electrical demand on the Company. Lights in Building 104 are all T-8 Fluorescent Lights. The lights in Building 103 are about 50% changed over to T-8 Fluorescent Lights from T- 12 Fluorescent Light. T-8 Lights are more efficient and use less voltage than T-12 Light. Also the ballasts for the T-8 Lights are electrical and more efficient as well.

AT&T CORP

CEDAR KNOLLS, NJ 07654

Stewardship Activities	Date Acknowledged	Comments
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	1/24/14	In 2013 AT&T CORP installed a field of ground-level solar panels.

BUTLER PRINTING & LAMINATING INC

Site ID: BUTLER PRINTING & LAMINATING INC
 3971 250 PATERSON HAMBURG TPKE,
 BUTLER, NJ 07405

Stewardship Activities	Date Acknowledged	Comments
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	10/20/14	Facility replaced hazardous coolant used in the rotogravure rollers with food grade coolant.
12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).	10/20/14	Facility replaced 50% of the fluorescent light bulbs with newer, more efficient light bulbs that use 50% less energy
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	6/17/08	This site currently is using an air cooling compressor instead of a water cooling compressor that was used in the past. The water used is part of a closed loop system with no additional city water consumed. As a result, this site has considerably reduced the amount of city water that was used.
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	6/17/08	This site has eliminated their waste solvent and waste ink waste streams. All waste solvent/ink is now reworked and blended into darker ink colors.

------------------------	-------------------	----------

<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>3/5/14</p>	<p>CPC has eliminated that use of all 37% Formaldehyde Solution(s) onsite. This is a preservative that was used in the soft soap products.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>3/5/14</p>	<p>CPC continues to operate a reverse osmosis reclamation system. Reclaimed water is used as boiler & cooling tower make-up water.</p>
<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>3/5/14</p>	<p>The Colgate 2014 Sustainability Report devotes several pages to stewardship efforts in this area including packaging, product content, deforestation, and community involvement. The report can be found at: http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/HomePage.cvsp</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>3/5/14</p>	<p>CPC continues to operate efficient boilers and cogeneration unit for more efficient energy and steam production.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>3/5/14</p>	<p>http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/HomePage.cvsp</p>
<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>3/5/14</p>	<p>http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/HomePage.cvsp</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>3/5/14</p>	<p>Annual environmental report is available for the public online at: http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/HomePage.cvsp</p>

<p>11) GREEN BUILDING CERTIFICATION - Has the site registered or received certification for any new construction or major building renovation project from a recognized green building organization such as LEED or Green Globes? If yes, describe registered or certified green building construction projects at the site. KEYS TO QUALIFYING: - 1) Must be listed as registered site working toward achieving certification or 2) Actual certification document or award recipient - LEED rating from accredited 3rd party - Green Globes - from EC3 Global. 3) If the answer to this question is yes, the facility will automatically receive a "yes" for the next question on green building implementation.</p>	<p>3/5/14</p>	<p>More efficient lighting was installed through the facility.</p>
<p>8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?</p>	<p>3/5/14</p>	<p>The Colgate 2014 Sustainability Report states compliance with all aspects of the European Union's REACH regulation and devotes several pages to a "Spotlight on Suppliers" and "Focus on Ingredients" that highlight stewardship efforts. The report can be found at: http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/HomePage.cvsp</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>1/8/09</p>	<p>A reverse osmosis reclamation system was installed in 2008. Reclaimed water is used as boiler and cooling tower make-up water.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>1/8/09</p>	<p>More efficient lighting was installed through the facility</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>1/8/09</p>	<p>More efficient boilers installed in 2007. A cogeneration unit was installed in 2007 for more efficient energy and steam production</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>1/8/09</p>	

4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	1/8/09	The system is designed to ensure ongoing compliance, reduce future risks and liabilities, and respond to changing requirements. The EMS defines organizational structure, responsibilities, practice, procedures, processes and resources. Management systems should meet or exceed all applicable local, regional, and national laws and regulations, in addition to meeting the company standard.
5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.	1/8/09	Colgate -Palmolive publishes a report for the entire company. http://www.colgate.com/app/Colgate/US/Corp/LivingOurValues/Sustainability/KeyPerformanceIndicators.cvsp
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	1/8/09	Carbon Dioxide emissions are calculated

COUNTY CONCRETE CORP

Site ID: COUNTY CONCRETE CORP
3328 50 RAILROAD AVE,
ROXBURY TWP, NJ 07847

Stewardship Activities	Date Acknowledged	Comments
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	6/30/15	This site purchased all new equipment to have tier 4 engines (lower emissions). In the last year they purchased two cement trucks, a Kumatsu bulldozer and loader.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/29/14	70 motors have been replaced to High Efficiency motors throughout plants on 5 of their sites (Sussex, West Orange, Oxford, Kenvil and Morristown). They might drive conveyor belts, screening equipment, central mixers, compressors etc. Approximately 85% of all motors are now high efficiency.
19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	5/29/14	There are 9 new trucks with tier 4 engines that have 50-90 % lower emissions and better mileage. www.aem.org/PDF/DTF_Tier4WP.FIN.pdf

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>5/29/14</p>	<p>Through the NJ Energy Program they have replaced lighting at all 5 locations from 42Watt bulbs to High Efficiency fluorescent.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>5/29/14</p>	<p>County Concrete Corp is a LEED supplier of concrete. They have developed a concrete product using steel byproduct which reduces the carbon footprint of the concrete by greater than 60%.</p>
<p>18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/13/13</p>	<p>70 motors have been replaced to High Efficiency motors throughout plants on 5 of their sites (sussex, west orange, oxford, kenvil and morristown). They might drive conveyor belts, screening equipment, central mixers, compressors etc. Approximately 85% of all motors are now high efficiency.</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>6/13/13</p>	<p>Their 10 newest concrete trucks have DD-13 engines which are the only diesel engines on the market that are greenhouse gas compliant. These are the lowest emission trucks available</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>6/13/13</p>	<p>Through the NJ Energy Program they have replaced lighting at all 5 locations from 42Watt bulbs to High Efficiency fluorescent</p>

 PARSIPPANY-TROY HILLS TWP, NJ 07054

Stewardship Activities	Date Acknowledged	Comments
<p>14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).</p>	<p>4/10/13</p>	<p>The facility is ROHAS Compliant. Eliminated lead from products.</p>
<p>15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.</p>	<p>4/10/13</p>	<p>The facility reduced the number of fire pumps due to redundancy of systems. The old system required the discharge of 2000 gallons of water per minute while the system was tested several times a year. The facility installed a closed loop system which eliminated the test water discharge.</p>
<p>16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.</p>	<p>4/10/13</p>	<p>Changed packaging from plastic to biodegradable material.</p>

<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>4/10/13</p>	<p>New controls installed January 2013 on heating and air conditioning systems to make systems more efficient. Boiler is now only natural gas. The boiler was dual fuel (gas/oil) until November 2012. Removed all underground fuel tanks.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>4/10/13</p>	<p>Environmental, Health and Safety; Policy Number: 2.1 Issued October 2012 by Mark Ciano</p>
<p>20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.</p>	<p>4/10/13</p>	<p>The facility completed a solar energy project in December 2011. The system is able to produce 2.4 million KW.</p>
<p>Performance Track.</p>	<p>8/14/08</p>	<p>McNeil is committed to participating in Performance Track from 2006 through 2009.</p>
<p>21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.</p>	<p>8/14/08</p>	<p>McNeil has an annual program where employees volunteer their time to help clean and preserve existing open spaces in their community. In 2007, 29 employees went to the Great Swamp in Morris County and helped clear 29,000 square feet of land of trash and invasive plant species in order to help reclaim this wetlands area. The group also helped to repair and maintain walkways through this area.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>8/14/08</p>	<p>McNeil has a program that allows local students to "Shadow" company employees for a day to help them learn about potential careers. McNeil's environmental consultant Alice M. Schussler was "Shadowed" for a day by a student who was taught about McNeil's environmental initiatives.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>8/14/08</p>	<p>McNeil is a division of Johnson and Johnson and operates under a corporate environmental policy. Policies regarding Environment and Health and Safety are clearly posted throughout the site.</p>

<p>4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.</p>	<p>8/14/08</p>	<p>McNeil forwards information to Johnson and Johnson which is used to track environmental goals and progress.</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>8/14/08</p>	<p>Johnson and Johnson produces an annual environmental report which includes information that McNeil provides about this site. See Environmental Performance section of 2008 Sustainability Report pg 22 http://www.jnj.com/wps/wcm/connect/684817004eeb4ac7a5a2a7aa97b96a34/2008+Sustainability+Report.pdf?MOD=AJPERES</p>
<p>23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.</p>	<p>8/14/08</p>	
<p>7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.</p>	<p>8/14/08</p>	<p>McNeil has a waste minimization SOP which encourages the use of green suppliers and recycled products.</p>
<p>6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.</p>	<p>8/14/08</p>	<p>See pg 22 of Sustainability report - http://www.jnj.com/wps/wcm/connect/684817004eeb4ac7a5a2a7aa97b96a34/2008+Sustainability+Report.pdf?MOD=AJPERES</p>
<p>9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.</p>	<p>8/14/08</p>	<p>McNeil assists local schools in packing hazardous waste from the schools labs and making sure it is disposed of properly.</p>

DAUPHIN NORTH AMERICA

Site ID: DAUPHIN NORTH AMERICA
4008 100 FULTON ST,
BOONTON, NJ 07005

Stewardship Activities	Date Acknowledged	Comments
22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.	11/6/13	Dauphin has a product brand that has received BIFMA level Certification. BIFMA is a sustainability standard and third-party certification program for the furniture industry. BIFMA website http://levelcertified.org/ Dauphin Certification: http://www.scscertified.com/products/cert_pdfs/Lamex_2013_SCS-SCF-02519_s.pdf
3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.	11/6/13	Dauphin has an Environmental Policy published on its website. http://www.dauphin.com/environment.htm
4) ENVIRONMENTAL MANAGEMENT SYSTEM - Is the site operated utilizing an Environmental Management System (EMS)? If yes, describe system employed, list any certifications. KEYS TO QUALIFYING: - 1) Must have an Environmental Policy (Yes to Question #3). 2) Site should have a Comprehensive EMS document or plan - more than just compliance, 3) Performance Evaluation - written report - at least annually.	11/6/13	According to Dauphin website, Dauphin is a certified ISO14001 company. http://www.dauphin.com/environment.htm

DREW UNIVERSITY

Site ID: DREW UNIVERSITY

MADISON, NJ 07940

Stewardship Activities	Date Acknowledged	Comments
21) ENVIRONMENTAL ENHANCEMENT PROJECTS - Has the site undertaken an Environmental Enhancement Project that has resulted in the reclamation or improvement of land at the site or within the community? If yes, identify the project and the resulting improvement to the environment. KEYS TO QUALIFYING: - 1) Site should be able to demonstrate project is current/maintained. 2) Project must be completed or underway. 3) Enhancements or mitigation required by permit or settlement action do not qualify.	1/31/12	Drew Forest Habitat Restoration Project - Drew University has restored a natural ecosystem on approx. 18 acres of forest and wetland habitat on the university campus. The restoration program had three components: 1) extensive removal of non-native invasive species, 2) erection of a 10 ft high deer enclosure fence surrounding the 18 acres, and 3) planting of 1300 native trees and shrubs. In addition, a second project, located in the center of the campus involved conversion of a lawn area to native plantings. Over 5000 native plants from 70 native species including 40 types of wildflowers, 12 shrub species and most of the region's upland ferns have been planted to form a lush, complex and diverse natural ground layer, which has resulted in restoration of a functioning ecosystem and protection of imperiled species.

EARTH FRIENDLY PRODUCTS

Stewardship Activities	Date Acknowledged	Comments
Design for the Environment.	9/23/15	Note: Part of the Design for the Environment program has been changed to the Safer Choice Program. 2015 EPA Safer Choice Partner of the Year winner http://www2.epa.gov/saferchoice/2015-safer-choice-partner-year-award-winners-formulators-product-manufacturers#tab-2 EFP Safer Choice Products http://www2.epa.gov/saferchoice/products
WasteWise.	9/23/15	
Green Power Parnership.	9/23/15	http://www.epa.gov/greenpower/partners/partners/earthfriendlyproducts.htm
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	9/23/15	All raw materials are non-hazardous and food grade preservatives used. All products are pH neutral. EFP products are Design For Env (now Safer Choice) approved by EPA. EFP uses eco-friendly pest management practices on site in an Integrated Pest Management Approach. EFP Products are Phosphate Free.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	9/23/15	EFP employs a rinse free manufacturing process which reduces water and wastewater. EFP utilizes water efficient faucets with sensors.
18) PROCESS/OPERATIONS ENERGY USE REDUCTION - Has the site substantially improved its energy efficiency by implementing changes in production/manufacturing operations? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.	9/23/15	Sustainable Manufacturing Practices(Amended-December 2011).pdf
16) MATERIAL CONSERVATION - Has the site taken actions to reduce total material usage or disposal? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to document type and quantity of materials exchanged/reused/recycled. 2) Exchanges or one-time events must have occurred within one year. 3) Process, product or formulation changes from anytime in the past must exceed current common practice for recognition. 4) Recycling must exceed mandatory requirements - beyond county plan - beyond municipal ordinance. 5) Durable goods and capital investment "life cycles" will not be considered. 6) Combustion of waste or recycling into a fuel will not be recognized.	9/23/15	EFP recycles non-required items such as shrink wrap, plastic straps and rubber gloves. EFP reuses boxes for packaging inserts and they repair broken pallets as opposed to discarding them. EFP has reduced trash by over 95% at the NJ location. In NJ, EFP has reduced our trash by over 95%. EFP is a Zero Waste Platinum certified facilities by US Zero Waste Business Council (USZWBC). Sustainable_Office_Practices.pdf

<p>13) LIFE CYCLE ASSESSMENTS - Has the site conducted a Life Cycle Assessment of any products or services, and based on findings implemented actions to reduce the environmental impacts? If yes, describe. KEYS TO QUALIFYING: - 1) An environmental assessment using specific standards - EPA LCA101 - ISO 14040. 2) Must be able to elaborate on the product, environmental assessment findings and outcome - what changes took place? - what decisions were made? 3) LCA is not a product quality assurance evaluation nor an economic evaluation.</p>	<p>9/23/15</p>	<p>Guidelines for formulating and designing Green Products-2014_0.pdf</p>
<p>19) TRANSPORTATION ENERGY USE REDUCTION - Excluding employee trip reduction, has the site substantially improved its energy efficiency by implementing changes in the transportation utilized? If yes, describe what was done, date initiated and impact on energy use. KEYS TO QUALIFYING: - 1) Changes should be observable or documented. 2) These should be changes with potential to noticeably reduce a site's carbon footprint. 3) Reduction within last 5 years.</p>	<p>9/23/15</p>	<p>EFP provides financial incentives to employees who purchase eco friendly cars and/or relocate within 10 miles of the work location.</p>
<p>12) GREEN BUILDING IMPLEMENTATION - Has the site undertaken any projects supportive of green design concepts or does the site incorporate green building design criteria for new construction/renovation projects? If yes, describe projects or provide written policy. KEYS TO QUALIFYING: - 1) Following green building principles. 2) No certification required. 3) Can be small and narrowly focused provided that - obvious or demonstratable environmental benefit - took thought, effort or cost beyond standard practice. 4) Applies to facilities, buildings and grounds not manufacturing, operations, processes or transportation (see question numbers 18 & 19). 5) Automatic if certified (#11 Green Building Certification).</p>	<p>9/23/15</p>	<p>Green Building Implementation Includes: Solar Array, No VOC Paint, Natural lighting, Energy Efficient lighting with sensors, Water efficient fixtures and bamboo flooring.</p>
<p>22) INNOVATIVE PROGRAM - Has the site adopted/ developed any innovative programs not captured in other checklist questions that improve/reduce the site's environmental impact and promotes environmental excellence within its organization? If yes, describe initiative. KEYS TO QUALIFYING: - 1) Any voluntary activity or program that results in a benefit to the environment but does not easily qualify for recognition under the previous categories.</p>	<p>9/23/15</p>	<p>EFP purchases Carbon Offset Credits in an effort to have a carbon neutral manufacturing operation. EFP has sustainability teams across five divisions, including the NJ division.</p>
<p>10) OUTREACH PROGRAM - Does the site have an outreach program that offers assistance to community leaders, local schools, neighborhood groups, etc. to address, educate and collaborate on environmental issues within the community? If yes, explain program. KEYS TO QUALIFYING: - 1) Must be environmentally educational or beneficial. 2) Must have occurred within past 1 year. 3) Not sales/marketing.</p>	<p>9/23/15</p>	<p>EFP provides student tours highlighting Green Chemistry/sustainable best practices. EFP sponsors a Green Chemistry/water resources exhibit @ the Garden State Children's Museum in Cherry Hill.</p>
<p>3) ENVIRONMENTAL POLICY - Is the site operated under a comprehensive written environmental policy, signed by the current senior officer of the organization addressing more than just compliance? KEYS TO QUALIFYING: - 1) Written document - inspector must see it! 2) Defined and executed by management - ideally signed, but ok if obviously endorsed/promoted. 3) Employees aware of policy - posted or obviously shared at site. 4) Commitment to environmental performance beyond just regulatory/legal compliance.</p>	<p>9/23/15</p>	<p>Sustainability Policy -outline.pdf http://www.ecos.com/mission.html</p>
<p>5) ANNUAL ENVIRONMENTAL REPORT - Does the site publish an Annual Environmental Report? KEYS TO QUALIFYING: - 1) Measures improvements or elements beyond just compliance. 2) Public document that must be available online - online report must be within one year. 3) Very small organizations may qualify with less formal reporting.</p>	<p>9/23/15</p>	<p>The 2013 report was provided for review. It was previously published on the website. The 2014 report is expected to be posted shortly.</p>

23) EPA VOLUNTARY PROGRAMS - Is the site participating in an EPA sponsored voluntary program? If yes, include the applicable EPA program(s). KEYS TO QUALIFYING: - 1) Site should be able to clearly identify any formal EPA program and describe their participation.	9/23/15	
17) EMPLOYEE TRIP REDUCTION - Has the site implemented a successful employee trip reduction program? If yes, describe program and results or participation. KEYS TO QUALIFYING: - 1) Site should be able to show - policy or program summary/rules - records of participation or trip reduction.	9/23/15	EFP has an active employee ride sharing program.
7) ENVIRONMENTAL PURCHASING POLICY- Has the site implemented an "Environmental Purchasing Policy" resulting in the purchase of products and office supplies that are recognized as environmentally responsible? If yes, describe. KEYS TO QUALIFYING: - 1) Site must provide one of the following - a written policy - documentation of preferred products purchased and presence of substantial environmentally preferred products on-site. 2) In all cases environmental aspect should be obvious or easily explained by site rep.	9/23/15	EFP-Sustainable Procurement Policy.pdf
20) RENEWABLE ENERGY USE - Does the site use renewable energy sources? If yes, identify the direct source (solar, wind, bio, etc.) or name the CleanPower supplier and characterize the amount. KEYS TO QUALIFYING: - 1) Any installations should be functional. 2) CleanPower purchases should be clearly shown in energy bills. 3) No time limit on renewable installations.	9/23/15	The facility has a roof top solar array.
6) CARBON FOOTPRINT ANALYSIS - Has the site accounted for all greenhouse gases? If yes, describe method used. KEYS TO QUALIFYING: - 1) Site should have documentation/report of all greenhouse gases, including off-site contributions. 2) Must explain methodology/standard used - Greenhouse Gas Protocol; or others - must note method in comments. 3) Disclosure to public voluntary, but encouraged.	9/23/15	The site regularly calculates their carbon footprint and is currently carbon neutral for manufacturing.
8) VENDOR/SUPPLY CHAIN REQUIREMENTS - Does the site require that businesses in their supply chain subscribe to environmentally sound business practices? If yes, explain method i.e. contract with vendors. KEYS TO QUALIFYING: - 1) Written policy agreement with vendors. 2) Specify environmental criteria for vendors. 3) Establish a vendor auditing system - how do they know what suppliers are doing?	9/23/15	Vendors are required to submit a sustainability plan to the company prior to doing business. EFP also conducts vendor audits to ensure the vendors meet env. standards.
9) MENTORING TO OTHER BUSINESSES - Does the site offer mentoring of an environmental nature to other businesses? If yes, describe mentoring program and any available contact information the site can provide. KEYS TO QUALIFYING: - 1) Must be environmentally based. 2) Be able to describe - who you are mentoring or willing to mentor - how others can contact you to participate either directly or through association membership. 3) Must not be profiting - not a paid consultant - not sales/marketing.	9/23/15	Vendors are required to submit a sustainability plan to the company prior to doing business. EFP also conducts vendor audits to ensure the vendors meet env. standards.

EARTH THEBAULT

Site ID: EARTH THEBAULT
14770 345 WALSH DR,
PARSIPPANY, NJ 07054

------------------------	-------------------	----------

Green Power Partnership.	4/12/17	Earth Color is a member of EPA's Green Power Partnership. Earth Color has been a member of this EPA Voluntary Program since 2007. EPA's Green Power Partners - As a result of using green power, these organizations are helping to support the development of new renewable generation capacity nationwide while also helping to protect the environment. Using green power is an easy and effective way to reduce the environmental impacts of your electricity use.
14) HAZARDOUS MATERIALS REDUCTION - Has the site implemented a change in operations and/or product formulation resulting in reduction or elimination of hazardous materials used/disposed of at the site? If yes, describe. KEYS TO QUALIFYING: - 1) Applies to hazardous materials. 2) Site should be able to back up reductions with data or demonstrations - manifests - observable process change - goal tracked in EMS and found in annual report. 3) Production adjusted reduction (not from slow business cycle). 4) Reduced risk with same volume or amount can qualify (swap high hazard for low hazard).	4/12/17	Earth Color has reformulated the composition of their inks, coatings and fountain solutions used on their printing presses which have resulted in a reduction in hazardous waste used and disposed of at the site. According to the Sustainability Director of Earth Thebault, the amount of Hazardous Waste has reduced by roughly 80% over the last 8 years. The facility is down to just 2 chemicals now that are sent out as "Hazardous Waste" and hope to, by the end of the year, be down to just 1 chemical. Their goal is to not have to send anything out as Hazardous Waste and to not produce any Hazardous Waste. The Company is working with their ink suppliers and engineers to phase out any toxic chemicals used in their coatings, inks and fountain solutions and is applying the 12 Principles of Green Chemistry to try to eliminate toxic chemicals from their inks, fountain solutions and coatings. (Since 2008 VOC emissions have been reduced by Earth Color by 18%) - but between 2012 and 2016 the VOC emissions have basically remained steady. 12 Principles of Green Chemistry 1.Prevention - It is better to prevent waste than to treat or clean up waste after it has been created. 2.Atom Economy - Synthetic methods should be designed to maximize the incorporation of all materials used in the process into the final product. 3.Less Hazardous Chemical Syntheses - Wherever practicable, synthetic methods should be designed to use and generate substances that possess little or no toxicity to human health and the environment. 4.Designing Safer Chemicals - Chemical products should be designed to affect their desired function while minimizing their toxicity. 5.Safer Solvents and Auxiliaries - The use of auxiliary substances (e.g., solvents, separation agents, etc.) should be made unnecessary wherever possible and innocuous when used. 6.Design for Energy Efficiency - Energy requirements of chemical processes should be recognized for their environmental and economic impacts and should be minimized. If possible, synthetic methods should be conducted at ambient temperature and pressure. 7.Use of Renewable Feedstocks - A raw material or feedstock should be renewable rather than depleting whenever technically and economically practicable. 8.Reduce Derivatives - Unnecessary derivatization (use of blocking groups, protection/ protection, temporary modification of physical/ chemical processes) should be minimized or avoided if possible, because such steps require additional reagents and can generate waste. 9.Catalysis - Catalytic reagents (as selective as possible) are superior to stoichiometric reagents. 10.Design for Degradation - Chemical products should be designed so that at the end of their function they break down into innocuous degradation products and do not persist in the environment. 11.Real-time analysis for Pollution Prevention - Analytical methodologies need to be further developed to allow for real-time, in-process monitoring and control prior to the formation of hazardous substances. 12.Inherently Safer Chemistry for Accident Prevention - Substances and the form of a substance used in a chemical process should be chosen to minimize the potential for chemical accidents, including releases, explosions, and fires.
15) WATER USE REDUCTION - Has the site employed a program to substantially reduce or reuse water? If yes, describe. KEYS TO QUALIFYING: - 1) Site should be able to back up reductions with data or demonstrations - water bill or other monitoring - obvious process change observed - goal tracked in EMS and found in annual report. 2) Production adjusted reduction (not from slow business cycle). 3) No credit for drought restriction steps.	4/12/17	Earth Color has initiated the following water reduction practices at their Walsh NJ Facility - 1) The Company has implemented an effective water filtration system that provides clean drinking water to their employees. 2) The Company replaced the water coolers used to cool down their sheet fed printing presses with high efficient chillers. The Company is conserving roughly 4,800,000 gallons of water per year. 3) The Company officials state that when weather is colder (below 50 Degree F), the Company uses mechanical cooling instead of refrigeration chillers to cool down their printing press. The mechanical cooling uses ambient air to cool down the web press thus the refrigeration chiller does not need to be used which saves on water consumption. Water consumption from 2008 at all the Earth Color sites is down at 33% but has not changed much between the years of 2012 to 2016.
