WILD TROUT ZONE

(West of Interstate 287 and Route 202)

Catch & Release Brook Trout - All Waters

Pros:

- Protects Brook Trout in appropriate region, where wild populations occur.
- Minimizes effects on anglers who fish for stocked trout.

Cons:

- More complex regulation - anglers need to know new zone boundary.
- Species Identification - anglers must correctly identify the trout species.

NO OTHER CHANGES to existing seasons, daily creel, minimum size, and allowable gear for all trout-stocked waters within Zone, except for 5 newly designated *Trout-Stocked Waters with Wild Brown Trout*.
