

WHOLE DEER CARCASS BAN

- Hunters are banned from bringing a whole carcass from any member of the Cervid family such as deer, elk, moose, and caribou (reindeer) into New Jersey from ANY other state or country.
- Hunters are banned from bringing a non-taxidermied head of any member of the Cervid family harvested into New Jersey from ANY other state or country.
- ONLY boned-out meat, cleaned skullcaps and hides, shed antlers, and clean upper canine teeth of any member of the Cervid family may be brought into New Jersey.

DEER-DERIVED SCENT AND LURE BAN

- Lures and scents made from deer are banned for sale, possession, and use while hunting in New Jersey, including deer urine and deer glandular secretions, as infectious prions that cause CWD can be found in these fluids.
- ONLY synthetic scents or natural lures made from species not in the deer family are legal for deer hunting in New Jersey.
- Many synthetic products are readily available at sporting goods stores and online retailers. Hunters must use these products as part of New Jersey's effort to keep CWD out of the state.

WHERE TO REPORT SICK DEER:

NJDFW Health and Forensics (908) 735-6398

NJDFW Deer Biologist (609) 223-6073
email: njdeer@dep.nj.gov

LAW ENFORCEMENT:

Northern Region (908) 735-8240

(Bergen, Essex, Hudson, Hunterdon, Morris, Passaic, Somerset, Union, and Warren Counties)

Central Region (609) 259-2120

(Burlington, Mercer, Middlesex, Monmouth, and Ocean Counties)

Southern Region (856) 629-0555

(Atlantic, Camden, Cape May, Cumberland, Gloucester, and Salem Counties)

WHAT IS CHRONIC WASTING DISEASE?

Chronic Wasting Disease (CWD) is a progressive and fatal neurologic disease affecting members of the Cervid family such as deer, elk, moose, and caribou (reindeer). CWD is caused by an infectious protein called a prion.

HOW IS CWD SPREAD?

- ☞ CWD is transmitted directly by animal-to-animal contact or indirectly by contact with a contaminated environment. Congregating deer around food sources greatly increases the risk of spread where CWD is known to exist.
- ☞ CWD can be spread by the natural movement of infected animals or by humans moving live, infected, captive deer or carcass parts of infected deer.
- ☞ CWD prions are shed from the infected animals in saliva, blood, feces, and urine.
- ☞ Prions have been found throughout the body of infected deer, particularly in the brain, eyes, spinal cord, spleen, tonsils, and lymph nodes.
- ☞ Prions are shed before the animals appear sick and are known to remain infectious in the environment for decades where they bind to soil and plants.

Surveillance for CWD prions in wild and captive deer began in New Jersey in 1998.

WHAT DOES CWD INFECTION LOOK LIKE?

CWD is only symptomatic in older deer but all adult deer are susceptible. CWD-infected symptom-free deer are more likely to die from deer-vehicle collisions, predation, hunters, pneumonia or other illness, or parasites than healthy deer.

Late stage physical symptoms include:

- ☞ Emaciation, excessive salivation, lack of muscle coordination, difficulty in swallowing, excessive thirst, and excessive urination

Late stage behavioral symptoms include:

- ☞ An exaggerated wide posture, may stagger and carry the head and ears lowered, dull expression, and loss of fear of humans
- ☞ CWD is always fatal with no treatment currently available

WHAT IS NEW JERSEY DOING TO PREVENT CWD?

Preventing CWD from entering New Jersey is Fish and Wildlife's primary focus.

- ☞ Limiting movement of captive animals
- ☞ Banned the importation of any live cervid into New Jersey since 2002
- ☞ Banned the importation of whole hunter-killed carcasses (see back section)
- ☞ Banned the use of deer-derived scents and lures and deer semen (see back section)

HOW CAN BUTCHERS & TAXIDERMISTS HELP?

If you see a deer you suspect may have CWD:

- ☞ Taxidermists and deer processors are one of the Division's frontline detectors for possible importation of CWD infected material.
- ☞ Keep current as to which states/provinces have CWD by visiting <http://cwd-info.org/>
- ☞ Participate in the CWD Surveillance program. Contact the Office of Fish and Wildlife Health and Forensics for more information at (908) 735-6398.

If you discover that whole carcasses or parts of deer, elk, moose, caribou (reindeer) or any cervids were brought into New Jersey illegally or you suspect CWD in an animal brought to you:

- ☞ Report it immediately either to Fish and Wildlife's Office of Fish and Wildlife Health and Forensics, a regional Division Law Office or a Division Deer Biologist. Phone numbers can be found on the back cover.
- ☞ Keep the carcass or parts secure until you are contacted by the Division.

Only the following deer parts are legal to bring back to New Jersey:

- ☞ Cut and wrapped meat (either commercially or privately)
- ☞ Quarters or other meat portions to which no part of the spinal column is attached
- ☞ Deboned meat (meat with bones removed)
- ☞ Hides with no head attached
- ☞ Finished taxidermy heads
- ☞ Antlers with no attached tissue
- ☞ Clean skulls or skull plates with no attached lymphoid or brain tissue (skull plates, antlers or skulls from which residual brain tissue has been removed should be soaked in a 30 percent bleach solution for 15 minutes to destroy the prions.)
- ☞ Upper canine teeth (also known as buglers, whistlers or ivories)
