

Tubeling Planting Instructions

**Remove
Seedling
from Tube**

1. Choose an appropriate site

Keep in mind the seedlings adult size.

2. Loosen the soil

18 inches across, 8 inches deep.

3. Clear a spot

Dig in the middle of the soil 2-3 times as wide as the tube.

4. Remove seedling from the tube

Squeeze the sides of the tube to take the seedling out.

Recycle the tube or send it back to the NJ State

Forestry Services.

5. Plant!

Immediately place the seedling into the soil at the proper depth - root collar level with the surrounding ground.

6. Lightly pack the soil

Using your hands, pat down the soil around the roots.

7. Mulch

Place mulch evenly around the seedling.

8. Water
