Notes:

All results are shown in mg/kg. B = Analyte detected in Field Blank. D = Sample diluted prior to analysis.

E = Estimated value due to interference.

J = Detected below method detection limit. FT BGS = Feet Below Ground Surface

NA = Not Analyzed for this parameter

ND = Not Detected

NS = No Soil Cleanup Criteria.

Shaded/bold = Parameter exceeds most stringent SCC.

Notes:

Ali results are shown in mg/kg. B ≈ Analyte detected in Field Blank. D = Sample diluted prior to analysis. E = Estimated value due to interforence.

J = Detected below method detection limit.

FT BGS = Feet Below Ground Surface

NA = Not Analyzed for this parameter

ND = Not Detected

NS = No Soil Cleanup Criteria.

Shaded/bold = Parameter exceeds most stringent SCC.

#### Notes:

All results are shown in mg/kg. B = Analyte detected in Field Blank. D = Sample diluted prior to analysis.

E = Estimated value due to interference.

J = Detected below method detection limit.

FT BGS = Feet Below Ground Surface NA = Not Analyzed for this parameter

ND = Not Detected NS = No Soil Cleanup Criteria.

Shaded/bold = Parameter exceeds most stringent SCC.

### MONITORING WELL CERTIFICATION FORM B-LOCATION CERTIFICATION

### THIS FORM MUST BE COMPLETED BY THE PERMITTEE AND/OR SURVEYOR

Name of Permittee:PSE&GName of Facility:MGP-017 - Front StreetLocation:McCarter Highway, Newark, New Jersey

#### LAND SURVEYOR'S CERTIFICATION

| Well Permit Number:                          | 2 6 - 5 1 0 1 3                    |
|----------------------------------------------|------------------------------------|
| (This number must be permanently             |                                    |
| affixed to the well casing.)                 |                                    |
| Longitude (NAD '83):                         | West 74° 10' 00.42"                |
| Latitude (NAD '83):                          | North 40° 44' 34.06"               |
| Elevation of Top of Inner Casing (cap off)   |                                    |
| (one-hundredth of a foot.) (NAVD '88):       |                                    |
| Source of elevation datum (benchmark, etc.)  |                                    |
| and elevation. (If an alternate datum has    |                                    |
| been approved by the Department, identify    |                                    |
| here and give approximated elevation):       | Source: Newark City GPS Mon #89-28 |
|                                              | Elev.: 8.11'                       |
| Owner's Well Number (as shown on application |                                    |
| or plans):                                   | MW-1                               |

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

#### MONITORING WELL CERTIFICATION - FORM A AS-BUILT CERTIFICATION (One form must be completed for each well)

#### CERTIFICATION

| CERTIFICATION                                      |                      |
|----------------------------------------------------|----------------------|
| Well Permit Number:                                | <u>26-51014</u> _    |
| Owner's Well Number (As shown on the               |                      |
| application or plans):                             | <u>MW-1A</u>         |
| Well Completion Date:                              | <u>luly 14, 1998</u> |
| Distance from Top of Casing (cap off) to           |                      |
| ground surface (one-hundredth of a foot):          | 0.42'                |
| Total Depth of Well to nearest 1/2 foot:           | 59'                  |
| Depth to Top of Screen (or Top of Open Hole)       |                      |
| From Top of Casing (one-hundredth of a foot):      | 49'                  |
| Screen Length (or length of open hole) in feet:    | <u>10'</u>           |
| Screen or Slot Size:                               | 0.010                |
| Screen or Slot Material:                           | PVC Sch. 40          |
| Casing Material (PVC, Steel or Other-Specify):     | PVC Sch. 40          |
| Casing Diameter (inches):                          | <u>2"</u>            |
| Static Water Level From Top of Casing at the Time  |                      |
| of Installation (one-hundredth of a foot):         | 34.56'               |
| Yield (gallons per minute):                        | <1                   |
| Development Technique (specify)                    | Submersible Pump     |
| Length of Time Well is Developed/Pumped or Bailed: | 1 hour               |
| Lithologic Log:                                    | Attached             |
|                                                    |                      |

#### **AUTHENTICATION**

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of gine and imprisonment.

| affixed to the well casing.)                            |                                                                  |
| Longitude (NAD '83):                                    | West 74° 10' 00.51"                                              |
| Latitude (NAD '83):                                     | North <u>40° 44' 34.10"</u>                                      |
| Elevation of Top of Inner Casing (cap off)              |                                                                  |
| (one-hundredth of a foot.) (NAVD '88):                  | 38.06'                                                           |
| Source of elevation datum (benchmark, etc.)             |                                                                  |
| and elevation. (If an alternate datum has               |                                                                  |
| been approved by the Department, identify               |                                                                  |
| here and give approximated elevation):                  | Source: Newark City GPS Mon #89-28                               |
|                                                         | Elev.: <u>8.11'</u>                                              |
| Owner's Well Number (as shown on application            |                                                                  |
| or plans):                                              | MW-1A                                                            |
|                                                         |                                                                  |

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

# MONITORING WELL CERTIFICATION - FORM A AS-BUILT CERTIFICATION

(One form must be completed for each well)

| Name of Permittee: | Public Service Electric & Gas |  |
|--------------------|-------------------------------|--|
| Name of Facility:  | Former Front Street Gas Works |  |
| Location:          | McCarter Highway, Newark, NI  |  |
| NJPDES Permit No.: |                               |  |

#### **CERTIFICATION**

| Well Permit Number:                                | <u>26-51015-</u> |
|----------------------------------------------------|------------------|
| Owner's Well Number (As shown on the               |                  |
| application or plans):                             | <u>MW-2</u>      |
| Well Completion Date:                              | July 1, 1998     |
| Distance from Top of Casing (cap off) to           |                  |
| ground surface (one-hundredth of a foot):          | 0.37'            |
| Total Depth of Well to nearest 1/2 foot:           | 15.5'            |
| Depth to Top of Screen (or Top of Open Hole)       |                  |
| From Top of Casing (one-hundredth of a foot):      | 2.5'             |
| Screen Length (or length of open hole) in feet:    | <u>13'</u>       |
| Screen or Slot Size:                               | 0.010            |
| Screen or Slot Material:                           | PVC Sch. 40      |
| Casing Material (PVC, Steel or Other-Specify):     | PVC Sch. 40      |
| Casing Diameter (inches):                          | 2"               |
| Static Water Level From Top of Casing at the Time  |                  |
| of Installation (one-hundredth of a foot):         | <u>6.90 '</u>    |
| Yield (gallons per minute):                        | ≈1               |
| Development Technique (specify)                    | Submersible Pump |
| Length of Time Well is Developed/Pumped or Bailed: | 1 hour           |
| Lithologic Log:                                    | Attached         |
| -                                                  |                  |

#### **AUTHENTICATION**

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility/pf fine and imprisonment.

|                                              | Elev.: 8.11'                        |
| Owner's Well Number (as shown on application |                                     |
| or plans):                                   | MW-2                                |

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

#### AUTHENTICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

#### MONITORING WELL CERTIFICATION - FORM A AS-BUILT CERTIFICATION (One form must be completed for each well)

| Name of Permittee: | Public Service Electric & Gas |
|--------------------|-------------------------------|
| Name of Facility:  | Former Front Street Gas Works |
| Location:          | McCarter Highway, Newark, N   |
| NJPDES Permit No.: |                               |

#### CERTIFICATION

| CERTIFICATION                                      |                  |
|----------------------------------------------------|------------------|
| Well Permit Number:                                | <u>26-51017-</u> |
| Owner's Well Number (As shown on the               |                  |
| application or plans):                             | MW-3             |
| Well Completion Date:                              | June 30, 1998    |
| Distance from Top of Casing (cap off) to           |                  |
| ground surface (one-hundredth of a foot):          | 0.39'            |
| Total Depth of Well to nearest 1/2 foot:           | 14'              |
| Depth to Top of Screen (or Top of Open Hole)       |                  |
| From Top of Casing (one-hundredth of a foot):      | 3'               |
| Screen Length (or length of open hole) in feet:    | <u>11'</u>       |
| Screen or Slot Size:                               | 0.010            |
| Screen or Slot Material:                           | PVC Sch. 40      |
| Casing Material (PVC, Steel or Other-Specify):     | PVC Sch. 40      |
| Casing Diameter (inches):                          | <u>2"</u>        |
| Static Water Level From Top of Casing at the Time  |                  |
| of Installation (one-hundredth of a foot):         | <u>6.15'</u>     |
| Yield (gallons per minute):                        | ≈1               |
| Development Technique (specify)                    | Submersible Pump |
| Length of Time Well is Developed/Pumped or Bailed: | <u>1 hour</u>    |
| Lithologic Log:                                    | Attached         |
|                                                    |                  |

#### **AUTHENTICATION**

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of the and imprisonment,

| and elevation. (If an alternate datum has                                            |                                    |
| been approved by the Department, identify                                            |                                    |
| here and give approximated elevation):                                               | Source: Newark City GPS Mon #89-28 |
|                                                                                      | Elev.: 8.11'                       |
| Owner's Well Number (as shown on application                                         |                                    |
| or plans):                                                                           | MW-3                               |

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

#### **AUTHENTICATION**

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

#### MONITORING WELL CERTIFICATION - FORM A AS-BUILT CERTIFICATION (One form must be completed for each well)

| Name of Permittee: | Public Service Electric & Gas |   |
|--------------------|-------------------------------|---|
| Name of Facility:  | Former Front Street Gas Works |   |
| Location:          | McCarter Highway, Newark, NI  | _ |
| NJPDES Permit No.: |                               |   |

### CERTIFICATION

| CERTIFICATION                                      |                  |
|----------------------------------------------------|------------------|
| Well Permit Number:                                | 26-51018-        |
| Owner's Well Number (As shown on the               |                  |
| application or plans):                             | MW-3A            |
| Well Completion Date:                              | July 16, 1998    |
| Distance from Top of Casing (cap off) to           |                  |
| ground surface (one-hundredth of a foot):          | 0.44'            |
| Total Depth of Well to nearest 1/2 foot:           | 29'              |
| Depth to Top of Screen (or Top of Open Hole)       |                  |
| From Top of Casing (one-hundredth of a foot):      | 24'              |
| Screen Length (or length of open hole) in feet:    | 5'               |
| Screen or Slot Size:                               | 0.010            |
| Screen or Slot Material:                           | PVC Sch. 40      |
| Casing Material (PVC, Steel or Other-Specify):     | PVC Sch. 40      |
| Casing Diameter (inches):                          | 2"               |
| Static Water Level From Top of Casing at the Time  |                  |
| of Installation (one-hundredth of a foot):         | 2.65'            |
| Yield (gallons per minute):                        | <i>≈</i> 1       |
| Development Technique (specify)                    | Submersible Pump |
| Length of Time Well is Developed/Pumped or Bailed: | 1 hour           |
| Lithologic Log:                                    | Attached         |
|                                                    |                  |

#### **AUTHENTICATION**

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprise

### MONITORING WELL CERTIFICATION FORM B-LOCATION CERTIFICATION

#### THIS FORM MUST BE COMPLETED BY THE PERMITTEE AND/OR SURVEYOR

Name of Permittee:PSE&GName of Facility:MGP-017 - Front StreetLocation:McCarter Highway, Newark, New Jersey

#### LAND SURVEYOR'S CERTIFICATION

| Well Permit Number:                          | 2 6 - 5 1 0 1 8                    |
|----------------------------------------------|------------------------------------|
| (This number must be permanently             |                                    |
| affixed to the well casing.)                 |                                    |
| Longitude (NAD '83):                         | West 74° 09' 56.96"                |
| Latitude (NAD '83):                          | North <u>40° 44' 34.70"</u>        |
| Elevation of Top of Inner Casing (cap off)   |                                    |
| (one-hundredth of a foot.) (NAVD '88):       | 8.38'                              |
| Source of elevation datum (benchmark, etc.)  |                                    |
| and elevation. (If an alternate datum has    |                                    |
| been approved by the Department, identify    |                                    |
| here and give approximated elevation):       | Source: Newark City GPS Mon #89-28 |
|                                              | Elev.: 8.11'                       |
| Owner's Well Number (as shown on application |                                    |
| or plans):                                   | MW-3A                              |

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

#### AUTHENTICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

## MONITORING WELL CERTIFICATION - FORM A AS-BUILT CERTIFICATION

(One form must be completed for each well)

| Name of Permittee: | Public Service Electric & Gas |  |
|--------------------|-------------------------------|--|
| Name of Facility:  | Former Front Street Gas Works |  |
| Location:          | McCarter Highway, Newark, NI  |  |
| NJPDES Permit No.: |                               |  |

### **CERTIFICATION**

| CERTIFICATION                                      |                  |
|----------------------------------------------------|------------------|
| Well Permit Number:                                | <u>26-51019-</u> |
| Owner's Well Number (As shown on the               |                  |
| application or plans):                             | MW-3BR           |
| Well Completion Date:                              | luly 31, 1998    |
| Distance from Top of Casing (cap off) to           |                  |
| ground surface (one-hundredth of a foot):          | 0.25'            |
| Total Depth of Well to nearest 1/2 foot:           | 55'              |
| Depth to Top of Screen (or Top of Open Hole)       |                  |
| From Top of Casing (one-hundredth of a foot):      | 35'              |
| Screen Length (or length of open hole) in feet:    | 20'              |
| Screen or Slot Size:                               | 0.010            |
| Screen or Slot Material:                           | PVC Sch. 40      |
| Casing Material (PVC, Steel or Other-Specify):     | PVC Sch. 40      |
| Casing Diameter (inches):                          | 2"               |
| Static Water Level From Top of Casing at the Time  | -                |
| of Installation (one-hundredth of a foot):         | 4.05'            |
| Yield (gallons per minute):                        | ≈2               |
| Development Technique (specify)                    | Submersible Pump |
| Length of Time Well is Developed/Pumped or Bailed: | 1 hour           |
| Lithologic Log:                                    | Attached         |
|                                                    |                  |

### AUTHENTICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisorment.

# MONITORING WELL CERTIFICATION FORM B-LOCATION CERTIFICATION

# THIS FORM MUST BE COMPLETED BY THE PERMITTEE AND/OR SURVEYOR

Name of Permittee:PSE&GName of Facility:MGP-017 - Front StreetLocation:McCarter Highway, Newark, New Jersey

#### LAND SURVEYOR'S CERTIFICATION

| Well Permit Number:                          | 2 6 - 5 1 0 1 9                    |
|----------------------------------------------|------------------------------------|
| (This number must be permanently             |                                    |
| affixed to the well casing.)                 |                                    |
| Longitude (NAD '83):                         | West <u>74° 09' 56.97"</u>         |
| Latitude (NAD '83):                          | North <u>40° 44' 34.77"</u>        |
| Elevation of Top of Inner Casing (cap off)   |                                    |
| (one-hundredth of a foot.) (NAVD '88):       | - <u></u>                          |
| Source of elevation datum (benchmark, etc.)  |                                    |
| and elevation. (If an alternate datum has    |                                    |
| been approved by the Department, identify    |                                    |
| here and give approximated elevation):       | Source: Newark City GPS Mon #89-28 |
|                                              | Elev.: 8.11'                       |
| Owner's Well Number (as shown on application |                                    |
| or plans):                                   | MW-3BR                             |

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

#### AUTHENTICATION

# MONITORING WELL CERTIFICATION - FORM A AS-BUILT CERTIFICATION

(One form must be completed for each well)

| Name of Permittee: | Public Service Electric & Gas |
|--------------------|-------------------------------|
| Name of Facility:  | Former Front Street Gas Works |
| Location:          | McCarter Highway, Newark, NI  |
| NIPDES Permit No.: |                               |

#### **CERTIFICATION**

| CERTIFICATION                                      |                  |
|----------------------------------------------------|------------------|
| Well Permit Number:                                | 26-51020-        |
| Owner's Well Number (As shown on the               |                  |
| application or plans):                             | MW-4BR           |
| Well Completion Date:                              | August 11, 1998  |
| Distance from Top of Casing (cap off) to           |                  |
| ground surface (one-hundredth of a foot):          | 0.25'            |
| Total Depth of Well to nearest 1/2 foot:           | <u>62'</u>       |
| Depth to Top of Screen (or Top of Open Hole)       |                  |
| From Top of Casing (one-hundredth of a foot):      | 42'              |
| Screen Length (or length of open hole) in feet:    | 20'              |
| Screen or Slot Size:                               | 0.010            |
| Screen or Slot Material:                           | PVC Sch. 40      |
| Casing Material (PVC, Steel or Other-Specify):     | PVC Sch. 40      |
| Casing Diameter (inches):                          | 2"               |
| Static Water Level From Top of Casing at the Time  |                  |
| of Installation (one-hundredth of a foot):         | 7.65'            |
| Yield (gallons per minute):                        | ≈2               |
| Development Technique (specify)                    | Submersible Pump |
| Length of Time Well is Developed/Pumped or Bailed: | 1 hour           |
| Lithologic Log:                                    | <u>Attached</u>  |

#### **AUTHENTICATION**

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

# MONITORING WELL CERTIFICATION FORM B-LOCATION CERTIFICATION

# THIS FORM MUST BE COMPLETED BY THE PERMITTEE AND/OR SURVEYOR

Name of Permittee: PSE&G Name of Facility: MGP-017 - Front Street Location: McCarter Highway, Newark, New Jersey

# LAND SURVEYOR'S CERTIFICATION

| Well Permit Number:                          | 2 6 - 5 1 0 2 0                    |
|----------------------------------------------|------------------------------------|
| (This number must be permanently             |                                    |
| affixed to the well casing.)                 |                                    |
| Longitude (NAD '83):                         | West 74° 09' 58.53"                |
| Latitude (NAD '83):                          | North <u>40° 44' 34.67"</u>        |
| Elevation of Top of Inner Casing (cap off)   |                                    |
| (one-hundredth of a foot.) (NAVD '88):       | 13.28'                             |
| Source of elevation datum (benchmark, etc.)  |                                    |
| and elevation. (If an alternate datum has    |                                    |
| been approved by the Department, identify    |                                    |
| here and give approximated elevation):       | Source: Newark City GPS Mon #89-28 |
|                                              | Elev.: 8.11'                       |
| Owner's Well Number (as shown on application |                                    |
| or plans):                                   | MW-4BR                             |

or plans):

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

# MONITORING WELL CERTIFICATION - FORM A AS-BUILT CERTIFICATION

(One form must be completed for each well)

| Name of Permittee:   | Public Service Electric & Gas |
|----------------------|-------------------------------|
| Name of Facility:    | Former Front Street Gas Works |
| Location:            | McCarter Highway, Newark, N   |
| NJPDES Permit No.: _ |                               |

# CERTIFICATION

| CERTIFICATION                                      |                    |
|----------------------------------------------------|--------------------|
| Well Permit Number:                                | <u>26-51021</u> -  |
| Owner's Well Number (As shown on the               |                    |
| application or plans):                             | MW-5BR             |
| Well Completion Date:                              | August 11, 1998    |
| Distance from Top of Casing (cap off) to           |                    |
| ground surface (one-hundredth of a foot):          | 0.02'              |
| Total Depth of Well to nearest 1/2 foot:           | 72'                |
| Depth to Top of Screen (or Top of Open Hole)       |                    |
| From Top of Casing (one-hundredth of a foot):      | 52'                |
| Screen Length (or length of open hole) in feet:    | 20'                |
| Screen or Slot Size:                               | 0.010              |
| Screen or Slot Material:                           | <u>PVC Sch. 40</u> |
| Casing Material (PVC, Steel or Other-Specify):     | PVC Sch. 40        |
| Casing Diameter (inches):                          | 2"                 |
| Static Water Level From Top of Casing at the Time  |                    |
| of Installation (one-hundredth of a foot):         | 14.55'             |
| Yield (gallons per minute):                        | <1                 |
| Development Technique (specify)                    | Submersible Pump   |
| Length of Time Well is Developed/Pumped or Bailed: | 1 hour             |
| Lithologic Log:                                    | Attached           |
|                                                    |                    |

# AUTHENTICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

# MONITORING WELL CERTIFICATION FORM B-LOCATION CERTIFICATION

# THIS FORM MUST BE COMPLETED BY THE PERMITTEE AND/OR SURVEYOR

| Name of Permittee: | PSE&G                                |
|--------------------|--------------------------------------|
| Name of Facility:  | MGP-017 - Front Street               |
| Location:          | McCarter Highway, Newark, New Jersey |

### LAND SURVEYOR'S CERTIFICATION

| Well Permit Number:<br>(This number must be permanently | 2 6 - 5 1 0 2 1                    |
|---------------------------------------------------------|------------------------------------|
| affixed to the well casing.)                            |                                    |
| Longitude (NAD '83):                                    | West 74° 09' 59.68"                |
| Latitude (NAD '83):                                     | North40° 44' 37.71"                |
| Elevation of Top of Inner Casing (cap off)              |                                    |
| (one-hundredth of a foot.) (NAVD '88):                  | 19.22'                             |
| Source of elevation datum (benchmark, etc.)             |                                    |
| and elevation. (If an alternate datum has               |                                    |
| been approved by the Department, identify               |                                    |
| here and give approximated elevation):                  | Source: Newark City GPS Mon #89-28 |
|                                                         | Elev.: 8.11'                       |
| Owner's Well Number (as shown on application            |                                    |
| or plans):                                              | MW-5BR                             |

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

### AUTHENTICATION

### MONITORING WELL CERTIFICATION - FORM A AS-BUILT CERTIFICATION (One form must be completed for each well)

| Name of Permittee: | Public Service Electric & Gas |  |
|--------------------|-------------------------------|--|
| Name of Facility:  | Former Front Street Gas Works |  |
| Location:          | McCarter Highway, Newark, NI  |  |
| NJPDES Permit No.: |                               |  |

# COTICICATION

| CERTIFICATION                                      |                          |
|----------------------------------------------------|--------------------------|
| Well Permit Number:                                | <u>2 6 - 5 1 6 9 4 -</u> |
| Owner's Well Number (As shown on the               |                          |
| application or plans):                             | MW-6                     |
| Well Completion Date:                              | <u>August 29, 1998</u>   |
| Distance from Top of Casing (cap off) to           |                          |
| ground surface (one-hundredth of a foot):          | 0.32'                    |
| Total Depth of Well to nearest 1/2 foot:           | 32'                      |
| Depth to Top of Screen (or Top of Open Hole)       |                          |
| From Top of Casing (one-hundredth of a foot):      | <u>17'</u>               |
| Screen Length (or length of open hole) in feet:    | 15'                      |
| Screen or Slot Size:                               | 0.010                    |
| Screen or Slot Material:                           | PVC Sch. 40              |
| Casing Material (PVC, Steel or Other-Specify):     | PVC Sch. 40              |
| Casing Diameter (inches):                          | 2"                       |
| Static Water Level From Top of Casing at the Time  |                          |
| of Installation (one-hundredth of a foot):         | 27.95'                   |
| Yield (gallons per minute):                        | <1                       |
| Development Technique (specify)                    | Submersible Pump         |
| Length of Time Well is Developed/Pumped or Bailed: | <u>1 hour</u>            |
| Lithologic Log:                                    | Attached                 |
| >                                                  |                          |

#### **AUTHENTICATION**

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

# MONITORING WELL CERTIFICATION FORM B-LOCATION CERTIFICATION

# THIS FORM MUST BE COMPLETED BY THE PERMITTEE AND/OR SURVEYOR

| Name of Permittee: | PSE&G                                |
|--------------------|--------------------------------------|
| Name of Facility:  | MGP-017 - Front Street               |
| Location:          | McCarter Highway, Newark, New Jersey |

## LAND SURVEYOR'S CERTIFICATION

| Well Permit Number:                          | 2 6 - 5 1 6 9 4                    |
|----------------------------------------------|------------------------------------|
| (This number must be permanently             |                                    |
| affixed to the well casing.)                 |                                    |
| Longitude (NAD '83):                         | West 74° 10' 02.79"                |
| Latitude (NAD '83):                          | North 40° 44' 33.79"               |
| Elevation of Top of Inner Casing (cap off)   |                                    |
| (one-hundredth of a foot.) (NAVD '88):       | 38.39'                             |
| Source of elevation datum (benchmark, etc.)  |                                    |
| and elevation. (If an alternate datum has    |                                    |
| been approved by the Department, identify    | -                                  |
| here and give approximated elevation):       | Source: Newark City GPS Mon #89-28 |
|                                              | Elev.: 8.11'                       |
| Owner's Well Number (as shown on application |                                    |
| or plans):                                   | MW-6                               |

Elevations are to be determined by double run, three wire leveling methods using balance sights, commencing form a well marked and described point. This beginning point shall either be derived from Federal or State benchmarks if not more than 1000 feet from the site or, if the Department has approved an alternate datum, based on an assumed datum of 100. Tolerances should meet third order standards, which are 0.05 ft. x (mile)  $\frac{1}{2}$ . For sections less than 0.1 mile, let miles = 0.1.

## AUTHENTICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.
