

Evaluation of Extractable Petroleum Hydrocarbons in Soil Technical Guidance

July 23, 2019

Welcome

- In-Person Attendees
- Webinar Attendees

Continuing Education Credits (CECs)

SRP Licensing Board **has not yet approved 3 Technical CEC**
for this Training Class

- Certificate process will occur after course has been approved by the SRPL Board
- **Attendance Requirements:**
 - In-person attendance: must sign-in / sign-out and may not miss more than 20 minutes of the training
 - Webinar participants: must be logged-in for entire session and answer 3 out of 4 test questions (randomly inserted in the presentation)

CECs: What's the Process?

Upon SRPL Board approval of CEC application:

- DEP compiles a list of "in-person" and "webinar" participants eligible for CECs
- DEP will email eligible participants a "Link" to a LSRPA webpage with certificate access instructions
- Certificates are issued by the LSRPA after paying \$25 processing fee

Test Your Knowledge

Is the Lynne Mitchell the new Acting Assistant Director of the Remediation Review Element (BIR and BRAP)?

A. Yes

B. No

Test Your Knowledge

Is the Lynne Mitchell the new Acting Assistant Director of the Remediation Review Element (BIR and BRAP)?

A. Yes

**EXAMPLE WEBINAR
QUIZ SLIDE**

Important Reminders

- **Please mute cell phones**
- **Phone calls / conversations**
 - Please take outside of the meeting room
- **Question / Answers**
 - At times specified during the presentation
 - Please wait for the microphone
 - Webinar participants, wait for question period to “open up” and can then type in question

Remember!

Remember to sign **in and out** for credit

Please fill out the Course Evaluation Form

**NJDEP Evaluation of Extractable Petroleum
Hydrocarbons in Soil Technical Guidance Training

Evaluation of EPH in Soil Technical Guidance

John Ruhl, Technical Coordinator
Bureau of Environmental Evaluation
and Risk Assessment
John.ruhl@dep.nj.gov

Committee Members

- David Barskey, Co-Chair, Department (retired)
- John Ruhl, Co-Chair, Department
- Kathleen Kunze, Department Guidance Coordinator (retired)
- Ronald Baker, USGS New Jersey Water Science Center (retired)
- Michel Boufadel, New Jersey Institute of Technology (NJIT)
- Geoffrey Clark, LSRP, GHD Services, Inc.
- John Donohue, Fuel Merchants Association of New Jersey
- David Puchalski, LSRP, NewFields Princeton, LLC

Additional Contributions Rendered

- Paul Sanders, NJDEP, BEERA
- Paul Bauer, NJDEP, BIS
- Lynne Mitchell, NJDEP, SRWMP Training Chair
- Christina Page, NJDEP, SRWMP Ass't Training Chair
- Nicole Kozlowski, NJDEP, SRWMP Ass't Training Chair
- Jacob Oehrig, NewFields

List of Abbreviations

- AOC – Area of Concern
- Cat 1/Cat 2 – Category 1/Category 2
- Conc. - concentration
- EPH - Extractable Petroleum Hydrocarbons
- EPH Protocol - *Protocol For Addressing Extractable Petroleum Hydrocarbons* (August 2010)
- FAQs – Frequently Asked Questions in August 2010 EPH Protocol
- Ing-D Exp. Path. – Ingestion-Dermal Exposure Pathway
- NRDCSRC – Non-Residential Direct Contact Soil Remediation Criterion
- RDCSRC – Residential Direct Contact Soil Remediation Criterion
- SRC – Soil Remediation Criterion
- SRS – Soil Remediation Standards in REMEDIATION STANDARDS (N.J.A.C. 7:26D)
- Technical Rules - TECHNICAL REQUIREMENTS FOR SITE REMEDIATION (N.J.A.C. 7:26E)
- TPH - Total Petroleum Hydrocarbons

Petroleum Products in Table 2-1 of Technical Rules

Petroleum products this guidance applies to:

Cat 1 Defined (Section 4.1.1 of this guidance)

- No. 2 Heating Oil
- Diesel Fuel

Petroleum Products in Table 2-1 (cont'd)

Cat 2 Defined (section 4.1.2 of this guidance)

- Nos. 4 & 6 Heating Oil
- Hydraulic Oil, Cutting Oil, Lubricating Oil
- Crude Oil
- Waste Oil, *Unknown Petroleum Hydrocarbons
- Waste Vehicular Crankcase Oil
- *Mineral Oil
- *Dielectric Fluid, *Dielectric Mineral Oil, *Transformer Oil
- *Manufactured Gas Plant (MGP) Sites

* Petroleum products added to Table 2-1 that post-date the EPH Protocol

Stimulus For Developing EPH Technical Guidance

- Consider alternative EPH product limits for other soil textures
 - Medium sand-based EPH default product limits to all soil types (App. 3.1 of this guidance):
 - 8,000 mg/kg EPH for Cat 1
 - 17,000 mg/kg EPH for Cat 2
- Update EPH SRC with pending revisions to SRS

Main Differences Between 2010 and Now

- Addition of six EPH petroleum products in Table 2-1 of Technical Rule
- Allow for development EPH alternative product limits
- 8,000 mg/kg default product limit assigned to some Cat 2 petroleum products
- Establishment of 30,000 mg/kg EPH ceiling
- Compliance averaging for EPH Cat 1 SRC
- Petroleum product mixtures - clarification for EPH product limits and applicable SRC

Additional Changes

- Updated EPH evaluation steps (Sect. 5.0), plus
 - order rearranged to the investigator's perspective
 - streamlined
- Updated EPH Cat 2 SRC calculator
 - no longer compares EPH conc. to default product limit
 - displays equation and parameter default values for Ing-D Exp. Path.

Pertinent aspects of FAQs and EPH Protocol Implementation Phase-In (August 2010) retained in EPH Technical Guidance Appendix 3

Historical Perspective: TPH to EPH Freon/Method 418.1 Phase-Out

- TPH via EPA Method 418.1 used Freon extraction
 - Freon depletes ozone layer
- Freon phased-out
 - Method 418.1 unavailable
- Replacement method necessary
- Department employed several methods to bridge the gap
 - USEPA SW846 Methods 8015B and 8015B/C,
 - NJDEP OQA-QAM-025 and OQA-QAM-025 rev. 7, and
 - NJDEP EPH Method Revision 2

Historical Perspective: TPH Transition to EPH (Legislative Mandate)

- TPH based on “field capacity” and was not health-based
- Department legislatively mandated to establish human health-based remediation standards per Brownfield and Contaminated Site Remediation Act (N.J.S.A. 58:10B-12)
- EPH METHODOLOGY (Version 3.0) [August 2010] is health-based

Historical Perspective: TPH transition to EPH (NJDEP EPH Method Version 3.0)

- **RESULT:** Provides more accurate assessment of potential human health risk
- Determines collective concentrations for specific carbon number ranges of extractable aliphatic and aromatic petroleum hydrocarbons
- EPH method analyzes for 4 aromatic + 4 aliphatic fractions
- Representative toxicity factors assigned to each fraction range

EPH Category 1: Human Health-Based SRC Derivation

- 2007 EPH-TPH Field Study (No. 2 heating oil tank removals)
- EPH Direct Contact SRC based on Ing-D Exp. Path.
- Applying 95% Lower Confidence Limit of the mean and 2010 Remediation Standards Rule update:
 - **5,100** mg/kg EPH RDCSRC
 - **54,000** mg/kg EPH NRDCSRC

Appendix 3.3

EPH Cat 1 – Inhalation SRS and IGW Soil Screening Level

- How are the inhalation and impact to ground water exposure pathways evaluated?
- >1,000 mg/kg EPH triggers contingency analyses for:
 - Naphthalene: evaluates inhalation exposure pathway [FAQ#5]
 - 2-methylnaphthalene: evaluates impact to ground water exposure pathway [FAQ#9]

Petroleum Product Mixtures

Mixtures of Table 2-1 Petroleum Products

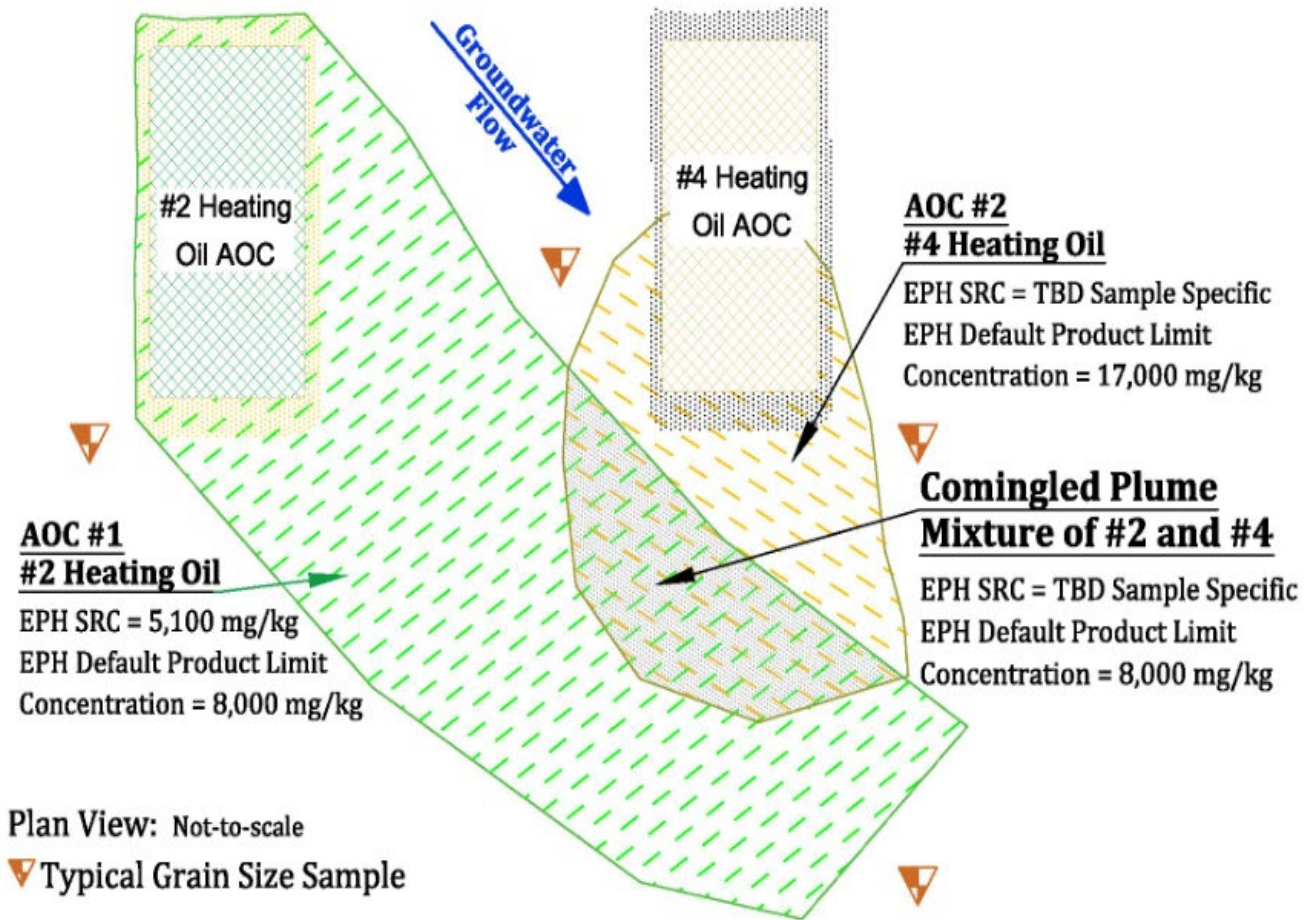

Hand-Out: EPH Category, SRC, and
Default Product Limit by Petroleum Product

Section 4.1.3

Manufactured Gas Plant	2	Sample-specific	8,000
Mixtures			
Mixture of Categories 1 and 2		Sample-specific	8,000
Waste Oil comprised of Categories 1 and 2		Sample-specific	8,000
Mixture of petroleum product with 8,000 mg/kg default product limit and petroleum product with 17,000 mg/kg default product limit		Sample-specific	8,000

Commingled NAPL Plumes Scenario

Two separate and unique NAPL plumes

- Each plume is investigated individually
- Any commingled area utilizes the **most conservative** remedial criteria

QUESTIONS?

Conceptual Approach for Petroleum Hydrocarbons in Soils

Ronald J. Baker

U.S. Geological Survey (retired)

Michel C. Boufadel, Ph.D., PE, BCEE, P.Hydro.

Professor, Department of Civil and Environmental Engineering

Professor, Department of Chemical and Materials Engineering

Director, Center for Natural Resources

New Jersey Institute of Technology, Newark NJ

Objectives for Presentation

- Basic understanding of NAPL distribution in soils
- Complex system involving three phases
 - Hydrocarbons; water; air
- Movement of hydrocarbons is highly irregular
- Hysteresis
- Need for a simplification using

Hydrocarbon in Aquifers

Problem Statement

Three phases exist in the pore space:

- Hydrocarbon
- Water
- Air

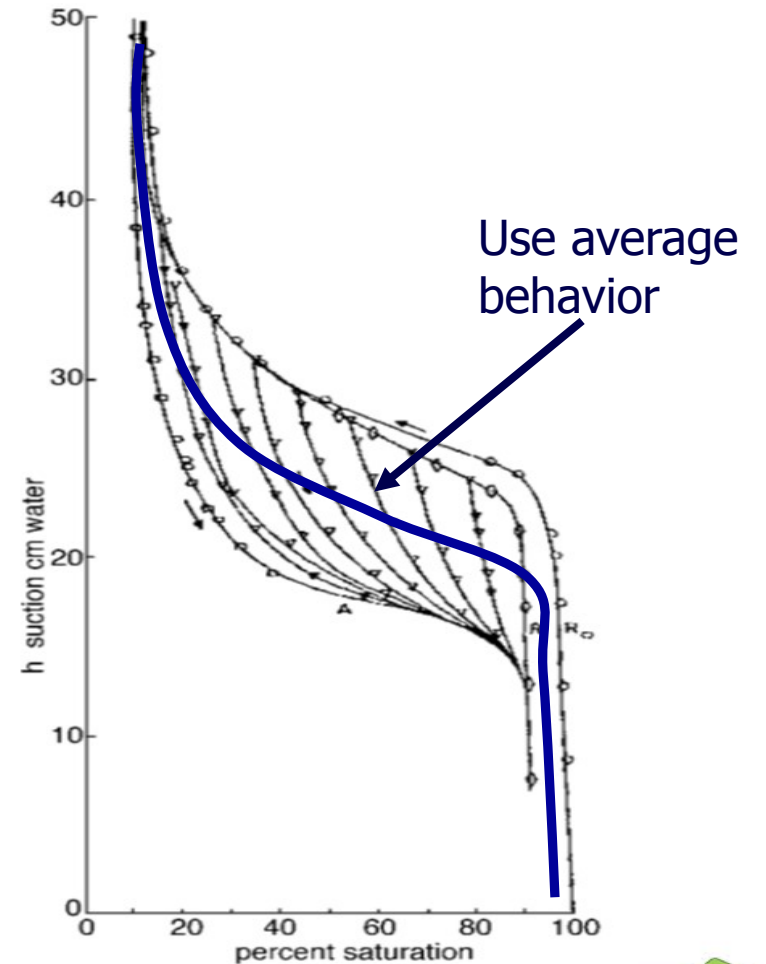

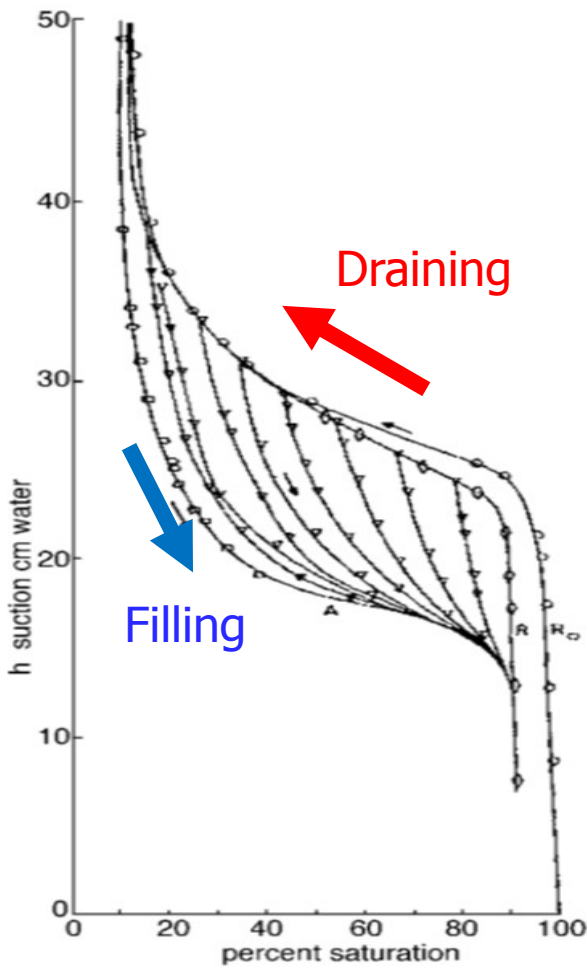

Red= Oil
Green= Air
Blue= Water
White= Soil

Hysteresis

The movement of hydrocarbons depends on the content and hydrodynamics of the three phases and the soil wettability

EPH Committee Approach

- Accurately predicting the hydrocarbon content requires complicated models and a significant amount of soil and hydrocarbon data
- Adopt the approach used for unsaturated water flow in soils
- Conceptually, replace oil for water in the equations
 - Account for oil viscosity

EPH Committee Approach

Solve the Darcy equation for hydrocarbon flow in porous media (i.e., in soils)

Darcy flux= hydraulic conductivity*(Head drop)

$$q = \frac{g}{\nu} k_{\text{intrinsic}} * k_r * (\text{Head drop})$$

Where: ν = oil viscosity.

$k_{\text{intrinsic}}$ = Intrinsic soil permeability -Depends on porosity and d_{10}

(If you know porosity and d_{10} , you obtain $k_{\text{intrinsic}}$)

k_r = Relative permeability (0 to 1) **Depends on hydrocarbon content**

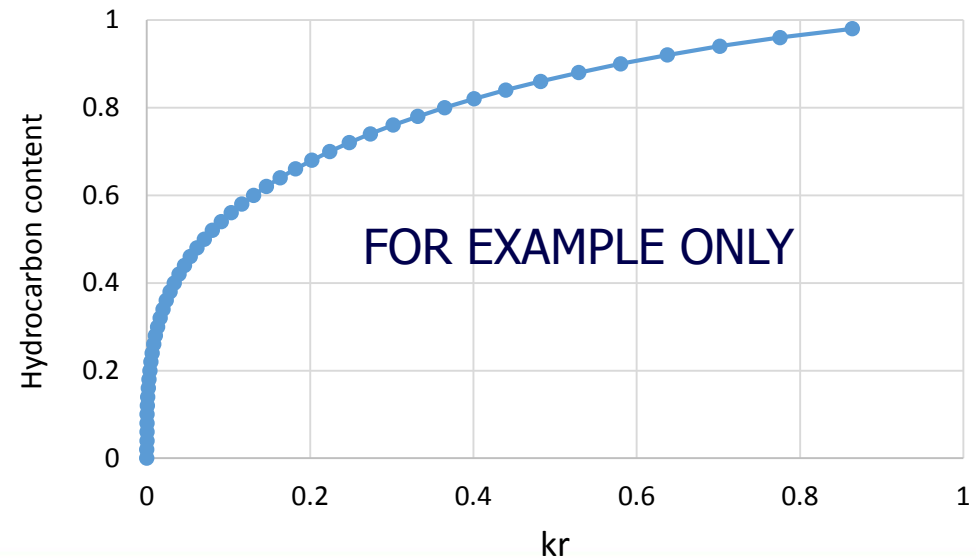

EPH Committee Approach

For vertical flow, (head drop)=1.0; Also let $q = 1$ foot/(100 years) per NJDEP

Thus, given oil viscosity, and k_{int} , one solves for k_r :
$$k_r = \frac{v}{g \cdot k_{intrinsic}}$$

After finding k_r , one finds the hydrocarbon content (i.e., volume fraction)

Questions?

Equation Variables used in the Calculator, Sensitivity Analysis, and Sample Collection for Particle-Size Distribution

Ronald J. Baker

U.S. Geological Survey (retired)

Factors that Determine Petroleum Hydrocarbon Product Mobility

- Site characteristics
 - Size, shape
 - Slope, structures, disturbance
- Product properties
 - Viscosity & density
 - Temperature, degree of weathering
- Soil properties
 - Porosity
 - Grain size distribution

Equations and Variables

- Appendix 2.3 describes derivation of the equation in detail
- Variable Names handout lists all variables used in the equation **(in red)**
- The following slides show the equations used in the calculator

Derivation of the Equation used to Calculate the Alternative EPH Product Limit in Soil

$$\begin{aligned}
 C &= \frac{M_o}{M_s} = \frac{\theta_o * \rho_o}{(1 - \emptyset) * \rho_s} \xrightarrow{S * \emptyset} \frac{S * \emptyset * \rho_o}{(1 - \emptyset) * \rho_s} \xrightarrow{(1 - S_r)S_e + S_r} \frac{[(1 - S_r)S_e + S_r] * \emptyset * \rho_o}{(1 - \emptyset) * \rho_s} \\
 &\xrightarrow{1.1349 * k_r^{0.3095}} \frac{[(1 - S_r) * 1.1349 * k_r^{0.3095} + S_r] * \emptyset * \rho_o}{(1 - \emptyset) * \rho_s} \xrightarrow{\frac{K * \mu}{k_o * \rho_o * g}} \frac{[(1 - S_r) * 1.1349 * \left(\frac{K * \mu}{k * \rho_o * g}\right)^{0.3095} + S_r] * \emptyset * \rho_o}{(1 - \emptyset) * \rho_s}
 \end{aligned}$$

Final Equation used to Calculate the Alternative EPH Product Limit in Soil

Input the parameter default values and convert the units to mg/kg. The remaining parameters are specific to the type of petroleum product and the site's soil-specific properties.

$$C = \frac{[(1 - 0.02)1.1349 * (\frac{10^{-9} * \mu}{k * \rho_0 * 9.81})^{0.3095} + 0.02] * 0.41 * \rho_o}{(1 - 0.41) 2.54} * 10^6 \frac{mg}{kg}$$

Product Related Variables

- μ = Dynamic Viscosity
 - Lower viscosity \rightarrow greater mobility
- ρ_o = Product Density
 - Lower density \rightarrow lower mobility

Properties of Products Specified in the Calculator

Petroleum Product Name	Density (g/cm ³)	Dynamic Viscosity (poise)
Cutting Oil, Diesel Fuel No. 2 Heating Oil Unknown Petroleum Hydrocarbons	0.8245 @ 15°C	0.02 @ 15°C
Dielectric Fluid Mineral Oil Transformer Oil	0.8673	0.19
No. 4 Heating Oil	0.9250 @ 20°C	0.23 @ 20°C
Hydraulic Oil	0.8727 @ 15°C	1.02 @ 15°C
Lubricating Oil	0.8498 @ 15°C	1.4217 @ 15°C
Waste Vehicular Crankcase Oil	0.8848 @ 15°C	1.75 @ 15°C
No. 6 Heating Oil	0.9879 @ 15°C	403.4 @ 15°C

Soil Properties that Determine Product Mobility

- Φ = Total porosity of soil
- θ_o = Product-filled porosity
- i = Flow Gradient
 - Worst case: vertical gradient (1.0 feet/foot)
- D_{10} = grain effective diameter
 - Sieve size through which 10% passes

Values Determined by the Calculator

- **D₁₀**
- **C** = AOC-specific alternative product limit
 - Defined as the product concentration at which product moves at 0.01 ft/yr
- **Ceiling limit** = 30,000 mg/kg (Appendix 3.2)
- And is **C** greater than or less than the **ceiling limit**?
 - Only use **C** if it is less than the ceiling limit

Default Variables Imbedded in the Calculator

- **i** = Vertical Groundwater Gradient – dimensionless (1.0)
- **q** = Darcy Flux value – feet/year (0.01 feet/year)
- **S_r** = Residual petroleum HC saturation – percent (2%)
- **ρ_s** = Grain density of the soil - grams/cm³ (2.54 g/cm³)
- **Temperature** - of NAPL in soil (15 degrees C)
- **n** = Van Genuchten uniformity coefficient n (4)
- **τ** = tortuosity to flow (0.5)
- **F** = particle shape factor (2.5)
- **Φ** = porosity (0.41)

Variables Determined by the Calculator

- **K** = Hydraulic conductivity $K=q/I = 0.01$ ft/year
- **k** = Intrinsic permeability of the medium
- **k_r** = Relative permeability of the medium
- **S** = NAPL saturation ratio, the fraction of porosity occupied by product
- **S_e** = Effective saturation, the relative fraction of product available for flow
- **θ_o** = Product-filled porosity

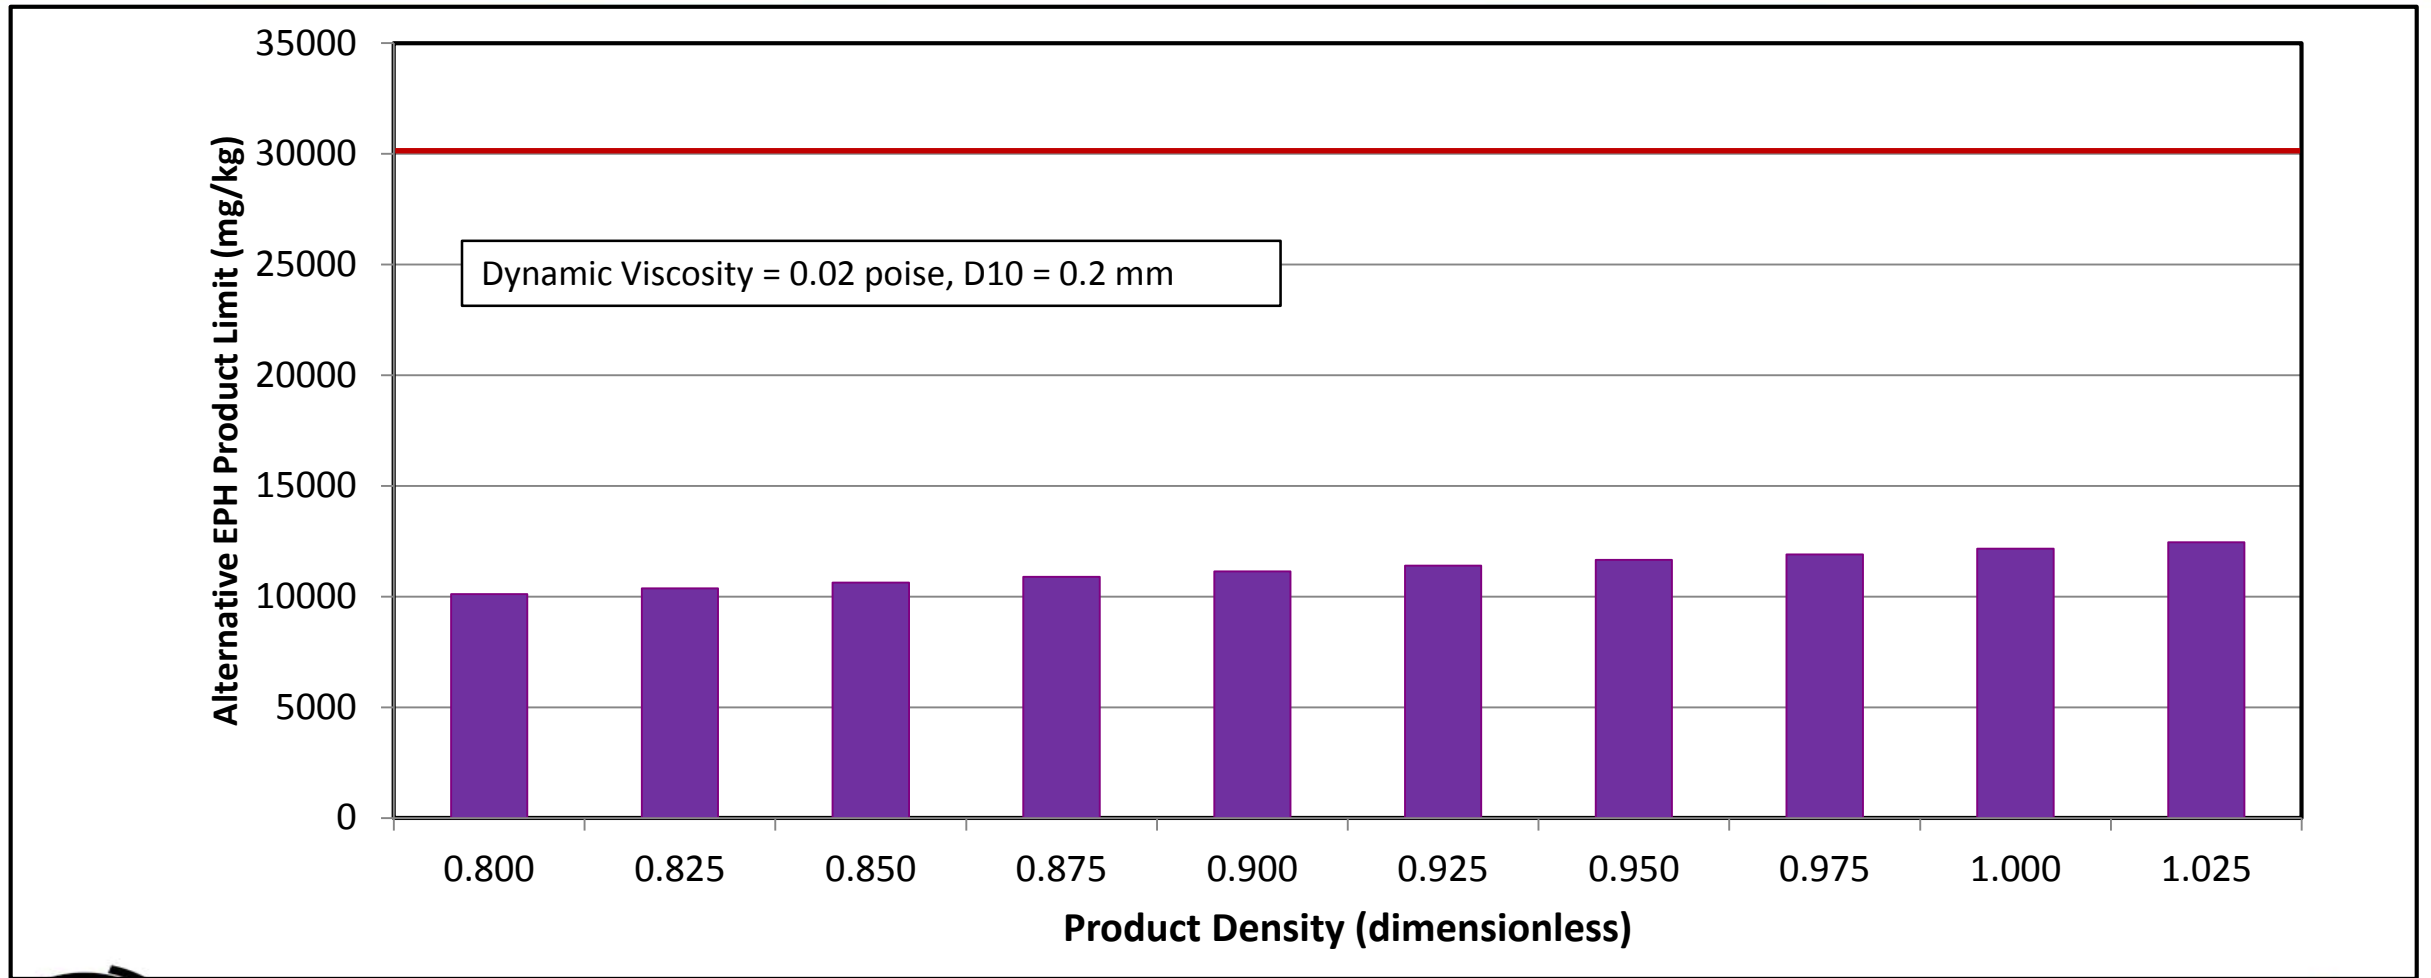

Sensitivity Analysis of Variables in the Calculator

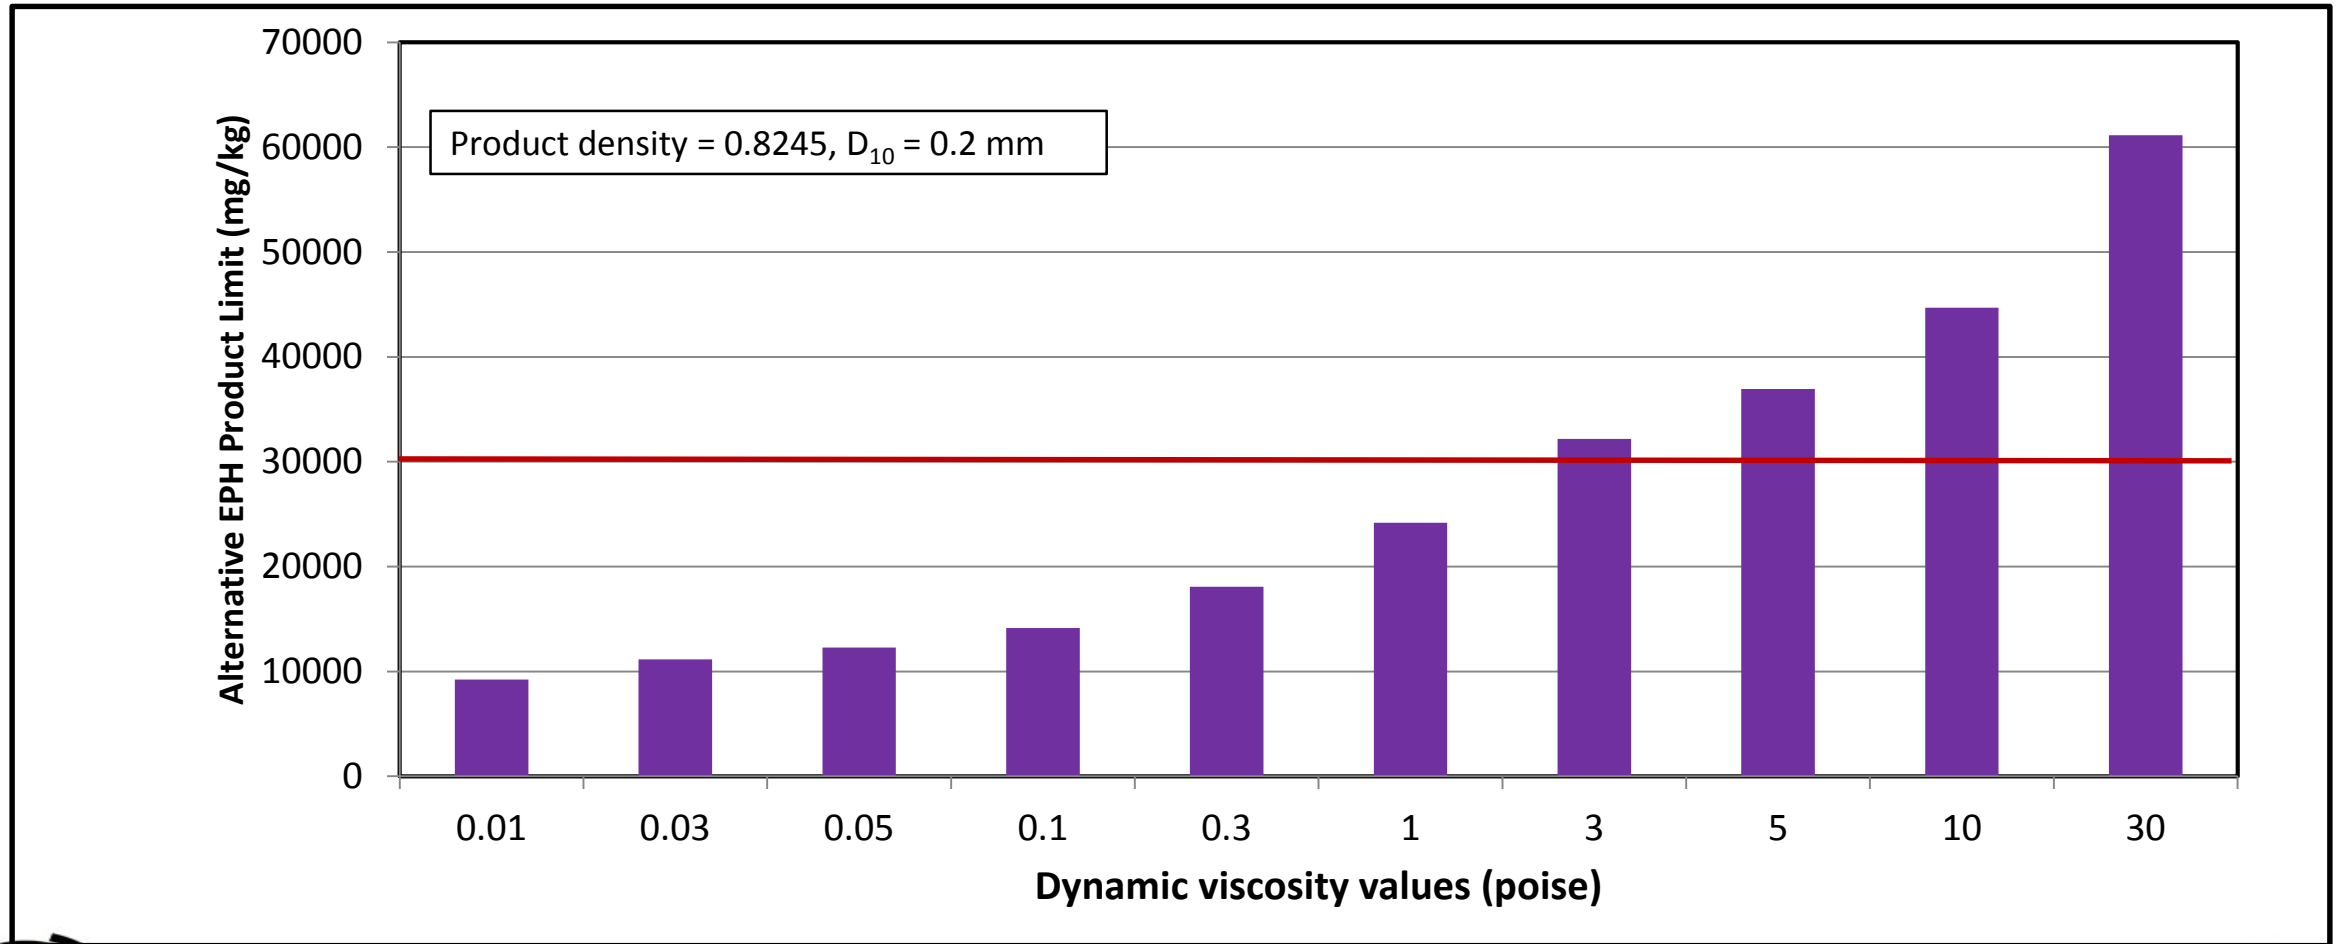

- Alternative EPH Product Limit has different degrees of sensitivity to these variables:
 - **Product properties**
 - Density
 - Dynamic viscosity
 - **Soil properties**
 - Porosity
 - D_{10}

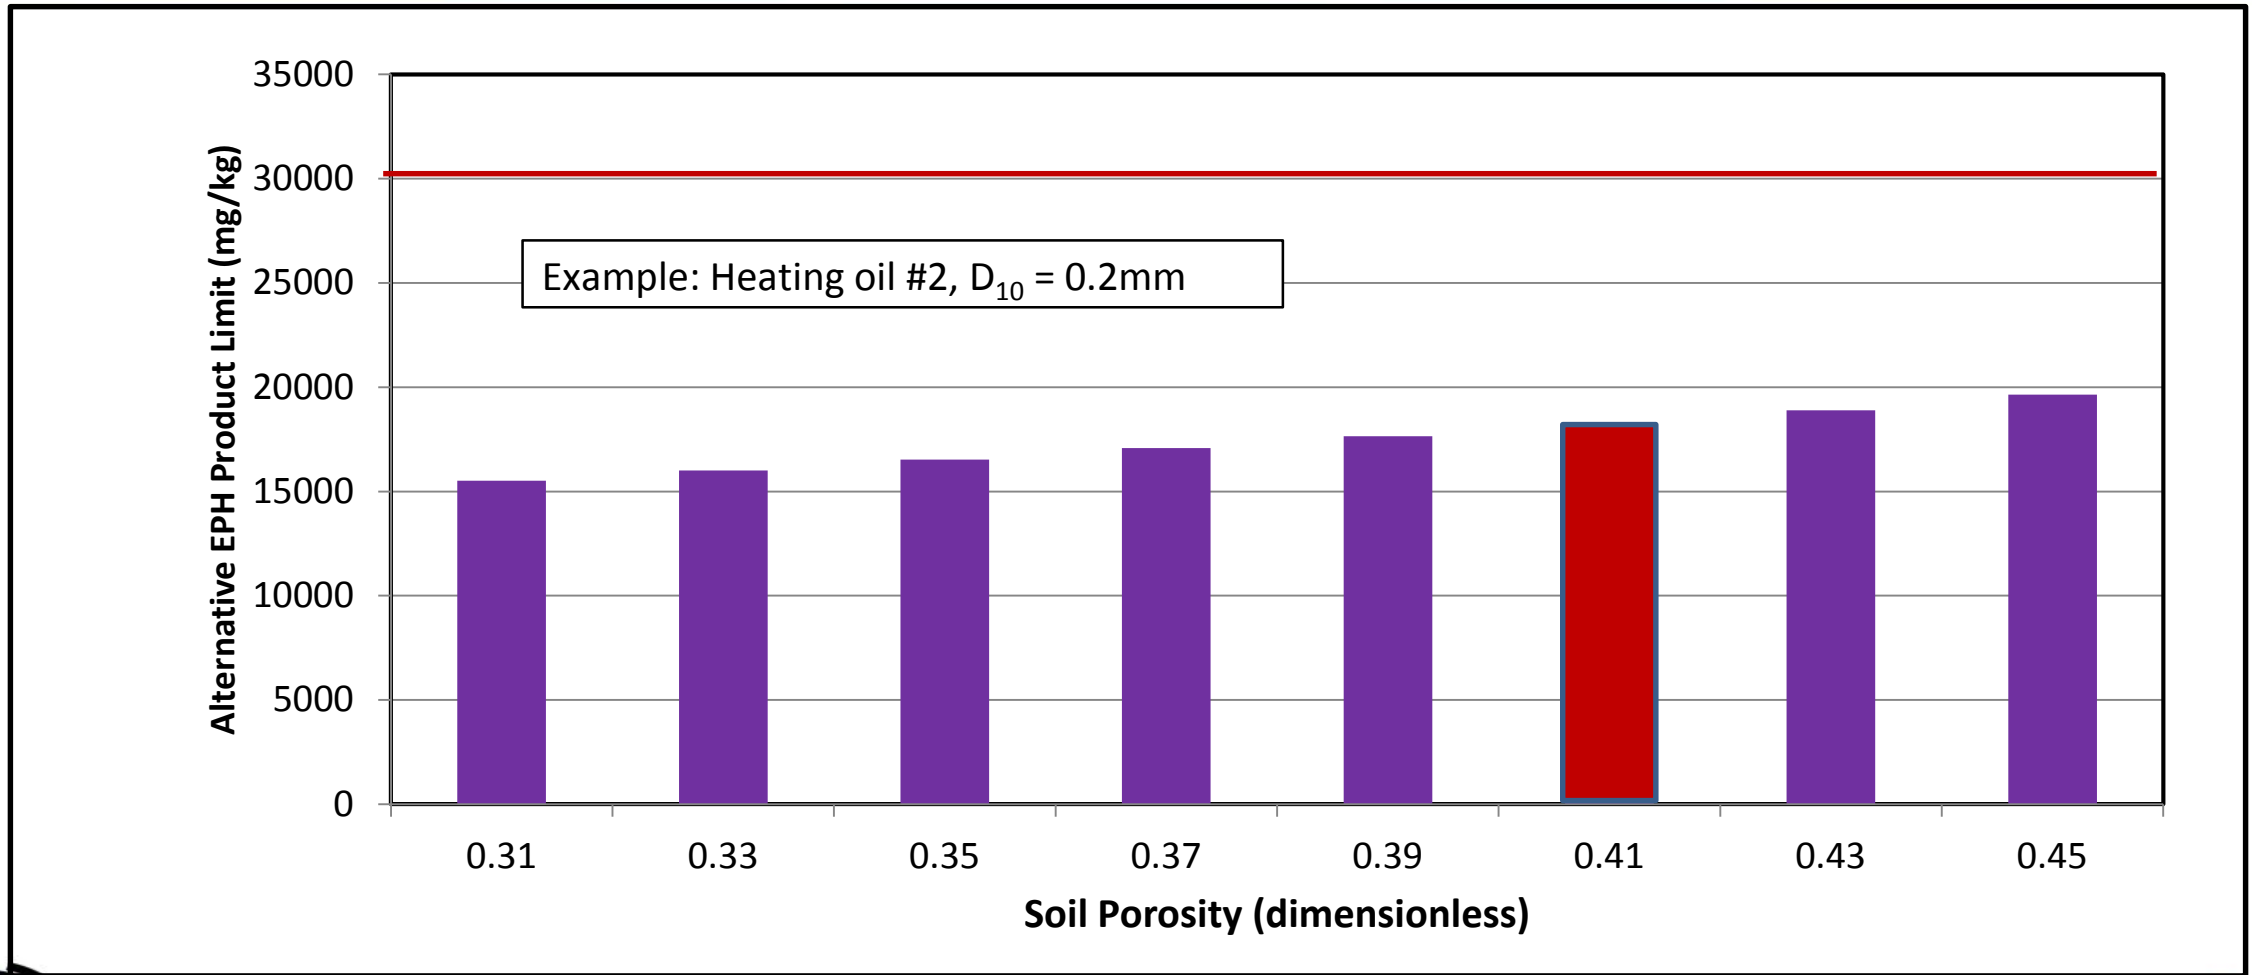

Minimal Effect of Product Density on C-Value

Substantial Effect of Product Viscosity on C-Value

Minimal Effect of Porosity on C-Value

Why use D_{10} ?

- D_{10} = measure of the finer particle fraction
 - Finer particles control permeability
- D_{10} is the basis of the Hazen formula used in geotechnical engineering and the Kozeny-Carmen equation (which we use in the calculator)
- D_{20} or D_{60}/D_{10} were rejected as alternatives
 - D_{20} gives less information about the finer particles
 - D_{60}/D_{10} informs about soil grading, but gives no additional information about the finer fraction

USDA Soil Classification System (SCS)

Soil Permeability

Sieves for Determining Particle (grain) Size Distribution

Sieves for Determining Particle (grain) Size Distribution

Additional Information about Sieve Analysis

- Chain of Custody must follow samples from collection through results reporting
- Specify method used
- Appropriate QA/QC measures must be applied
- If D_{10} is supplied by the lab, calculation method must be specified

Example of Particle Size Distribution Data

Project: 493 North Arlington, NJ

Collected: 10/19/16

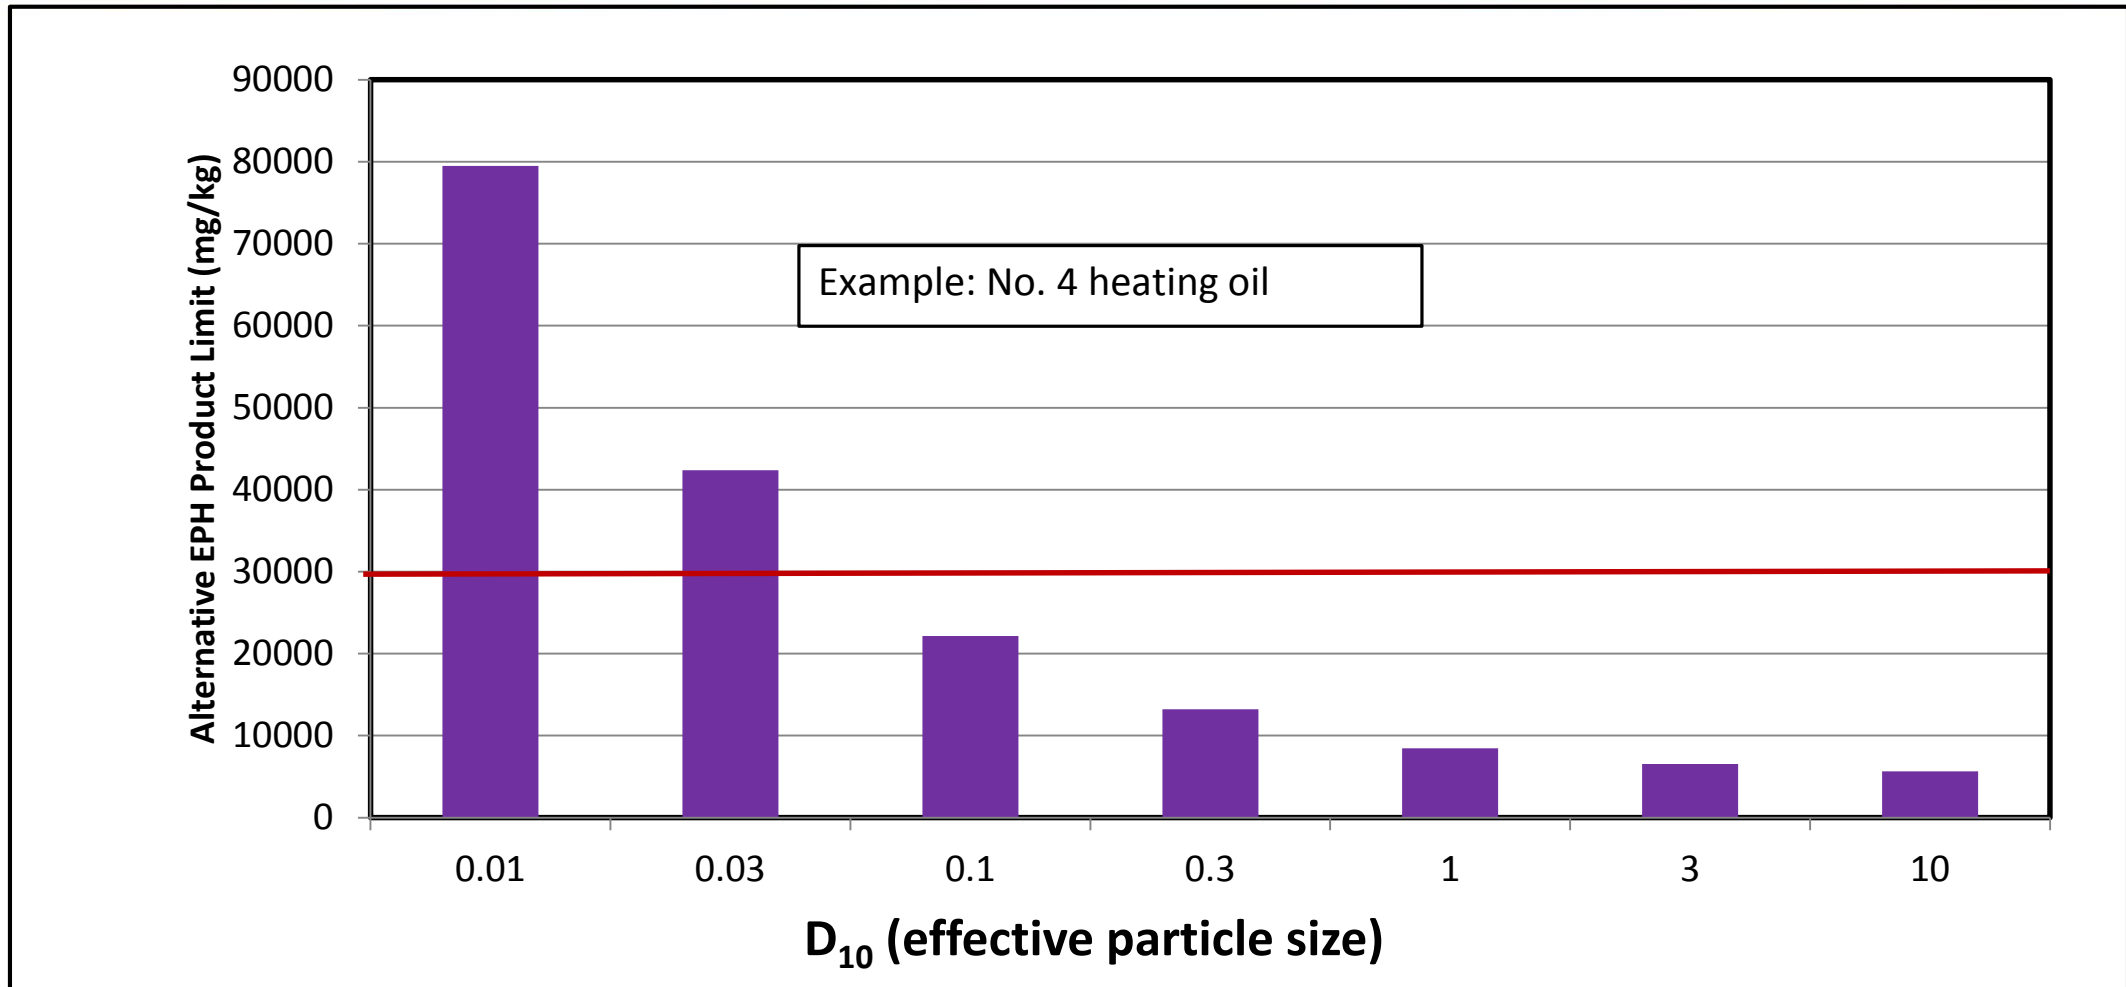

Lab Method: ASTM D422-63

Sieve	size (mm)	Percent passed through
0.75 Inch	19.05	100.0
0.375 Inch	9.575	99.4
No.4 Sieve	4.75	96.2
No.10 Sieve	2.00	92.3
No.30 Sieve	0.60	87.1
No.50 Sieve	0.30	82.8
No.100 Sieve	0.15	74.3
No.200 Sieve	0.075	65.1
Hydrometer	0.030	50.0
Hydrometer	0.005	10.0
Hydrometer	0.0015	3.0

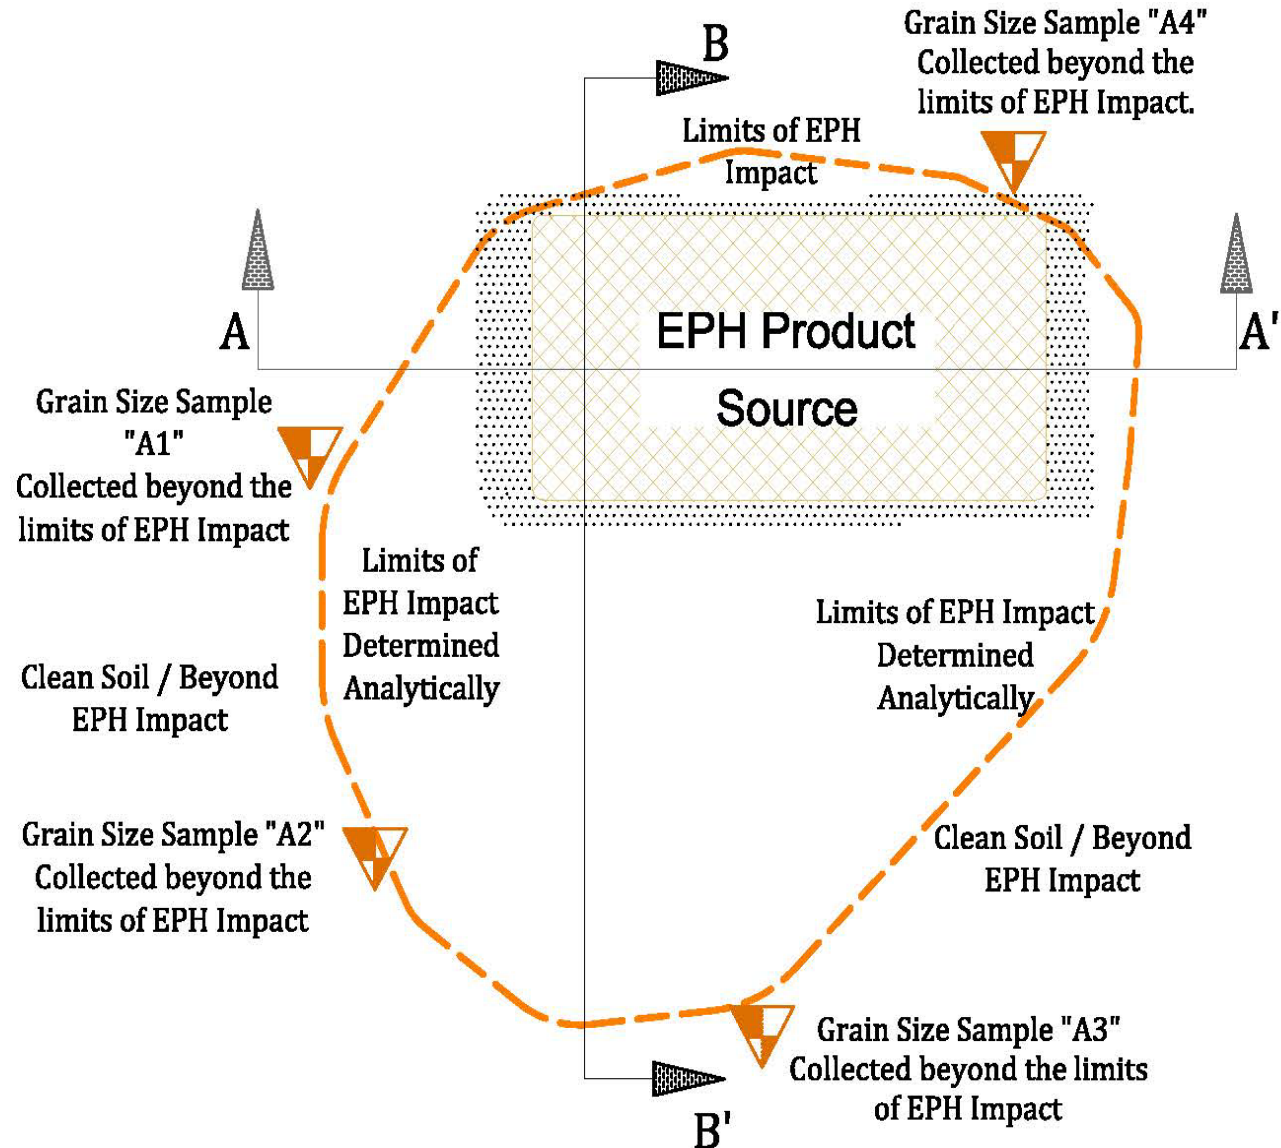

D₁₀

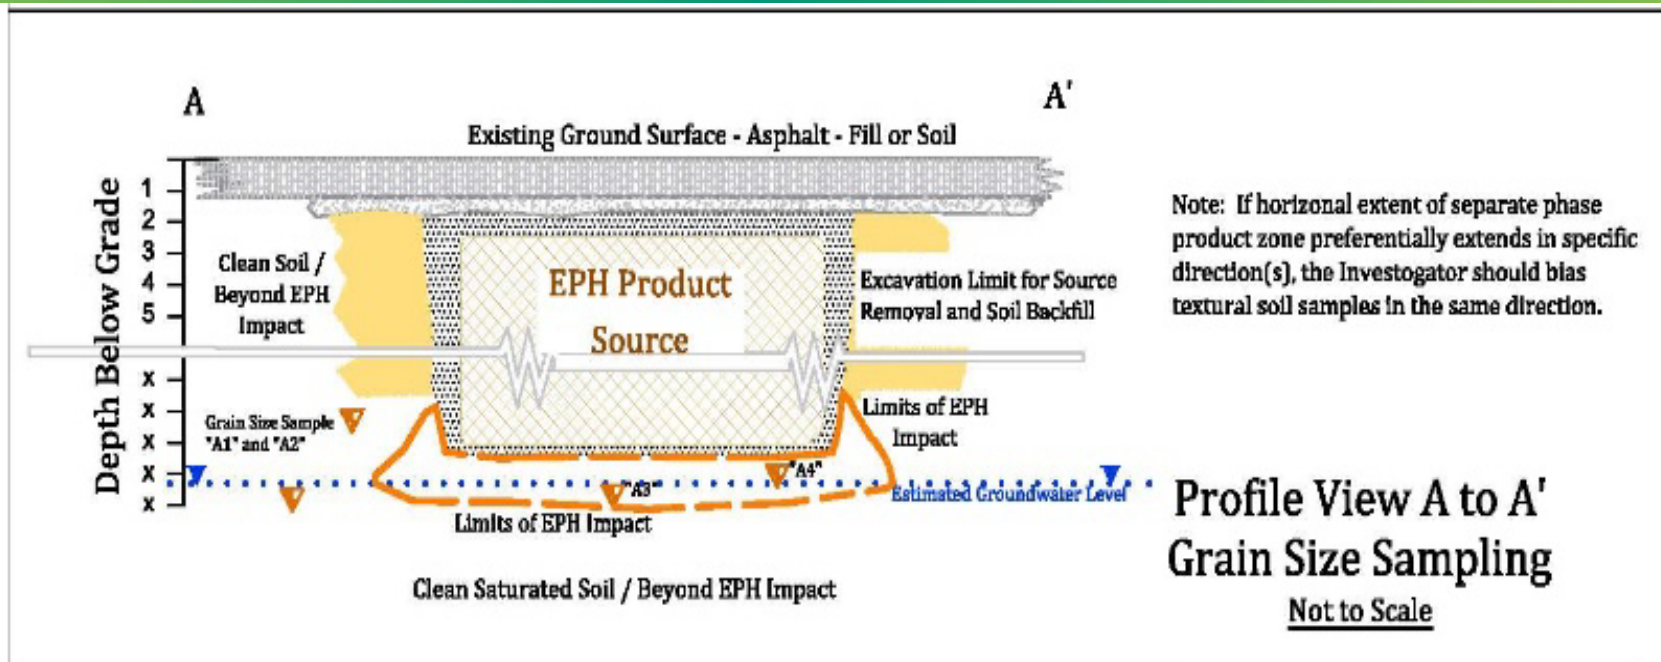

Substantial Effect of D_{10} on C value

EPH Grain Size Sample Notes - Horizontal

Typical Cross Sections- Grain Size Sample Locations

Note: If horizontal extent of separate phase product zone preferentially extends in specific direction(s), the Investigator should bias textural soil samples in the same direction.

Profile View A to A' Grain Size Sampling
Not to Scale

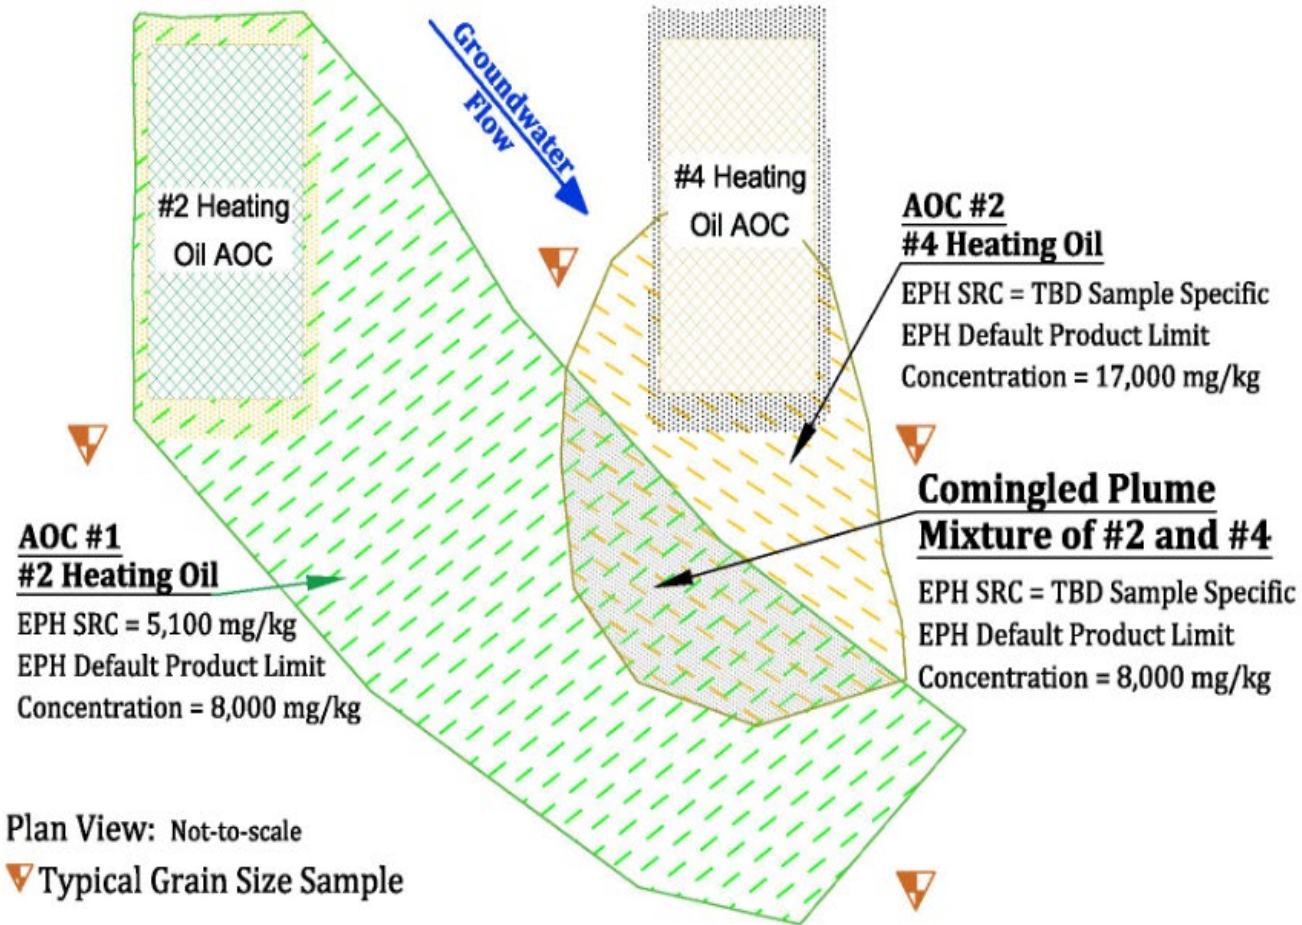

- LEGEND**
- ▼ Typical Soil Textural Sample Location. Site Investigator must select the most appropriate location for each AOC and each petroleum product.
 - - - Typical limits of EPH concentrations in soil above the residential soil criteria.
 - Typical groundwater elevation demonstrates the Investigator may select to collect textural samples above or below the water level.
 - Typical drawing section line, demonstrating the depths of the textural samples should not be directly associated with the original release depth below grade.

Profile View B to B' Grain Size Sampling
Not to Scale

Commingled NAPL Plumes Scenario

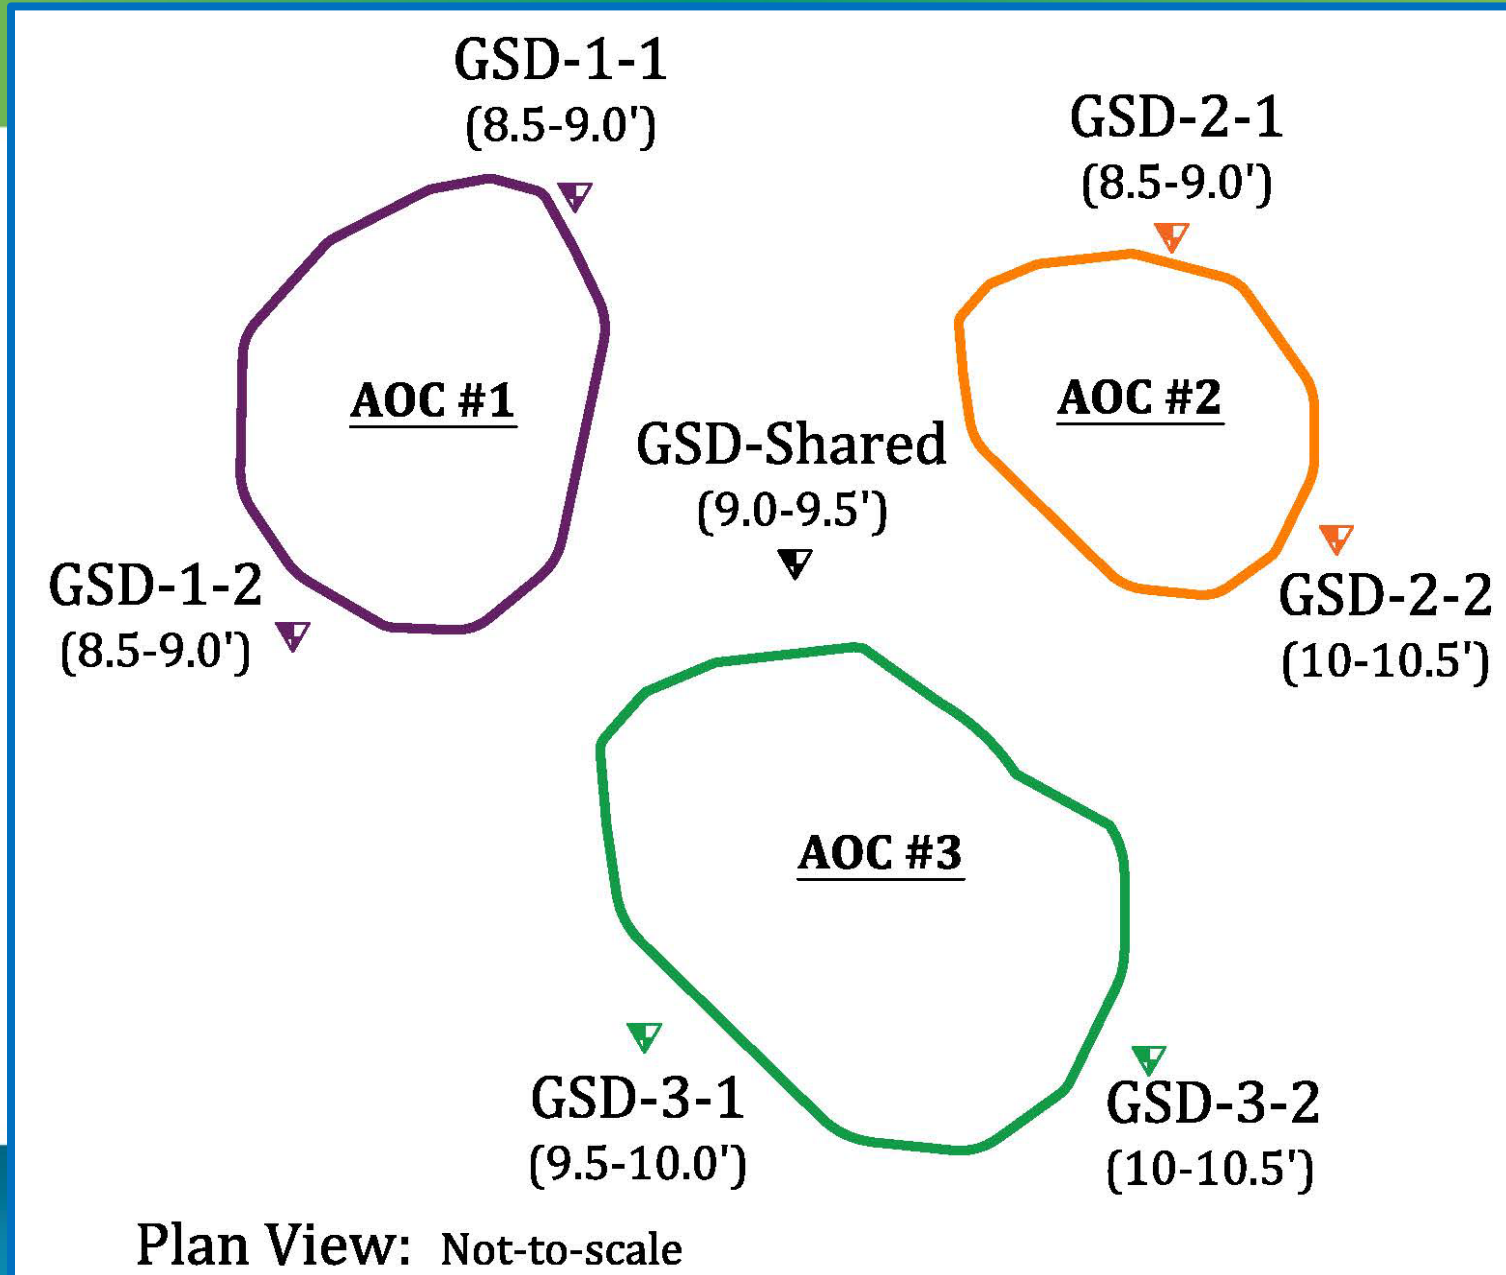

Two separate and unique NAPL plumes

- Each plume is investigated individually
- Any commingled area utilizes the **most conservative** remedial criteria

Sharing of Grain Size Samples - 3 AOCs Scenario

EPH Investigation Overview

John F. Donohue

Fuel Merchants Association of New Jersey

Determine EPH of Concern

- **Cat 1 EPH**
 - Number 2 (#2) fuel oil and/or diesel fuel
- **Cat 2 EPH**
 - Number 4 (#4) fuel oil, Number 6 fuel oil, hydraulic oils, cutting oils, crude oil, lubricating oil, waste oil, waste vehicular crankcase oil, and waste mineral oil
- **Both: Current #2 Fuel Oil, Former #4 Oil Use**
 - Mixtures: MGP, crude oil, cutting oil, unknown EPH

Determine Health Based Limits

- **Cat 1 EPH** = 5,100 mg/kg RDCSRC
 - 54,000 mg/kg NRDCSRC
- **Cat 2 EPH** → Site Specific
 - >2,300 mg/kg fractionated analysis needed
 - Use SRC calculator
- **Mixtures** → Most Stringent

Determine Contingency Driver Limits

- N.J.A.C. 7:26E, Table 2-1
- **Cat 1 EPH:** 1,000 mg/kg
 - Evaluate for naphthalene and 2-methylnaphthalene
- **Cat 2 EPH, Heating Oils:** 100 mg/kg
 - PAHs
- **Cat 2 EPH, Other:** >ND or Required
 - Product specific

Determine Default Product Limits

- **Cat 1 EPH:** 8,000 mg/kg
- **Cat 2 EPH:** 17,000 mg/kg
- **Mixtures:** 8,000 mg/kg

What if EPH concentrations are:

- Greater than default product limit?
 - Consider 'Alternative Product Limit'
- Greater than 30,000 mg/kg?

What's New?

- Guidance includes greater reference to Attainment Compliance Technical Guidance
- Guidance provides a method to develop a site-specific, alternative product limit
- Alternate product limit calculator
- Textural analysis of soil is needed to generate a value for use in the 'calculator'

What's New?

Depends on the Project Type

Residential HOT

- No substantive change
- Cat 1 EPH standard
- Cat 2 EPH calculated

Compliance
Averaging
(>5,100/<8,000
mg/kg)

Standard Industrial

- Small changes
- Cat 1 EPH standard
- Cat 2 EPH calculated
- Product ceiling limit
- Option for Alternative
Product Limit
Concentration
- Additional Grain Size
analysis

Complex Industrial

- More changes
- Cat 1 EPH standard
- Cat 2 EPH calculated
- Product ceiling limit
- Option for Alternative
Product Limit Concentration
- Grain Size analysis
- Added products and mixtures
- Technical Consultation**

What is Not New

- Cat 1 Soil Remediation Criterion (RDCSRC)
 - Established in Remediation Standard, N.J.A.C. 7:26D
 - Established in Heating Oil Tank System Rule, N.J.A.C. 7:26 F (HOTSR Rule)
- Cat 2 Composition Specific EPH Soil Criterion Remediation Calculator (which has been updated)
- Contingency Analysis Requirements
- Default Product Limits
- Unrestricted Use Criterion/Institutional Control Requirements
- Product Indicator Concentrations require Single-Point Compliance

Residential Use Remediation Goal

- **Existing Residential Site with Unrestricted Use as goal**
 - EPH 2019 does not offer a 'silver bullet'
 - Compliance averaging or 75%/10X can be used for Cat 1 fuels and specific compounds of concern
 - Alternative product limit calculator, along with compliance averaging or 75%/10X can be used at sites regulated by N.J.A.C. 7:26F (HOTSR Rule) if EPH > 8,000 mg/kg is present
 - Cat 2 fuel AOC attainment compliance options do not include averaging

Non-Residential Use Remediation Goal

- **Non-Residential Site with an Unrestricted Use as goal**
 - EPH 2019 does not offer a 'silver bullet' for Cat 1 fuels due to RDCSRC
 - Alternative product limit calculator, along with compliance averaging or 75%/10X can be used at sites regulated by N.J.A.C. 7:26F (HOTSR Rule) if EPH > 8,000 mg/kg is present
 - Cat 2 fuels and use of alternative product limit can be quite effective for meeting remediation goal
 - Compliance averaging or 75%/10X can be used for Cat 1 fuels and specific compounds of concern

Restricted Use

- **Restricted Use is acceptable to the PRCR**
 - Institutional control required
 - Engineering control use may be reduced
 - Long term monitoring requirements can apply
 - Requires Remedial Action Permit (see HOTSr exclusions)

Why Default Product Limits?

- **7:26E-5.1 Remedial action requirements**
 - (e) The person responsible for conducting the remediation shall treat or remove free product and residual product to the extent practicable or contain **free product** and **residual product** when treatment or removal is not practicable. Monitored natural attenuation of free product and residual product is prohibited.
- **Question: How does the LSRP determine...**
 - What is 'Free product'? What is 'Residual product'?
 - What is 'Residual contamination'?
 - What is 'NAPL'?
- Answer: Department established 'Product Limits' for EPH

The Work of the Committee

- Evaluate the appropriateness of established default product limits
- Seek out methods to support development of 'site specific' limits
 - Centrifuge analysis
 - Testing of EPH impacted soils
- Consider a field classification of soil and use corresponding default limits from prior studies
- Provide the regulated community the option to calculate a product limit

Brost and DeVaul, 2000

- The Title: NAPL Mobility Limits in Soil
- The title may have been better stated as:
 - When is product in soil residual (or presumed to be immobile)?
 - When is product in soil NAPL (or potentially mobile)?
- Demonstrated **soil texture** is the predominant factor

What did Brost and DeVaul Say?

- “**Conservative** screening concentrations for NAPL that could be considered immobile in unsaturated soils.”
- “Mobile NAPL deplete as immobile residual chemical is left behind through the soil column in which the NAPL is descending.”
- “Our intent...is to determine **conservative** NAPL concentration below which NAPL will be immobile.”
- “By ‘**conservative**’ we mean underpredicting the concentration at which mobility would actually occur.”
- “These screening values are intended to be worst-case estimates for mobility. **Higher values may be applicable on a site-specific basis.** For example, with an adequate distance in unsaturated soil between the lowest depth of a mobile NAPL and groundwater. ...account for potential NAPL redistribution in unsaturated soil layer. Redistribution decreases concentration...”

Brost and DeVaul: Table 2

NAPL	Soil Type	Residual NAPL Concentration (mg/kg)
Middle Distillates	Coarse Gravel	2,286
Middle Distillates	Coarse Sand & Gravel	3,879
Middle Distillates (Cat 1)	Medium to Coarse Sand	7,742
Middle Distillates	Fine to Medium sand	13,333
Middle Distillates	Silt to Fine sand	22,856
Fuel Oils	Coarse Gravel	5,143
Fuel Oils	Coarse Sand & Gravel	8,727
Fuel Oils (Cat 2)	Medium to Coarse Sand	17,419
Fuel Oils	Fine to Medium sand	30,000
Fuel Oils	Silt to Fine sand	51,429

Existing default product limits

Challenges to Determining Soil Type

- Appendix 3.1 states: "Sand was selected by the NJDEP as a reasonably conservative soil texture for determination of a default upper limit concentration for No. 2 fuel oil and diesel based on the residual saturation point."
- Sand
 - Coarse, fine, sand with fines?
 - Silty sand? Sandy silt? Clay?
- Soil Classification
 - Could the investigator use USDA Soil Classification, as with VI?
 - How did Brost and DeVaul measure or classify soil type? Could the investigator go to their chart?

USDA Soil Classification System

Generic Soil Types Can Pose Issues

- Use of any generic soil classification is generally too broad
- Sieve analysis was conducted on samples submitted to EPH committee for use evaluating viability of centrifuge analysis
- For 7 of 11 sites, sand content 70% or less
 - Sites with 90% sand, EPH calculated to 22,000 mg/kg to 31,000 mg/kg
 - Sites with 70% sand, EPH calculated to 23,000 mg/kg to 88,000 mg/kg
 - Sites with 50% sand, EPH calculated to 83,000 mg/kg
 - Sites with 30% sand, EPH calculated to 23,000 mg/kg to 177,000 mg/kg

EPH Guidance-Criterion and Limits

- Health Based Criterion
 - N.J.A.C. 7:26D, N.J.A.C. 7:26F
- Contingency Analysis
 - N.J.A.C. 7:26E
 - Health Based Criterion
- Ecologic Assessment
 - ECO Guidance 1,700 mg/kg
- Product Limits
 - Default Product Limits- 8,000 mg/kg, 17,000 mg/kg
 - Site-specific Product Limits: established via soil testing up to Product Ceiling

Product Ceiling Limit

- Committee discussions:
 - When is a soil not a soil?
 - At what concentration of residual product do the characteristics of the soil change?
- Cat 1 Fuel NRDCSRC = 54,000 mg/kg
- Cat 2 Fuel criterion can range over 100,000 mg/kg
- Alternative product limit calculation can exceed 100,000 mg/kg

What is appropriate? 30,000 mg/kg

EPH Guidance 2019 - Effect

- EPH Product Limits for Cat 1 and Cat 2 Fuel can be up to 30,000 mg/kg
- Institutional Controls are required if EPH is to remain on-site at concentrations over RDCSRC (except for the limited provisions of the HOTS Rule)
- Derivation of Alternative EPH Product Limit does not eliminate the need to remediate compounds of concern identified by contingency analysis
- Derivation of an Alternative Product Limit does not eliminate the need to evaluate ground water investigation requirements for compounds of concern identified by contingency analysis

Summary

- Define product type as soon as possible
- Product indicator concentrations are capped by the Default Ceiling Limit
- Product indicator compliance is determined on a point-by-point basis
- Soil samples for grain size analysis can be collected at any time
- A 'Calculator' is used to develop a Site-Specific Alternative Product Limit Concentration
- EPH samples are referenced to a free or residual product level, 'residual contamination' is not defined

Questions?

BREAK

Using The EPH Alternative Product Limit Calculator

Dave Puchalski, PE, LSRP

NewFields Princeton, LLC

dpuchalski@newfields.com

EPH Alternative Product Limit Concentration Calculator for Soil

Goals of this Section

- Introduce the calculator format
- Describe the data entry process
- Identify the input variables and calculator output
- Provide insight into the calculations
- Identify some eccentricities in the calculator
- Describe a recommended documentation and submittal process

Using the Product Limit Calculator

- **Read the instructions** & become comfortable with the calculator
- Preparing your data
- Working with the calculator
- Data submittal
- **READ THE INSTRUCTIONS**

Preparing Your Data

Necessary information

1. Site specific information, including the PI# for the site and the AOC # for the investigation
 - **link to data miner**
2. Grain Size soil analysis laboratory reports
3. Definition of the Type of Petroleum Product discharged at the AOC
4. Site Plan of the AOC and sample locations
5. Download the NJDEP Excel Calculator

EPH Alternative Product Limit Concentration Calculator for Soil

Simple
One Page
No interpretation
Instruction guide follows
the input process

RESET CALCULATOR

INSTRUCTIONS

Instructions for using the EPH Alternative Product Limit Concentration Calculator.

Use this calculator in accordance with the Department's *Technical Guidance for Evaluation of Extractable Petroleum Hydrocarbons in Soil*. This calculator provides a tool for the investigator to calculate an AOC-specific alternative EPH product limit concentration. To use the calculator, the investigator must identify the petroleum product as listed in Table 2-1 at N.J.A.C. 7:26E-2.1(d) and have the laboratory report of the grain size distribution analyses. The investigator can input the effective diameter (D₁₀) reported by the laboratory, or the investigator can input the grain size distribution values and the calculator will generate the D₁₀ value.

Complete the following actions:

- Input the general information including the Site Name, PI number for the Site, AOC Name and AOC Number from the CID as applicable, and the investigator's name in the corresponding blue fields.
- To the right of "Type of Petroleum Product", click in the blue field, and then select the applicable petroleum product from the dropdown list (identical to Table 2-1 at N.J.A.C. 7:26E-2.1(d)). If the petroleum product is Waste Oil with known source(s), select instead the source petroleum product from the dropdown list; or if the source petroleum product is not identified on the dropdown list or is unknown, select Unknown Petroleum Hydrocarbon. This ensures the correct dynamic viscosity and density values are incorporated into the calculation.

Contact the Department if the petroleum product is MGP or Crude Oil.
- Choose the selector button corresponding to the number of grain size samples that were analyzed. The selection options are 3 and 4 samples.
- In the blue fields to the right of **Sample Identification Name/Number**, input the Sample ID for each sample analyzed for grain size.
- For each sample, click the radio button corresponding to source of the D₁₀ value.

The default option is "Direct D₁₀ input from lab report" when D₁₀ has been calculated and reported by the laboratory. If this option is chosen, click on the blue box: **COMPLETE GRAIN SIZE DATA SHEET**, which opens the sheet **Grain Size Data Entry**. In the column titled "Grain Size from Sieve (mm of Sieve)", starting at the **bottom**, enter the corresponding sieve size in mm from **finest upward to coarsest** for each sieve size reported by the laboratory. In the column directly to the right titled "Percent of soil mass passing through the sieve", enter the percent passing corresponding to each sieve size. The D₁₀ value for the sample is displayed in the gray field to the right of "Calc D₁₀". Continue the data entry process for the remainder of the samples. When finished, click: **Return to Summary**
- The **Summary Sheet** displays the D₁₀ value for each sample and computes the intrinsic permeability (k), displaying both parameters below the corresponding sample in the green fields.
- The **Calculated EPH Product Limit Concentration** for each sample is displayed on Line 27. If a displayed **Calculated EPH Product Limit Concentration** has a strikethrough, then the concentration for that sample exceeds the 30,000 mg/kg EPH Ceiling Limit.
- Line 29 provides the **Alternative EPH Product Limit Concentration for Soil in this AOC** (cell E29). The concentration is the lesser of the median value for the **Calculated EPH Product Limit Concentrations** from Line 27 -OR- the 30,000 mg/kg EPH ceiling limit.
- Save the spreadsheet with a unique file name and date within the project file.
- Print the **Summary Sheet** by selecting "PRINT EPH Report". Return to the **Grain Size Data Entry** sheet and print it separately.
- To run another set of samples or to calculate an Alternative EPH Product Limit Concentration for a second petroleum product stored/discharged at the AOC, click "RESET CALCULATOR" and return to Step 1.

Instructions –Intro & Action 1 to 4

Instructions for using the EPH Alternative Product Limit Concentration Calculator.

Use this calculator in accordance with the Department's *Technical Guidance for Evaluation of Extractable Petroleum Hydrocarbons in Soil*. This calculator provides a tool for the investigator to calculate an AOC-specific alternative EPH product limit concentration. To use the calculator, the investigator must identify the petroleum product as listed in Table 2-1 at N.J.A.C. 7:26E-2.1(d) and have the laboratory report of the grain size distribution analyses. The investigator can input the effective diameter (D_{10}) reported by the laboratory, or the investigator can input the grain size distribution values and the calculator will generate the D_{10} value.

Complete the following actions:

1. Input the general information including the Site Name, PI number for the Site, AOC Name and AOC Number from the CID as applicable, and the investigator's name in the corresponding blue fields.
2. To the right of "Type of Petroleum Product", click in the blue field, and then select the applicable petroleum product from the dropdown list (identical to Table 2-1 at N.J.A.C. 7:26E-2.1(d)). If the petroleum product is Waste Oil with known source(s), select instead the source petroleum product from the dropdown list; or if the source petroleum product is not identified on the dropdown list or is unknown, select Unknown Petroleum Hydrocarbon. This ensures the correct dynamic viscosity and density values are incorporated into the calculation.

Contact the Department if the petroleum product is MGP or Crude Oil.

3. Choose the selector button corresponding to the number of grain size samples that were analyzed. The selection options are 3 and 4 samples.
4. In the blue fields to the right of **Sample Identification Name/Number**, input the Sample ID for each sample analyzed for grain size.

Instructions –Action 5 to 8

5. For each sample, click the radio button corresponding to source of the D_{10} value.

The default option is “Direct D_{10} input from lab report” when D_{10} has been calculated and reported by the laboratory. If this option is chosen, click on the blue box: **COMPLETE GRAIN SIZE DATA SHEET**, which opens the sheet **Grain Size Data Entry**. Click in the gray field to the right of **Lab D_{10}** and enter the D_{10} value. Do this for each sample. When finished, click **Return to Summary**.

If D_{10} is not provided by the laboratory, the investigator selects “Input sieve D_{10} data and determine through this calculator”. Next, click on the blue box: **COMPLETE GRAIN SIZE DATA SHEET**, which opens the sheet **Grain Size Data Entry**. In the column titled "Grain Size from Sieve (mm of Sieve)", starting at the bottom, enter the corresponding sieve size in mm from finest upward to coarsest for each sieve size reported by the laboratory. In the column directly to the right titled "Percent of soil mass passing through the sieve", enter the percent passing corresponding to each sieve size. The D_{10} value for the sample is displayed in the gray field to the right of “Calc D_{10} ”. Continue the data entry process for the remainder of the samples. When finished, click: **Return to Summary**

6. The **Summary Sheet** displays the D_{10} value for each sample and computes the intrinsic permeability (k), displaying both parameters below the corresponding sample in the green fields.
7. The **Calculated EPH Product Limit Concentration** for each sample is displayed on Line 27. If a displayed **Calculated EPH Product Limit Concentration** has a strikethrough, then the concentration for that sample exceeds the 30,000 mg/kg EPH Ceiling Limit.
8. Line 29 provides the **Alternative EPH Product Limit Concentration for Soil in this AOC** (cell E29). The concentration is the lesser of the median value for the **Calculated EPH Product Limit Concentrations** from Line 27 -OR- the 30,000 mg/kg EPH ceiling limit.

Instructions – Action 9 to 11

9. Save the spreadsheet with a unique file name and date within the project file.
10. Print the **Summary Sheet** by selecting “**PRINT EPH Report**”. Return to the **Grain Size Data Entry** sheet and print it separately.
11. To run another set of samples or to calculate an Alternative EPH Product Limit Concentration for a second petroleum product stored/discharged at the AOC, click “**RESET CALCULATOR**” and return to Step 1.

Close Instructions – Selection button.

Questions?

What to Include in Report Submissions

John Ruhl, Technical Coordinator
Bureau of Environmental Evaluation
and Risk Assessment

Objectives

- EPH Alternative Product Limit Calculation - Report content
- Conclusions
- EPH Technical Questions / Dept. Contact

What to Submit - EPH Alternative Product Limit

Technical Rules

- Applicable phase documentation/discussion
- Information pursuant to N.J.A.C. 7:26E-1.6

What to Submit - EPH Alternative Product Limit (cont'd)

AOC-specific info:

- Petroleum product identity
- Source Description (e.g., UST, AST, etc.)/Cause of discharge
- EPH product limits (defaults and alternative)
- Figures & vertical soil profiles across EPH product zone demonstrating delineation (include boring logs) [refer to Figure 2.1-1 in the guidance]
- All printouts from EPH Alternative Product Limit Calculator
- Complete lab data deliverables for all grain size distribution analysis(es):
how D_{10} calculated

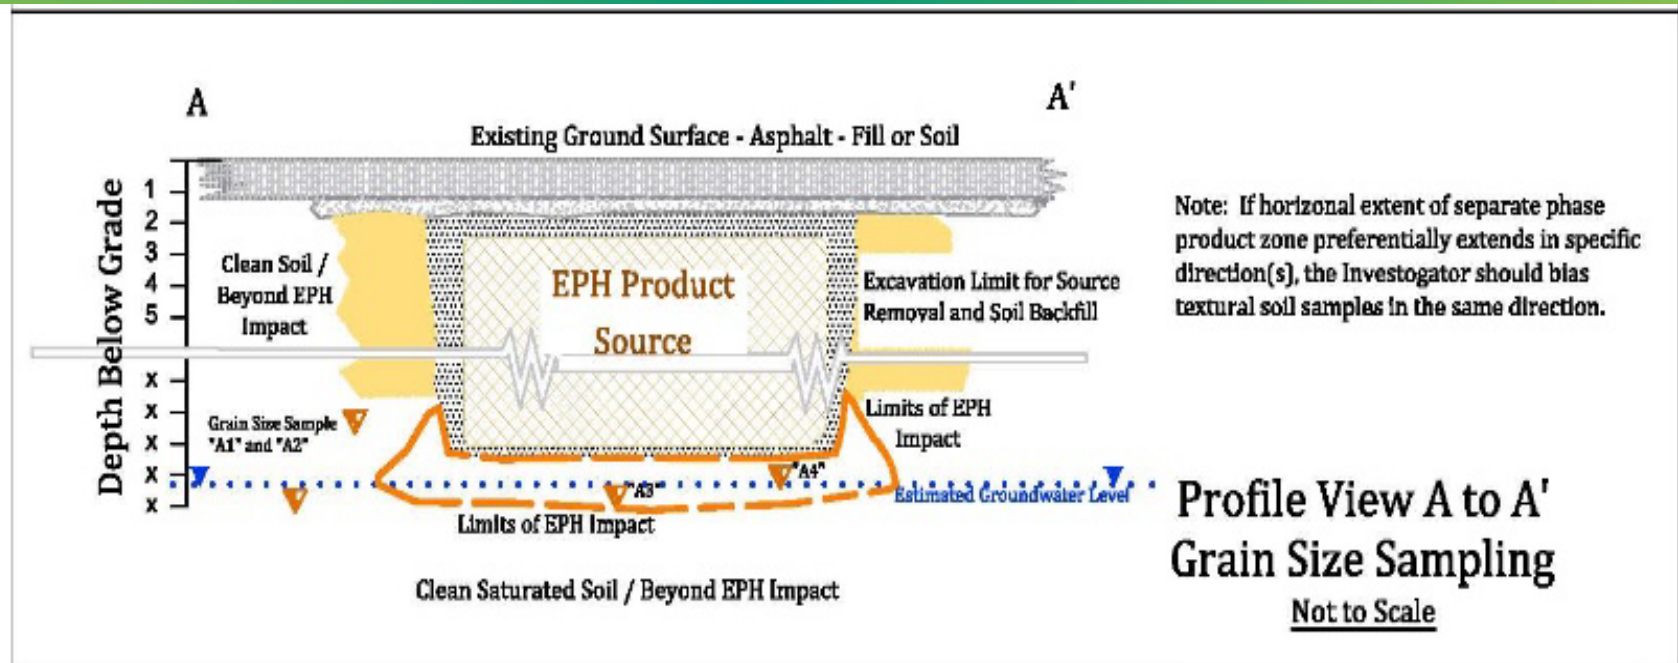

Appendix 2.2

EPH Grain Size Sample Notes - Horizontal

Typical Cross Sections- Grain Size Sample Locations

Note: If horizontal extent of separate phase product zone preferentially extends in specific direction(s), the investigator should bias textural soil samples in the same direction.

Profile View A to A' Grain Size Sampling
Not to Scale

- LEGEND**
- ▼ Typical Soil Textural Sample Location. Site Investigator must select the most appropriate location for each AOC and each petroleum product.
 - - - Typical limits of EPH concentrations in soil above the residential soil criteria.
 - • • Typical groundwater elevation demonstrates the Investigator may select to collect textural samples above or below the water level.
 - Typical drawing section line, demonstrating the depths of the textural samples should not be directly associated with the original release depth below grade.

How to Use pre-September 2010 TPH Data

Cat 1 EPH only

- TPH data can be used
 - TPH/EPH data considered comparable (1:1 ratio)
- TPH or EPH > 1,000 mg/kg
 - Resample 25% for naphthalene & 2-methylnaphthalene
 - Bias locations to highest TPH/EPH detections
- Remediate TPH > 10,000 mg/kg

Appendix 3.5

How to Use pre-September 2010 TPH Data

Cat 2 EPH only

- TPH $>2,300$ mg/kg and $\leq 10,000$ mg/kg
 - Resample 25% of TPH samples for EPH (determines health-based criteria)
 - Bias locations to highest TPH

If EPH results are above health-based criteria, delineation required
- TPH results $> 10,000$ mg/kg:
 - Remediate, OR
 - Resample, analyze using EPH Method, and use SRC Calculator

Appendix 3.5

Conclusions

- Majority of the **Evaluation of EPH in Soil Technical Guidance** is not new information
- One new important tool - the EPH Alternative Product Limit Calculator

QUESTIONS?

EPH Category 2 Ingestion/ Dermal Calculator Soil Remediation Criteria for Residential & Non-Residential Standards Training Section

Dave Puchalski, LSRP, PE

NewFields Princeton, LLC

dpuchalski@newfields.com

EPH Category 2 Health-based Soil Remediation Criterion Calculator

Goals of the Section

- Introduce the calculator format
- Describe the data entry process
- Identify the input variables and calculator output
 - Present Two Samples with the same EPH Concentration, but different chemical characteristics
 - Provide limited overview of the calculations

EPH Category 2 Chemical Speciation

What are Aliphatics and Aromatics?

Aliphatics

- Contains Carbon and Hydrogen joined together as straight chains, branched chains, or cyclic non-aromatic hydrocarbons
- May contain single, double, and triple bonds
- Include Petroleum Constituents
- Examples: Alkanes, Alkenes, Alkynes, Cycloalkanes

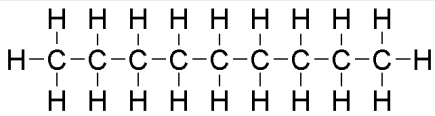

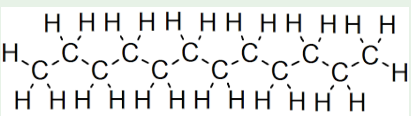

Aromatics

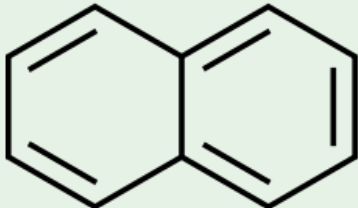

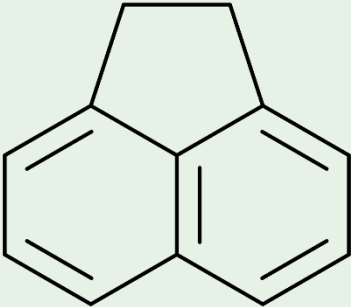

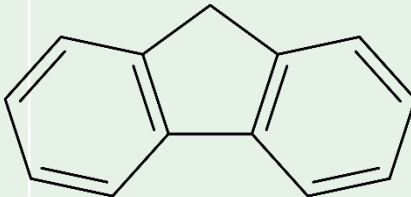

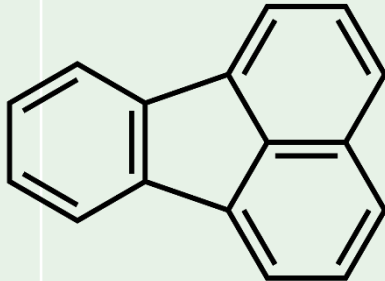

- Cyclic Compounds with Carbon joined together in alternating single and double bonds.
- Contains one or more aromatic rings (Benzene rings)
- Generally more volatile, more toxic, variable solubility
- Examples: Monoaromatics, Polyaromatic Hydrocarbons
- Benzene, Toluene, Phenol, Benzo(a)pyrene

Aliphatic Ranges & Indicator Compounds

Carbon Range	AL 9-12	AL 12-16	AL 16-21	AL 21-40
Indicator Compound	Nonane	Dodecane	Hexadecane	Docosane
Chemical Formula	C ₉ H ₂₀	C ₁₂ H ₂₆	C ₁₆ H ₃₄	C ₂₂ H ₄₆
Molecular Weight, g/mol	128.3 g/mol	170.3 g/mol	226.4 g/mol	310.6 g/mol
Water Solubility, ug/L @25 deg C	220 ug/l	3.7 ug/l	0.021 ug/l	0.00078 ug/l
Vapor Pressure, Pa @25 deg C	593.3 Pa / 0.086 psi	18.0 Pa / 0.001 psi	0.20 Pa / 2.95 x10 ⁻⁵ psi	0.0002 Pa / 2.95 x10 ⁻⁸ psi
Structure			Straight Chain n- Alkane <i>Too large to present</i>	Straight Chain n- Alkane <i>Too large to present</i>

Aromatic Ranges & Indicator Compounds

Carbon Range	AR 10-12	AR 12-16	AR 16-21	AR 21-36
Indicator Compound	<u>Naphthalene</u>	Acenaphthene	Fluorene	Fluoranthene
Chemical Formula	C ₁₀ H ₈	C ₁₂ H ₁₀	C ₁₃ H ₁₀	C ₁₆ H ₁₀
Molecular Weight, g/mol	128.2 g/mol	154.2 g/mol	166.2 g/mol	202.3 g/mol
Water Solubility, ug/L @25 deg C	31,000 ug/l	3,900 ug/l	1,690 ug/l	230 ug/l

EPH Guidance & Scenarios

John Donohue

Fuel Merchants Association of NJ

www.fmanj.org

David Puchalski, PE, LSRP

NewFields Princeton, LLC

dpuchalski@newfields.com

Baseline Characteristics for all Scenarios

- Each Scenario was developed to present specific points
 - All information is conceptual and may be abbreviated for training
 - Generally the same site, but different AOCs
 - Same surface covering & same surface water percolation rate
 - Same depth to water
 - Access is available for each of the AOCs unless indicated
- Variations exist in the mass of petroleum that was released
 - Variations in degradation characteristics

SCENARIO 1

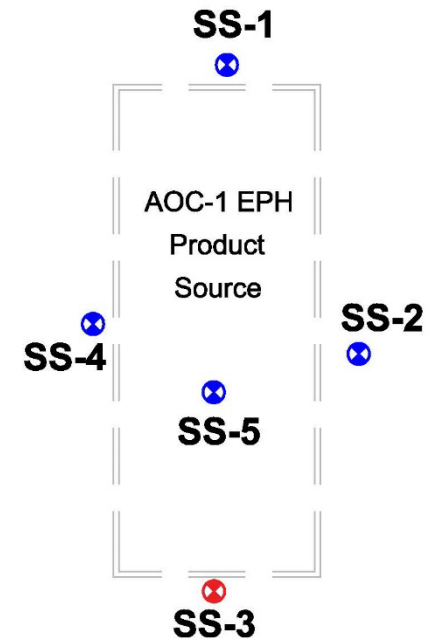

#2 FUEL OIL WITH A PLANNED RESIDENTIAL/ UNRESTRICTED PROPERTY USE

Scenario 1 / #2 Fuel Oil Cat 1 –Residential Use

1. Are more samples required?
2. Is a ground water investigation required?

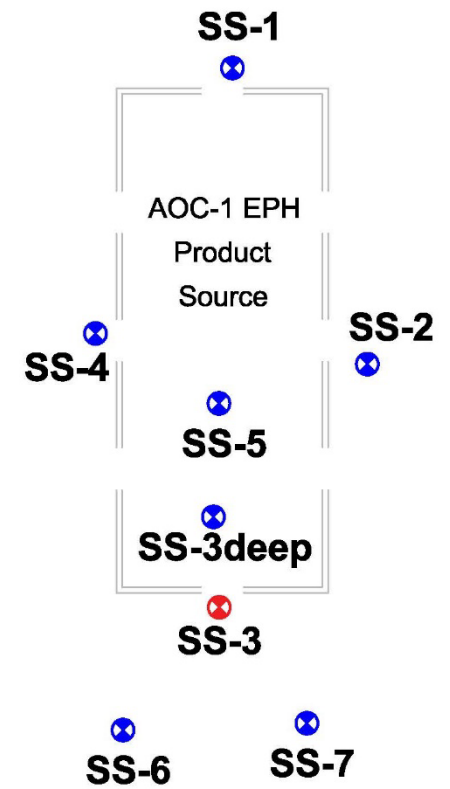

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5
EPH Concentration (mg/kg)	800	3,785	7,675	3,650	2,100
2 Methyl-Naphthalene (8 mg/kg RDCSRs)	NA	NA	7.85	NA	NA
Naphthalene (6 mg/kg RDCSRs)	NA	NA	4.25	NA	NA
EPH Product Limit Concentration	8,000 mg/kg				
RAO Goal?	Residential – Unrestricted Use				
Remedial Action?	To Be Determined				

Plan View: Not-to-scale

Scenario 1 / #2 Fuel Oil Cat 1 –Residential Use

1. SS-6 & 7 are required to delineate the EPH exceedance
2. SS-3 deep is required for vertical delineation
3. No GW investigation is required
 - 2 MeN is below criteria

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-7	SS-3d
EPH Concentration (mg/kg)	800	3,785	7,675	3,650	2,100	4,150	2,105	650
2 Methyl-Naphthalene (8 mg/kg RDCSRS)	NA	NA	7.85	NA	NA	NA	NA	NA
Naphthalene (6 mg/kg RDCSRS)	NA	NA	4.25	NA	NA	NA	NA	NA
EPH Product Limit Concentration	8,000 mg/kg							
Remedial Action?	Compliance Average - EPH							

SCENARIO 2A AND 2B

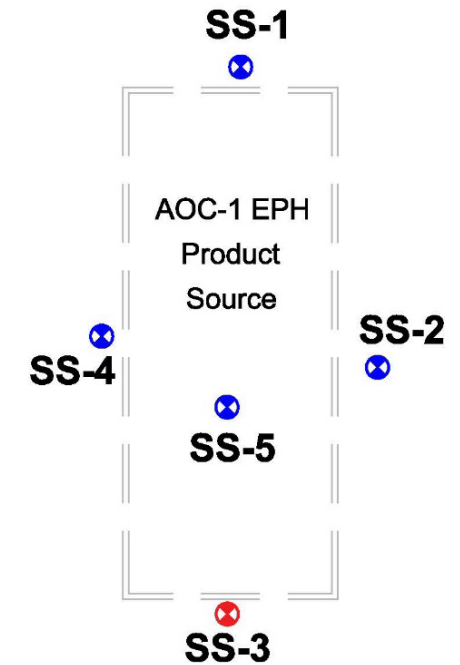

**3,000 GALLON #2 FUEL OIL WITH A
PLANNED NON RESIDENTIAL
PROPERTY USE**

Scenario 2 / Cat 1, 3,000-gal Non-Residential Use

1. Are more samples required?
2. Is a ground water investigation required?
 - SPLP samples are collected by the field team
3. What remedial actions are available?

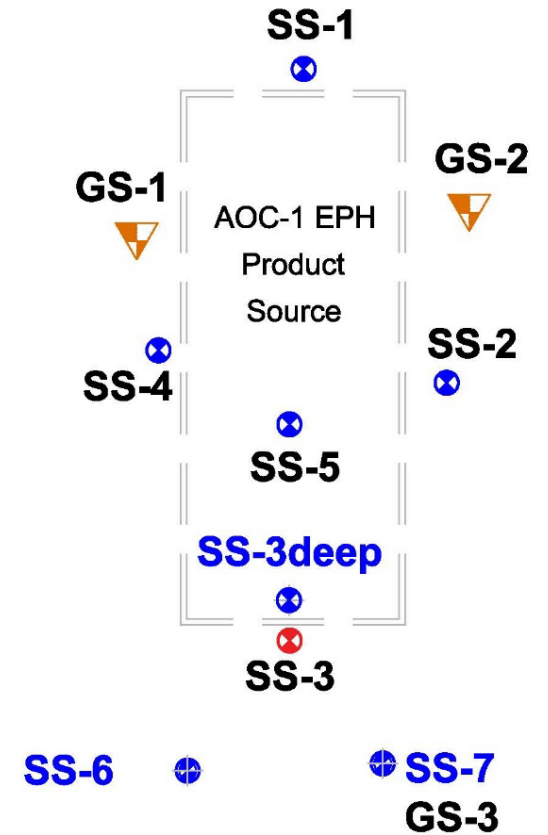

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5
EPH Concentration (mg/kg)	1,020	3,785	8,551	3,650	2,100
2 Methyl-Naphthalene (8 mg/kg NRDCSRS)	NA	4.10	9.25	NA	NA
Naphthalene (17 mg/kg NRDCSRS)	NA	0.85	5.15	NA	NA
EPH Product Limit Concentration	8,000 mg/kg (Default value)				
RAO Goal?	Non-Residential				

Plan View: Not-to-scale

Scenario 2A / Cat 1, 3,000-gal Non-Residential Use

- 5 Borings Completed– 2 Horizontal, 1 Vertical, 2 Grain Size
- SS-6 & 7 are required for horizontal delineation
- 2MeN exceedance triggers further investigation
 - SPLP is analyzed on SS-2, SS-3 and SS-6 & **PASSES**
- SS-3 deep is required for vertical delineation EPH & 2MeN

Plan View: Not-to-scale

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-7	SS-3d
EPH Concentration (mg/kg)	1,020	3,785	8,551	3,650	2,100	4,150	2,105	650
2 Methyl-Naphthalene (8 mg/kg NRDCSRS)	NA	4.10	9.25	NA	NA	4.15	NA	6.05
Naphthalene (17 mg/kg NRDCSRS)	NA	0.85	5.15	NA	NA	1.35	NA	NA
EPH Product Limit Concentration	8,000 mg/kg (Default value)							
RAO Goal?	Non-Residential – Limited-Restricted Use or Unrestricted							

Scenario 2A / Cat 1, 3,000-gal Non-Residential Use

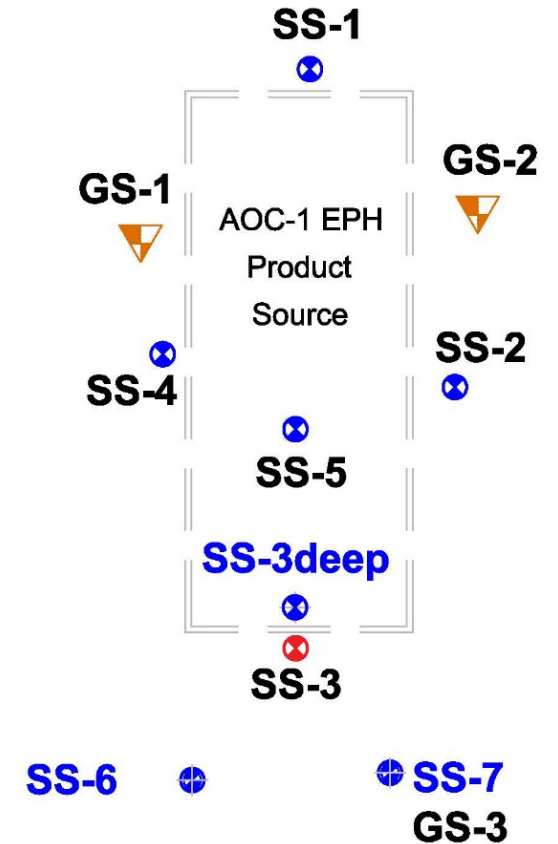

Grain size yields – D₁₀ Larger than 0.110 mm

Alternate Product Indicator Concentration = **8,552 mg/kg**

Remedial Alternatives

Compliance Average EPH and 2MeN in soils

Alternate product indicator concentration for EPH

Plan View: Not-to-scale

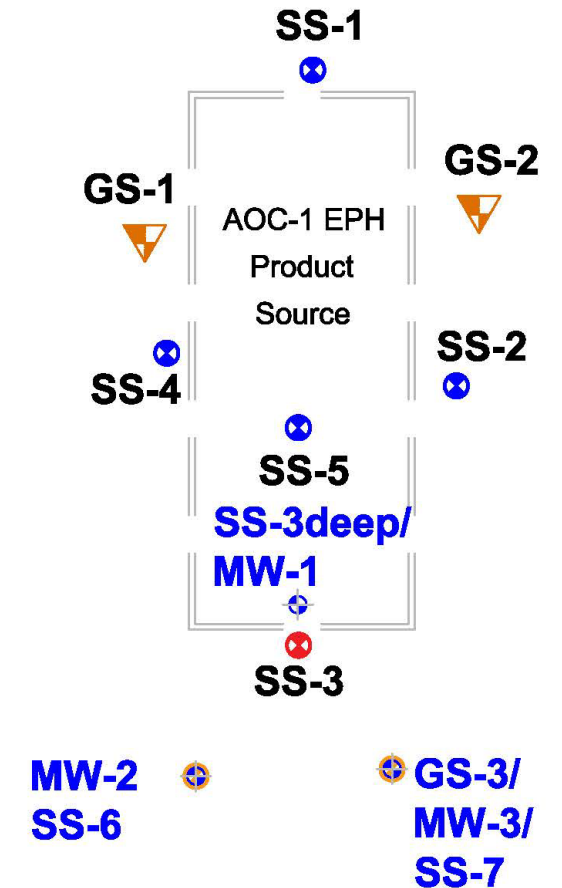

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-7	SS-3d
EPH Concentration (mg/kg)	1,020	3,785	8,551	3,650	2,100	4,150	2,105	650
2 Methyl-Naphthalene (8 mg/kg NRDCSRS)	NA	4.10	9.25	NA	NA	4.15	NA	6.05
Naphthalene (17 mg/kg NRDCSRS)	NA	0.85	5.15	NA	NA	1.35	NA	NA
EPH Product Limit Concentration	8,552 mg/kg (Site Specific "C" Value)							
RAO Goal?	Non-Residential – Limited-Restricted Use or Unrestricted							

Scenario 2B / Cat 1, 3,000-gal Non-Residential Use

WHAT IF, SPLP was not collected?

1. Site specific EPH product indicator concentration remains valid.
2. 2 Methyl-Naphthalene MUST be addressed.
 - a. A groundwater investigation may be conducted for 2 MeN
 - b. **OR** –Evaluate 2 MeN impact to GW with SPLP samples or F_{oc} Soil-Water Partition Equation

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-7	SS-3d
EPH Concentration (mg/kg)	1,020	3,785	8,551	3,650	2,100	4,150	2,105	650
2 Methyl-Naphthalene (8 mg/kg RDCSRS)	NA	4.10	9.25	2.15	1.15	4.15	NA	6.05
Naphthalene (6 mg/kg RDCSRS)	NA	0.85	5.15	0.6	<0.10	1.35	NA	NA
EPH Product Limit Concentration	8,552 mg/kg (Site Specific "C" Value)							
RAO Goal?	Unrestricted Residential Use is available							

Plan View: Not-to-scale

SCENARIO 3A AND 3B

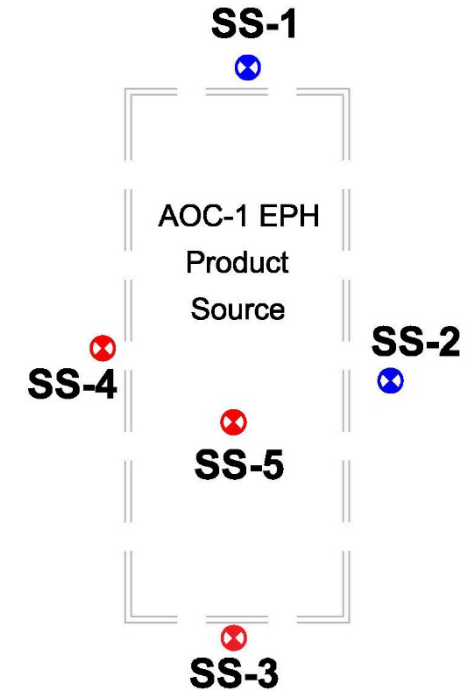

**8,000 GALLON #2 FUEL OIL
WITH A PLANNED RESIDENTIAL
PROPERTY USE**

Scenario 3 / 8,000 gal. Cat 1 –Residential Use

1. Are more samples required?
 - a. Where to take samples and how many?
2. Is a ground water investigation required?
3. What additional work is required?

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5
EPH Concentration (mg/kg)	800	3,185	8,675	3,950	16,875
2 Methyl-Naphthalene (8 mg/kg RDCSRS)	NA	NA	9.65	2.15	11.75
Naphthalene (6 mg/kg RDCSRS)	NA	NA	4.25	13.2	<0.15
EPH Product Limit Concentration	8,000 mg/kg (Default value)				
RAO Goal?	Residential – Unrestricted Use				

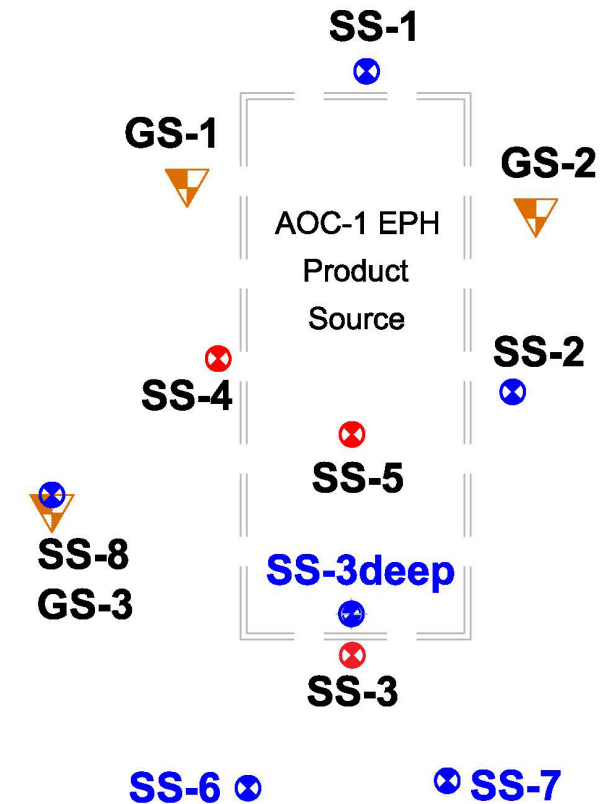

Plan View: Not-to-scale

Scenario 3A / #2 Fuel Oil Cat 1 –Residential Use

SPLP at SS-5 and SS-3 PASSES. No ground water trigger
 SS-5 must be remediated in order to reach residential standards.
 SS-4 Naphthalene may be compliance averaged after delineating
 Do we need vertical delineation of SS-4? **YES**

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-7	SS-8	SS-3d
EPH Concentration (mg/kg)	400	3,185	8,675	3,950	16,875	4,150	2,105	2,005	650
2 Methyl-Naphthalene (8 mg/kg RDCSRS)	NA	NA	9.65	2.15	11.75	4.15	0.21	0.19	7.95
Naphthalene (6 mg/kg RDCSRS)	NA	NA	4.25	13.2	<0.15	1.35	0.21	<0.19	<0.22
EPH Product Limit Conc.	9,160 mg/kg (Site Specific "C" Value)								
RAO Goal?	Residential – Unrestricted Use								

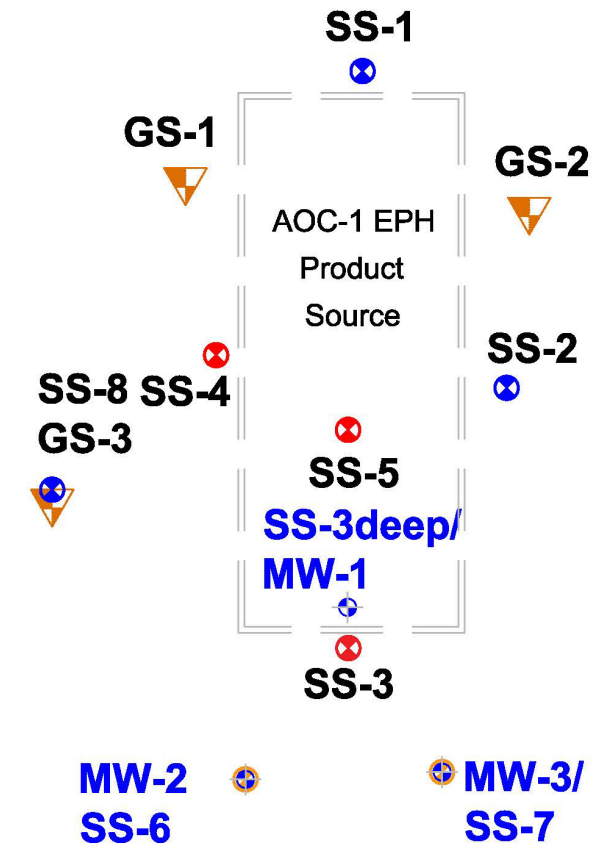

Plan View: Not-to-scale

Scenario 3B / #2 Fuel Oil Cat 1 –Residential Use

SPLP SS-5 Fails. A ground water investigation is required
 SS-5 must be remediated in order to reach residential standards
 SS-4 Naphthalene may be compliance averaged after delineating

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-7	SS-8	SS-3d
EPH Concentration (mg/kg)	400	3,185	8,675	3,950	16,875	4,150	2,105	2,005	650
2 Methyl-Naphthalene (8 mg/kg RDCSRS)	NA	NA	9.65	2.15	11.75	4.15	0.21	0.19	7.95
Naphthalene (6 mg/kg RDCSRS)	NA	NA	4.25	13.2	<0.15	1.35	0.21	<0.19	<0.22
EPH Product Limit Conc.	9,160 mg/kg (Site Specific "C" Value)								
RAO Goal?	Residential – Unrestricted Use								

Plan View: Not-to-scale

SCENARIO 4

**2,000 GALLON DIESEL OIL WITH A
PLANNED RESIDENTIAL PROPERTY
USE**

Scenario 4 / Diesel Fuel Oil 2000 gal. UST

1. The LSRP collected Grain Size samples during the investigation
2. What remedial actions are available? **SS-4 is at a footing**
3. Are more samples required?
 - Where to take samples and how many?

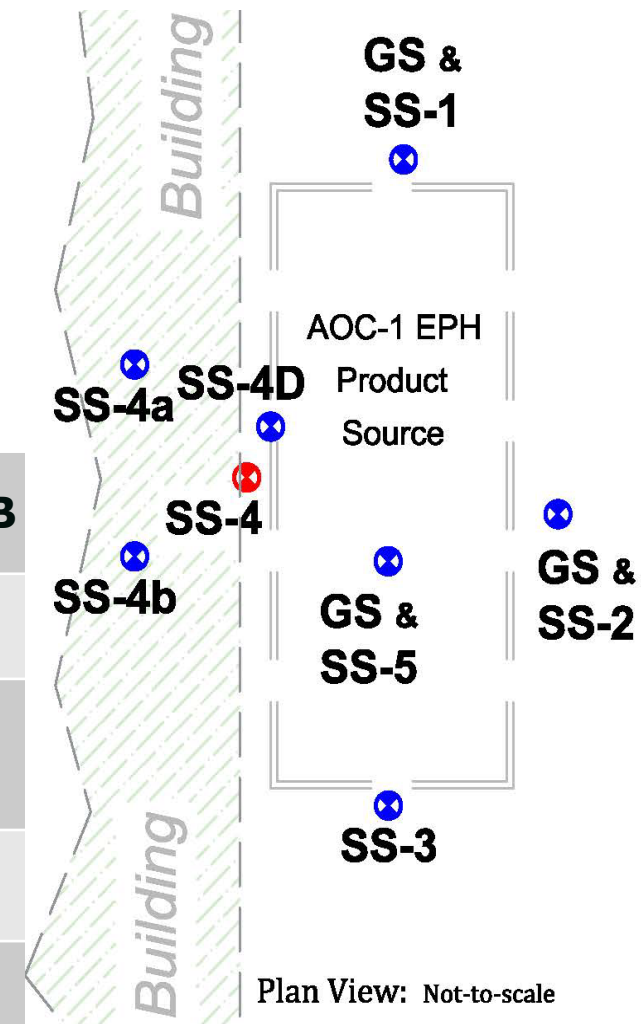

Sample Name	GS & SS-1	GS & SS-2	SS-3	SS-4	GS & SS-5
EPH Concentration (mg/kg)	ND	ND	ND	17,000	ND
2 Methyl-Naphthalene (8 mg/kg RDCSRS)	NA	NA	NA	5.15	NA
Naphthalene (6 mg/kg RDCSRS)	NA	NA	NA	13.2	NA
EPH Product Limit Conc.	8,000 mg/kg (Default Limit)				
RAO Goal?	Residential – Unrestricted Use				

Scenario 4 / Diesel Fuel Oil 2000 gal. UST

1. Site specific product indicator concentration = **22,000 mg/kg**.
2. What delineation is required?
3. How does Naphthalene in SS-4 affect the site?

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-4D	SS-4A	SS-4B
EPH Concentration (mg/kg)	ND	ND	ND	17,000	ND	5,050	4,100	3,800
2 Methyl-Naphthalene (8 mg/kg RDCSRS)	NA	NA	NA	5.15	NA	4.7	3.6	3.21
Naphthalene (6 mg/kg RDCSRS)	NA	NA	NA	13.2	NA	4.4	3.2	1.8
EPH Product Limit Conc.	22,000 mg/kg (Site Specific "C" Value)							
RAO Goal?	Residential – Unrestricted Use							

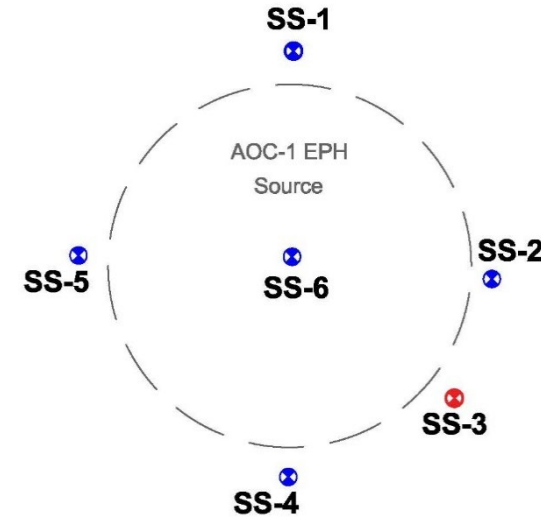

SCENARIO 5

LUBRICATING OIL WITH A PLANNED RESIDENTIAL PROPERTY USE

Scenario 5 / Lubricating Oil Cat 2 – Residential use

1. What remedial actions are available?
2. Are more samples required?
 - Where to take samples and how many?
3. Is a groundwater investigation required?
4. What additional work is required?

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6
EPH Concentration (mg/kg)	80	3,785	22,000	3,650	1,150	4,250
EPH Cat 2 Risk Calculator Results (mg/kg)	NA	Pass	Pass	Pass	Pass	Pass
Individual PAH Exceedances of Residential	NA	No exceed.	No exceed.	No exceed.	No exceed.	No exceed.
EPH Product Limit Conc.	17,000 mg/kg (Default Limit)					
RAO Goal?	Residential - Unrestricted Use					

Scenario 5 / Lubricating Oil Cat 2 – Residential use

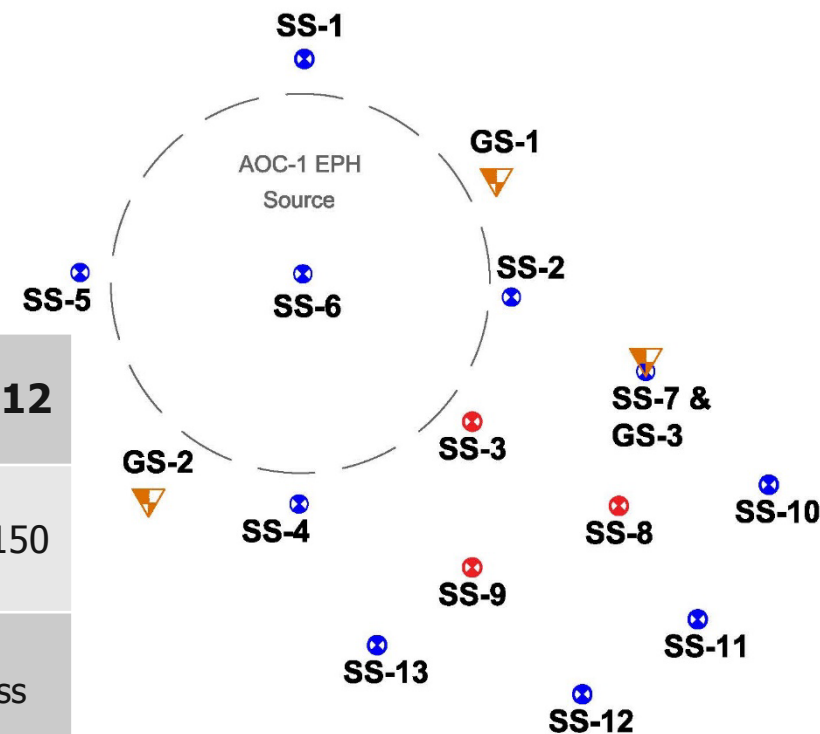

Alternate Product Indicator Concentration = **21,755 mg/kg**

Remedial Alternatives

EPH Product Indicator Exceedances

EPH Cat 2 – Is not a chemical of concern

Individual PAH Compounds –Are not chemicals of concern

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-8	SS-9	SS-12
EPH Concentration (mg/kg)	80	3,785	22,000	3,650	1,150	4,250	24,200	21,750	13,150
EPH Cat 2 Risk Calculator Results (mg/kg)	NA	Pass	Pass	Pass	Pass	Pass	Pass	Pass	Pass
Individual PAH Exceedances of Residential	NA	No exceed	No exceed	No exceed	No exceed	No exceed	No exceed	No exceed	No exceed
EPH Product Limit Conc.	21,755 mg/kg (Site Specific "C" Value)								
RAO Goal?	Residential - Unrestricted Use								

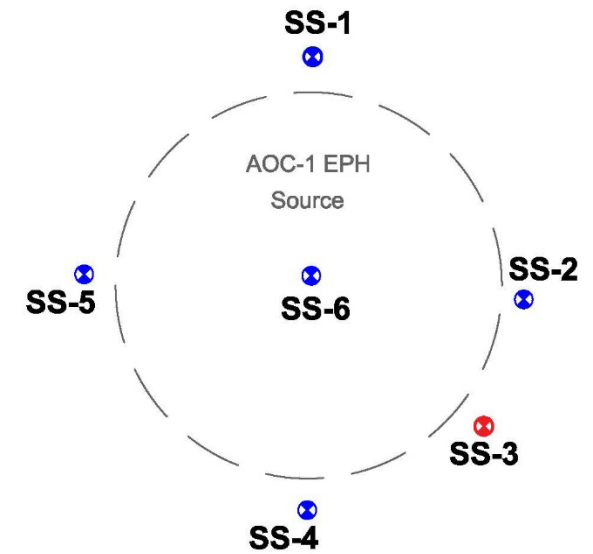

SCENARIO 6A & 6B

CUTTING OIL WITH AN INDUSTRIAL PROPERTY USE

Scenario 6A / Cutting Oil– Industrial Use

1. What remedial actions are available?
2. Are more samples required?
 - Where to take samples and how many?
3. Is a ground water investigation required?
4. What additional work is required?

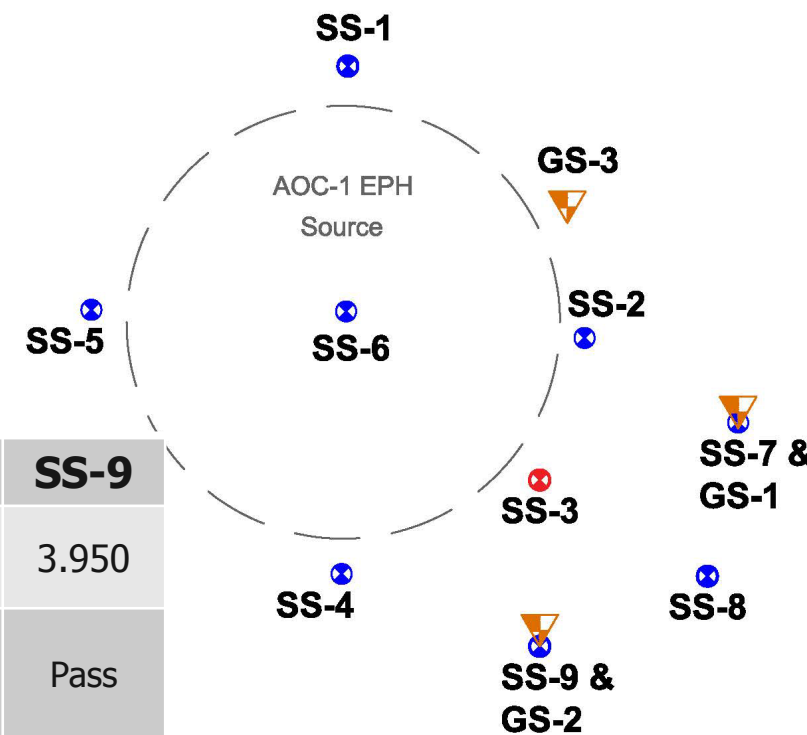

Plan View: Not-to-scale

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6
EPH Concentration (mg/kg)	85	4,785	23,250	3,650	1,150	4,250
EPH Cat 2 Risk Calculator Results	NA	Pass	Pass	Pass	Pass	Pass
Indivi. PAH Exceedance of Residential Criteria	NA	No exceed.	No exceed.	No exceed.	No exceed.	No exceed.
EPH Product Limit Concentration	8,000 mg/kg (Unique Petroleum Product)					
RAO Goal?	Industrial – Limited Restricted Use					

Scenario 6A / Cutting Oil– Industrial Use

1. Why is the default Product Limit concentration = **8,000** mg/kg?
2. Alternate Product Indicator Concentration = **25,755** mg/kg

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-7	SS-8	SS-9
EPH Concentration (mg/kg)	85	4,785	23,250	3,650	1,150	4,250	1,020	5,010	3,950
EPH Cat 2 Risk Calculator Results	NA	Pass	Pass	Pass	Pass	Pass	Pass	Pass	Pass
Indiv PAH Exceedance of Residential Criteria	NA	No exceed	No exceed	No exceed	No exceed	No exceed	No exceed	No exceed	No exceed
EPH Product Limit Concentration	25,755 mg/kg (Site Specific "C" Value)								
RAO Goal?	Unrestricted RAO								

Scenario 6B / Crude Oil– Industrial Use

1. EPH and Cat 2 concentrations are the same, however the petroleum product was a **CRUDE OIL** release
2. Why is the default Product Limit concentration = **UNKNOWN?**

Plan View: Not-to-scale

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6
EPH Concentration (mg/kg)	85	4,785	23,250	3,650	1,150	4,250
EPH Cat 2 Risk Calculator Results	NA	Pass	Pass	Pass	Pass	Pass
Indivi. PAH Exceedance of Residential Criteria	NA	No exceed.	No exceed.	No exceed.	No exceed.	No exceed.
EPH Product Limit Concentration	UNKNOWN					
RAO Goal?	Industrial – Limited Restricted Use					

Scenario 6B / Crude Oil– Industrial Use

Crude Oil & MGP & Waste Oil with an unknown source are considered unique mixtures of chemicals

The LSRP & PRCR can contact the NJDEP to evaluate the source material and determine a project specific EPH criteria for the product indicator concentration

Plan View: Not-to-scale

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6
EPH Concentration (mg/kg)	85	4,785	23,250	3,650	1,150	4,250
EPH Cat 2 Risk Calculator Results	NA	Pass	Pass	Pass	Pass	Pass
Indivi. PAH Exceedance of Residential Criteria	NA	No exceed.	No exceed.	No exceed.	No exceed.	No exceed.
EPH Product Limit Concentration	UNKNOWN					
RAO Goal?	Industrial – Limited Restricted Use					

SCENARIO 7

#4 FUEL OIL WITH AN INDUSTRIAL PROPERTY USE

Scenario 7 / #4 Fuel Oil Cat 2 – Industrial Use

1. What remedial actions are available?
2. Are more samples required?
 - Where to take samples and how many?
3. Is a ground water investigation required?
4. What additional work is required?

Plan View: Not-to-scale

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6
EPH Concentration (mg/kg)	80	3,785	26,250	3,650	1,150	4,250
EPH Cat 2 Risk Calculator Results (mg/kg)	NA	Pass	Fail	Pass	Pass	Pass
Individual PAH Exceedances of Residential D	NA	No exceed.	YES	No exceed.	No exceed.	No exceed.
EPH Product Limit Conc.	17,000 mg/kg (Default Limit)					
RAO Goal?	Industrial – Limited Restricted or Unrestricted Use					

Scenario 7 / #4 Fuel Oil Cat 2 – Industrial Use

Alternate Product Indicator Concentration = 14,378 mg/kg

Remedial Alternatives

EPH Product Indicator

EPH Cat 2 Risk analysis

Individual PAH Compounds

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-8	SS-9	SS-12
EPH Concentration (mg/kg)	80	3,785	26,250	3,650	1,150	4,250	21,250	16,200	13,150
EPH Cat 2 Risk Calculator Results (mg/kg)	NA	Pass	Fail	Pass	Pass	Pass	Fail	Fail	Fail
Individual PAH Exceedances of Residential D	NA	No exceed	YES	No exceed	No exceed	No exceed	YES	YES	No exceed
EPH Product Limit Conc.	17,000 mg/kg (Default Limit)								
RAO Goal?	Industrial – Limited Restricted or Unrestricted Use								

Not all results are presented.

Scenario 7 / #4 Fuel Oil Cat 2 – Industrial Use

Remedial Alternatives

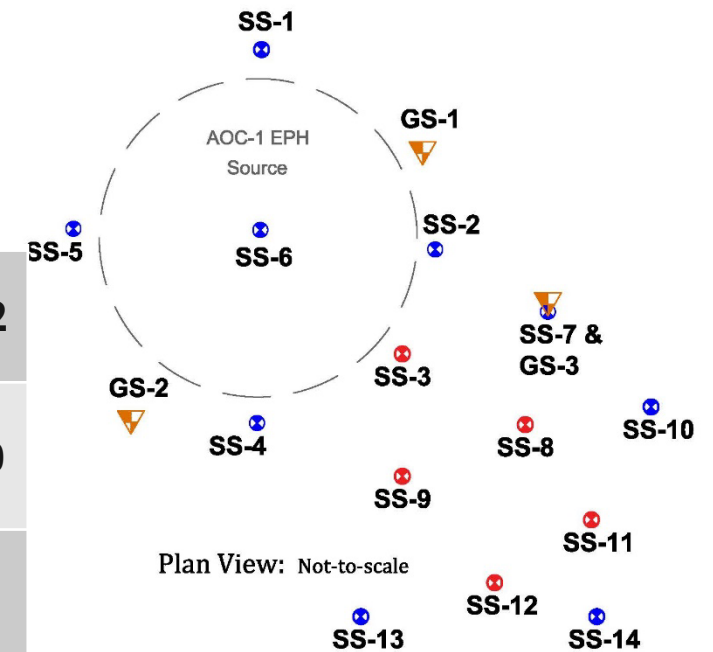

EPH Product Indicator - Active Remediation - No Compliance Avg

EPH Cat 2 Risk analysis - Active Remediation - No Compliance Avg

Individual PAH Compounds – Compliance Averaging is available

Consider 75%/10X & Spatially Weighted Average Technique

Sample Name	SS-1	SS-2	SS-3	SS-4	SS-5	SS-6	SS-8	SS-9	SS-12
EPH Concentration (mg/kg)	80	3,785	26,250	3,650	1,150	4,250	21,250	16,200	13,150
EPH Cat 2 Risk Calculator Results (mg/kg)	NA	Pass	Fail	Pass	Pass	Pass	Fail	Fail	Fail
Individual PAH Exceedances of Residential D	NA	No exceed	YES	No exceed	No exceed	No exceed	YES	YES	No exceed
EPH Product Limit Conc.	17,000 mg/kg (Default Limit)								
RAO Goal?	Industrial – Limited Restricted or Unrestricted Use								

Not all results are presented

Comparison of Calculated Product Indicator Concentrations – Varying Petroleum Type

Summary

- EPH concentrations provide three pieces of data:
 1. Indication of the potential for free or residual petroleum product
 2. Indication of a direct contact human health exposure
 3. A screening point to determine if additional actions/analytical is required
- The LSRP must focus on compliance with all chemicals/compounds in accordance with N.J.A.C. 7:26D and N.J.A.C. 7:26E
- The LSRP may use the Attainment & Compliance Technical Guidance
