IBI Rating: Fair

Low Gradient Habitat Score (0-200): 149

Habitat Rating: Suboptimal

Summary: Despite ample large woody debris and root wads which provide excellent cover for predatory fish species, few were collected in 2011 or 2015, resulting in a low score for the %-piscivore metric. The stream is typically turbid and has a higher percentage of fines sediments which likely remain in suspension. These turbid conditions likely impact the feeding ability of top predatory fish.
