

## **Action items to reduce flooding in Wreck Pond May, 2013:**

**Rebuild Pier Beach dune\***

**Utilize pumps to reduce Wreck Pond water level prior to Nor'easters\***

**Add sluice gate to existing outflow pipe**

**Modify inlet -- add a second pipeline (box culvert) to allow watershed flooding to exit Wreck Pond -- include sluice gate on box culvert. Before culvert is built, Spring Lake needs ability to open inlet anytime flood conditions arise\***

**Build living shoreline (berm) to increase Wreck Pond capacity**

**Retain / delay rain water run-off in the Watershed**

\* needs to be completed before 2013 storm season
