

CONSIDERING A DATA CENTER? JUST ADD WATER

A GROWING INDUSTRY

Across the region, newer and larger data centers are being proposed to support cloud computing, AI, and digital infrastructure.

RESOURCE NEEDS - IT'S NOT JUST ELECTRICITY!

Large data centers may use millions of gallons of water per day for cooling, potentially affecting local water supplies and infrastructure.

JUST ADD WATER

For the sake of our shared water resources, we urge you to “just add water” - availability, permitting, technology, and other factors - to the conversation early in planning.

HAVE QUESTIONS? WE'RE HERE TO HELP

DRBC's staff can help municipalities, developers, communities, and utilities understand water resources considerations for data centers.
