Re: Opposition to use of the Hydro-Fracking technique for drilling

Dear Sir/Madam:

Enclosed please find a petition signed by 42 New York State residents. Each of us oppose the drilling for natural gas in New York State. We are particularly concerned that the use of the hydro-fracking method of extracting natural gas from the Marcellus Shale area will irreparably damage our environment and will likely poison the drinking water for both upstate and New York City residents.

We urge you to use all advocacy and regulatory efforts to ban the use of hydro-fracking and even further, to prohibit the drilling for natural gas in New York State.

The regulations being drafted by the Delaware River Basin Commission must strongly address the cumulative and destructive effects of using the hydro-fracking technique and drilling generally. It should be used to prohibit the use of hydro-fracking as well as drilling.

The drinking water of millions of residents, the land and environment of Pennsylvania, New Jersey and New York State and the health of millions must not be jeopardized. Economic development should not be driven only by drilling for natural gas. The minimal economic benefits of drilling for natural gas will be outweighed by the economic consequences of the destruction of the tri-state environment.

Thank you for your attention. We are watching your actions.

Hoping that you do the correct thing,

Gray and Green Coalition

Jack Kupferman, Chair  
77 7<sup>th</sup> Avenue #14A
