The Delaware River

- 330 miles long.
- Interstate boundary its entire length.
- Longest, un-dammed U.S. river east of the Mississippi (dams are located on tributaries, not the main stem Delaware).
- Tidal to Trenton, NJ.

The Delaware River Basin

- ~13 million people (about 5% of the U.S. population) rely on its waters
- Provides half the drinking water to NYC
- Drains 13,539 square miles of watershed in 4 states.
- 6.4 billion gallons are withdrawn every day
- Contributes over \$21B in economic value

WATER, WATER EVERYWHERE, BUT NOT A DROP FIT TO DRINK.

1937

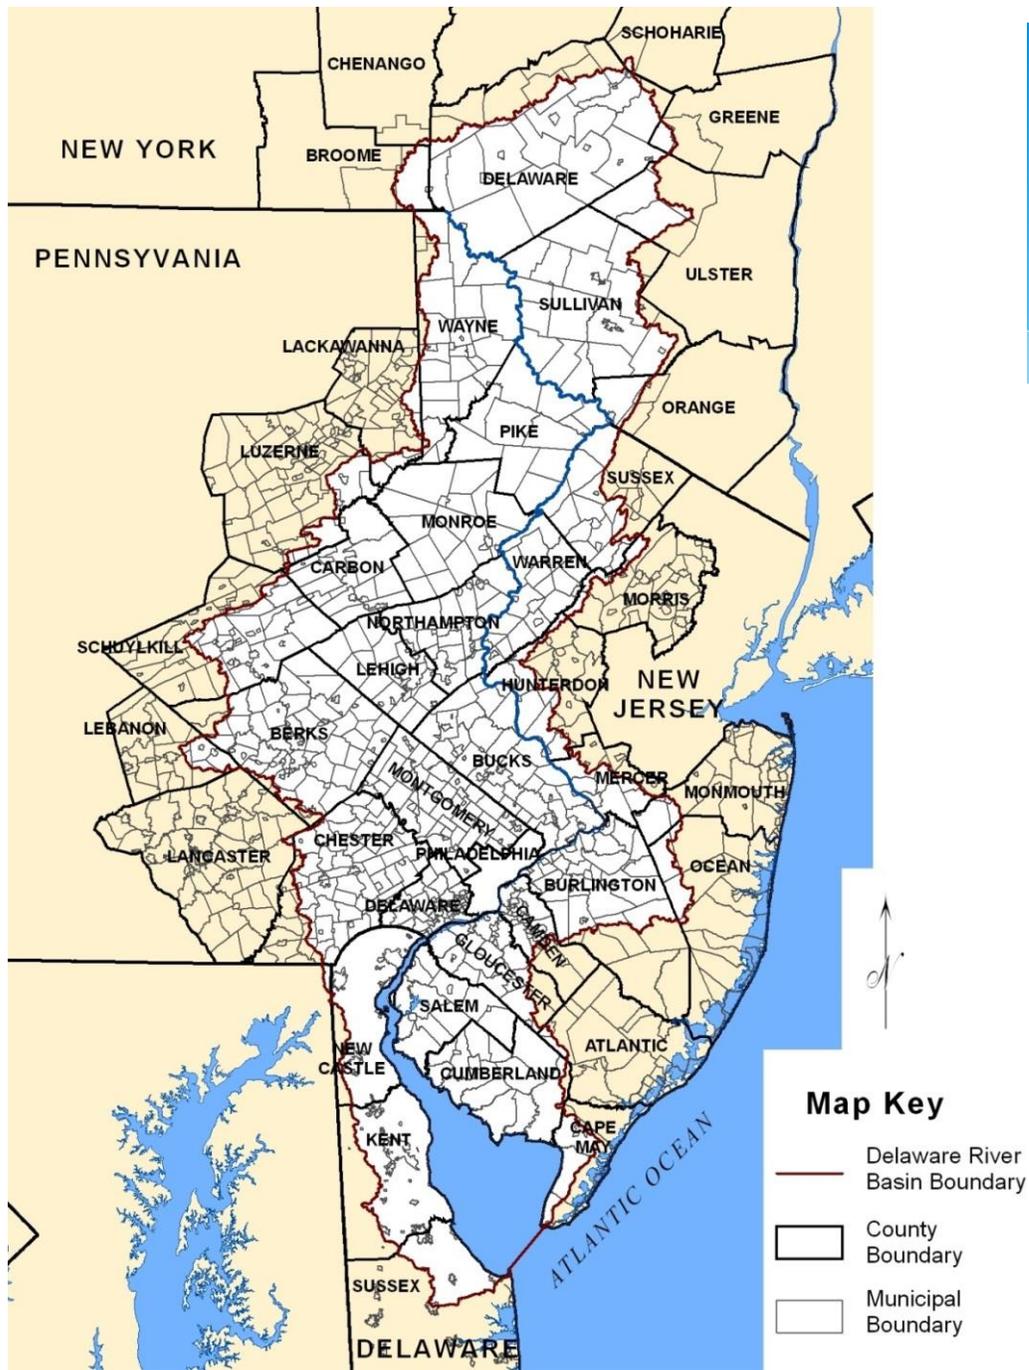

The Problems

- Water supply shortages and disputes over the apportionment of the basin's waters
- Severe pollution in the Delaware River and its major tributaries
- Serious flooding

The Challenge

- 4 States
- 42 Counties
- 838 Municipalities
- NY City

The Solution: The Delaware River Basin Commission

- 1961 – President Kennedy and the four Basin State Governors sign the Delaware River Basin Compact, the federal/state law that formed the Delaware Basin Commission (DRBC)

Delaware River Basin Compact

- Recognizes DRB as a regional asset with local, state and national interests
- Management and control of water resources under a **Comprehensive Plan** will bring benefits and is in the public welfare.
- The Commission shall develop and effectuate **plans, policies and projects** relating to the water resources of the Basin

Delaware River Basin Commission

■ Five Equal Members:

- Delaware

- New Jersey

- Pennsylvania

- New York

- Federal Government

- Four Governors are the Commissioners

- Commissioner may select alternates

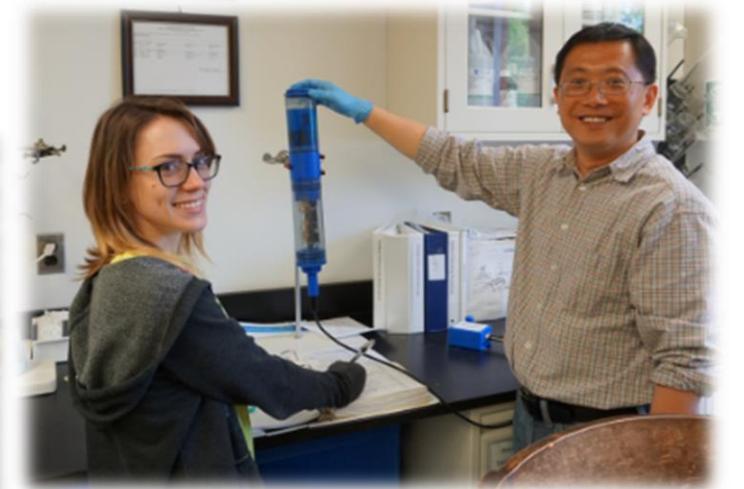

- Federal Commissioner is Commanding General, USACE, NAD

- Majority rules in most voting

- Meets quarterly

DRBC Staff and Budget

- Professional Planners, Engineers and Scientists
- 39 Budgeted Staff (12% Vacancy Rate)
- FY2019 Budget = \$6.3 million
- Funding from “Signatory Members” = \$1.7 M (27%)
- Located in West Trenton, NJ since 1974

Compact Designated Responsibilities

Create a Comprehensive Plan

- Flood damage (and drought) reduction
- Ground and surface water supply development
- Propagation of fish and game
- Related watershed projects
- Recreational facilities
- protection to fisheries...;
- Hydroelectric power development
- Control of movement salt water;
- Abatement and control of surface water pollution;

and the regulations towards the attainment of these goals

DRBC Core Responsibilities

- **FLOW** - An adequate and sustainable supply of water.
- **QUALITY** - Clean and healthy water resources.

View from Bowman Hill Tower by Linda Park

Flow

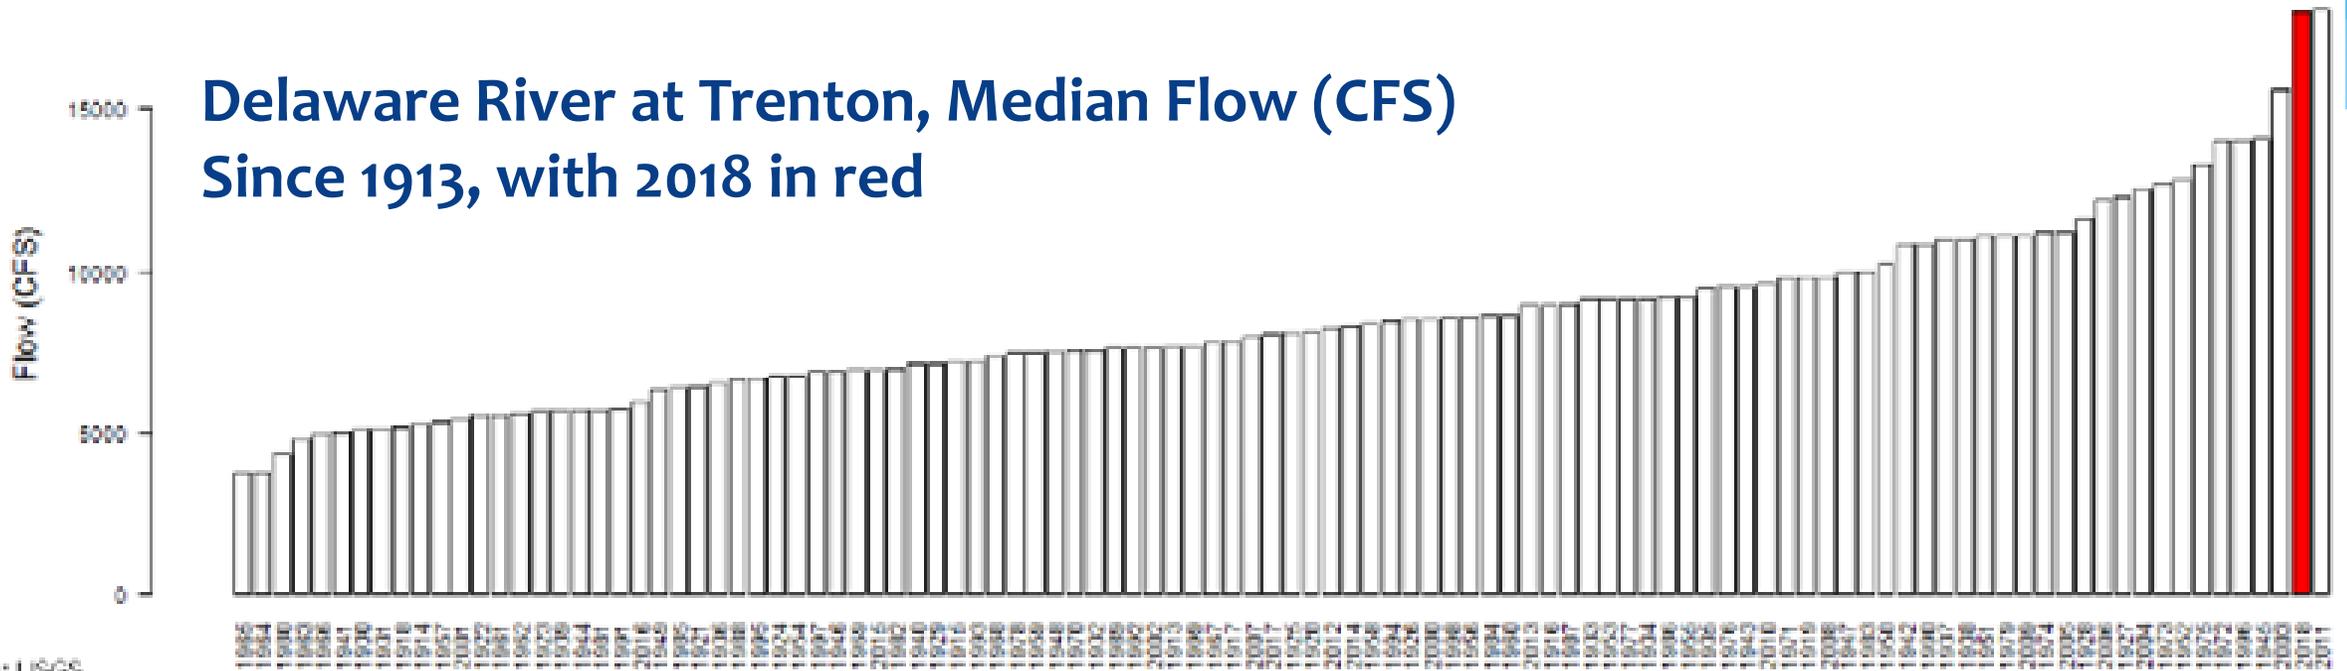

“It has to be wet before it can be clean.”

Dawn at Ten Mile River by Martha Tully

How Wet Has It Been?

**Delaware River at Trenton, Median Flow (CFS)
Since 1913, with 2018 in red**

Data: USGS

NOTE: Highest year was 2011, which included flows resulting from Hurricane Irene and Tropical Storm Lee.

How Dry Has It Been?

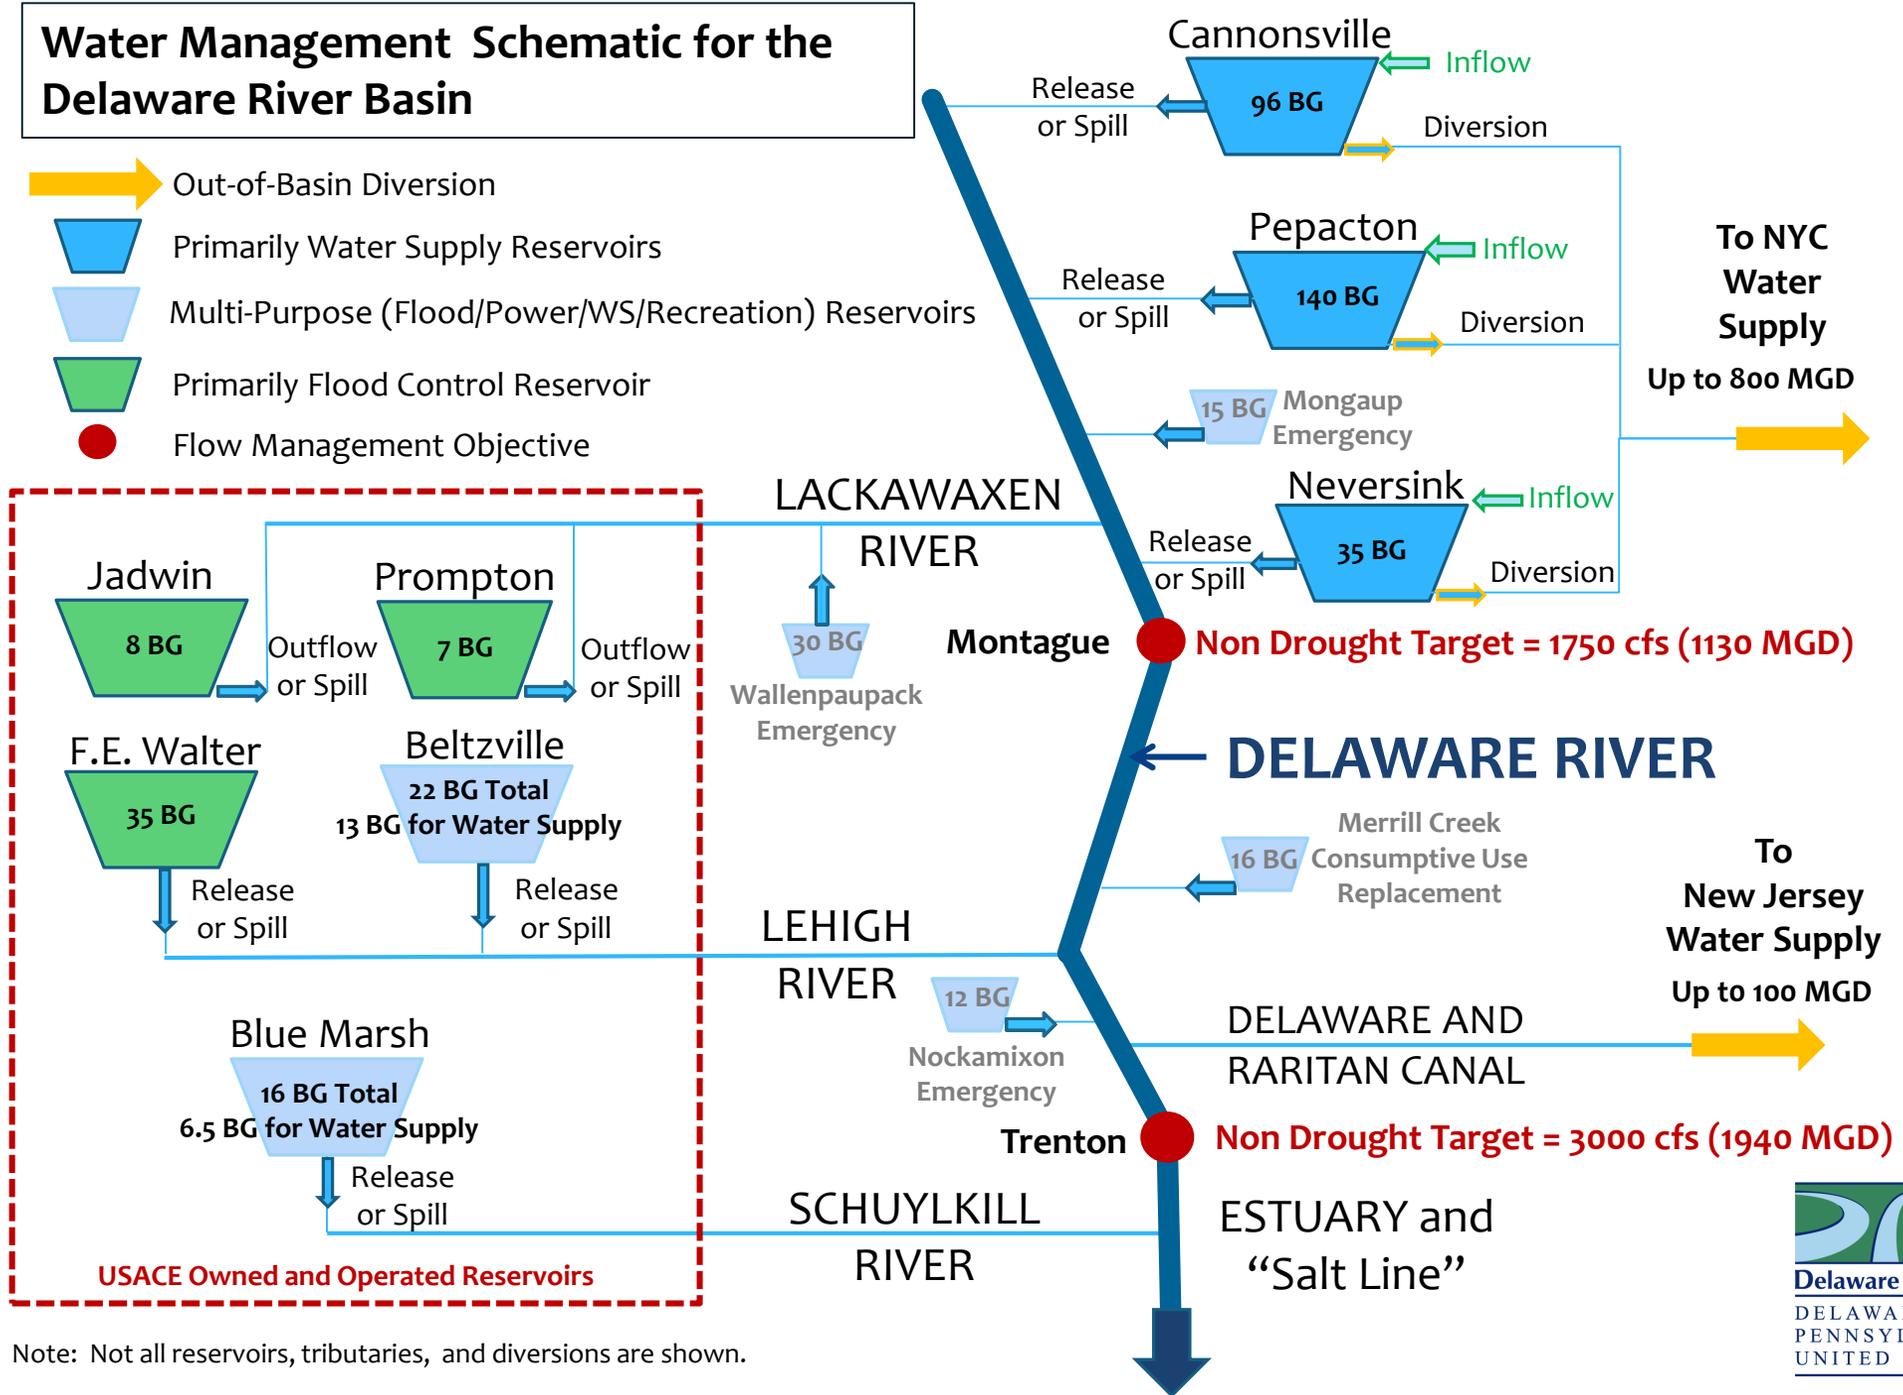

<u>Decades</u>	1950s	1960s	1970s	1980s	1990s	2000s	2010s
Reservoir Completed	A B C	D E F	G H	I			
<u>Drought Years:</u>							
Drought Watch or Warning							
Drought Emergency							

A=Neversink, B=Pepacton, C=Nockamixon, D=Promtpon and Jadwin, E=FE Walter; F=Cannonsville, G=Belzville, H=Blue Marsh, I=Merrill Creek.

Lake Wallenpaupack and the Mongaup System were constructed in the 1920s]; Dates are approximate.

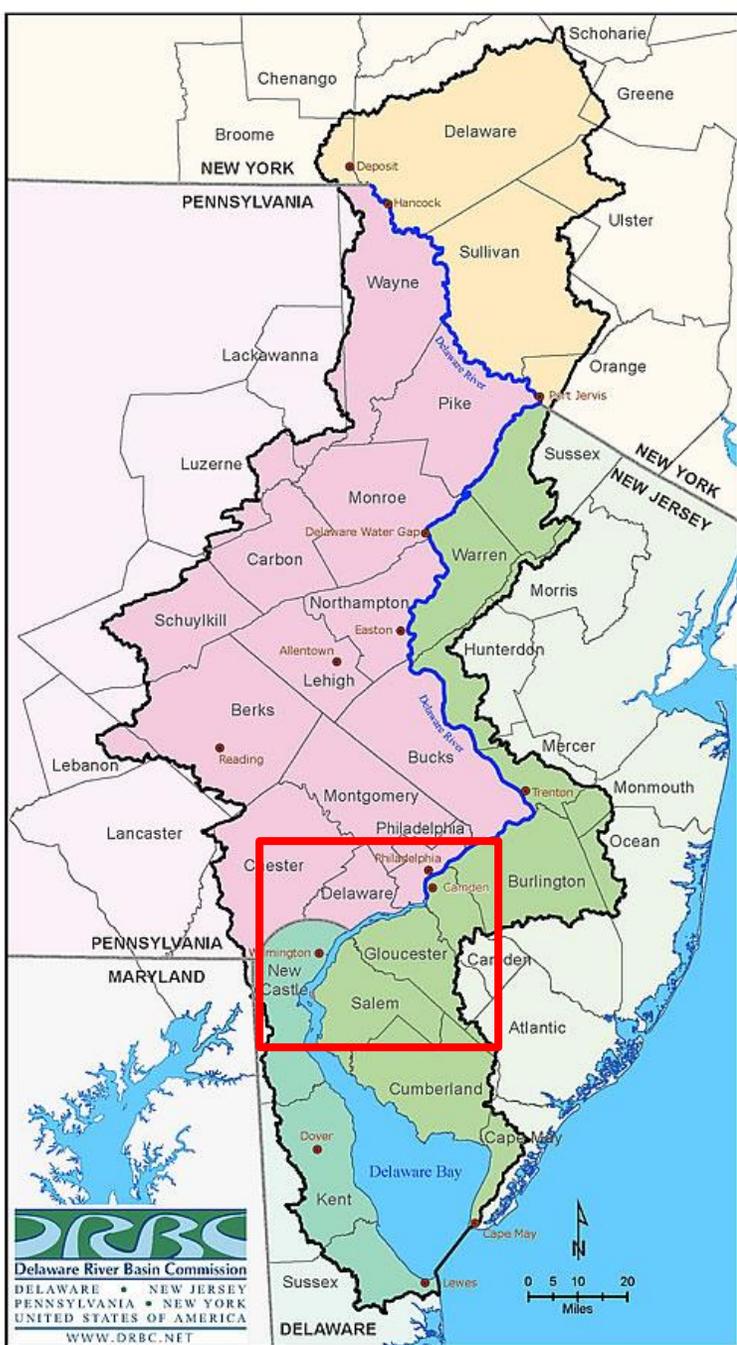

Water Management Schematic for the Delaware River Basin

-  Out-of-Basin Diversion
-  Primarily Water Supply Reservoirs
-  Multi-Purpose (Flood/Power/WS/Recreation) Reservoirs
-  Primarily Flood Control Reservoirs
-  Flow Management Objective

Note: Not all reservoirs, tributaries, and diversions are shown.

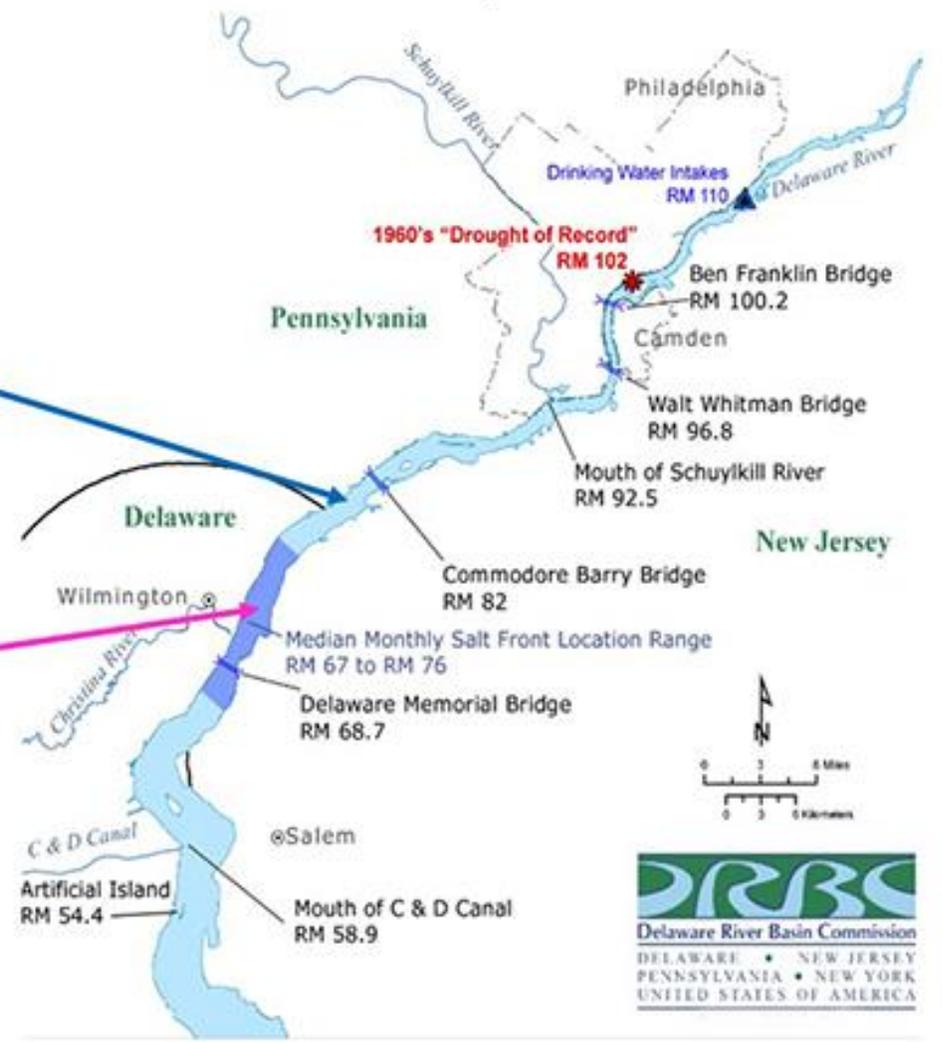

Salt Line Location: October 7, 2019

Location:
RM 80**

**Normal October
Location:
RM 72**

Water Supply Planning Objectives

- Meet Compact planning requirements (Articles)
 - **Water Supply:** sustainable and resilient
 - During existing extremes - floods and droughts
 - Meeting water demands – consumptive and non-consumptive
 - Under future scenarios that include mega trends - water efficiency, energy needs, climate change, ecological flows
 - **Flow Management:** Support needs and targets – balance supply & flood loss reductions

Current Tasks

Water Supply Planning

Water Supply Planning (DRBC)

- Water Use

Partner Led Efforts

- DE WSCC
- NJ WSAC
- PA State Water Plan

2060 Planning Elements

Water Demand Projections

- Public Water Supply
- Power
- Industrial / Commercial
- Agricultural
- Other

Whitepapers

- Blue Marsh Reservoir
- Beltzville Reservoir
- Brandywine System
- Power (policy)
- FE Walter Expansion

Water Availability Analyses

- Surface water
 - Non-tidal (SWEET)
 - Tidal (PST & Salinity models)
- Groundwater (USGS recurrence interval)

Surface Water Intake

Surface Water Withdrawals

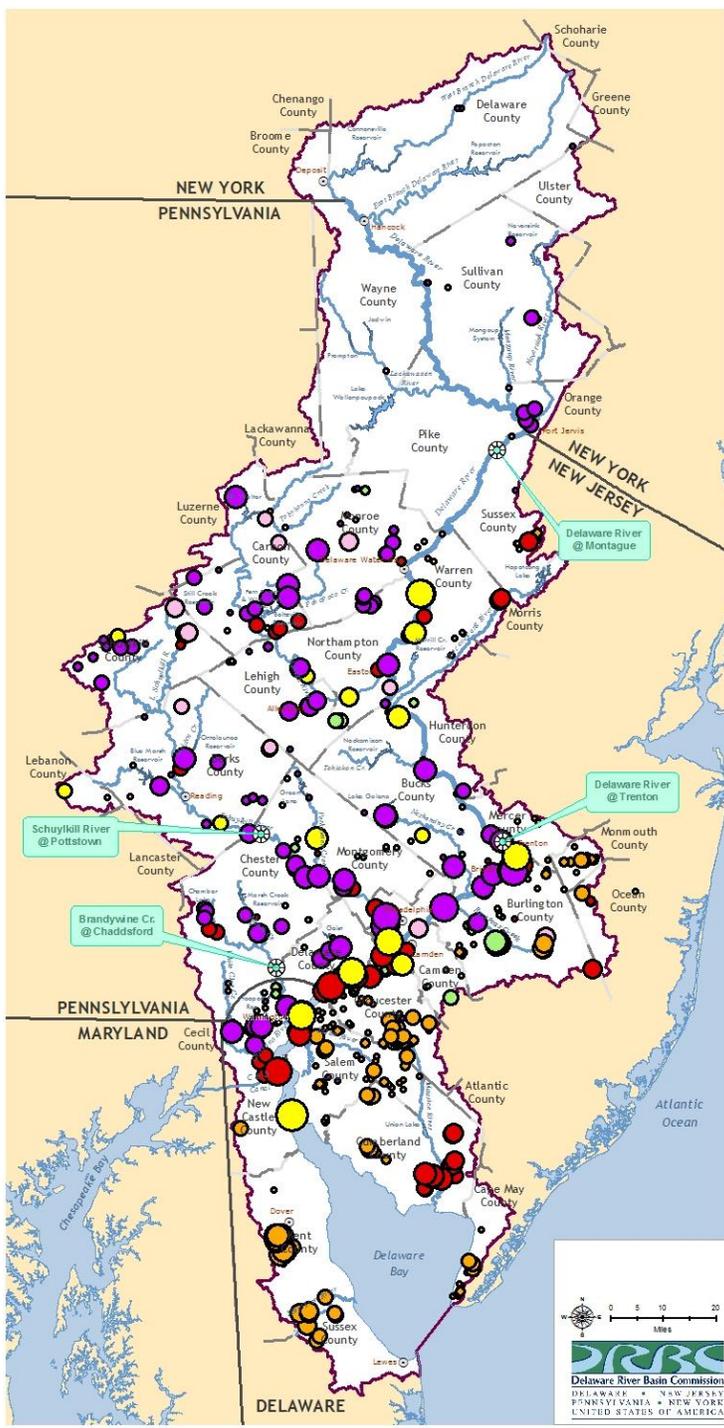

Withdrawal Category

- Public Water Supply
- Agriculture
- Golf
- Industrial
- Thermoelectric
- Other

Volume in Million Gallons per Day

- 0 - 0.5 MGD
- 0.6 - 1.0 MGD
- 1.1 - 5.0 MGD
- 5.1 - 10 MGD
- 10 - 100 MGD
- 100 - 1,000 MGD
- Greater than 1,000 MGD

USGS Stream Gage Location

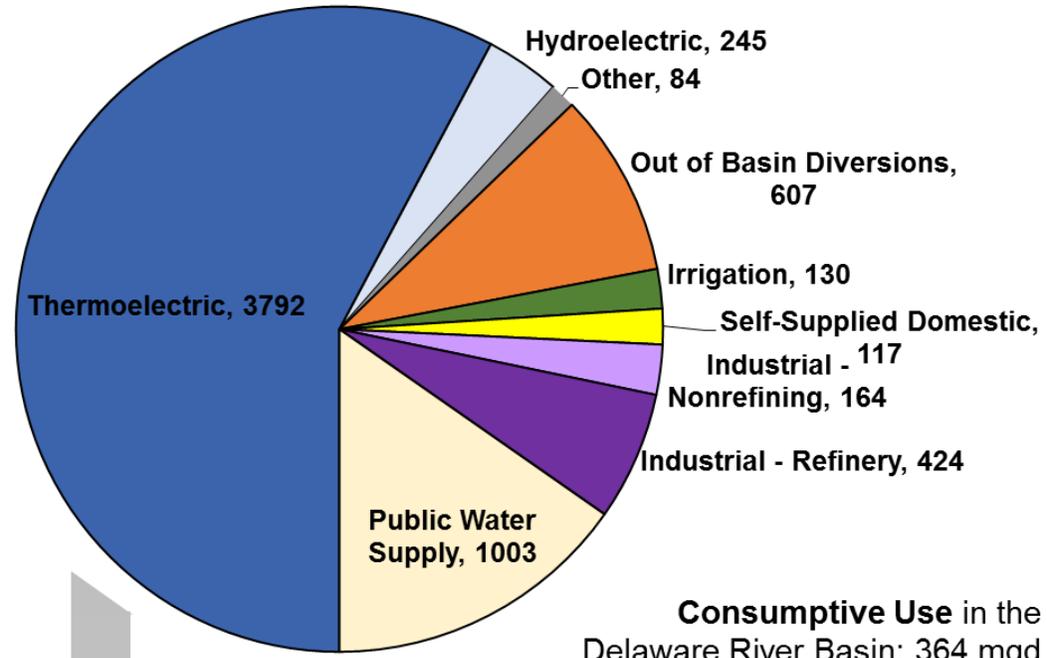

- >1,200 active docket approvals for water (groundwater & surface water).
- ~ 1,500 surface water withdrawals approved in ~375 dockets.
- ~5,600 groundwater withdrawals approved in ~850 dockets

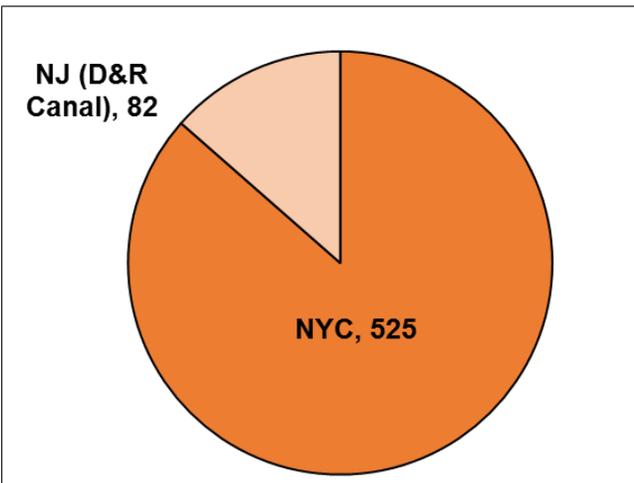

Delaware River Basin Water Use : CY2016

Total Water Withdrawals (ground and surface) from the Delaware River Basin: 6,565 mgd

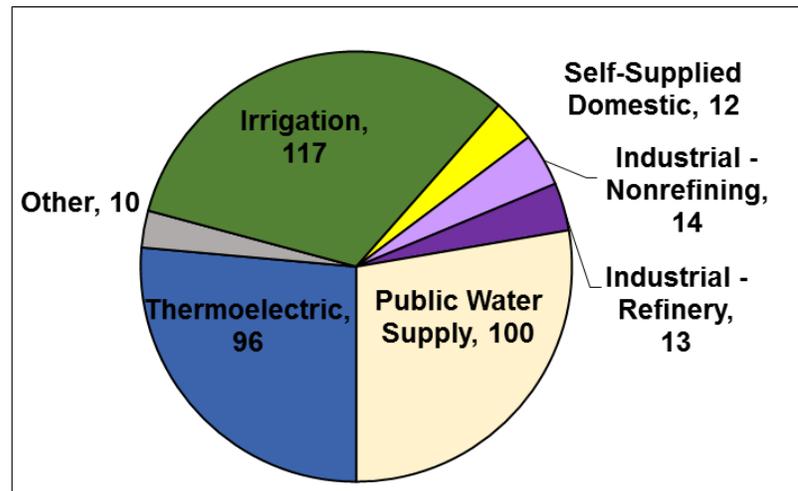

- Thermoelectric
- Hydroelectric
- Other
- Out of Basin Diversions
- Irrigation
- Self-Supplied Domestic
- Industrial - Nonrefining
- Industrial - Refinery
- Public Water Supply

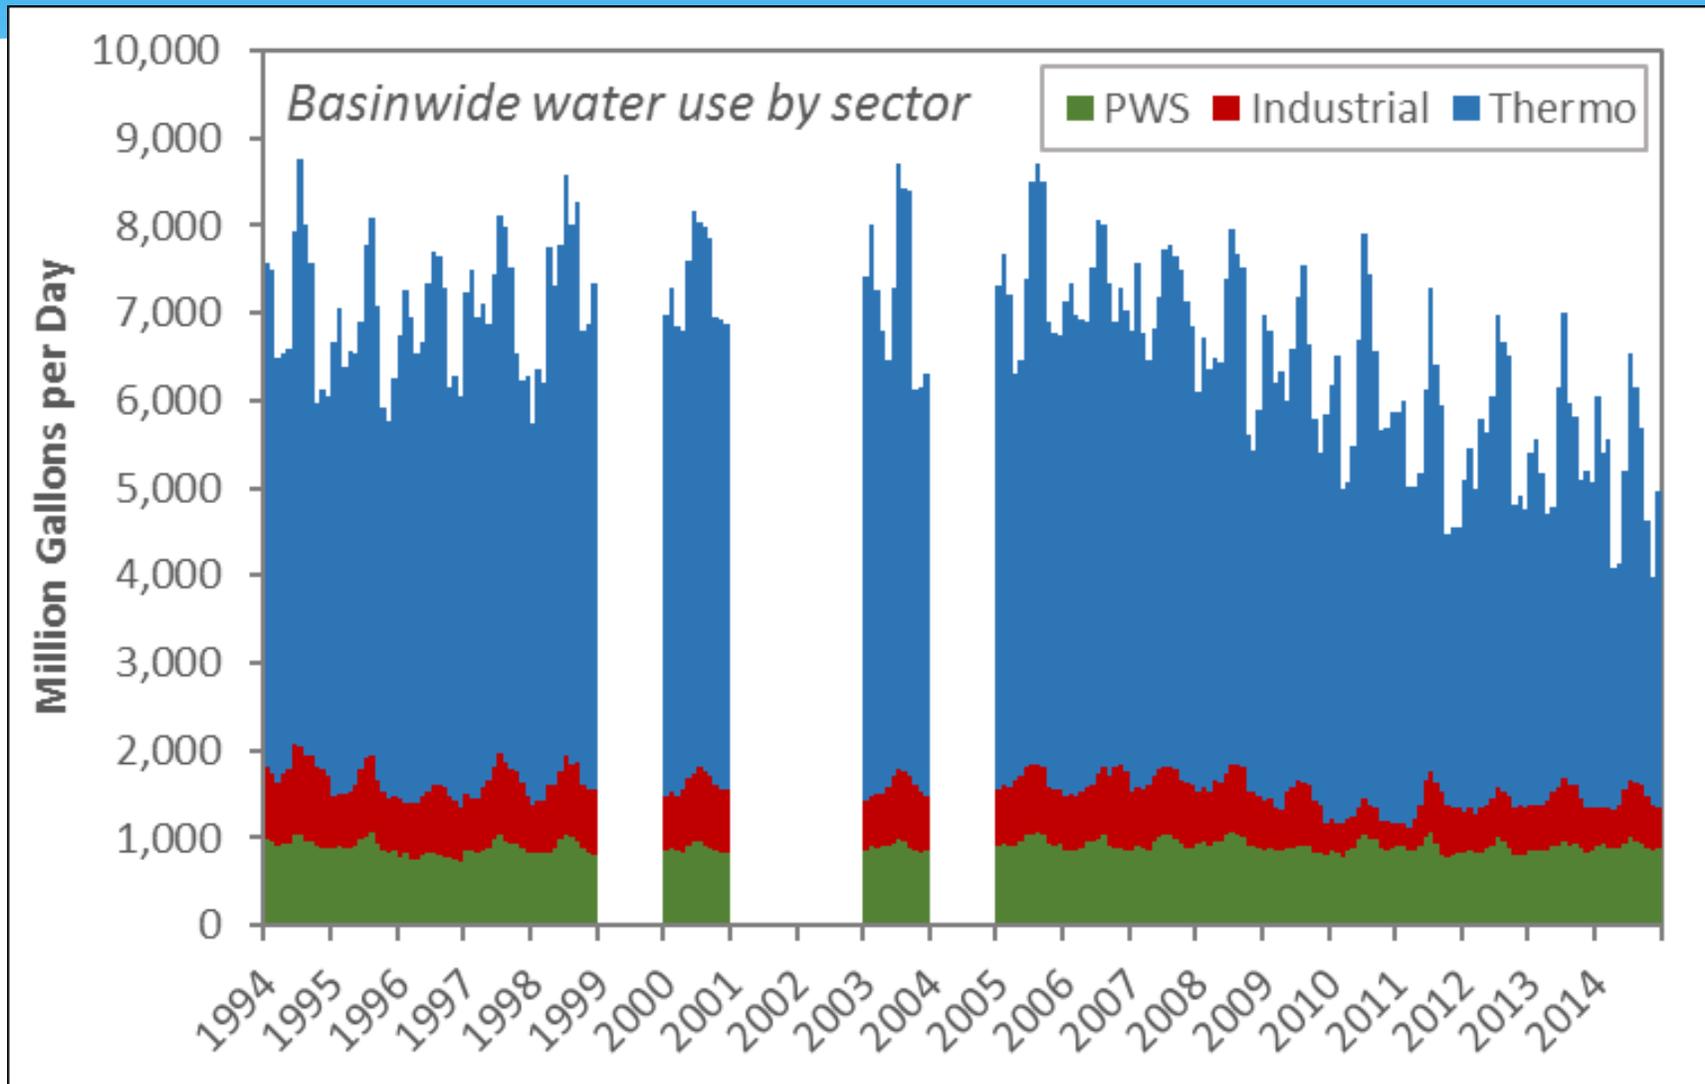

Major Exports from the Delaware River Basin: 607 mgd

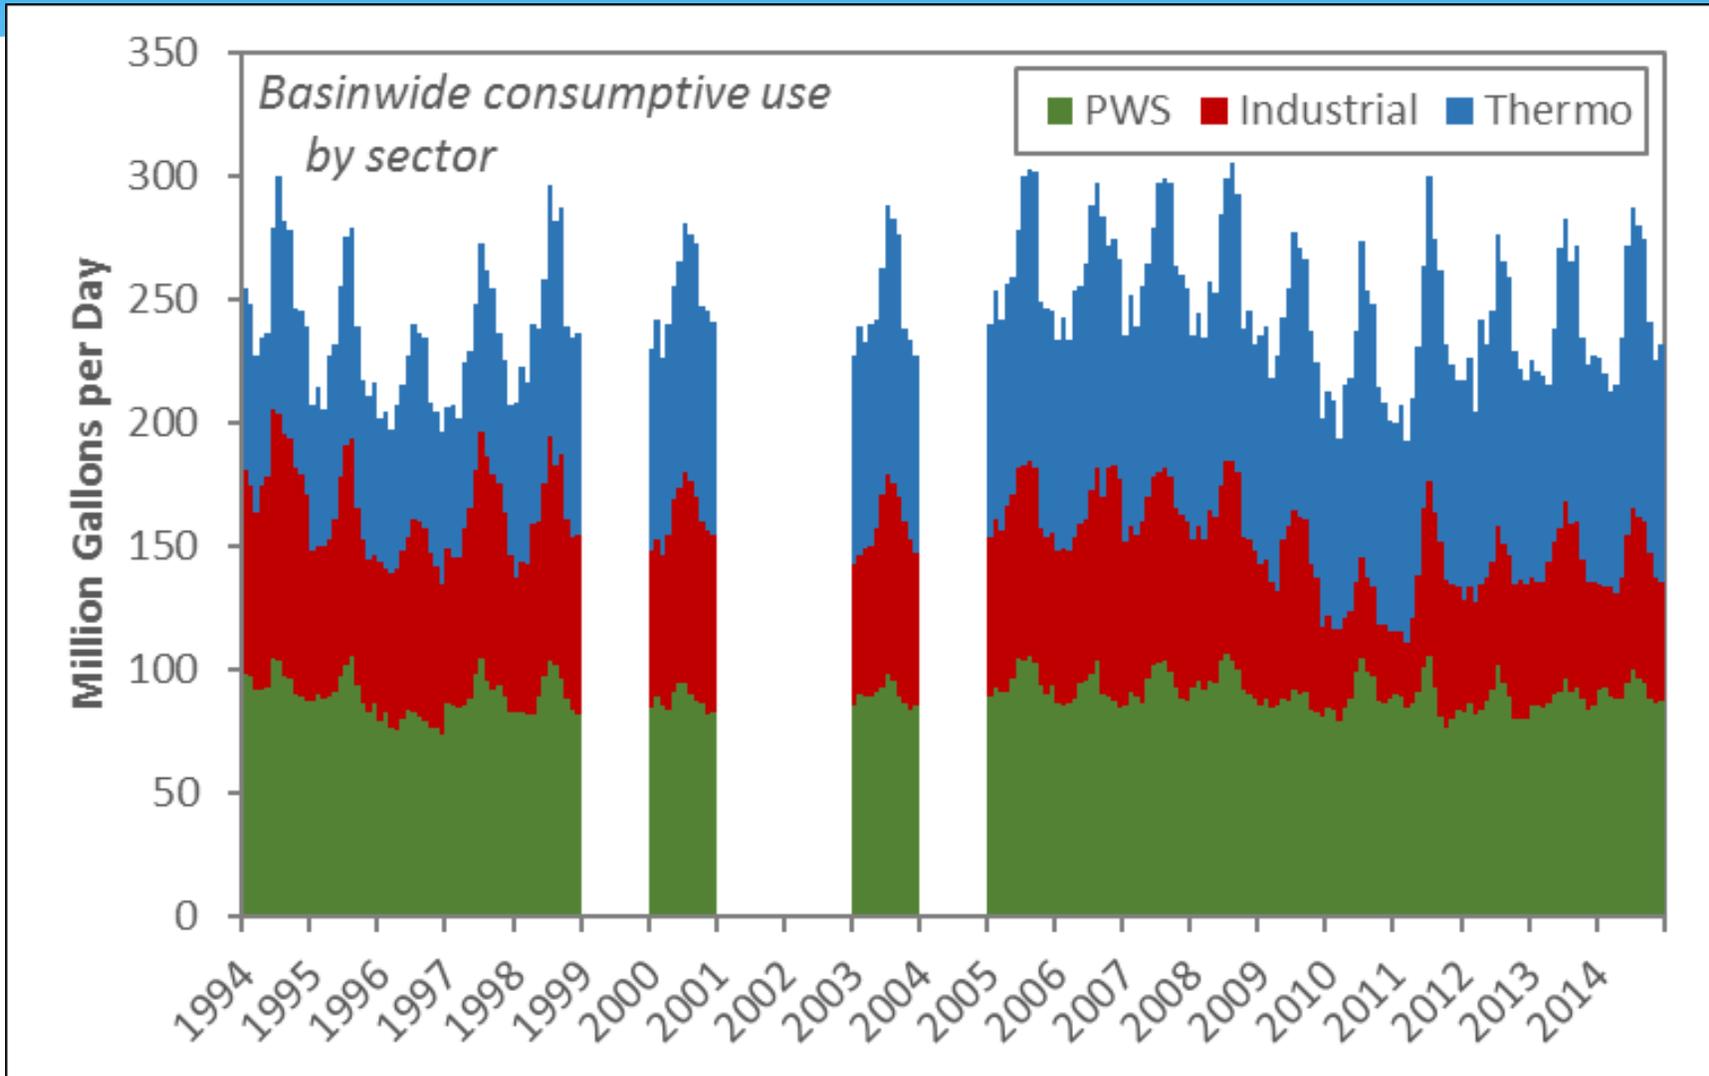

Consumptive Use in the Delaware River Basin: 364 mgd

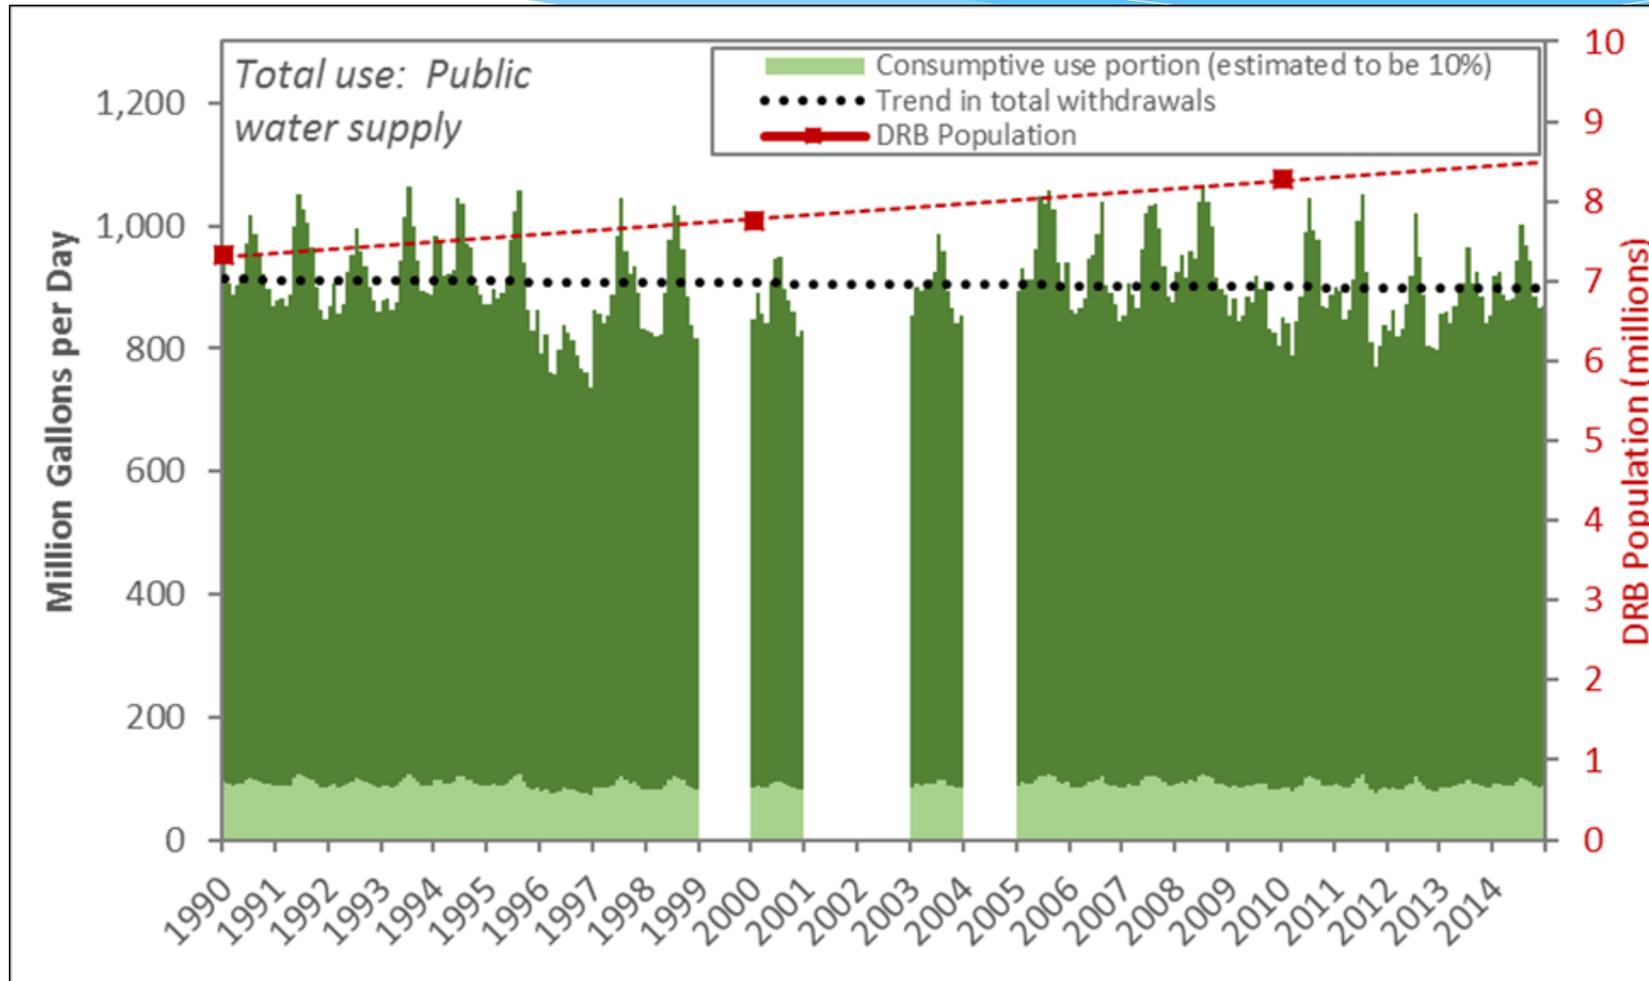

Monthly Total Water Withdrawals for Three Key Sectors in the Delaware River Basin

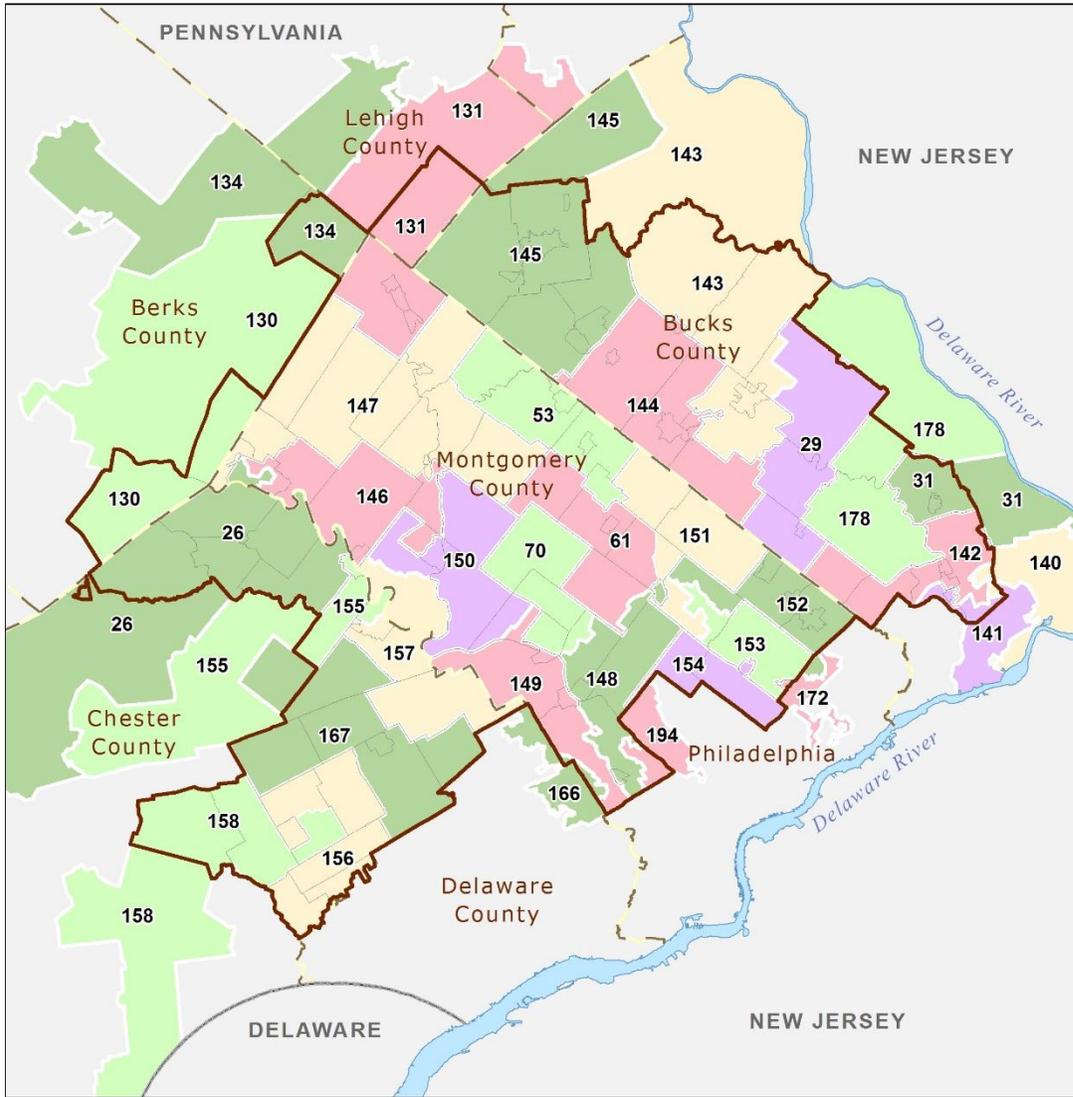

Monthly Consumptive Water Use for Three Key Sectors in the Delaware River Basin

Public Water Supply Demand--DRB

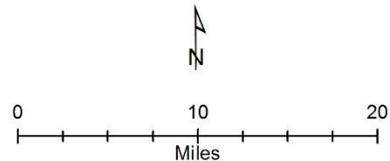

Southeastern Pennsylvania GW Protected Area

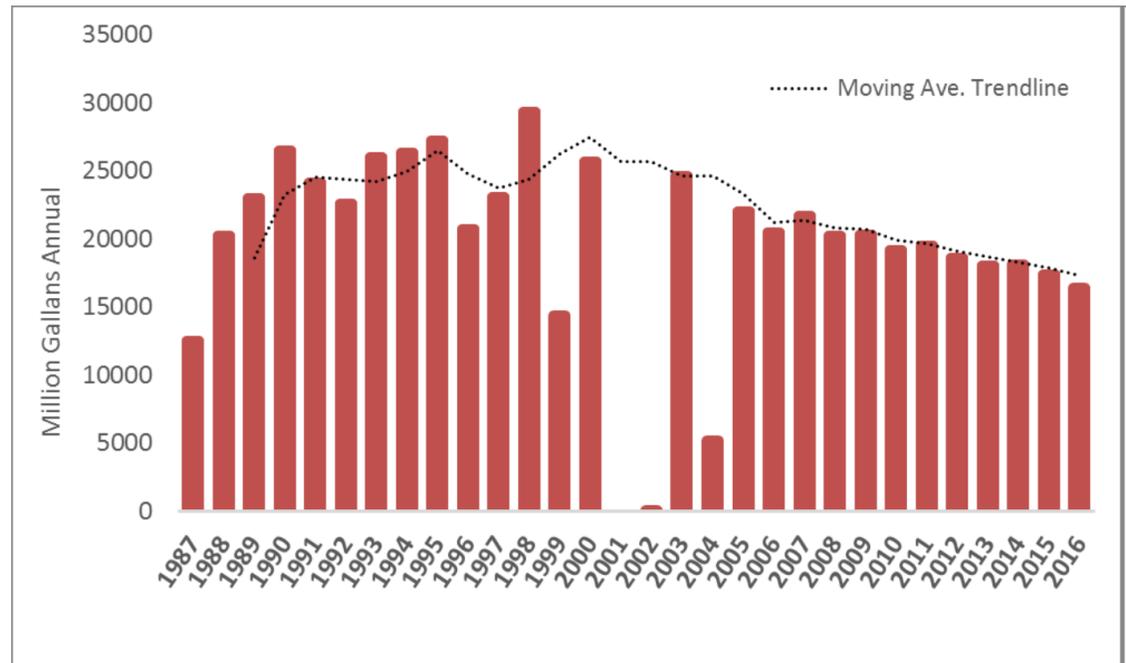

Legend

- SE PA GWPA
- County Boundary
- Municipal Boundary

- Between 1990-2013 total withdrawals were reduced by approximately 8.5 billion gallons or 23.4 million gallons a day.
- More use of surface water sources including the Delaware River.

Water Quality

*Fish kill on the Delaware from oil spill in 1929
(courtesy Temple Archives)*

Plastic Pollution along waterways

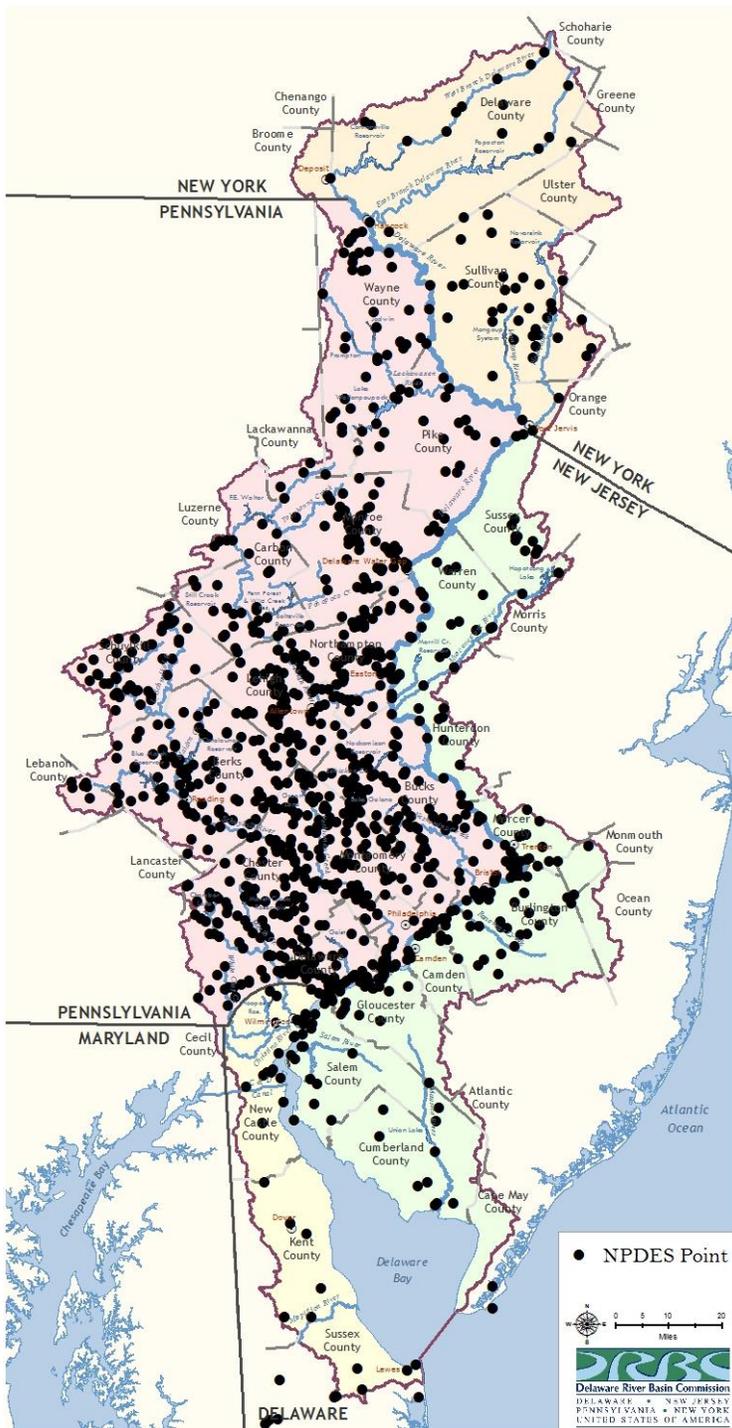

The Quality of Basin Waters Shall Be Maintained For:

- Public drinking water (after reasonable treatment)
- Recreation
- Wildlife, fish and other aquatic life
- Regulated waste assimilation

Point Mountain by David B. Soete

NPDES Dischargers in DRB

- NPDES = National Pollutant Discharge Elimination System: Requires Permit to discharge
- Set effluent limits and monitoring requirements in the permit
- 1,164 active discharge permits in Delaware River Basin

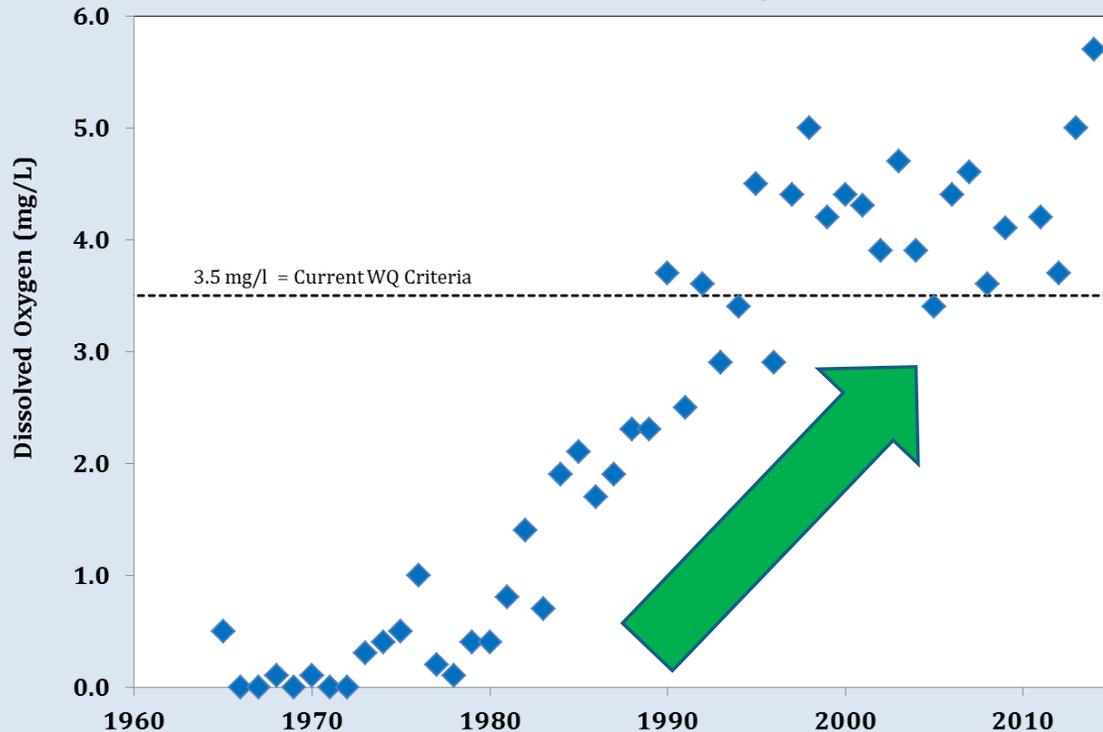

DRBC Collaborative Results

Aquatic Life Benefits

Fisheries.noaa.gov

Delaware River Dissolved Oxygen
@ River Mile 100 / Ben Franklin Bridge
Minimum of all July Averages

- **A dead zone in the Estuary restored.**
- Significant improvement in dissolved oxygen.

- **A dead river zone in the Estuary restored.**
- Significant improvement in Dissolved Oxygen.

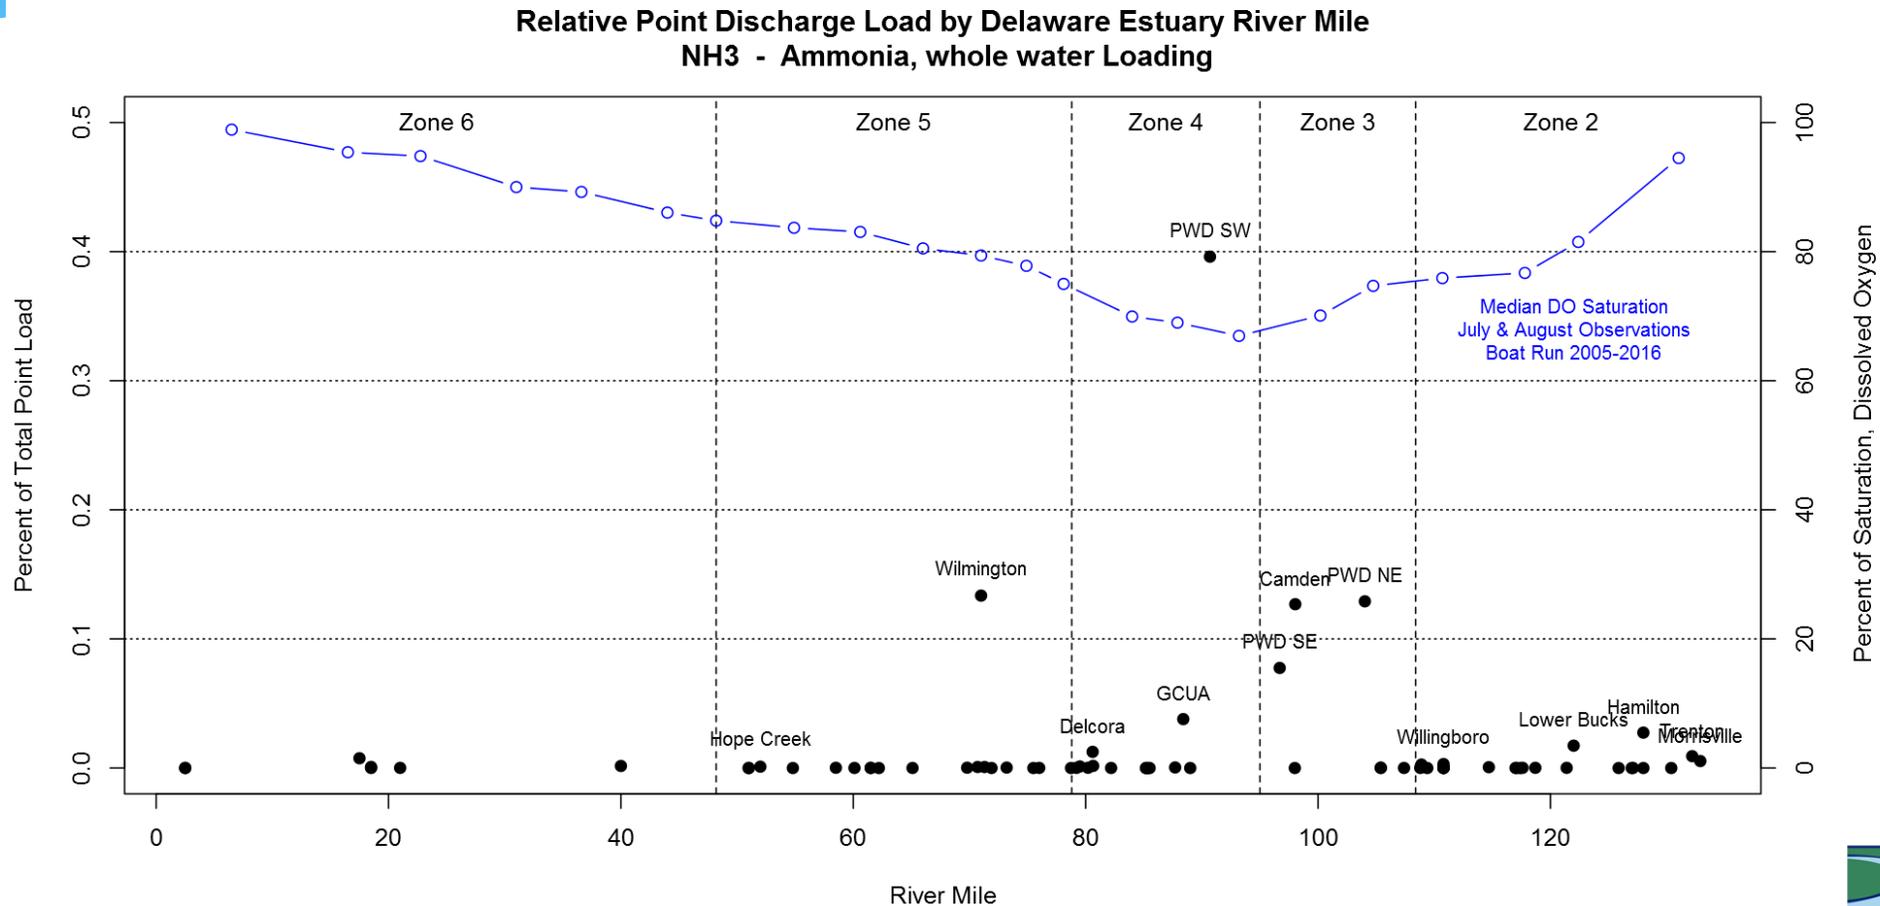

Mapping the Delaware River Waterfront's building boom

Big changes are coming to the waterfront

By **Melissa Romero** and **Anna Merriman** | Updated Sep 26, 2018, 5:30pm EDT

<https://philly.curbed.com/maps/delaware-river-philadelphia-development-projects>

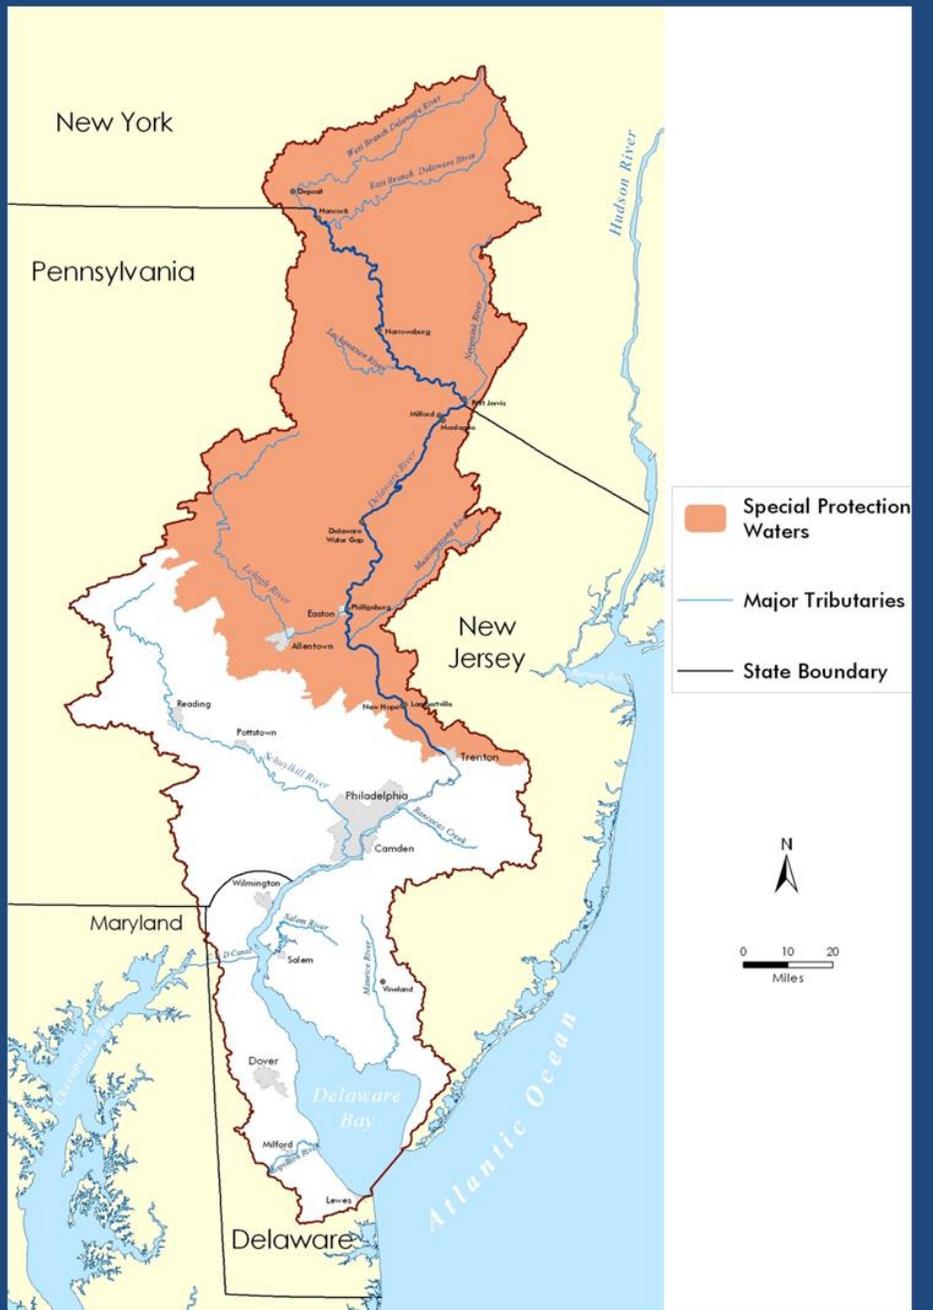

Delaware Estuary DO "Sag"

The Dissolved Oxygen "sag" in the Estuary is primary influenced by point source discharges

Special Protection Waters

Keeping Clean Waters Clean

- Entire basin upstream from Trenton
- Believed to be the longest anti-degradation reach in the US.
- It's more beneficial to “keep the clean waters clean” than to allow them to become degraded and attempt to restore them later.

Other Challenges

What's in our waters?

- PFAS
- Microplastics
- PCBs
- Other Contaminants of Emerging Concern

Climate

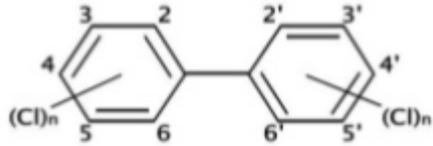

- Precipitation
- Temperature
- Sea Level Rise

Can we swim in it?

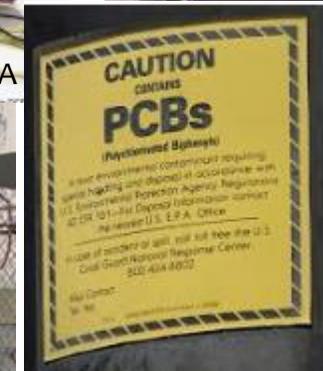

Frozen Stemware on the Flat Brook by Evan Kwityn

Polychlorinated Biphenyls (PCBs)

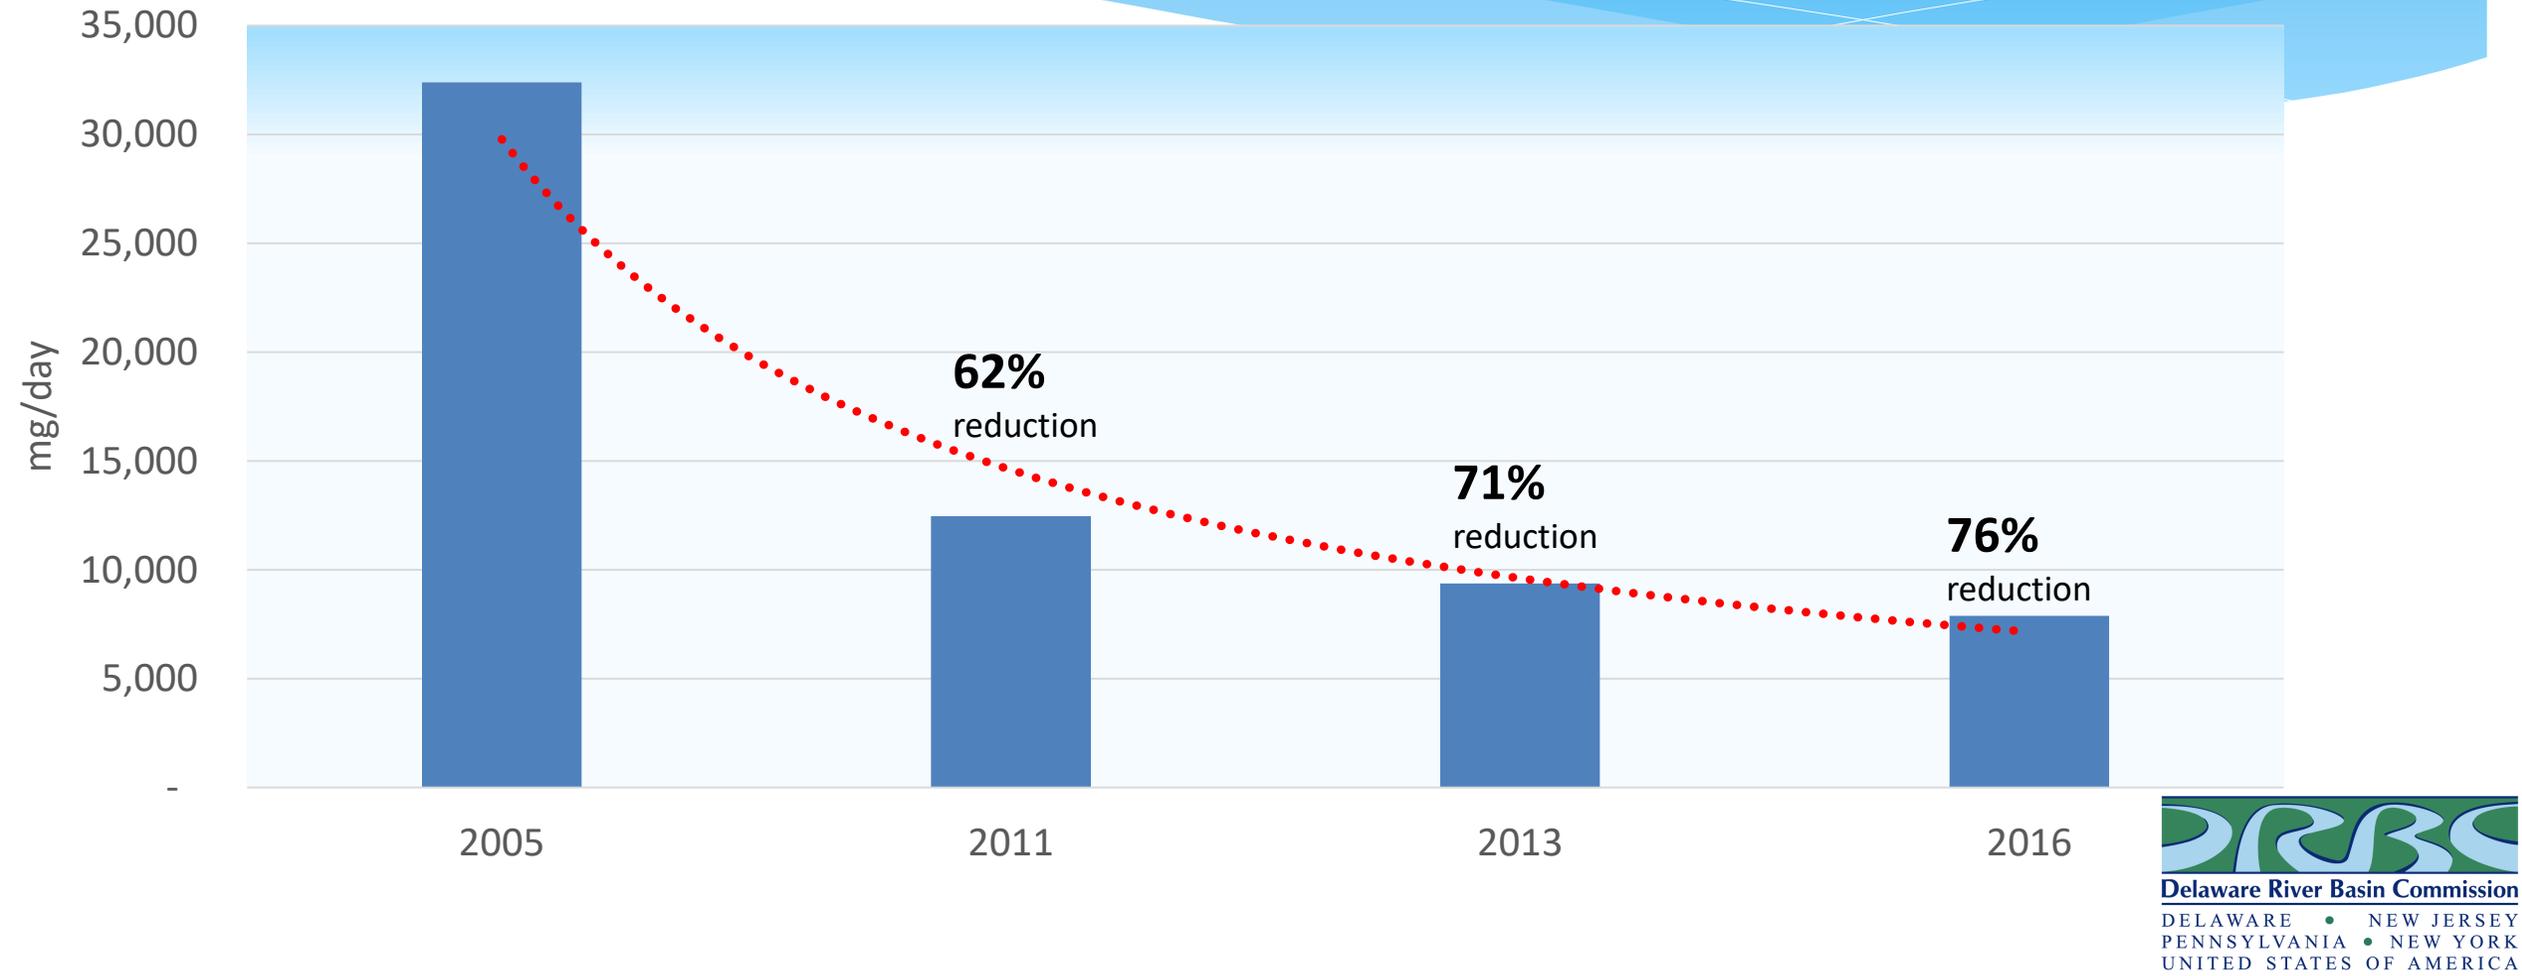

- Man-made organic chemicals
- Industrial and commercial applications
 - Electrical insulating
 - Flame retardant
- Banned in 1979
- Possible human carcinogen
- Not water soluble

PCB Loadings

Top Ten Point Source Dischargers mg/day

Microplastics

Small plastic pieces less than five millimeters long which can be harmful to our ocean and aquatic life.

- Primary microplastics include microbeads which were commonly found in health care products like face washes and toothpastes.
- Secondary microplastics occur when larger pieces of plastic like bottles and fishing line break down through photodegradation.

University of Delaware

Climate Change

- More warm extremes and fewer cold extremes
- Heavy rains become more intense
- More frequent dry spells
- Rising sea level with increased frequency and intensity of coastal flooding

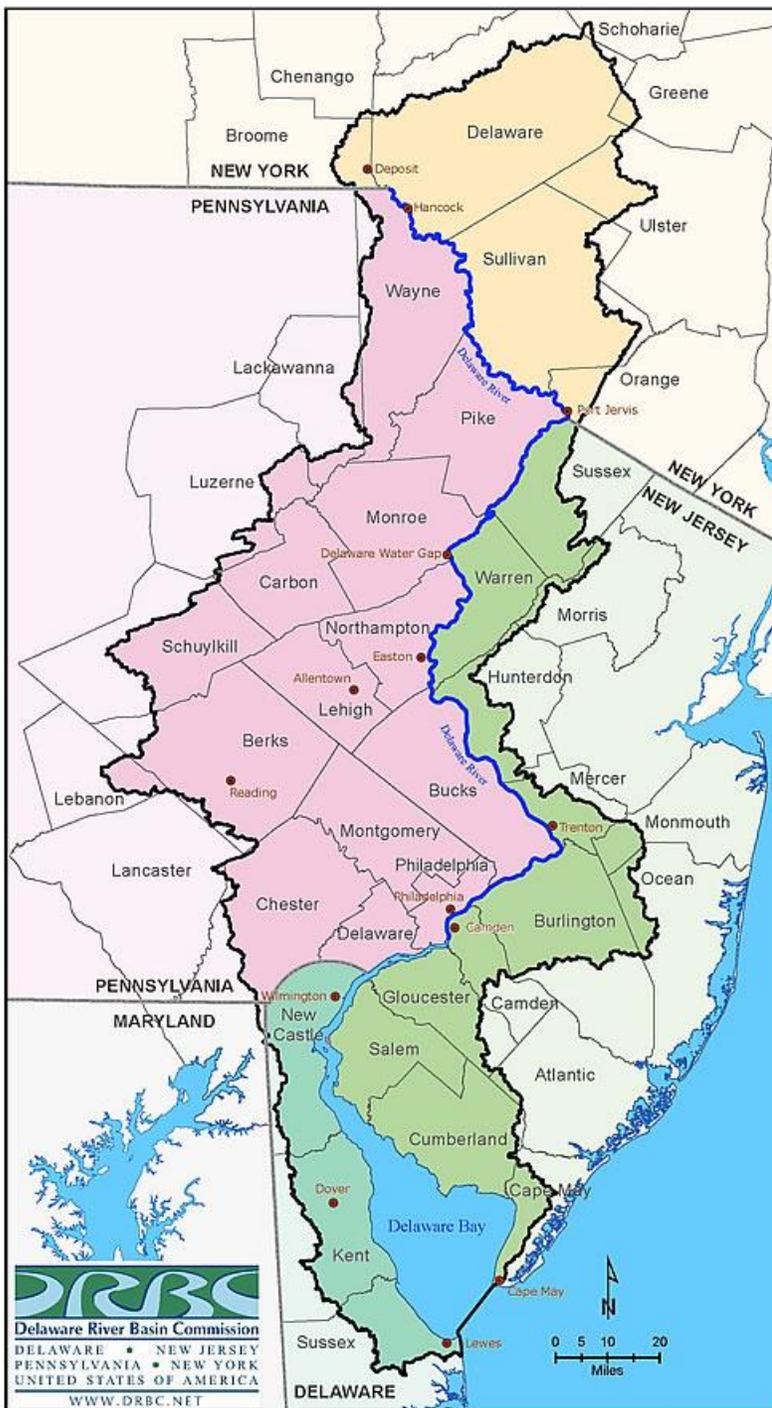

Complex Considerations

Freshwater Hydrologic Climate Considerations:

- Precipitation
 - Flow
- Temperature
 - Evapotranspiration
 - Snowpack

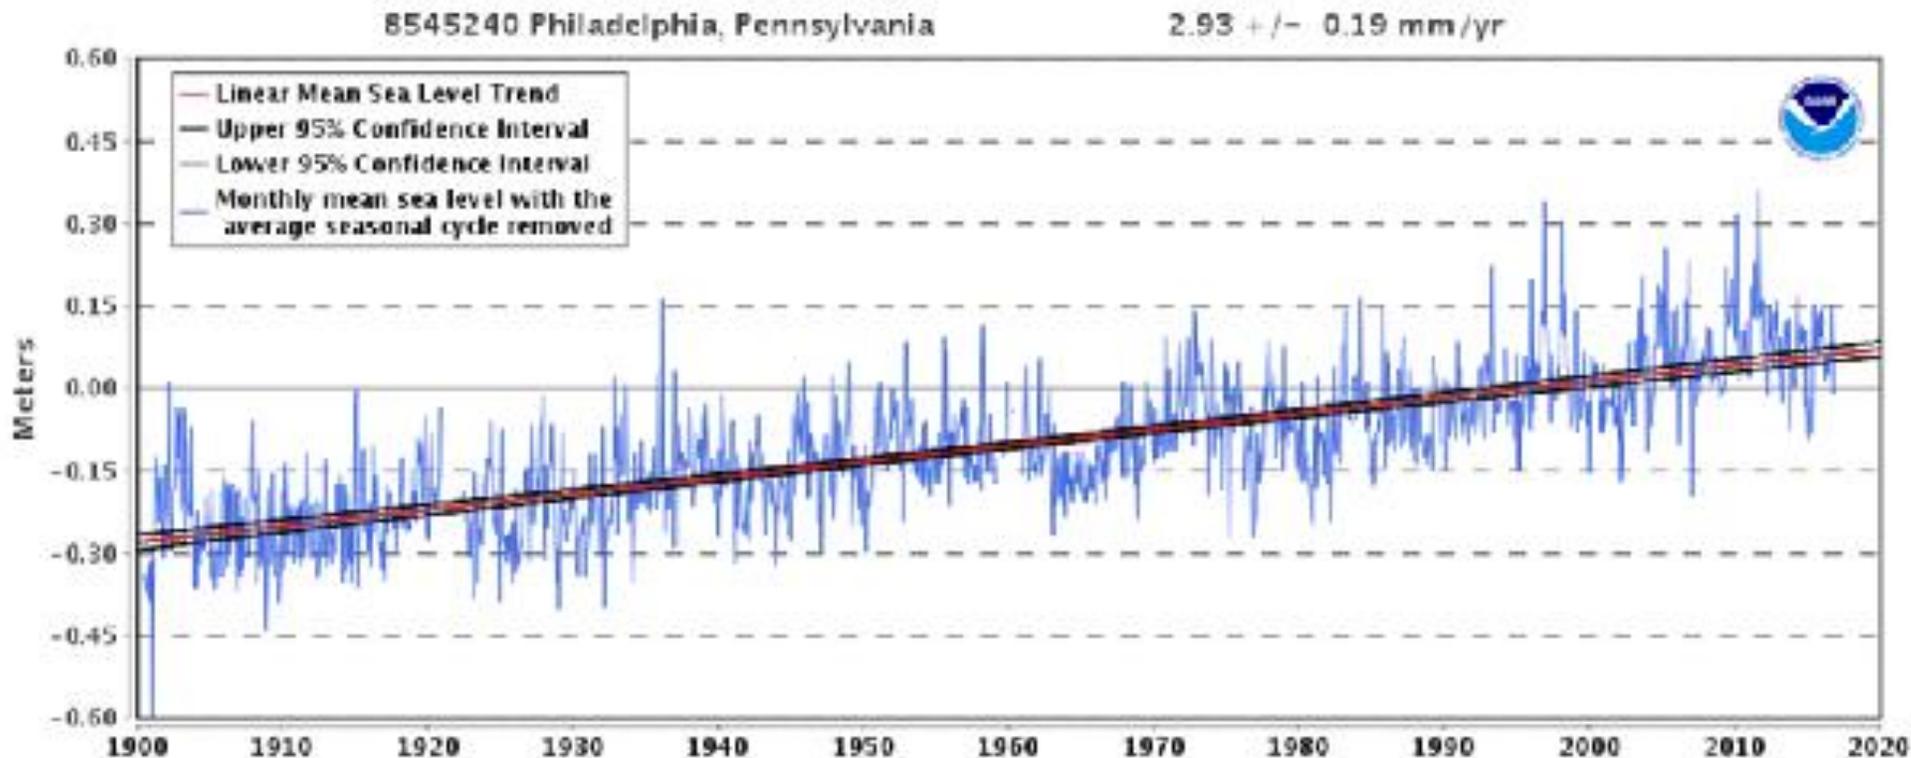

Salt Water Climate Considerations:

- Sea Level Rise

Sea Level Rise

“Regional Sea Level Change Projections: It is very likely that in the 21st century and beyond, **sea level change will have a strong regional pattern**, with some places experiencing significant deviations of local and regional sea level change from the global mean change.” -IPCC 2013

Mean Sea Level Trend, Philadelphia:

- 2.93 mm/year (1/10 inch/year)
- 11.5 inches/century

Data: NOAA
