Notes:

1. All units in acres and rounded to the nearest 0.1. The totals shown in this table may not equal the sum of addends due to rounding.
2. As defined by the U.S. Department of Agriculture (USDA)
3. Inclination of the soil from horizontal and measured in percent
4. Potential for mechanical activities to compact soils
5. As defined by USDA Natural Resources Conservation Services and based on potential to develop anaerobic conditions in the upper part. Hydric –anaerobic conditions; Partially Hydric - Potential anaerobic conditions are present; and Not Hydric – anaerobic conditions are not present
6. High = poorly drained, very poorly drained; Moderate = somewhat poorly drained, moderately well drained; Low = well drained, somewhat excessively drained, excessively drained
7. Revegetation Potential estimated using NRCS Non-irrigated Capability Class. Capability Class 1 = Good, 2 = Fair, ≥ 3 = Poor
8. Water Erosion Potential estimated using NRCS classifications low (minor risk), moderate (contains certain undesirable properties), severe (unacceptable risk)
9. Erodibility Groups 1-8 with Group 1 having the highest erodibility potential and Group 8 the least erodibility potential
