Grade 7: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

Description

Included here are the prerequisite concepts and skills necessary for students to learn grade level content based on the New Jersey Student Learning Standards in mathematics. This tool is intended to support educators in the identification of any gaps in conceptual understanding or skill that might exist in a student's understanding of mathematics standards. The organization of this document mirrors that of the mathematics instructional units, includes all grade level standards, and reflects a grouping of standards and student learning objectives.

The tables are divided into three columns. The first column contains the grade level standard and student learning objectives, which reflect the corresponding concepts and skills in that standard. The second column contains standards from prior grades and the corresponding learning objectives, which reflect prerequisite concepts and skills essential for student attainment of the grade level standard as listed in the first column. Given that a single standard may reflect multiple concepts and skills, all learning objectives for a prior grade standard may not be listed. Only those prior grade learning objectives that reflect prerequisite concepts and skills important for attainment of the associated grade level standard is listed. The third column contains <u>Student Achievement Partners' recommendations</u> (SAP) for the 2020-21 school year regarding preserving or reducing time as compared to a typical academic year.

Unit 1: Operations with Rational Numbers

Rationale for Unit Focus

Unit 1 focuses on operations with rational numbers and algebraic expressions. Learners extend previous understandings of addition and subtraction to add and subtract rational numbers. Similarly, they extend previous understandings of multiplication and division of fractions to multiply and divide rational numbers. They solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. They apply properties of operations to calculate with numbers in any form and convert between forms as appropriate.

Note: Double asterisks (**) indicate that the example(s) included within the New Jersey Student Learning Standard may be especially informative when considering the Student Learning Objective.

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <u>SAP</u> recommendation to preserve or reduce time in 20-21 as compared to a typical year
 7.NS.A.1 Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram. a. Describe situations in which opposite quantities combine to make 0. For example, in the first round of a game, Maria scored 20 points. In the second round of the same game, she lost 20 points. What is her score at the end of the second round? b. Understand p + q as the number located a distance q from p, in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real- world contexts. We are learning to/that apply previous understandings of addition to add rational numbers 	 6.NS.C.5 Understand that positive and negative numbers are used together to describe quantities having opposite directions or values (e.g., temperature above/below zero, elevation above/below sea level, credits/debits, positive/negative electric charge); use positive and negative numbers to represent quantities in real-world contexts, explaining the meaning of 0 in each situation. We are learning to/that use positive and negative numbers to represent quantities in real-world contexts in real-world contexts and explain the meaning of zero in context 6.NS.C.6 Understand a rational number as a point on the number line. Extend number line diagrams and coordinate axes familiar from previous grades to represent points on the line and in the plane with negative number as a indicating locations on opposite sides of 0 on the 	Incorporate foundational work on understandings of rational numbers (6.NS.C.5, 6.NS.C.6 and 6.NS.C.7) to build towards operations with rational numbers (7.NS.A) as detailed by the cluster.

Unit 1, Module A

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations SAP recommendation to preserve or reduce time in 20-21 as compared to a typical year
 describe situations in which opposites combine to make zero show by modeling, a number and its opposite have a sum of zero (additive inverse) p + q is the number located a distance q from p, in the positive or negative direction depending on whether q is positive or negative (e.g. 5 + -4 is 4 units in the negative direction from 5 and, similarly, 5 + 4 is also 4 units away in the positive direction) represent addition and subtraction of signed rational numbers on a vertical or horizontal number line interpret sums of rational numbers in real world situations 	 number line; recognize that the opposite of the opposite of a number is the number itself, e.g., - (-3) = 3, and that 0 is its own opposite. We have learned to/that locate numbers with opposite signs as points on opposite sides of zero on the number line 6.NS.C.7 Understand ordering and absolute value of rational numbers. a. Interpret statements of inequality as statements about the relative position of two numbers on a number line diagram. <i>For example, interpret -3 > -7 as a statement that -3 is located to the right of -7 on a number line oriented from left to right.</i> c. Understand the absolute value of a rational number as its distance from 0 on the number line; interpret absolute value as magnitude for a 	in 20-21 as compared to a typical year
	positive or negative quantity in a real-world situation. For example, for an account balance of -30 dollars, write -30 = 30 to describe the size of the debt in dollars. We have learned to/that	

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations SAP recommendation to preserve or reduce time in 20-21 as compared to a typical year
	 represent the relative position of two numbers on a number line diagram using inequality statements absolute value of a rational number is its distance from zero on the number line 	
 7.NS.A.1 Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram. c. Understand subtraction of rational numbers as adding the additive inverse, p - q = p + (-q). Show that the distance between two rational numbers on the number line is the absolute value of their difference and apply this principle in real-world contexts. d. Apply properties of operations as strategies to add and subtract rational numbers. We are learning to/that apply previous understandings of subtraction to subtract rational numbers is the same as adding the additive inverse, p - q = p + (-q) show by modeling on a number line that the distance between two rational numbers is the same as abuven two rational numbers is the same between two rational numbers is the same as adding the additive inverse, p - q = p + (-q) 	 5.NF.A.1 Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. <i>For example, 2/3 + 5/4 = 8/12 + 15/12 = 23/12. (In general, a/b + c/d = (ad + bc)/bd.)</i> We have learned to/that add and subtract fractions with unlike denominators, including mixed numbers, by replacing given fractions with equivalent fractions 	Incorporate foundational work on understandings of rational numbers (6.NS.C.5, 6.NS.C.6 and 6.NS.C.7) to build towards operations with rational numbers (7.NS.A) as detailed by the cluster.

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations SAP recommendation to preserve or reduce time in 20-21 as compared to a typical year
 numbers is the absolute value of their differences and apply the concept in real world contexts apply properties of operations as strategies to add and subtract rational numbers 		
 7.NS.A.2 Apply and extend previous understandings of multiplication and division of fractions to multiply and divide rational numbers. a. Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as (-1)(-1) = 1 and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts. b. Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If <i>p</i> and <i>q</i> are integers, then - (<i>p</i>/<i>q</i>) = (-<i>p</i>)/<i>q</i> = <i>p</i>/(-<i>q</i>). Interpret quotients of rational numbers by describing real world contexts. 	 S.NF.B.4 Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction. a. Interpret the product (<i>a/b</i>) × <i>q</i> as a part of a partition of <i>q</i> into <i>b</i> equal parts; equivalently, as the result of a sequence of operations <i>a</i> × <i>q</i> ÷ <i>b</i>. For example, use a visual fraction model to show (2/3) × 4 = 8/3, and create a story context for this equation. Do the same with (2/3) × (4/5) = 8/15. (In general, (<i>a/b</i>) × (<i>c/d</i>) = <i>ac/bd</i>.) We have learned to/that apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction. interpret the product of a fraction and a fraction as (<i>a/b</i>) × (<i>c/d</i>) = <i>ac/bd</i> ** 	Incorporate foundational work on understandings of rational numbers (6.NS.C.5, 6.NS.C.6 and 6.NS.C.7) to build towards operations with rational numbers (7.NS.A) as detailed by the cluster.

Unit 2: Equations, Inequalities, and Two-Dimensional Geometric Concepts

Rationale for Unit Focus

Unit 2 focuses on equations, inequalities and geometric concepts. Learners construct simple equations and inequalities to solve problems by reasoning about the quantities. They solve simple equations of particular forms fluently, ggraph the solution set of inequalities, and interpret solutions in the context of the problem. The unit also includes geometric concepts of area, surface area and volume. Learners add finding area and circumference of circles to their repertoire of skills related to area and perimeter. They solve real-world and mathematical problems

Grade 7: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

involving area of two-dimensional objects composed of triangles, quadrilaterals and polygons. Learners return to writing and solving simple equations to conclude the unit, using facts about supplementary, complementary, vertical, and adjacent angles in multi-step problem.

Note: Double asterisks (**) indicate that the example(s) included within the New Jersey Student Learning Standard may be especially informative when considering the Student Learning Objective.

Unit 3: Proportionality and Three-Dimensional Geometric Concepts

Rationale for Unit Focus

Unit 3 focuses on proportionality. Learners begin the unit, extending the work with unit rates from grade 6, to compute unit rates associated with ratios of fractions. They recognize and represent proportional relationships in multiple ways, deciding whether two quantities are in a proportional relationship. They identify the constant of proportionality in a variety of representations (e.g. tables, graphs, equations, diagrams, and verbal descriptions) and use proportions to solve problems involving scale drawings of geometric figures. Grade 7 learners

Grade 7: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

work with proportions concludes as they represent proportional relationships by equations, interpret points on graphs of proportional relationships in context, and use proportional relationships to solve multistep percent and ratio problems.

The geometric concepts of Unit 3 focus on analyzing geometric figures. Learners solve real-world and mathematical problems involving volume and surface area of three-dimensional objects, describe the two-dimensional figures that result from slicing three-dimensional figures and draw (with technology, with ruler and protractor, as well as freehand) geometric shapes with given conditions. They focus on constructing triangles and noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.

Note: Double asterisks (**) indicate that the example(s) included within the New Jersey Student Learning Standard may be especially informative when considering the Student Learning Objective.

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations SAP recommendation to preserve or reduce time in 20-21 as compared to a typical year
 7.RP.A.1 Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units. For example, if a person walks ½ mile in each ¼ hour, compute the unit rate as the complex fraction ½/¼ miles per hour, equivalently 2 miles per hour. We are learning to/that compute unit rates involving ratios of fractions (complex fractions) in quantities measured in like or different unit 	■ 6.NS.A.1 Interpret and compute quotients of fractions and solve word problems involving division of fractions by fractions, e.g., by using visual fraction models and equations to represent the problem. For example, create a story context for $(2/3) \div (3/4)$ and use a visual fraction model to show the quotient; use the relationship between multiplication and division to explain that $(2/3) \div (3/4) = 8/9$ because 3/4 of 8/9 is 2/3. (In general, $(a/b) \div$ (c/d) = ad/bc). How much chocolate will each person get if 3 people share 1/2 lb. of chocolate equally? How many 3/4- cup servings are in 2/3 of a cup of yogurt? How wide is a rectangular strip of land with length 3/4 mi and area 1/2 square mi?	For curricula and lessons that are well aligned to analyzing proportional relationships as detailed by the cluster, no special considerations for shifting how time is dedicated are recommended. Time spent on instruction and practice should not be reduced.

Unit 3, Module A

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations SAP recommendation to preserve or reduce time in 20-21 as compared to a typical year
	We are learning to/thatcompute quotients of fractionsinterpret quotients of fractions	
	■ 6.RP.A.2 Understand the concept of a unit rate a/b associated with a ratio a:b with b ≠ 0, and use rate language in the context of a ratio relationship. <i>For example, "</i> This recipe has a ratio of 3 cups of flour to 4 cups of sugar, so there is 3/4 cup of flour for each cup of sugar." "We paid \$75 for 15 hamburgers, which is a rate of \$5 per hamburger.	
	We have learned to/that	
	 construct a unit rate (a/b) from a given ratio (a:b) explain a unit rate (a/b) associated with a ratio (a:b) 	
	■ 6.RP.A.3 Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations.	
	b. Solve unit rate problems including those involving unit pricing and constant speed. <i>For example</i> , if it took 7 hours to mow 4 lawns, then at that rate, how many lawns	

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <u>SAP</u> recommendation to preserve or reduce time in 20-21 as compared to a typical year
	could be mowed in 35 hours? At what rate were lawns being mowed?	
	We have learned to/that	
	 solve unit rate problems, including unit pricing and constant speed 	
 7.RP.A.2 Recognize and represent proportional relationships between quantities. a. Decide whether two quantities are in a proportional relationship, e.g., by testing for equivalent ratios in a table or graphing on a coordinate plane and observing whether the graph is a straight line through the origin. b. Identify the constant of proportionality (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relationships. We are learning to/that decide whether two quantities show a proportional relationship by testing for equivalent ratios in a table decide whether two quantities show a proportional relationship by testing for equivalent ratios in a table 	 6.RP.A.3 Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations. a. Make tables of equivalent ratios relating quantities with whole number measurements, find missing values in the tables, and plot the pairs of values on the coordinate plane. Use tables to compare ratios. We have learned to/that represent and solve rate and ratio real-world and mathematical problems by using equations create tables of equivalent ratios and find missing values with whole number 	For curricula and lessons that are well aligned to analyzing proportional relationships as detailed by the cluster, no special considerations for shifting how time is dedicated are recommended. Time spent on instruction and practice should not be reduced.

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations SAP recommendation to preserve or reduce time in 20-21 as compared to a typical year
 identify the constant of proportionality (unit rate) in equations and verbal descriptions of proportional relationships identify the constant of proportionality (unit rate) in tables, graphs, and diagrams 		
 7.G.A.1 Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale. We are learning to/that solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale. 	 6.G.A.1 Find the area of right triangles, other triangles, special quadrilaterals, and polygons by composing into rectangles or decomposing into triangles and other shapes; apply these techniques in the context of solving real-world and mathematical problems. We have learned to/that find the area of right triangles and other triangles by composing into rectangles find the area of special quadrilaterals and polygons by composing into rectangles or decomposing into triangles and other shapes apply the techniques of finding area of polygons by composition or decomposition to solve real-world and mathematical problems 	<i>Reduce</i> time spent creating scale drawings by hand. Time spent on instruction and practice should not exceed what would be spent in a typical year.

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <u>SAP</u> recommendation to preserve or reduce time in 20-21 as compared to a typical year
7.RP.A.2 Recognize and represent proportional relationships between quantities. c. Represent proportional relationships by equations. <i>For example,</i> if total cost <i>t</i> is proportional to the number <i>n</i> of items purchased at a constant price <i>p</i> , the relationship between the total cost and the number of items can be expressed as $t = pn$. d. Explain what a point (<i>x</i> , <i>y</i>) on the graph of a proportional relationship means in terms of the situation, with special attention to the points (0, 0) and (1, <i>r</i>) where <i>r</i> is the unit rate. We are learning to/that	 5.G.A.2 Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation. Grade 7: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

Description

Included here are the prerequisite concepts and skills necessary for students to learn grade level content based on the New Jersey Student Learning Standards in mathematics. This tool is intended to support educators in the identification of any gaps in conceptual understanding or skill that might exist in a student's understanding of mathematics standards. The organization of this document mirrors that of the mathematics instructional units, includes all grade level standards, and reflects a grouping of standards and student learning objectives.

The tables are divided into three columns. The first column contains the grade level standard and student learning objectives, which reflect the corresponding concepts and skills in that standard. The second column contains standards from prior grades and the corresponding learning objectives, which reflect prerequisite concepts and skills essential for student attainment of the grade level standard as listed in the first column. Given that a single standard may reflect multiple concepts and skills, all learning objectives for a prior grade standard may not be listed. Only those prior grade learning objectives that reflect prerequisite concepts and skills important for attainment of the associated grade level standard is listed. The third column contains the recommendations from <u>Student Achievement Partners' recommendations</u> (SAP) for the 2020-21 school year regarding preserving or reducing time as compared to a typical academic year.

Unit 4: Probability and Statistics

Rationale for Unit Focus

In Unit 4, learners are introduced to probability. The focus of the unit is on both probability and statistics. Learners understand that the probability of a chance event is a number between 0 and 1, with larger numbers indicating greater likelihood and probabilities near 0 indicating an unlikely event. They collect data to approximate the probability of a chance event. Learners develop uniform and non-uniform probability models, use them to find probabilities, and compare probabilities from a model to observed frequencies. Learners conclude the

Grade 7: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

first module of the unit by representing sample spaces and finding probabilities of compound events using organized lists, tables, tree diagrams, and simulation.

In the final grade 7 module, learners understand that statistics can be used to gain information about a population by examining a sample of the population and understand the role of random sampling in producing valid inferences. They use data from a random sample to draw inferences about a population and generate multiple samples to gauge the variation in predictions. Building on the work of grade 6, they use measures of center and measures of variability for data from random samples to make informal inferences and compare two populations.

Note: Double asterisks (**) indicate that the example(s) included within the New Jersey Student Learning Standard may be especially informative when considering the Student Learning Objective.

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <u>SAP</u> recommendation to preserve or reduce time in 20-21 as compared to a typical year
■ 7.SP.C.5 Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around ½ indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event.	n/a	Combine lessons on developing, using, and evaluating probability models in order to emphasize foundational concepts and reduce the amount of time spent on this topic (7.SP.C). Limit the amount of required student practice.
 We are learning to/that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around ¹/₂ indicates an event that is neither unlikely 		<i>Eliminate</i> lessons and problems on finding probabilities of compound events, as detailed in the standards (7.SP.C.8).

Unit 4, Module A

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations SAP recommendation to preserve or reduce time in 20-21 as compared to a typical year
nor likely, and a probability near 1 indicates a likely event		
 7.SP.C.6 Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability. <i>For example,</i> when rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times. We are learning to/that approximate the probability of a chance event by collecting data on the chance process that it produces observing long run relative frequency predict the approximate relative frequency 	n/a	 Combine lessons on developing, using, and evaluating probability models in order to emphasize foundational concepts and reduce the amount of time spent on this topic (7.SP.C). Limit the amount of required student practice. Eliminate lessons and problems on finding probabilities of compound events, as detailed in the standards (7.SP.C.8).
7.SP.C.7 Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy.	n/a	Combine lessons on developing, using, and evaluating probability models in order to emphasize foundational concepts and reduce the amount of time spent on this topic (7.SP.C).

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations SAP recommendation to preserve or reduce time in 20-21 as compared to a typical year
a. Develop a uniform probability model by assigning equal probability to all outcomes and use the model to determine probabilities of events. <i>For example,</i> if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected.		<i>Limit the amount of required student practice.</i> <i>Eliminate</i> lessons and problems on finding probabilities of compound events, as detailed in the standards (7.SP.C.8).
We are learning to/that		
 develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events 		
7.SP.C.7 Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy.	n/a	Combine lessons on developing, using, and evaluating probability models in order to emphasize foundational concepts and reduce the amount of time spent on this topic (7.SP.C).
 b. Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. For example. 		<i>Limit the amount of required student practice.</i>
find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes		<i>Eliminate</i> lessons and problems on finding probabilities of compound events, as detailed in the standards (7.SP.C.8).

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <u>SAP</u> recommendation to preserve or reduce time in 20-21 as compared to a typical year
for the spinning penny appear to be equally likely based on the observed frequencies?		
We are learning to/that		
 develop a probability model, which may not be uniform, by observing frequencies in data generated from a chance process compare probabilities from a model to observed frequencies and explain possible sources of the discrepancy if the agreement is not good 		
 7.SP.C.8 Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation. a. Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs. 	n/a	Combine lessons on developing, using, and evaluating probability models in order to emphasize foundational concepts and reduce the amount of time spent on this topic (7.SP.C). Limit the amount of required student practice.
 We are learning to/that the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs 		<i>Eliminate</i> lessons and problems on finding probabilities of compound events, as detailed in the standards (7.SP.C.8).
