Subject: Re: <no subject>

In general, we support the Sierra Club's comments on the NJ Energy Master Plan and want to see a much greater percentage of our energy supply from clean alternative sources and conservation, including mandating LEED in new and retrofitted buildings with an emphasis on best available insulation.

Such a progressive program will help NJ environmentally and economically in creating new businesses, etc. This is a critical issue and New Jersey can be in the forefront attracting clean industry and protecting public health with cleaner air. We oppose oil drilling off the coast as unnecessary and dangerous to the tourist industry and we think more nuclear power is not a safe or economical way to go.

Thank you.
